independent banking, and we pledge resistance to every such trend.

Trends toward branch banking, subsidized competition by unfairly tax-exempted institutions, and toward holding company expansion are hurtful to the independent bank, and unhealthful to the independence of the American community. This we believe.

We point with pride to the fact that in thousands of American cities, towns, and villiages, from one end of the Nation to the other, independent banks serve and serve well.

By actual count, more than 10,000 purely local unit banks have survived wars, cycles of prosperity and depression, changes in economic climate and readjustments in management patterns. They have demonstrated the strength that is in the independent bank. They have earned the right to survive and to serve, in generations to come, American business, particularly small business, the American family, and the American community.

Home owned and home managed, directed by men of affairs of its own special area, the independent bank is responsive to local needs in a way that is impossible for a branch bank or holding company unit where the ownership is absentee and the central interest in some distant city.

Each independent bank plays a vital role, safeguarding, generating, and mobilizing local wealth, nurturing independent business and cultivating community development, community loyalty and community pride. Its own independence is a vital asset to the self-generating progress of its home area.

We recall that in the 1930's, when the strength of American banks was tested as never before, upward of 10,000 unit banks in their thousands of American towns and cities were not found wanting. They survived, a clear and unmistakable rebuttal of the wretched canard that "only big banks can be strong banks."

Let it be remembered also that the national banking structure did not topple into the bank holiday of 1933, bringing U.S. abandonment of the gold standard, until the occurrence of a series of big bank failures, many of them with branches, or holding company controlled.

Let it be recalled moreover the Federal and State banking authorities strained every resource to keep big banks open, while permitting hundreds of small banks to be closed by their directors for lack of any sort of aid. We note in passing that the Federal Deposit Insurance Corp. has changed all this. But we cannot forget that in the final toll of the depression, the record reveals that 33 banks, operating 700 branches, with some $2.2 billion in assets, had failed, never to be reopened.

If statistics show that there were more small bank closings, it was simply because there were more such banks. A bank can be strong or weak, regardless of size.

More than 10,000 independent local banks proved their inherent soundness in the 1930's. Today each such bank is a pillar of strength in its local community.

And let it be further remembered that a hundred years ago, it was the failure of branch banking systems in the panic of 1857 which caused our National and State banking systems thereafter to be set up on a unit banking basis.

Also that Britain's abandonment of the gold standard in 1931 followed the international run on her big branch banks and a failure of one of the English international banks.

We believe in States rights, the dual banking system, and in correspondent banking.

We believe that Federal power should never override State banking independence. The principle of restricting national bank branches to the limits set by State law for State banks must not be changed.

Group banking and holding company banking is branch banking, whatever its local guise. All such chain banking must, therefore, be restricted to the same limits as branch banking within each State.

We pledge our efforts for amendment of the Holding Company Act of 1956 to close this loophole.

We insist that every branch or holding company development be carefully scrutinized for strict adherence to the spirit of our branch banking restrictions. We hold to our long-standing conviction that the holding company device has usually served for evading restrictions placed by State and Federal law on branch banking, and insist that it should not be permitted to add to the complexity of our banking structure.

Generally, we admit, the exponents of multiple banking in the United States are bankers whose soundness and sincerity are above question.

However, branch bank expansion and holding company operations are tempting tools for ambitious men to use for financial self-aggrandizement. We must ever be alert against the splendid financiering about which our first Comptroller of the Currency warned in 1863, and which was so great a source of weakness in our banking system in the late 1920's and early 1930's. The administrators of our branch banking laws and of the Bank Holding Company Act of 1956 have a heavy responsibility to prevent this sort of abuse from recurring.

Finally we believe there must be no deviation from the cardinal banking principle that banks should be banks.

Neither by the holding company device, nor by any other circumvention, should an ownership or other interest in nonbanking businesses be permitted to impair or compromise the duty of the banker to be the impartial arbiter of the credit use and safekeeping of his community's funds.

We congratulate and compliment the Congress of the United States and the Governors of the Federal Reserve System on their faithful regard for this principle in the discharge of their administrative duties.

The matter of tax-exempted competition concerns every independent bank. It may have been good public policy once upon a time to foster small cooperatives and associations with tax exemption. But, as multi-million-dollar institutions and with multi-billion-dollar system totals, these competitors for the business and and savings of the public, which banks are chartered to serve, have outgrown the need for Federal paternalism. We believe tax exemptions represent an unwarranted and unfair subsidy. As tax-paying American enterprises, independent banks protest the continuation of such tax exemptions as a growing unhealthy situation, both for the U.S. Treasury and for private enterprise.

We believe that in independence there is national strength.

The strength and the solidarity of the independent banks of America was demonstrated in the long and finally successful fight for enactment of the Bank Holding Company Act of 1956.

It has been demonstrated anew this year. Powerful branch banking expansion drives have been rebuffed in Missouri, Illinois, Georgia, New York, and other States. We pledge continuance of our defense of independent banking, and by our faith in the National fronts.

This is our credo.

By the faith that is in us in American independent unit banking on both the State and role which it plays in American economy, we look forward to the challenge of the future confidently.

As independent banks, standing together we defend that faith to our utmost.

Famed Ellis Island Should Be Kept as a Symbol and a Gateway as Proposed by the American Council of Learned Societies

---

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. McDOWELL. Mr. Speaker, businessmen and scholars have joined in an effort to turn historic Ellis Island into an international training center for Americans assigned abroad.

This proposal is backed by Dr. Frederick Burkhardt, president of the American Council of Learned Societies.

The Washington (D.C.) Post and Times Herald endorses the proposal in a fine editorial and urges that Ellis Island become a new gateway of opportunity for the world.

Why the haste in dismantling this great symbol of American's welcome to the peoples of all lands and all races?

The plan of the General Services Administration to put famed Ellis Island on the auction block smacks of the discriminatory and racist restrictions contained in the present Immigration and Nationality Act.

Ellis Island stands for freedom.

The General Services Administration should postpone for at least 60 days the sale which it has scheduled for May 8, 1959.

I include here an editorial and an article from the Washington Post and Times Herald on this subject for the information of my colleagues:

[From the Washington Post and Times Herald, May 7, 1959]

A GATEWAY AGAIN

Wouldn't it be a splended idea to use Ellis Island as a training center for American executives who are going overseas to work? The suggestion is certainly arresting, but it will come to nothing unless Franklin G. Floete, chief of the General Services Administration, decides against selling the island to a private bidder. This Friday the place which served as a gateway for millions of immigrants may be sold to a Yonkers businessman who plans to turn the island into an amusement park. The reason why the island was placed on the auction block is that no public purpose was found for its use.

At the last minute, William M. Brennan, a New York management consultant, came up with the idea of establishing a nonprofit training center on the island for use by the thousands of businessmen who go abroad each year. Mr. Brennan's plan has so far won some respectable support, but he figures he needs about 60 more days to raise the needed money. The estimate is that only $500,000 will be required as an initial outlay because the condition of the buildings on the island is good. Surely this proposal deserves a fair hearing. Wouldn't it me possible to forestall the sale on Friday in the hopes that Ellis Island might become a new gateway of opportunity for the world?

[From the Washington Post and Times Herald, May 7, 1959]

ELLIS ISLAND SOUGHT AS TRAINING CENTER

(By Eve Edstrom)

Businessmen and scholars have joined in an effort to turn historic Ellis Island into an international training center for Americans assigned abroad.

But whether the project dies aborning hinges on a decision which General Services Administrator Franklin Floete must make by 5 p.m. Friday.

If GSA accepts the high bid for the 27-acre former immigration center, it will be developed commercially as a pleasure resort.

But if GSA rejects all bids, the island has an excellent chance of becoming a nonprofit international institute where Americans employees and their families would receive intensive training prior to leaving for foreign assignments.

Several American corporations have indicated their interest in the cultural institute plan as championed by William M. Brennan, New York management consultant and Dr. Frederick Burkhardt, president of the American Council of Learned Societies.

SCHOOL FOR 300

Under their proposals, Ellis Island would provide a school for about 300 students, hotel quarters for 600 to 800 people, apartments for faculty and staff families, and space for permanent trade and cultural exhibits.

The businessmen-students would study languages and foreign cultures. Instruction would be carried on 8 to 10 hours daily, 6 days a week for 2 to 4 months. The tuition fee of $50 a day would be paid by the company employing the students.

Wives would be urged to attend classes with their husbands as guests of the institute. Children would receive regular schooling as well as oversea orientation and language instruction.

The institute, it is emphasized, would be organized in such a way as to teach not just languages but total communication. This would be done on a 24-hour basis, with families living the life of the country of their assignment. Faculty members would be supplemented by tutors who are natives of the foreign country and who are familiar with its business practices.

None of the 35 buildings on the island would be demolished. They would be remodeled at an estimated cost of $500,000. Long-range plans call for a 5-year $6 million modernization program which would include a bridge to span the 900 yards between the island and the Jersey City shore.

Backers of the International Institute asked GSA to defer consideration of bids for 60 days so they could draft firm plans for its operation and financing. If such plans met with the approval of the Department of Health, Education, and Welfare, Ellis Island then could be transferred on a conditional basis to the nonprofit group at no cost.

But when GSA offered the land for sale, HEW had received no applications for its use for health or education purposes. Ellis Island, therefore, was offered for sale, and bidders on the property, it is understood, do not want action on their bids deferred.

The highest bid of $671,000 was submitted by Atlas Buffalo, Inc., of Yonkers, N.Y., headed by Sol G. Atlas. His announced plans are to construct a resort area on the island.

APPRAISED AT $6 MILLION

Atlas previously had bid $201,000 for the island, but the bid was rejected as too low for the property, which, with its buildings, is appraised at more than $6 million.

Because the island has gone begging since it was closed 4½ years ago, GSA indicated last January it would accept in the neighborhood of $800,000 from the right buyer.

GSA's decision on disposal of the island will not be based entirely on the highest bid. Consideration also will be given to the proposed use of the island.

The proposal for turning the island into an international training institute currently is before HEW Secretary Arthur S. Flemming, who is expected to indicate his Department's interest in the project to GSA officials by Friday.

National Character of the Chinese People: It Is Easier To Conquer China Than To Govern It—Chinese Strength Resides in Their Weakness

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a remarkable article on the character of the Chinese people, appearing in the New Leader of March 30, 1959. So often people who write about the Chinese don't understand them. Chinese who understand themselves do not easily write about themselves. To write too revealingly of deepest attitudes would be to depart from the attitudes being described. It is only very rarely that one finds a Chinese who is both sufficiently Chinese and sufficiently Western to see the importance of describing or explaining for the West the basic ideas and values of the Chinese as a race, and has the capacity to make the ideas and values understandable to westerners—insofar as they can be articulated in English.

The author of this article is Mr. Valentin Chu, born and educated in China. From V–J Day until 1949 he was a senior reporter for the China Press, an independent English-language daily in Shanghai. For the next 7 years he was Time-Life correspondent in Hong Kong where he specialized in analysis of Chinese Communist documents and publications and interviewed more than 500 refugees from the Communist mainland. Since 1956 Mr. Chu has served on Time's editorial staff in New York.

The article follows:

CHINESE NATIONAL CHARACTER

(By Valentin Chu)

We Chinese have for centuries been a source of unintentional bafflement to the rest of the world. Our bland looks and piquant epigrams, our disastrous famines and rich cultural heritage, our elegant cuisine and objets d'art, our strange tongues and stranger calligraphy, our sages, mandarins, war lords, peasants, rickshaw coolies, and slit-gowned women—all these and many other such aspects have conjured up for the Western eye an extraordinarily complex and mystifying picture. So much so that it has long been a popular sport in the West to try to describe, analyze, or just speculate about China and its enigmatic people.

This was fun for everyone concerned as long as it remained a parlor game. But since the Communist takeover in China the pastime has been taken up in earnest by pundits and politicians in quest of solutions to international problems—and the game has got out of hand.

The old smugness about China has disappeared from the Western consciousness. Its place has been taken by a growing awareness that what the inscrutable Chinese does behind his closed door may affect far more than the Westerner's laundry. This awareness, coupled with a misjudgment of the Chinese mind, has created such a political neurosis that every time someone in Peiping sneezes experts around the world stop short to analyze whether he has sneezed in a Chinese or a Russian accent.

Unhappily, eagerness to know is not identical with ability to understand. Nine years after Mao Tse-tung and his comrades seized power most of the world is still debating Peiping's Marxist orthodoxy, its strength, popularity, and even morality. It is said to note that this decade-old cataclysmic convulsion, involving a quarter of the world's population, should remain for the outside world a puzzle rather than a stark fact.

The key to the puzzle is what I should call "the Chinese in us." Whether we Chinese have a knack of misleading others or whether others have a knack of misreading Chinese behavior, the result is the same.

Years ago, many scoffed at a possible marriage between communism and the Chinese mind. Yet today we are faced with the reality of Red China. It would seem that the Chinese have, however reluctantly, accepted communism. And now some political seers have made a punditic turnabout and have discovered that, after all, the Chinese mind always had an affinity with regimentation.

The interplay of communism and the traditional Chinese cast of mind has reshaped the behavior of both the people and the Communists, but not their intrinsic elements. Herein lies the confusion for the outside world.

The Chinese Communists have combined traditional Chinese tactics and Communist ideology, making Chinese communism more palatable—and deadlier. On the other hand, the Communist regime has inexorably driven the Chinese people to their favorite sanctuary, philosophy. The result has been an apparent yielding by the people, under pressure.

These two groups, armed with contrary philosophies and similar tactics, have been staging one of the most bizarre struggles in human history. The subtle give-and-take, the intricate parries and thrusts, the fancy footwork of the opponents, are often incomprehensible and misleading to the rational West. This unprecedented byplay has stumped not only the non-Chinese who do not understand the Chinese, but even some Chinese who do not understand communism.

How is this struggle carried on? Have the Communists succeeded in tearing up the fabric of tradition and reweaving it into a Marxist pattern? Or will the yielding softness of the Chinese eventually prove to be the undoing of Mao's paradise? The correct answers can only be reached if one understands how the Chinese mind works.

Until a decade ago, a common Western image of China was that of a nation of laundrymen thriving on chop suey, lotus seeds, opium and concubines; between tong wars, the Chinese sauntered about in gaudy mandarin robes and conversed in Confucian analects. The picture, in short, was cuter than we could ever be.

The real Chinese way of life is less theatrical and more profound. It may be summed up in the traditional conception o fultimate contentment: "yu shih wu chen"—"no quarrel with the world." This is a succinct expression of Taoist philosophy, attributed to the ancient Chinese mystic,

Lao-tse, whose influence on Chinese life surpasses that of the better known Confucius.

No quarrel with the world means that the individual is oblivious of such incidentals as business, wealth or government. His desires are in abeyance and his grievances few. He merges with Nature.

An outgrowth of this philosophy is that most prominent of Chinese traits, resilience. In China, resilience has always been linked with survival and life, while rigidity has been associated with destruction and extinction. The only way to survive and eventually overcome an overwhelmingly stronger force is to be soft, penetratingly soft. By yielding elastically to brute force, one diverts the blow, conceals one's real strength and preserves the chance for a comeback. A whole system of self-defense, tai chi, has evolved from this thesis. A simplified version of it flourishes in Japan as judo.

The Chinese love of introspection produces reticence and unobtrusiveness. Compared to westerners, Chinese are introverts. In the Chinese, reticence may serve to conceal mediocrity, but it also may camouflage wisdom. As a classic Chinese proverb puts it, "Great wisdom resembles stupidity."

Forty centuries of trial and error have taught the Chinese that the shortest distance between two points is seldom a straight line; more often it is the line of least resistance. We are detour artists, in business, friendship, courtship or war—and it is just a question of one's point of view whether one calls this devious or worldly.

We Chinese are great tongue-in-cheek talkers and between-the-line readers. We put forward the obvious, about which we do not really care, alongside the obscure, which we want to convey. We do this as a matter of courtesy, or in order to bypass resistance or for the sheer love of double entendre.

The Chinese prefers intuition to logic. He dislikes to search for truth by analyzing the shapeless and classifying the indivisible. He would rather reach a solution by insight than by logical deduction.

One of the greatest techniques perfected by the Chinese is the art of bargaining. A typical Chinese bargaining bout usually begins with the seller quoting an exorbitant price and the buyer responding with a ridiculously low offer. The two may chat lackadaisically or argue belligerently about a host of seemingly irrelevant topics, from yesterday's weather to next year's rice harvest. At a certain point, the buyer will make as if to break off and leave, and the seller will display ostensible indifference.

When they have sufficiently indulged in histrionics and have probed each other's relative strengths, a bargain is struck. Then they part, both complaining of having received a raw deal—but both feeling victorious.

Bargaining is loved by the Chinese as much for the game as for the money saved, and everything is expected to be bargained for. Anyone who will not or cannot bargain is considered intellectually inferior.

These traits do not wholly comprehend the Chinese character. But by and large they orient our life and influence our behavior. They tend to make us patient, serene, self-sufficient; at times a little wise, but often unaggressive, diffident, disunited and hopelessly undisciplined. A highly developed Chinese personality is like aged wine, mellow but potent. It has "no quarrel with the world."

Communist ideology is diametrically opposed to Chinese philosophy. Communism in practice is an attempt to reach the beautiful via the ugly, peace through war, freedom through slavery, democracy through dictatorship. It is no mere political system, but an inverse religion replete with gods, confessions, taboos, dogmas and inquisitions. It is a way of life that brooks no heresy, and it can survive only by suppressing the dissident, individualistic and free wheeling.

If one abstracts Chinese tactics from Chinese philosophy and combines them with such an undeviating ideology, the product will be insidiously un-Chinese. Mao Tse-tung has done exactly this.

Mao's contribution to international communism has not been to revise it, but to flavor it with sweet-sour sauce. Many of his recipes were concocted during his early days of guerrilla warfare against the Nationalists. A favorite tactic of his in dealing with a much stronger force is derived from the dictum of Sun-tse, a fifth century military theorist: "Enemy advances, we retreat. Enemy retreats, we pursue. Enemy encamps, we agitate. Enemy tires out, we attack."

After his army had grown large enough for regular battles, Mao developed his most famous stratagem: "Ta ta, tan tan; tan tan, ta ta"—"Fight fight, talk talk; talk talk, fight fight." By skillfully interspersing battles and phony truces, Mao averted many military crises and grew in strength. This is how he has described his method of vanquishing imperialistic nations: "Our tactical principle is to exploit the contradictions among them in order to win over the majority, to oppose the minority and then to crush the enemies separately."

All good military leaders in Chinese history have loved ruses de guerre. They thought of war in terms of a chess game, and they much preferred to win wars by avoiding battles and using feints, traps, and similar tricks. The most famous stratagem in Chinese history was devised by Chuko Liang, a military genius of the Three Kingdoms era (3d century A.D.).

Chuko, commanding general of the army of the Kingdom of Shu, was trapped one day with only 2,500 of his troops at his advance base, Hsicheng, as an army of 150,000, under the command of General Ssuma Yi of the Kingdom of Wei, approached the city. In a desperate flash of brilliance, Chuko threw open the city gates of Hsicheng, furled all military banners and set some soldiers in civilian clothes to sweeping the street near the gates.

Chuko himself, dressed in his favorite crane-weather robe and silk scarf, sat atop the city wall, flanked by two page boys holding a sword and a ceremonial duster. When Ssuma rode near the city wall, he saw the unruffled Chuko calmly plucking way at a zither.

Chuko might have been shaking in his clogs, but his stance was so bold that Ssuma suspected an ambush and ordered the immediate withdraw of his army. Chuko dispatched small bands of noisy pursuers to harass the retreating enemy. The Wei troops, fleeing from an imaginary trap, stampeded themselves into a disastrous defeat.

This "Kung Cheng Chi," the "Stratagem of the Empty City," is familiar to every Chinese, including Mao Tse-tung, who once wrote a brief poetic version of it: "The stage of action of the military expert is provided by objective material conditions; but with the stage set, he can direct the performance of many lively dramas, full of sound and color, power and grandeur." How often Mao has directed such lively dramas on the military, political, and diplomatic stages.

It is just such dramatic ruses that are likely to confuse westerners who are trying to understand and cope with Communist China. The crux of the China puzzle is not the amount of information available, but the depth of misinterpretation.

This confusion is worsened by the language barrier, which often cannot be overcome by translation. The florid Chinese language, so delicate in nuances and rich in literary allusions, is unusually complex and extremely difficult to render adequately, let alone literally, in translation. So, for example, a typical Peiping policy statement is a mixture of Communist dialectics and Chinese linguistic floss, often made deliberately fuzzier for special effects.

Confusions and paradoxes like these are apt to mislead non-Chinese observers, especially the armchair pundits who think life can be understood via the reference library, or the tourist-inspector who believes that anything worthwhile has to be visible and anything he cannot see, nonexistent.

Now, both these types are certainly honest. But they overlook the fact that no amount of speculation and no amount of sightseeing will shed light on China unless they understand the emotions and cast of mind of the silent millions who must live and die under communism. Without this understanding, all the analysis only amounts to "scratching an itch from outside the shoe."

A typically capricious Western notion is that since the Chinese have known so little freedom historically, they will readily submit to communism. This view misconstrues the Chinese attitude to freedom. The traditional Chinese conception of freedom is not participation in government, but avoiding government. This kind of freedom is individualistic and personal, rather than political. It harmonizes with Lao-tse's idea of a perfect government; one that does nothing.

In China, even bad governments may last a long time, provided they remain inefficient. In their own way, the typical Chinese prefer a government that leaves them alone, rather than one that does everything to or for them. Regimentation, even in a good cause, is distasteful to the Chinese nature. And therein lies the long-range danger to the Communist regime.

It would be a mistake to believe that the effect of monolithic totalitarianism is as deadly for the Chinese as it is for westerners. For compared to the way of Chinese life, the way of Chinese communism is clumsy and inept.

A few years ago, for instance, the Communists tried to force Shanghai businessmen to subscribe to an onerous government bond drive. Relays of Communist speakers would harangue them with polite, persuasive speeches at meetings that lasted 8 to 10 hours at a time; the businessmen were forbidden to leave until the meetings ended. This technique was given a nickname by the laconic citizens of Shanghai: "Fatigue bombardment."

Soon the businessmen devised a typical Chinese countermove. They began attending these meetings enthusiastically—equipped with buns, thermos bottles full of tea, and even toothbrushes. The unspoken message of the camping paraphernalia so neutralized the fatigue bombardment that the Communists settled for much smaller bond subscriptions. Where else could so critical a battle be fought with such sophistication?

For the past decade, people in China have been using every trick of survival to cope with their ruthless regime, techniques reflecting the traditional proverb, "lip obedience, but not heart obedience." This trait is frequently mistaken by straight-shooting westerners as pure and simple submissiveness.

The Chinese have been virtually transformed into a nation of reluctant hypocrites. The Communists, being Chinese themselves, are quite aware that a great deal of tongue-in-cheek eulogies they receive from the people make them look silly, at least in Chinese eyes. One has to know the language to realize that the deadliest insults in Chinese are always couched in exquisitely polite words.

The common view in the West is that Mao's regime exercises an ever-tightening

control over the Chinese people, who are powerless to do other than submit. On this premise is built the thesis that if the United States ever antagonizes Peiping, a devastating war would ensue. This is a frightening prospect, but an unlikely one.

If one looks at the Communist regime with a Chinese eye, one realizes that Peiping is expert in the psychology of bargaining. It is a past master in "strategems of the empty city." It may act belligerently when it is weak, and one would be foolish to become either unduly alarmed or optimistic over some ambiguously worded Communist statement.

A Chinese observer would discern that the peasants and intellectuals, with whose acquiescence the Communists rose to power, are most restive. Mao's brutally ambitious economic juggernaut is all but submerged in the quagmire of Chinese resilience, for the overwhelming majority of the people opposes the regime and has its own roundabout way of resisting it. The secret of Peiping's eventual failure is held by the yielding, plastic, all-engulfing giant that is the Chinese people.

In light of this, it is tragicomic to hear the contention that United States refusal to recognize Communist China and United Nations failure to admit it to its ranks is tantamount to "ignoring a nation of 600 million people." Despite this cliche, the fact is that China is now the scene of an acute state of silent war: "people's government vs. the people." It will be a long time before Mao can marshal his 600 million rugged individualists into a solid phalanx which the United States and the United Nations cannot afford to ignore. Right now, Mao is too busy fighting his people.

A casual visitor to China today may be impressed by the sight of hasty reconstruction, Spartan discipline and anthill activity. These effects have been achieved at the expense of many other Chinas: the China of kaleidoscopic colors, sounds and smells; the China of ubiquitous smiles, mellow humor and ready hospitality; the China of carefree anglers beneath willow trees; the China of somnolent temple bells and misty lakes.

Our strength resides in our weakness. It is easy to extract a false confession from a Chinese, but it is hard to give him a genuine brainwashing. It is easier to conquer China than to govern it. The Chinese are usually weak as a nation, but tough as a race.

These statements are admittedly a series of paradoxes—but we are a paradoxical people. One day, surely, those other, more real Chinas will destroy the false image that prevails now. And that day may be nearer than many suspect.

Tobacco Imports

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. DORN of South Carolina. Mr. Speaker, I hate to tell the tobacco boys "I told you so," but many of them would not listen last year during reciprocal-trade debate. Now here it is—another 15-percent increase in tobacco imports under this one-world reciprocal-trade concept. Our American tobacco farmers will be hornswoggled and gypped out of their tobacco acreage just as were the cotton farmers of the Southeast. We will be permitted to grow less and less while Yugoslavia and other countries will grow more and more.

The following is from the U.S. Department of Agriculture:

U.S. IMPORTS OF UNMANUFACTURED TOBACCO SET RECORD IN 1958

U.S. imports of unmanufactured tobacco for consumption reached a record total of 138.6 million pounds in 1958, compared with the previous high of 124.1 million pounds in 1957. Tobaccos imported into the United States consist largely of oriental-type cigarette leaf and cigar leaf for blending with domestic tobacco in cigarettes and cigars. U.S. imports in 1958 were valued at $105 million.

The United States is the world's third largest importer of unmanufactured tobacco, being exceeded only by the United Kingdom and West Germany. U.S. imports have risen steadily during the past decade, reflecting increasing amounts of oriental leaf being used in cigarettes and larger quantities of foreign-grown cigar filler and scrap going into cigars.

CIGARETTE LEAF IMPORTS RISE STEADILY

Cigarette leaf (largely oriental) now makes up about 75 percent of total U.S. imports of unmanufactured tobacco. Imports of cigarette leaf are steadily rising and reached a record 104.7 million pounds in 1958, compared with 91.2 million pounds in 1957 and with an average of 76.4 million for 1950–54. The value of 1958 imports of cigarette leaf, at $76.8 million, indicates that the average value per pound (market value in foreign country) was U.S. 73.4 cents.

Turkey and Greece are the largest shippers of cigarette leaf to the U.S. market. In 1958 they supplied a total of 93.6 million pounds. Imports from both countries set new records. Since the end of World War II, Turkey has been the most important supplier. But imports from Greece are rising more rapidly percentagewise than those from Turkey. In 1958, Greece furnished more than double the quantity it supplied in 1950–54.

NOTE.—"Imports" refers to imports for consumption. These include withdrawals from bond for consumption and releases from customs custody immediately upon arrival.)

Tobacco, unmanufactured: U.S. imports for consumption, by principal countries of origin average 1950–54, annual 1955–58

[In thousands of pounds]

Commodity and origin	Average, 1950–54	1955	1956	1957 [1]	1958 [1]
Cigarette leaf:					
Turkey	53,802	57,686	61,528	60,000	65,108
Greece	13,280	17,872	18,881	23,271	28,536
Syria	3,579	2,421	1,587	1,178	1,059
Italy	1,025	1,504	1,826	1,514	1,744
Cyprus	247	297	524	501	1,320
Yugoslavia	1,011	3,523	2,899	3,558	3,964
Other countries	3,491	373	702	1,176	2,964
Total	76,435	83,676	87,947	91,198	104,695
Cigar wrapper:					
Netherlands [2]	3	1		1	
Indonesia	664	326	137	124	79

[1] Preliminary.
[2] Largely Indonesian tobacco reshipped from the Netherlands.

Source: Compiled in the Foreign Agricultural Service from records of the Bureau of the Census.

Other countries supplying cigarette leaf to the U.S. market include Italy, Yugoslavia, Cyprus, and Syria. Some oriental leaf also originates in Rhodesia-Nyasaland.

Annual imports for consumption generally are a fairly reliable indicator of manufacturers' usings of foreign-grown cigarette leaf during the year. With this assumption, it appears that the average percentage of imported tobacco used in U.S. cigarettes is slowly rising, and amounted to about 8 percent in 1958. This was still below the prewar percentage of about 10 percent. Due to much larger U.S. cigarette output, how-

ever, the absolute volume of imported cigarette leaf used in 1958 was more than twice that for the 1935–39 period.

Under the Tariff Act of 1930, the U.S. tariff on imports of cigarette leaf was originally 35 cents per pound. There has been a gradual reduction in the tariff over the years and the present rate, which became effective June 30, 1958, is 12¾ cents per pound. This rate applies to all countries except those in the Soviet bloc, for which the 1930 rates apply.

CIGAR LEAF IMPORTS UP

Imports for consumption of cigar leaf consist largely of cigar filler and scrap tobacco (used mainly as scrap filler). Together, these important categories accounted for 32.2 million pounds last year, compared with 30.6 million in 1957. The annual 1950–54 average was 23.8 million.

Imports of cigar wrapper have dropped in recent years and totaled only 0.6 million pounds in 1958, compared with an average of 1.1 million in 1950–54 and 2.1 million for 1935–39.

Cuba is the largest supplier of cigar filler, scrap and cigar wrapper. Imports from that country last year were 12.1 million pounds of cigar filler, 13.8 million of scrap, and 0.5 million of wrapper. Cigar tobacco imports from the Philippines amounted to 5.9 million pounds in 1958—largely scrap.

Imports from both Cuba and the Philippines enjoy favorable tariff treatment in the U.S. market. The present U.S. tariff rate on Cuban unstemed cigar filler is 12.6 cents per pound; on stemed filler, 18.0 cents, and on scrap, 12.6 cents. Corresponding rates applicable to other countries (except the Philippines) are 16.1 cents for unstemed cigar filler, 23.0 cents for stemmed filler, and 16.1 cents for scrap. Cuban unstemmed cigar wrapper enjoys a tariff rate of 81.9 cents per pound, compared with 90.9 cents for similar leaf from other areas. Significant gradual reductions have taken place during past years in the tariff rate on Cuban cigar leaf. Under the Tariff Act of 1930, rates per pound were established as follows: Unstemmed cigar filler, 28 cents; stemmed filler, 40 cents, and scrap, 28 cents.

The importation of Philippines tobacco is favored by a duty-free quota which now amounts to 5,850,000 pounds per year. This will be gradually reduced and there will be no duty-free quota after 1974. Quantities imported for consumption, in excess of the duty-free quota, are dutiable at the Cuban rates.

Nikolai Dorofeyevich Yarushevich

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include the following text of a special edition of News and Views, a monthly periodical published by the National Laymen's Council Church League of America. This is indeed a revealing article concerning the rise of Soviet Secret Police Agent, Metropolitan Nikolai, who was brought into the United States under the guise that he was a great Christian leader.

NIKOLAI DOROFEYEVICH YARUSHEVICH

"Mordre wol out, that we see day by day". (Chaucer, Canterbury Tales.)

Although written nearly 600 years ago Chaucer's observation that "murder will out" still holds good today. The New York Times for June 9, 1956, carried a news photo showing the Reverend Eugene Carson Blake, president of the National Council of Churches, escorting Metropolitan Nikolai of Russia to visit Independence Hall in Philadelphia. The picture shows a solid line of police holding back angry demonstrators shouting epithets at the Soviet clergyman. Some of them probably shouted "murderer" at the holy man from Russia. Millions of Americans no doubt were shocked at such rudeness and incivility.

Page 114 of Life for March 23, 1959, again shows Metropolitan Nikolai this time officially branded as a Soviet secret agent by a high ranking Soviet secret police official, Peter Deriabin, who recently defected to the West. Between these two pictures hangs a tale—a tale of consummate villainy and cynical fraud beyond all historical parallel.

In March 1956, nine prominent leaders of the N.C.C.C. headed by Eugene Carson Blake journeyed to Moscow at the invitation of the Soviet Government through Metropolitan Nikolai, second ranking Orthodox hierarch in all of the U.S.S.R. The N.C.C.C. leaders came back bursting with enthusiasm and praise for Metropolitan Nikolai. They did not have much to say on just who this Soviet clergyman was and what his background was. Soviet Russia is a land of mystery and secrecy and it is often very hard to dig out even the most elementary facts readily available to anyone in a non-Communist country.

News and Views has been doing a little research on the venerable Nikolai now that a former Soviet secret police official has identified him as a former colleague of his in the same sinister, murderous organization.

Metropolitan Nikolai of Krutitski and Kolomna, to give his full title, was born Boris Dorofeyevich Yarushevich, in Kovno in 1891. His father was an arch-priest in the old Russian Orthodox Church. Young Yarushevich became a monk in 1914. He was graduated from a theological seminary a year later.

On November 7, 1917, Lenin's Bolsheviki stormed the winter palace in Petrograd and overthrew the liberal democratic government of Kerensky. Within 3 months the Bolsheviks began the destruction of all religion in Russia. It is highly significant that the victorious Bolsheviks struck at religion long before they began their expropriation of all property and other assaults on human freedom and dignity. Mark well the date because this is highly important in our study of the rise of Metropolitan Nikolai.

Shuster in his very important and scholarly "Religion Behind the Iron Curtain" states:

"The Communists attacked with blind fury. Church property was taken away, priests were left without any means of subsistence. Houses of worship were profaned. A few excerpts from the pastoral letter issued by Patriarch Tikhon on January 18, 1918, summarize the situation at that time:

" 'Daily we are in receipt of letters reporting the horrible, bestial murders of quite innocent and bedridden people * * * There are no hearings, all rights and laws have been abrogated. The holy edifices are targets for gunfire, or are subjected to looting, ridicule, and degradation. Venerable persons residing in monasteries and honored by the faithful are seized by the dark, ungodly powers of this age. Schools supported by the orthodox church for the education of priests are turned into institutions of nonbelievers or are made into houses of prostitution.'

"The Metropolitan of St. Petersburg, the Metropolitan of Kiev, and the chief representative of the Roman Catholic church in Russia were tried and executed. How many others suffered a like fate, no one knows."

We now know that thousands of priests, monks, and other religious leaders were horribly murdered or exiled to slow death in Siberia. Churches were despoiled, robbed of their valuable ikons and other wealth and converted into granaries, barracks, or even stables.

And while all this was going on how fared our "dearly beloved brother" Metropolitan Nikolai, bosom pal of Eugene Carson Blake and other American modernist, ecumenical, left-wing clergymen?

In 1918 Boris Yarushevich, while churches were being closed and desecrated all over Russia, became head of the Peter and Paul Cathedral in Peterhof. The next year he became archimandrite and head of the Alexander Nevsky Monastery of Petrograd. In 1922 he became bishop of Peterhof and Petrograd diocese. That same year a priest named Vvedensky started the living church movement which enjoyed the official protection and approval of the Bolshevik regime. (See News and Views, May 1957, p. 4.)

The supreme head of the orthodox church, Patriarch Tikhon was arrested in July 1922. He died 3 years later. From 1925 to 1943 no election of a new patriarch was permitted by the Soviets. Indeed, the very title disappeared from all official documents and the press. It was forbidden to use any religious title in any publication. The death of Patriarch Tikhon was merely announced as that of "Citizen" Belavin.

Before his death Tikhon had designated Metropolitan Cyril as keeper of his office. Orthodox canon law empowered only a sobor or general council of top hierarchs as guarding the ecclesiastical succession. The Soviet Government immediateley arrested Cyril. Tikhon's second choice had been Metropolitan Agaphangel but he was already in exile. Patriarch Tikhon's third choice was Metropolitan Peter but he was arrested as soon as he assumed office and transported to Siberia where he died in 1936.

With the death of Metropolitan Peter the legitimate succession of ecclesiastical authority was wiped out forever. Out of 11 hierarchs appointed to act as keeper or deputy 10 died in exile or in prison. The present patriarch, like Metropolitan Nikolai, is nothing more than a secret police appointee and hence devoid of any bona fide ecclesiastical authority.

In 1936 Nikolai had advanced under the Soviet secret police to Archbishop of Peterhof and Novgorod diocese. In 1939 he was exarch of the Ukraine. While Khrushchev was busy purging the Communist Party of the Ukraine his henchman Nikolai directed a merciless campaign of persecution against the Ukrainian Orthodox Autocephalous Church as well as against the Greek Catholics and Ukrainian Roman Catholics. Hundreds of priests and thousands of laymen were deported to slave labor camps and a speedy death.

In 1942 Nikolai made the news in Russia by being the first religious leader since the 1917 revolution to be officially recognized by title in an official Soviet document. He was appointed a member of a Commission To Investigate German Atrocities. As this was fully a year before Stalin deigned to take official notice of Nikolai's superior, Patriarch Sergius, it must be quite obvious who was the favorite boy of the Bolsheviks. Sergius was also restored to some limited degree of authority and prestige as part of the Communists' use of religions to bolster sagging Soviet morale under the hammer blows of Hitler's onsweeping Reichswehr.

With the end of World War II Metropolitan Nikolai's real role in Soviet foreign policy began to unfold itself—that of an international Judas goat leading the innocent faithful into the Red abbatoir of nations and peoples. In 1945 he was the directing genius of the Moscow sobor which arbitrarily brought the Orthodox churches of newly conquered satellites under the Moscow patri-

archate. Metropolitan Nikolai began to travel extensively and frequently in western Europe building up contacts with various Protestant denominations. In 1948 he was busy in Stockholm with the phony Stockholm peace appeal.

On February 23, 1951, the Communist World Council of Peace met in East Berlin, Germany. A featured speaker at the Red gathering was Metropolitan Nikolai, of Moscow. This agent of KGB (Soviet Secret Police) launched a vitriolic attack against the United States. Here are some of the vicious charges made by the so-called "Christian" leader of the Soviet Orthodox Church who fraternizes with leaders of the National and World Councils of Churches, and who has been invited to join them in the World Council:

We all know how on June 25, 1950, the hordes of the Korean-American marionette—Li Sun Man, villianously fell upon the Peoples Democratic Korean Republic, at the direction of their American masters. The painstaking elaboration of this—horrible in its baseness—act is known.

It is known how the freedom-loving Korean people answered the bloody attack in one outburst. It is known how President Truman gave the order to the American Armed Forces in the Far East to come to the aid of his true ally—Li Sun Man.

It is known by what methods the United States of America influenced and [what methods it] uses to put through the U.N. resolutions it desires.

The demagogic wails of American propagandists are known, with which they try to cover up the bestial grin of imperialism revealed to the whole world.

The march of military actions on the fronts of this long-suffering land is known. The boundless courage and heroism, with which an ancient people defends its independence and life before the hordes of contemporary savages, is known. What sympathy and condolence are called forth by the sufferings of the Korean people from all freedom-loving humanity, are known.

And there is also known one circumstance of the Korean events, and it is to this circumstance that I want to draw your attention. I have in mind the conduct of the war in Korea by the American aggressors.

When we turn to the official statements of the governmental workers of the Korean Peoples Democratic Republic; when we listen to the evidence of war correspondents, journalists, up to now not known for the progressiveness of their opinions; when living people speak, who by some miracle have survived after the retreat of the army of occupation, or those who managed to escape from the leprous regions of the "new Americanized order"—we feel that which no document can transmit: We feel that depth of boundless, unassuageable grief into which modernized American monsters have plunged a noble people with its ancient culture.

And so we become convinced that the spirit and substance of fascism have not disappeared, that the delirious dreams of the fanatic Hitler have found their continuers, now trying to realize them.

Their followers do not lag behind their teachers.

From the first day of the lawless aggression the American neofascists began a systematic cannibalistic destruction of the "lower" Korean race.

What do we see?

Cynically violated standards not only of international rights, but of human morals. Executions without trial and inquisitions, secret and public. Dreadful tortures of victims: the cutting off of ears and noses, breasts, the putting out of eyes, the breaking of arms and legs, the crucifixion of patriots, the burial alive in communal graves of women with children at their breasts, etc. The rebirth of the customs of savages—the scalping of Korean patriots for "souvenirs."

For the purposes of annihilating the population, the American criminals first of all fanatically killed the political prisoners (from 200,000 to 400,000 persons), forcing them first to dig their own graves; they threw the bodies of patriots [who had been] hung, shot or who died from typhus into a precipice and, to conceal the traces, blew up a cliff above it.

The barbaric bombings of peaceful cities and centers of population were directed exclusively toward the annihilation of the civil population.

In the committees of inquiry of the American troops we see the reborn "technique" of Hitler, inhuman tortures of Korean patriots; hanging by the hands, binding [them] behind the back, which is impudently called "aeroplane"; welding handcuffs on the hands behind the back for 2 to 3 months; torture by electricity, including the electric bed, on which death follows the transmission of a strong current; a wet leather jacket which crushes the breast of the victim on drying; placing those ill of an epidemic sickness in cells filled to overflowing with prisoners.

These civilized savages arranged shooting matches with living targets, binding peasants to posts with barbed wire and shooting each of them over the heart of the target. Reviving the customs of the young-fascists, young-yankees photographed these scenes for their family albums and sent them home to their fiancees and wives.

These representatives of the higher race practiced and practice mass rape of the women and young girls of Korea, rounding them up from surrounding towns, making them drunk on gin and raping them. Not limited to outrages, the miserable victims were driven, in places, into tunnels, shot by machineguns, and buried under the debris of blown up cliffs.

Often one can see on the roads of Korea the still warm corpse of a mother and a crying child at her breast. Cases are known when children, born in prison, were trampled by the soldiers' boots in front of the mother, and then the mother was killed.

On retreating, this "flower of culture" destroyed or drove off with it all living things on the evacuated lands.

On attacking, their fury was also vented first of all on the peaceful people.

Thus, on landing on September 15 in the Bay of Inchon everything breathing in the region was annihilated by insane 48-hour fire. Upon attacking Seoul in September of 1950 the same tactics of general destruction were continued.

In September of 1950, the French journalist Charles Farvel visited the camp of death, located in the "valley of horror" in Southern Korea. More than 300,000 Koreans are doomed to death in that camp. At that time there were 10 such camps. The camps are surrounded by barbedwire, along which run high voltage electric currents. The people live on the ground, they have neither clothing nor shoes. They are not fed, they eat grass and the bark of trees and bushes. American scientists and doctors, under the guise of giving medical assistance, test the newest vaccines and chemical preparations on the prisoners. Every night there are executions in the ravines surrounding the camps. To be destroyed in the first order are the intelligentsia of the Korean people: doctors, teachers, engineers, technicians, agriculturists.

"I accuse!"—declared the Korean artist [a woman] Zoe Sin Hee—"The blood of thousands of infants destroyed by the Americans, the tens of thousands tortured in the camps of death, the hundreds of thousands killed at the front, call for justice. The American military criminals must be severely punished for their evil deeds. I accuse them. I believe that the hour of retribution will soon arrive."

In retreating in January of 1951, the occupation forcibly chased more than 2 million peaceful inhabitants to the south of Korea, who died in thousands on the road and the roadside ditches from hunger and cold, from the bullets of aggressors.

Those of the peaceful population of Northern Korea who remained alive or were dispersed among the camps expected hunger and epidemics. Even the notorious U.N. Commission on the Unification and Reestablishment of Korea in its letter to the U.N. of February 1, 1951, notes that 3,628 Koreans have been left without a roof in penury.

The Korean children are everywhere subject to the fury of the occupation. Everywhere, where the foot of the intervenors has stepped—in the province of Southern Pennyan, Northern Kengke, Southern Kengke, Kanko, Chang-Bong—the American bandits have destroyed the children.

And again one cannot dismiss the thought that the ideologists guiding the dreadful events in Korea consider themselves to be Christians, and not only Christians, but even leaders of Christian organizations. They know the Bible and often state so in the hearing of all.

And reason refuses to give an explanation of this nightmare, and the heart does not cease to tremble from feelings of holy hatred toward the cannibals, and the conscience of all simple people cries out against the evil deeds of the American aggressor.

Waves of protest and indignation against the American aggressor in Korea and the evil deeds of the occupation; against the attempts to loosen a new world war by means of blocs, pacts, the remilitarization of Germany and Japan; against the exploitation of the UN by the United States of America as a weapon of aggression—roll over the entire world. This indignation against the rulers who have lost their reason and will, dragging people toward the precipice, can be heard in numberless petitions, sent to parliaments and ministries. It is heard in the appearances of women and young people, going on in all the countries of the world. Protest and indignation is expressed by the many-thousand-strong crowds gathering in the town squares of Europe and demanding that the oversea world bandits and world colonizers in dress coats and generals' tunics return home.

And our holy duty, dear friends is to tighten our ranks in the fight for peace, for the cessation of the bloody aggression in Korea, in the fight against the remilitarization of Western Germany and Japan, as a step toward a new war, against weapons for the mass annihilation of people, for the progressive curtailing of armament.

Nikolai's atrocity story varies a bit from the official North Korean version which charged that American soldiers buried young Korean children alive with only their heads sticking above the ground and then used these live baby heads as targets for routine rifle practice.

In December that same year Nikolai charged that:

"American aggressors continue to wage a war of extermination in Korea * * * The ideas of hatred of humanity are inoculated in children and young people on a broad scale in the U.S.A. * * * It is thus that the American kindlers of war try to raise murderers from their tender years."

In 1952 Metropolitan Nikolai charged that U.S. airmen in Korea were waging germ warfare:

"Infected insects are being dropped from American aircraft on populated points, not

only in Korea but in China * * * The church cannot pass over in silence the sufferings of the Korean people, which is perishing from the brigandlike attack and demoniac malice of these human monsters * * * We shall hope that the Lord will put to shame the modern bloodthirsty Baal attempting to catch the entire world in his net, that the dread hand of providence will restore the truth that has been defiled."

Nikolai did not think much better of Pope Pius XII whom he regarded as a mere agent of American imperialism.

These are but a few brief excerpts from pages of similar slanders by Metropolitan Nikolai which have appeared in the Soviet press and journals.

At this point the sceptic will probably ask: "Why should the atheist Soviet regime build up religion when its own history and all its official pronouncements decree the death of all religions under the sickle and hammer?" News and Views for last November carried a long article "Treason or Dupery?" which fully explained the new line laid down by Stalin in and during the last war for exploiting the captive Orthodox Church of Russia to advance the interests of the Soviet regime. With a cynicism without parallel in history, the Communists use the Russian Orthodox Church as a weapon for world domination and the ultimate extinction of all religious belief.

By reestablishing and granting quasi-recognition to the church atheist and cynical Communists accomplished the following:

1. It enabled them to assimilate and bring under their control the Orthodox churches of the conquered satellites of East Europe.

2. It helped toward an old Russian objective—to make Moscow the "Third Rome".

3. It hampered the spread of the underground or catacomb church.

4. It gave the Soviets enormous world-wide prestige as many religious people, impressed by the apparent restoration of the Orthodox Church, lessened their suspicion of an animosity toward the Soviet Union. An apparently free functioning hierarchy and "packed churches" were witness to the liberality and tolerance of the Soviets toward organized religion.

5. With secret police agents posing as priests and listening to confessions, as well as penetrating every strata of the hierachy, it gave the Soviet police state another secret observation post inside the minds of the Russian enslaved people.

6. It enabled venal and treacherous Soviet clergymen to build bridges of contact and confidence with western clergymen and in turn rope them in on all manner of Soviet propaganda enterprises; viz, Stockholm Peace Appeal, World Congresses for Peace, etc., etc.

7. It enabled the Soviet government through its religious stooges to by-pass the Ecumenical Patriarch of Constantinople and the Roman Catholic Church and deal directly with other Christian denominations throughout the non-Communist world.

For example, in July, 1948, the Moscow conference of the heads and representatives of the Orthodox Autocephalous Churches announced that universal Christianity was not identified with western civilization; that most western Christian sects no longer followed the precepts of Christ and the True Faith and were sunken in materialism, greed, vice, and corruption. Only the Orthodox church represented the true faith and communism was nothing more than the Kingdom of God on this earth. Nine months later the First World Congress of Peace Partisans meeting in Paris issued a manifesto embracing much the same general line that the West had abandoned Christianity in its mad search for ever greater nuclear bombs and mass destruction weapons.

The Soviet hierarchy therefore have become an extremely valuable and important weapon in the arsenal of world communism as directed from Moscow. And, Metropolitan Nikolai of Krutitski and Kolomna is one of the most important front men in this international confidence game to bamboozle gullible Western clergymen into acting as dupes for all sorts of Communist propaganda swindles and confidence games.

If your church adheres to the National Council of Churches of Christ and the World Council you officially are associated with Boris Dorofeyevich Yarushevich, alias "Metropolitan Nikolai" in this most colossal and cynical hoax of all history. Take another look at page 114 of March 23 Life and read Mr. Deriabin's sensational article.

The N.C.C.C.'s Outlook for May 1956, in defending the Moscow visit of nine of its top leaders, commented, "Only a few seem to think it wrong for American Christians to talk with Russian Christians." The testimony of Soviet defector Deriabin can now leave no doubt that the Reverend Blake and his associates were not talking to "Russian Christians" at all but to murderous Soviet secret police agents and their stooges masquerading in clergymen's clothes.

Thus, official Soviet sources leave no doubt that Nikolai rose steadily to the second top ecclesiastical post in all of Russia while the Bolsheviks were exterminating the rest of the Orthodox clergy and extirpating all religions. As priests were murdered or deported to slow deaths in Siberia Nikolai stepped from one sacerdotal preference to the next. When Khrushchev went to the Ukraine to wipe out all anti-Soviets in blood purges, Metropolitan Nikolai was on hand to handle the purges of the clergy.

Metropolitan Nikolai's blood-strewn trail is a matter of open record in official Soviet documents. This record was available to the Rev. Eugene Carson Blake and his National Council of Churches' associates when they went to Russia in 1956 and invited Nikolai to this country. The Deriabin disclosure merely confirms and clinches the record. Blake now has little choice but to get down on his knees and ask God for forgiveness. Then he owes the American people a confession of grave error and an apology for having misled so many other clergymen into playing the fool in advancing Communist aims and objectives.

A Bill To Permit Weekly Newspapers To Suspend Publication for 2 Weeks a Year Without Loss of Second-Class Mailing Privileges

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. WOLF, Mr. Speaker, today, I introduced a bill to permit weekly newspapers to suspend publication for 2 weeks a year without loss of second-class mailing privileges.

The rural area of Iowa, and of America, is dotted with many small communities which are served by small weekly newspapers—often these newspapers are owned by one family and are manned by only one or two people.

These small publishers are literally chained to their jobs because of Federal regulations governing their mailing permits and because of State laws relating to legal advertising. These laws and regulations require publications week after week without interruption. These publishers do not have the trained personnel to permit them to enjoy an annual 1- or 2-week vacation.

Mr. Speaker, my proposed legislation merely gives the individual publisher the right to suspend publication for 2 weeks each year if he chooses.

The small weekly newspapers, which are very near to the thoughts of the people, have provided us with a medium of news and editorial opinion that cannot be replaced. It, therefore, seems to me that we should take every step possible to strengthen the small community press—not discourage it.

Centralization of the press and news media, in general, is a dangerous thing. Since the tendency has been toward more centralization and consolidation, it is time we did something to stimulate and encourage the small independent news outlet.

Hon. Andrew J. Sordoni, of Wilkes-Barre, Will Provide College Scholarships

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news stories from the Wilkes-Barre Sunday Independent of May 3, 1959, and the Wilkes-Barre Record of May 4, 1959:

[From the Wilkes-Barre Sunday Independent, May 3, 1959]

THREE SCHOLARSHIPS WILL BE GIVEN BY A. J. SORDONI—MAKES DISCLOSURE UPON GETTING AWARD FROM BACK MOUNTAIN GROUP

The Andrew J. Sordoni Foundation will provide three 4-year scholarships to Wilkes, King's, and Misericordia Colleges with the recipients to be selected by the directors of the Back Mountain Protective Association.

Mr. Sordoni made known this decision last night when he was honored guest at the annual dinner of the Back Mountain Protective Association at Irem Temple Country Club and received the group's Community Service Award.

The 250 persons who attended the event, the largest in the association's history, roundly applauded Mr. Sordoni's announcement.

Presentation of the award by Atty. James Lenahan Brown, association president, was made more significant as Attorney Brown traced the indelible imprints that the "Senator" had made in the development of the Back Mountain area. He emphasized the roles which Commonwealth Telephone Co. and the Harvey's Lake Light Co. had played in the industrial and residential growth within the region.

Attorney Brown noted that both of these utilities, under the leadership of Mr. Sordoni, had paced the area's development efforts. "The story of the growth of Commonwealth Telephone Co. is all the more dramatic for the part it has played in unlocking the final door to gracious suburban living. Then, too, the location of its general offices in Dallas and the stature the company has assumed as third largest independent telephone company in Pennsylvania has meant much to furthering the area. Truly, we honor this evening a man whose contributions to the Back Mountain area, and, indeed, with every area which has felt his dynamic leadership, know no bounds in their telling," he said.

Attorney Joseph L. O'Donnell was the toastmaster and, in his inimitable humor-our style coupled with forthright observations on the honored guest and association officers, set the pattern of an evening of both serious reflection and entertainment.

Judge J. Harold Flannery was principal speaker. In his address, he noted:

"This seems to be an age of conformity. Our social order is developing us in a pattern. If we do not dress as our neighbors dress, drive the same or similar car as he drives, have the same education and the same aims, ideals, and purposes, we are suspect, we are different. We do not fit.

FOLLOWED NO CROWDS

"At one time the symbol of America was rugged individualism. Today, thanks to advertising and social mores, it is abject conformity. You want to get on; don't you? Then don't be conspicuous, don't be different. What will people say? Wait for life to come to you.

"Give me the man who will challenge his destiny, who will go out to meet life and dare the slurs and arrows of outrageous fortune. If that man goes down he goes down gloriously, if he succeeds, he succeeds magnificently.

"That is one of the reasons we honor our distinguished guest tonight. He followed no crowd, anxious to fit, anxious to conform. He dared grandly, he strove mightily, and he has achieved magnificently."

Judge Flannery then went on to describe the qualities of head and heart and spirit which characterize Senator Sordoni and won him the place he has achieved wherever his interests and activities have touched.

Acknowledging the award, Mr. Sordoni said, "Everyone here has contributed in full measure to making the Back Mountain area a thriving, industrious community—a wonderful place in which to live and enjoy the fullness of life as it was meant to be.

"There are some of us here who remember back some 40 years and many of us then could visualize what this area could become. Working together, we've seen these visions realized. That is our greatest reward."

Former Senator Sordoni traced the early history of both the Harvey's Lake Light Co. and of Commonwealth Telephone Co. He noted that back in 1922 the Harvey's Lake Light Co. had 6 miles of line and 100 customers. Today, it has over 370 miles of line and 3,500 customers with a plant valuation approximating $1,250,000.

"Commonwealth Telephone Co.," he said, "in January 1928 had a total of 9,500 stations in its system. Today, its 73 exchanges has 68,395 stations and 90 percent are dial operated. Today in the Dallas district, there are 7,260 stations, almost equal to the number of subscribers in the entire company in 1928."

EMPLOYS 150 HERE

Commonwealth Telephone Co. in its general offices at Dallas alone has 150 employees and an annual payroll of over $500,000. Commonwealth's plant investment in the Back Mountain area exceeds $3 million. This year Commonwealth construction and service improvements in the Dallas area schedule an expenditure of $350,000 and of another $250,000 in 1960.

Note was also made of Sterling Farms at Harvey's Lake which, comprising 4,200 acres is noted as a model grassland dairy farm with its prize-winning herd of registered Guernseys. It has for many years been the scene of statewide Gressland Field Days and exhibited as a model of the industry.

Senator Sordoni concluded, "Our Sordoni interests will always help pace the growth of the Back Mountain area, a growth which I feel has just begun. I am humbly grateful for this honor you have given me this evening. My greatest reward, however, has and will continue to be the friendship you have extended and the knowledge that I am 'one' of you'."

Entertainment included vocal selections by Mrs. Sylvia Schooley, accompanied by Mrs. Robert W. Laux and selections by the Misericordia Ensemble.

Dinner chairman was Robert W. Laux and Mrs. Elizabeth Wallo, cochairman. Members of the reception committee included Rev. Robert DeWitt Yost, Joseph Palacky, Willard Garey, Mrs. James Lenahan Brown, Mrs. F. Budd Schooley, Mrs. Sam Davis, Mrs. David Lohmann, Mrs. Jean Kuehn, R. E. Neal and Mrs. Laux.

[From the Wilkes-Barre Record, May 4, 1959]

THREE SCHOLARSHIPS TO BE GIVEN—SORDONI ANNOUNCES FOUNDATION GIFTS

Highlighting the testimonial dinner tendered Andrew J. Sordoni by the Back Mountain Protective Association Saturday night at Irem Temple Country Club was the announcement by Senator Sordoni that the Andrew J. Sordoni Foundation will provide three 4-year scholarships—one each to Wilkes College, King's College and College Misericordia—with the recipients to be selected by the directors of the protective association.

"A man who challenged his destiny, who met life and dared the slurs and arrows of outrageous fortune. He dared greatly, strove mightly and achieved magnificently," Judge J. Harold Flannery said in paying tribute to Sordoni, who was presented the Back Mountain Protective Association's Community Service Award.

Judge Flannery noted, "This seems to be an age of conformity. Our social order is developing us in a pattern. If we do not do as our neighbors, we do not fit.

"At one time the symbol of America was rugged individualism. Give me the man who will challenge his destiny. If that man goes down, he goes down gloriously; if he succeeds, he succeeds magnificently. Our honored guest followed no crowd, anxious to fit, anxious to conform. He dared and achieved magnificently."

Judge Flannery described the qualities of "head and heart and spirit" which characterize Senator Sordoni and won him the place he has achieved wherever his interests and activities have touched.

In presenting the Community Service Award to Andrew Sordoni, Attorney James Lenahan Brown, association president, reviewed the imprints the "senator" had made in the development of the Black Mountain area. He emphasized roles played by Commonwealth Telephone Co., and the Harveys Lake Light Co. in the industrial and residential growth of the region. "The Commonwealth Telephone Co. story," he said, "is the more dramatic, for the part it has had in unlocking the final door to gracious suburban living. Then, too, the location of its general offices in Dallas and the stature the company has assumed as third largest independent telephone company in the State has meant much to furthering the area. Truly, we pay tribute to a man whose contributes to our Back Mountain area and, indeed, with every area which has felt his dynamic leadership know no bonds in their telling."

In accepting the award, Andrew Sordoni said, "It's not any segment here this evening but everyone who has contributed in full measure to making the Back Mountain area a thriving, industrious community and a wonderful place in which to live and enjoy the fullness of life as it was meant to be.

"There are some of us here who remember back some 40 years and many of us could then visualize what this area could become. The fact that, working together, we've seen these visions realized is our greatest reward."

Former State senator Sordoni traced the early history of both the Harveys Lake Light Co. and of Commonwealth Telephone Co. He noted that in 1922 the Harveys Lake Light Co. had 6 miles of line and 100 customers. It now has 370 miles of line and 3,500 customers with a plant valuation approximating $1,250,000.

Commonwealth Telephone Co. in its general offices at Dallas has 150 employees and an annual payroll of over $500,000. Its plant investment in the Back Mountain area exceeds $3 million. This year Commonwealth construction in the Dallas area schedules an expenditure of $350,000 and of another $250,000 in 1960.

Note was made of the Sterling Farms at Harveys Lake which, comprising 4,200 acres, is noted as a model grassland dairy farm with its registered herd of Guernseys. It has for many years been the scene of Grassland fields days attended by hundreds of agricultural experts from all over the East.

In concluding, Senator Sordoni said, "I am humbly grateful for this honor. My greatest reward continues to be the friendship you extend and the knowledge that I am one of you."

Vocal selections by Mrs. Sylvia Schooley accompanied by Mrs. Robert W. Laux and the Misericordia Ensemble provided entertainment through the dinner.

Dinner chairman was Robert W. Laux and Mrs. Elizabeth Wallo, cochairman. Members of the reception committee included Rev. R. D. Yost, Joseph Palacky, Willard Garey, Mrs. James Lenahan Brown, Mrs. F. Budd Schooley, Mrs. Sam Davis, Mrs. David Lohmann, Mrs. Jean Kuehn and Mrs. Robert Laux.

The Fallacy of Blaming Inflation on Wage Increases

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. PORTER. Mr. Speaker, everybody is against inflation. We know the great harm it does to helpless people. The problem is complex. Companies who can purchase full page ads ought, in my opinion, to show more responsibility about the kind of facts they peddle. The correspondence set out here below, under a previous consent, shows that the Warner & Swasey Co. has selected wages as the cause of price increases, omitting completely any consideration of profits, administered prices, and other factors far more in the control of the employer than wages are in the control of the employee.

The correspondence follows:

MARCH 11, 1959.

Dr. HUGH ELSBREE,
Director, Legislative Reference Service, Library of Congress, Washington, D.C.

DEAR DR. ELSBREE: Enclosed is an advertisement that appeared in the U.S. News & World Report for February 27. I think these figures are either wrong or misleading or both. Wages minus productivity doesn't equal a meaningful figure because there are two different bases, so how can they talk about the 2 percent difference?

I'd like to have one of your economists fill in the correct statistics and confirm or deny my feeling that this reasoning is highly fallacious.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

EARN YOUR WAGE INCREASE OR YOU'LL LOSE IT

All the labor contracts in the world can't beat arithmetic—either you earn your wage increase by enough increased production to pay it, or lose it by rising prices that you help cause. Since the war, wages have gone up 5 percent per year. Productivity has gone up only 3 percent. Where else could the 2 percent difference come from except higher prices? And that is exactly what has happened—prices up an average of 2 percent per year.

Why not enjoy your wage increase? Demand modern machines, use them to increase efficiency of your production, and you'll be worth more without costing more. Everybody benefits—you most of all.

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D.C., March 30, 1959.

To: The Honorable CHARLES O. PORTER.
From: Sar A. Levitan.
Subject: Attached Warner and Swasey Advertisement.

This is in response to your recent request for comment on the Warner & Swasey ad which appeared in the U.S. News & World Report, February 27, 1959.

The ad states in part:

"Since the war, wages have gone up 5 percent per year. Productivity has gone up only 3 percent. Where else could the 2 percent difference come from except higher prices? And that is exactly what has happened—prices up an average of 2 percent per year."

An analysis of each of the assertions follows:

1. "Since the war wages have gone up 5 percent.":

It is assumed that the statement refers to World War II. There are no data for average hourly earnings for all American industry dating back to 1945. The U.S. Department of Labor publishes gross hourly earnings for production workers in manufacturing and other industries.

According to the Bureau of Labor Statistics, gross average hourly earnings since World War II have more than doubled; consequently, the average hourly rate of manufacturing employees in current dollars has risen by more than the 5 percent claimed by Warner & Swasey.

The Bureau of Labor Statistics has published recently data for average hourly wages and salaries in nonagricultural employment going back to 1947. According to this series, the average hourly wages and salaries between 1947 and 1958 rose 73.3 percent. This would mean 6 percent a year, rather than the 5 percent claimed in the ad.

2. "Productivity has gone up only 3 percent."

Again, according to the U.S. Department of Labor real product per employee man-hour rose 29.2 percent between 1947 and 1958, or 2.5 percent per year.

3. "Prices up an average of 2 percent per year."

The Consumer Price Index rose between 1947 and 1958 a total of 28.2 percent, or about 2.4 percent per year. Between 1945 and 1958 the Consumer Price Index rose by 60.4 percent, or almost 5 percent a year.

It appears that whatever claim Warner & Swasey have as producers of precision machinery does not extend to the use of precise statistics. But while the data used in the ad may be questioned, there can be little disagreement with the conclusion that the source of increased real wages lies in rising productivity.

However, the implication left from the ad is that prices rise as a result of wage increases. Few economists would agree with this broad statement. Causes for price increases obviously are much more complicated. While wages are a major factor in costs—about two-thirds of total American income is paid in wages and salaries—one may still question the extent to which rise in prices brings about wage increases and the impact of rising wages upon prices.

This in a nutshell is, of course, the basic current debate about the causes of inflation. The Warner & Swasey ad disregards all other factors and leaves the impression that rising wages are the only cause of inflation.

APRIL 6, 1959.

WARNER & SWASEY,
Cleveland, Ohio.

GENTLEMEN: I refer you to your ad on page 1 of U.S. News & World Report for February 25, 1959. Your machinery may be precise but your statistics are not.

Of course, I agree with you that the source of increased real wages lies in rising productivity, but your cavalier use of percentages borders on the irresponsible. I assume this was unintentional and that you relied on your advertising agency. That is why I am taking the trouble to point out your errors.

Enclosed is a copy of an analysis I had prepared by the Legislative Reference Service of the Library of Congress. I would be glad to have your comments, especially an explanation as to how the persons who prepared that ad could be so far off base.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

CLEVELAND, OHIO, *April 21, 1959.*

The Honorable CHARLES O. PORTER,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR MR. PORTER: Thank you very much for writing to us about our advertisement, "Earn your wage increase or you'll lose it," and for having had an analysis prepared by the Reference Library.

With regard to the preciseness of our statistics, I'm afraid that I must raise the question as to what statistics on these subjects are precise? Frankly, we were not trying to be particularly precise, and I admit asking our copywriter to modify his figures to eliminate as many arguments as possible.

As your report shows, we can get statistics that will show much higher increase in gross average hourly earnings, and we can get statistics that will show that productivity has gone up less than we stated. We can also get statistics to show that prices have gone up more than we stated. We were trying to paint a picture, and we felt that the figures we quoted were shocking enough so that we did not need to use extreme figures.

Actually, I am not sure that I would be willing to accept any set of statistical figures on these subjects as being accurate; but I am perfectly willing to accept what I believe to be fact, and that is that if costs of production go up faster than increases in productivity, we are going to have higher prices, and if we have higher prices, increased wages are of little avail.

Admittedly, the entire picture is confused. On many items, present day prices are less in terms of hours worked by the average person; but in other cases, prices are higher in terms of hours worked by the average person. This, in my opinion, does not change our major premise, namely, that management, government, and labor should strive to continually increase the amount of goods produced, and that if wages increase faster than the increase in production per worker, prices will rise and wage increases will, in effect, be lost.

Yours very truly,

(Signed) WALTER K. BAILEY,
President.

P.S.—I spent a day in Portland last week. The weather was beautiful, and I admired everything out there. I regret to say that I had not been there in a good many years.

Remarks by Vice President Nixon at Conference on India and the United States

---

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the opening remarks of Vice President RICHARD NIXON to the Conference on India and the United States, May 4, 1959, in Washington, D.C., which was sponsored by the Committee for International Economic Growth:

OPENING REMARKS OF VICE PRESIDENT RICHARD NIXON TO THE CONFERENCE ON INDIA AND THE UNITED STATES, 1959

Mr. Johnston, Mr. Ambassador, and distinguished guests, ladies and gentlemen, I am very honored to appear here at this program, opening this historic conference and I can only say that I always feel much overwhelmed in a position such as this, because I realize that I am speaking before a group of people who are primarily experts on the subject which I am asked to cover. Mr. Johnston suggested that I have traveled a bit in the past 6 years, and he is, of course, correct—but I will have to admit that my travels throughout the world left time for only 5 days in India—and as anyone who has visited that country would tell you, 5 days does not make you an expert. I do not speak today to you who are experts in this field as one myself, and I know that from reading your program, you are going to make studies in depth of the problems which you are considering, but I thought it might be useful if I were to touch upon three matters of concern that might come up for consideration during the course of this conference. I noted that the first item listed on your agenda is the relation of India and its importance in relation to the security and freedom of the free world. Now when we consider the importance of India and its relationship to the security and freedom of the free world I think that perhaps we can best put it in context by pointing out one of the great crisis which confronts us today and measuring the problems of India with that crisis.

If you picked up your morning newspapers you no doubt noted that most of the headlines internationally on the front page dealt

with the crisis in Berlin. I would not underestimate the importance of the Berlin crisis, but I will say today that in my own mind what happens to India insofar as its economic progress is concerned in the next few years could be as important, or could be even more important in the long run than what happens in the negotiations with regard to Berlin. Now, having made this statement, let me indicate why I believe that is the case. As we know, in the great struggle which is going on in the world today, primary emphasis at the present time is on the nonmilitary aspect of the struggle—in Asia, in Africa, in the Near East, and in parts of Latin America and the whole world—not only the Asian world, but the American world, this hemisphere, is watching that struggle in Asia. There are two great peoples in Asia. The peoples who live under the Communist government of China, and the people of India. These are the two greatest population centers of the world, and of course the two greatest in Asia. One of these people is attempting to achieve economic progress without freedom. The other, the people of India, are attempting to achieve economic progress with freedom. They are very different in many respects, but they are alike in this respect. They both need—they both want—economic progress and so the question which will be answered in the next 5 years—the next 10 years—will be this: Can a people who need economic progress to satisfy the wants of their greatly increasing populations, achieve it in a climate of freedom, or must they pay for progress by giving up freedom? And what happens in India will therefore have a tremendous impact on the decisions made in other countries in Asia, in the Near East, in Africa, and even in the Americas. So this indicates the tremendous stake that the free world has in the economic problems of India.

Now, a second point, that I would make, is with regard to the attitude of the Government of the United States—the attitude that our Government and our people should have insofar as any aid we are able to provide for the economic development of India, or any other country in a similar status. I have often heard it said during courses of debates on this subject, that there are times when countries which we have been able to assist through loans or other programs, should not receive such considerations in the future because their leaders do not always agree with our leaders in the United Nations, or in other world councils. And my answer is always this: The purpose of U.S. aid has been, is, and must always be, not to make any country dependent upon us, but to allow all countries to be independent of us, or of any other foreign domination. Now, how can we justify, my friends in the Congress might ask then, the allocation of Government funds when we agree at the outset that those funds may not, in some instances, obtain complete agreement with the policies of the United States, and my answer is this: Our stake, the free world's stake, in India and all the other countries which are in this category, is that they are able to get the economic stability which will enable them in turn to have political independence. How does this serve us? It serves us because international communism and national independence are completely incompatible. And so this, of course, is the answer to those who do raise questions when this matter is up for consideration, as it will be during the course of this conference.

Now, a third point that I would make, is this: We agree that India needs economic progress. There is, of course, considerable disagreement as to how other nations may assist and work with the people and Government of India in attaining that progress. The easy answer would be, as far as the United States is concerned, to suggest that we best could assist by expanding what government does, and I would certainly say here today that our technical assistance programs, the programs of loans to the Export-Import Bank and the Developmental Loan Fund, and other governmental programs, certainly should be approved in the minimum amounts which have been requested by the administration. But I would be less than realistic if I were not to point out that if you were to place exclusive or even primary reliance on government assistance from the United States in order to attain this economic progress, we would be most unrealistic. And so I was glad to note that in the course of this conference not only will you consider what government can do, but also how private capital may also be attracted to this area of the world. And I would mention just three advantages that private capital has over government capital, recognizing at the outset that both are necessary, and both have their place.

First—Private capital is expansible, almost to an unlimited extent, whereas Government capital, insofar as our country the United States, is concerned, is limited—limited by our own budget and by the considerations which always come up when budget problems are before a country.

The second point is that, where private capital is concerned, there is and can be no question of any political influence going with it, and on occasions there is, of course, a question where Government capital is concerned that there might be political implications involved, and the third point is that private capital brings with it the skilled technical assistance which is needed, and without which capital might be wasted. These three advantages, I think, are worth mentioning, and I emphasize again that both are necessary, but in your considerations develop to the full how private capital can come in, because its greatest advantage is the first one I mentioned, that it is expansible, whereas Government capital is definitely limited.

And now if I could go to one last point. It is related to my first—I noted that in your conference agenda you have pointed out that you would consider the importance of India in relation to the security and freedom of the free world. Speaking now as an official of the American Government, and as an American citizen, I would not like this great Conference to begin believing that this was our sole interest. As far as a government and a people were concerned, when we did provide governmental assistance, or other assistance to our friends in India. If there were no communism in the world—if there were not threat of communism to the United States and other free nations like India, there would still be poverty and misery and disease, and when the people of the United States and our Government would be concerned about that poverty and misery and disease, and I would not like the case for Government assistance, the case for the interest of the American people in our friends in India, to be rested at the outset of this Conference simply on the negative, defensive issue of helping India in order to save the United States from communism. I think the case can better be presented in terms of—not the defeat of communism, in which, of course, we are interested, because we realize that freedom can live only where dictators are defeated—but our primary interest must be the victory of plenty over want, of health over disease, of freedom over tyranny of any type, wherever it exists in the world, and as far as our friends in India are concerned, we can assure you, those who are here today, and those in that great land so far away, in which we have always had such a warm and friendly interest, we can assure you that we welcome the opportunity to work with you, to work with you in developing the economic progress which is yours, so that you can prove to all the world that it is possible to have progress with freedom. This is our aim, and we know also that it is yours.

Thank you very much.

German American Chamber of Commerce

EXTENSION OF REMARKS
OF

HON. ALBERT H. BOSCH

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. BOSCH. Mr. Speaker, I have previously referred to the uniting of the United States-German Chamber of Commerce and the German-American Trade Promotion Office into the German American Chamber of Commerce, Inc., on April 27, 1959. I have been fortunate enough to secure a copy of the speech delivered on this occasion by Mr. Fritz Berg, president, Federation of German Industries, president, Council of European Industrial Federation.

Under leave to extend my remarks, I include the above-mentioned speech:

ADDRESS BY FRITZ BERG, PRESIDENT, FEDERATION OF GERMAN INDUSTRIES, PRESIDENT, COUNCIL OF EUROPEAN INDUSTRIAL FEDERATIONS

Before I came here, some friends suggested that my task tonight was to make a speech on a newborn child. I had to tell them that they were wrong and that the event we are celebrating today was not the christening of a child but, rather, the logic conclusion, the happy-end of a relationship that led up to marriage.

To put it in less romantic terms, we are celebrating today the fusion of two organizations both of which had set themselves the same basic aims: the promotion of economic relations and the strengthening of economic ties between the United States and Germany. It was logic, therefore, that these two organizations—the United States-German Chamber of Commerce and the German-American Trade Promotion Office—should unite.

The United States-German Chamber of Commerce was formed in 1947, only 2 years after the war. It was formed at a time when relations between our two countries were not yet placed on the same basis of friendship and mutual confidence by which they are characterized today. It should be underlined that those who took the initiative to set up a German American Chamber of Commerce so little time after the war were United States citizens. Let me take this opportunity of expressing our gratitude to them. With small means at their disposal, they rendered invaluable assistance in reestablishing contacts that had been broken during the war.

The German-American Trade Promotion Office (GATPO) was established in 1950, as the U.S. branch of the Association for the Encouragement of German-American Trade. "Dollar-drive," as this organization was briefly referred to, was created by private business organizations and government with the encouragement of the U.S. Government. It has given invaluable service to German businessmen trying to sell in the American market which, as you know, has never been an easy market to tackle for European exporters. But it has also helped American businessmen find their partners in Germany. I wish to thank all those who worked with GATPO for the important contribution they

have made to the revival of trade relations between the United States and Germany.

At the end of the war and for some years afterwards, there were no genuine trade relations between our two countries at all. Then, from 1950 to 1958, German exports to the United States rose from $102 million to $629 million, while imports from the United States between 1950 and 1958 went up from $412 million to $998 million. Capital transactions also increased constantly; today American investments in Western Germany amount to about $500 million.

However, in this connection it is only fair to mention one name which cannot be repeated often enough when speaking of the reconstruction of the European economies after the war: the Marshall Plan—standing out in economic and political history as a symbol of generosity combined with wisdom. It provided the basis on which only our own work and initiative could bear fruit. And as far as Germany is concerned, there is a man who had an important share in the practical execution of this American policy and whom we are privileged to have among us tonight: Mr. John J. McCloy. I first met him in Frankfurt in 1950 when he represented the United States in Germany. When he left several years later, we had the feeling that a friend was parting, one that had always tried to understand the nature and the problems of our country. If relations between the United States and Germany have taken the course they did, if they are governed today by mutual respect, friendship and confidence, this is in great measure his merit.

The rapid increase in trade and economic interrelations during the past years convinced us that the time had come to create a new instrument of German-American cooperation, perhaps somewhat different in character from both the two predecessor organizations I mentioned a minute ago. The new organization, it is true, must perform the classical tasks normally attributed to a chamber of commerce: to assist businessmen in carrying on trade and establishing new contacts with business partners in the other country. But in doing that we hope it will be a platform for the exchange of ideas and opinions between business leaders on the essential questions of our economic relations—thus making a valuable contribution to the promotion of American-German cooperation within the wider framework of Western cooperation.

It is in this spirit that I would now like to touch upon some of the topical problems of the world economic scene.

As regards Germany's and Europe's commercial relations with the United States, there is one development which, of late, seems to be in the center of interest over here: the creation of a common market among six nations of Western Europe. The European Economic Community, as it is officially called, is part of the efforts to unite Europe (or, at least, part of Europe). Ever since the end of the last war, the United States followed a policy of encouraging European integration. For she believed that European unity would increase the strength and stability of the free economies in Europe and thus enhance our mutual security.

No doubt this official American policy is still valid. But now that the European Economic Community has come about, concern is sometimes expressed in America that the common market might develop into a protectionist bloc discriminating against the outside world and running counter to the efforts of freeing trade on a worldwide scale.

Let me briefly enumerate the reasons why I am convinced that this concern is completely unfounded.

First, the common external tariff which is to be established under the Rome Treaty will not be higher than the average of the previously existing national tariffs, and in many cases it will be lower. Nevertheless, it might be argued, the dismantling of internal tariffs within the Common Market will in some cases make it more advantageous for a country to buy from one of its Common Market partners what it previously bought from countries outside the community. But then it should be kept in mind that the common external tariff will not be created overnight, but within a long period of 12 or 15 years—giving plenty of time for such adaptations in trade and production programs as may appear expedient.

Secondly, while the six are an important market for the United States, about three-quarters of U.S. exports to the Common Market countries consist of foodstuffs, tobacco and raw materials, on the majority of which tariffs are low or nonexistent. The rest of American exports to these countries consists of finished goods, especially industrial equipment, machinery, and chemicals. In these fields, the United States should always be able to find a market, despite customs barriers, because it is generally further ahead in technological development. Thirdly, it should not be forgotten that by way of bilateral negotiations between third countries and the Common Market, as well as negotiations within GATT, there is much scope for progressive reduction of such protection as remains (and in fact the United States is about to take an initiative in this matter). Fourth, the creation of a great market in Europe has increased incentives for American business to establish branch factories in Europe, to conclude license agreements and to participate in European enterprises. In fact, many important American companies are already moving in this direction.

Fifth, and this to my mind is the most important reason and one of the main reasons why the Common Market was established at all: it will certainly lead to general economic expansion within the six countries. This means greater purchasing power and generally increased chances of selling in this market. The higher the income, the more "needs" people detect and the more they want to buy. Thus, as you all know, our best customers are the most highly industrialized countries.

For these reasons I do not believe that the establishment of the Common Market will involve for the United States a loss of markets in Europe. On the contrary, it will offer a chance for an expansion of trade in many fields.

I would add that the will not to create a protectionist bloc but to contribute progressively to the freeing of international trade in general is not only laid down in the Rome Treaty; it is also demonstrated by the fact that the majority of the Common Market partners support the idea of a European Economic Association (or free trade area, as it was formerly called), extending the benefits of tariff dismantling to all 17 OEEC countries in Europe.

If negotiations on this association between the Common Market countries and their partners within OEEC have proved difficult, I am confident that a solution will be possible. The introduction of currency convertibility by 11 European countries and the special measures taken by France at the end of last year have considerably improved the prospects for reaching agreement. Of course, it will not come about overnight. France, after the courageous steps she has taken to reform her economy and to stabilize her currency, now needs a little time to breathe. The solution will have to be a compromise, probably in the form of a multilateral commercial agreement.

Germany industry, in agreement with its government, has always supported such a compromise and tried to mediate between the divergent points of view.

While the subject of the proposed agreement is a purely economic one, the creation of a European Economic Association is nevertheless also of immense political importance. The statesmen should act correspondingly. Cleavages of opinion in the negotiations have been largely about matters of technical detail. These, to my mind, should not provide the basis for decisions on projects of such consequence—economically and politically.

We therefore sincerely hope that the European Economic Association will become a reality. But we should not stop attention there. Within the Western World as a whole we should adopt the regular habit of consulting each other on all important matters of economic policy. In the interest of a harmonious and expansive development of the economies of the free world and in the interest of an effective defense against Soviet expansion, we should coordinate all essential measures in the field of business cycle, monetary and foreign economic policy.

Perhaps we ought to give some thought to the question as to how this can best be achieved: if new organizational forms are required or if it can be done within existing organizational frameworks.

Let me next turn briefly to one of the central problems of international economic policy and one of the most important tasks for cooperation among all Western countries: the assistance to the less developed areas. We want to help these countries, for moral as well as for quite selfish reasons, to develop their economies, to raise the living standards of their populations and, thus, to become better partners in a worldwide mutually beneficial commercial exchange.

I said this was a common task of the West. But what we are lacking most so far is a coordination of policies and a common concept as to how we should assist these countries. All too often in the past Western assistance has proved economically worthless, because it was not used in the right way, while politically it produced the opposite effect than had been hoped for. Also very often we gave assistance against each other, guided by short-sighted commercial motives. Let those in government and business who bear responsibility in this matter get together, in order to find, and to agree upon, a common policy—in the interest of the countries to be developed, in our own long-term interest, and because Western assistance must be as effective as possible in comparison with Soviet activities in this field.

What we need is a policy inspired by a combination of generosity and wisdon—as was the Marshall plan.

Assistance to the less developed areas is closely connected with the question as to how a stabilization of international commodity markets can be achieved.

The main commodity producing countries aer identical with the countries in process of development. On average, about 80 percent of their foreign exchange earnings are derived from exports of raw materials. It is obvious what the continuous fall of prices in the world commodity markets since about mid-1957 means under these circumstances.

The purchasing power of these countries is drastically reduced. It is rather disillusioning for them to find that they lose again, due to the fall in commodity prices, what they receive in the form of foreign assistance. However, the reduction of purchasing power means at the same time fewer purchases of industrial goods and equipment from the industrialized countries of the West (which no doubt was one of the factors in recent recessionary movements). Due to the incapacity of buying required capital equipment abroad the development programs of these countries are retarded and often seriously jeopardized.

The personal incomes of millions of people, already extremely low, are further

reduced. The consequence often is political unrest making these populations more prone to Communist infiltration.

I am aware the problem is a most complex and difficult one. I am also aware that past attempts at stabilizing commodity markets, for example by international commodity agreement, have not always been a happy experience. I dare not claim that a solution will be possible. However, in view of the importance this problem assumes in the wider context of assistance to the development countries and our defense against the Soviets in the economic field, we should at least try, jointly, to find a satisfactory solution in some form or other.

I mentioned the need for defense in the economic field. In fact, people often tend to forget that we are involved today in a global struggle with world communism in all fields of our existence—and that the threat is not only a military one.

At the 21st Communist Party Congress in the Soviet Union Mr. Khrushchev declared that it was by success in economic competition that communism would triumph on the world scene. If we adopt this way of thinking, it means that success or failure in the economic field are battles won or lost in the free world's struggle for survival with the Soviet bloc. In our foreign economic policy it means that many economic facts assume quite a different character from what they would be in a world of global international cooperation and peaceful competition and exchange.

You know Soviet tactics in the economic field, and I would not further dwell upon this tonight. I would only say that the problems involved must be tackled by the governments of the free world and by free enterprise in common.

Of course, this does not mean that we should regard all our economic relations with the Soviet Union as part of an economic warfare. Where the Soviets are prepared to follow normal trade practices and adhere to fair rules of international exchange, we can, I believe, confidently accept the challenge of competition. However, let us be on our guard and, where necessary, prepared to defend our free economies and our free way of life.

We in Germany stand at the frontline between the two blocs. You will understand, therefore, that we see the danger most clearly.

With the practical demonstration of communism right in front of us, in the eastern half of our own country, we stand the more firmly by the West—where we belong by our tradition, by our common cultural heritage and because we are—and want to remain—a free nation.

Let me say this again quite clearly: German industry has from the beginning wholeheartedly supported the policy of integration and cooperation with the West followed by the Federal Chancellor, Dr. Adenauer. Speaking on behalf of German industry tonight, I can assure you that our attitude will not change in the future. What, then, about the rumors which are occasionally heard that German industry is wishfully turning its eyes to the East in the hope of profitable business with the Soviet bloc?

Let me first quote a few figures. During pre-war years, Germany's trade with Russia was between 12 and 18 percent of its total foreign trade. Since the end of the war our trade with all Soviet-bloc countries has never exceeded 4 percent. Experts agree that for a number of reasons (for example, the irregularity of Soviet supply and demand, the limited range of goods offered by the Soviet bloc) there is little prospect of an increase in the years to come. Nor is there any special effort made by Western Germany to intensify trade relations with the Soviets. If there should be more trade in the future, it will be only within a general expansion of foeign trade.

Germany will never increase its commercial relations with the Soviets at the expense of relations with the West. The determinate policy of promoting Western economic integration through the Common Market, the European Economic Association, and the various international economic organizations of the West is, I believe, sufficient proof of this.

We are convinced that dealings with the East at the expense of the West would be the beginning of the end of our free economic system and our free institutions. It is not always realized that free enterprise is not only completely exterminated in Soviet Russia, but also in Eastern Germany.

Surely, we shall not be so stupid to let ourselves be maneuvered in a situation where trade relations with the Soviet bloc could be exploited for political blackmail. The example of our Finnish friends shows how dangerous it is to deal with the Eastern bloc, if this bloc is at the same time in a position to exercise political pressure.

If German industry believes that it is irrevocably bound to the West, this is also true of the overwhelming majority of the German people. You can also be certain that the foreign policy of our Government will not change. While the decision by Dr. Adenauer to accept nomination for the office of Federal President may at first have caused a shock, it is now clear that this does not mean a turn in policy. On the contrary, it is a well-considered way of maintaining the continuity of German foreign policy for many years to come.

It cannot be my task to elaborate on the points at issue at the coming conferences at the summit. But you can be assured that our Government will have the full support of industry against any solution breaking Western Germany out of the community of free nations and isolating it politically from its present friends. For separated from the West, we would probably before long suffer the fate of Czechoslovakia in 1948.

At the same time, the balance of economic power would dangerously, if not decisively, shift in favor of the Soviets. Mr. Khrushchev, however, hopes to win the cold war through economic predominance. With the separation of Western Germany from the western community of nations he would be one step, a big step, closer to the goal of world domination.

Speaking of our attitude in the field of foreign policy, I wish to insert a few remarks about our relationship with France. Here again we have been convinced that the policy followed by our Government was right. This policy is based on the recognition that the essential core of economic and political cooperation in Western Europe is friendship between France and Germany. Time and again German industry has given proof of how much importance it attaches to this question. And I am happy to state that in this we are at one with the leading men of French industry.

Let me finally add a word about Berlin. Naturally the fate of this city is very close to the hearts of the Germans. However, as the advanced post of the West, Berlin is at the same time a concern of the whole free world. Let me express our gratitude to our American friends for the spirit of solidarity they have shown and for the firm attitude they have taken toward the Soviets in this question. Events have already proved that this firmness was right.

This brings me to the end. I could do no more tonight than briefly touch upon some of the outstanding problems our free world is faced with and in the solution of which we as representatives of free enterprises bear a great share of responsibility. Let us be aware of this responsibility and take the time—in spite of everyday business worries—to think about the problems which concern us all in common. As Mr. H. W. Prentis said at the first International Conference of Manufacturers in 1951, we should not only be businessmen but by our action give proof that we deserve the name of industrial statesmen.

Before I sit down let me express the hope that this German American Chamber of Commerce will be successful in fulfilling its tasks in the years to come, that it will make a contribution to United States-German cooperation and thus to Western cooperation in general.

Jazz: A Means of Direct Intercultural Communication No. 2

EXTENSION OF REMARKS
OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. COHELAN. Mr. Speaker, Ralph J. Gleason, columnist for the San Francisco Chronicle, has persistently argued that outstanding U.S. jazz musicians should be included in our various programs designed to communicate American life and culture to other peoples. I am in sympathy with his view that jazz is of "interest to the people of the rest of the world, the Soviet Union being no exception."

Mr. Gleason again makes his point in a recent article which, while outspoken and satirical in tone, nevertheless argues effectively for inclusion of jazz along with other cultural presentations in the American exhibition in Moscow this summer. I request that this article be reprinted in the RECORD for the attention of all Members of Congress:

(By Ralph J. Gleason)

Well, the State Department finally let the cat out of the bag.

They're not going to do anything about sending jazz to the American exhibition in Moscow this summer. In fact, the only performing arts to be presented will be, to quote Billboard magazine, "along the lines of symphony and/or ballet to balance with the Russian counterpart exhibiting in New York."

Billboard quotes Harold C. McClellan, director of the American National Exhibition in Moscow, as saying that it was intended to give "a complete picture of American life without reference either to political, military or other controversial matters, and with no propaganda."

McClellan doesn't come right out and say that there will be no jazz groups at the exhibition. He just says that the State Department isn't sending any. If, however, a jazz group happens to get to Moscow, perhaps as tourists, there will be facilities at the exhibition for performing artists. "Mikes will be set up all over the place," he says, and visiting artists will be allowed to perform if the directors think they're okay.

Think that one over. We can't send Count Basie to Moscow, but if he and his 15-piece band went over at their own expense, then maybe, maybe, they'd be al-

lowed to play at the cultural exhibition which is supposed to present "a complete picture of American life."

Do these people never learn? What is required to convince the U.S. State Department, all the way from Dulles down to McClellan, that jazz music is not just another aspect of U.S. life and culture, but a particularly vital one which is of paramount interest to the people of the rest of the world, the Soviet Union being no exception.

As this column has repeated time and again since the Moscow Exhibition was first announced, jazz music should be a major part of the plans with a full roster of the best jazz groups present. Jazz is our most effective ambassador, as every musician who gets overseas discovers PDQ. Obviously we don't have any musicians in the State Department.

However, we do have doughnut dunkers. What do you think we are going to set up in Moscow to help "give a complete picture of American life?"

We are going to set up a doughnut-making machine, so help me. "We will have a fascinating doughnut-making machine," McClellan says. "The accumulated doughnuts will be given away in batches twice a day," he adds, perfectly seriously.

Well, isn't that nice. No wonder the people of the world get an odd opinion of us with brilliant thinkers like this pastry fan handling things. "A fascinating doughnut machine." Is he kidding?

Construction Program for Medical, Dental, and Public Health Schools

SPEECH

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. FOGARTY. Mr. Speaker, the cold, hard fact of the matter is that we as a nation are not doing what we should today to make sure that the schools of medicine, dentistry, public health, and other centers for education and research in the health field are adequate to meet the challenges and responsibilities they face, and all of us face, tomorrow.

One hears a great deal about progress in the health field these days. It is true that we have made giant strides in some vitally important areas. We can be proud of what has been accomplished in the construction of hospital and other health facilities, in the improvements of medical and public health services, in medical research and the assurance of its future development. We can be pleased with the advances associated with the pharmaceutical and chemical industry, with the contributions of voluntary health agencies and foundations, and with the health-consciousness of the American people which finds expression in organization and action. We can be proud of these things, and pleased, but we cannot be content.

One of the great gaps in our present programs is in the absence of broad support for the health institutions as institutions, as contrasted with the support of some of their separate functions.

Specifically, I am concerned that we are at the breaking point in terms of the ability of these teaching institutions in the health field to keep up with our population growth and with the demands engendered by the rapid changes in medicine and public health.

This is not a new concern of mine, or of many people who are influential leaders in medicine and science today. A great many proposals have been made by Members of Congress, by the executive branch, and by interests outside of the Federal Government seeking ways to meet at least part of the all too evident need. There has been a great deal of discussion, but almost nothing in the way of action.

The legislation that I introduce today proposes that the Federal Government give greater assistance in the renovation and modernization of our present medical and related schools, and that at the same time we give encouragement and stimulus to the construction of new schools. It would build upon and extend the highly productive present program of matching grants to assist in the construction of health research facilities. Thus it sets no precedents and poses no philosophical problems, even among those who persist in the archaic belief that the use of Federal funds for the partial support of medical school activities is ipso facto a threat of Federal control and socialized medicine.

The thing my proposed legislation does is to give clear recognition to three things: First, that research and education are inseparable and often indistinguishable one from the other in a medical school environment; second, that adequate facilities are a basic requirement for medical, dental, and related research and education; and third, that the Federal Government shares in this responsibility to see that such facilities are provided commensurate with the national need.

In other construction programs, matching funds from Federal sources—such as the Hill-Burton hospital construction program and the health research facilities construction program—have been successful beyond all expectation in helping the States, communities, and institutions raise money from non-Federal sources. Such matching grants foster and encourage the putting of private and State money to effective use. Without such stimulus, the other funds might never be raised and the needed facilities might never be built.

It is proposed, therefore, that the Congress enact legislation which will modify and extend the Health Research Facilities Act, now in its third year and being very effectively administered by the Public Health Service, in the following major respects:

First. Changes the title of the Act to include facilities for education as well as research in the health field.

Second. Extend the authorized duration of the program to 5 years, beginning with the fiscal year 1960.

Third. Increase the annual authorized availability of funds from the $30 million now provided for research facilities only to a total of $50 million annually for both research and educational facilities, thus making $250 million available for presently established schools of medicine, dentistry, public health, and osteopathy over a 5-year period.

Fourth. In addition, provides $100 million with more favorable matching terms for the construction of new schools in the above fields, including an initial or starting grant of up to $25,000 for planning purposes.

Fifth. Expands by 50 percent the membership of the Council that reviews and makes final recommendations on these grants to include educational as well as research representation.

There is great urgency associated with the enactment of such legislation.

One reason lies in the population changes that will occur during the next decade. Our total population will grow from 175 million to 220 million by 1970. Nearly three-quarters of this increase will be among persons over 65 and under 20 years of age, when requirements for medical care—which means, primarily, more physicians—are most frequent.

Moreover, medical practice continues to be more complex and the task of educating physicians correspondingly so. It is a task that cannot be carried out effectively in the absence of a fully adequate physical plant.

Then, too, medical and related schools carry an increasing responsibility to pioneer in the provision of medical and community health services. They carry out the largest component of the Nation's research in the health field. And they produce and increasingly important segment of the Nation's total manpower for research in the health sciences.

For these and a host of other reasons that are self-evident, it is abundantly clear that these schools are a national resource. Their ability to meet the challenges of tomorrow is a matter of deep public concern. It is our responsibility to give voice and substance to that concern in a program of action—a program that will reflect the public interest.

The medical schools need for assistance in the construction of new and the renovation of existing facilities has been amply demonstrated and often reiterated in studies and reports by such eminent groups as the Association of American Medical Colleges, the Council on Medical Education of the American Medical Association, the Committee of Consultants to the Secretary of Health, Education, and Welfare, this House itself, and others whose interest, insight, and objectivity are beyond question. They do not pretend, nor do I, that matching grants for construction purposes will meet all of the future needs of the medical schools. Ultimately, of course, some way must be found to meet the needs of such institutions for general operating funds. The institutions themselves, the Congress, and the people are not able to see this issue clearly today. It will take time, and study, and debate for the issue to be clarified, and it must be clarified before it can be resolved. We do know, however, that the health institutions of today are inadequately housed and that we will need additional institutions in years to

come. Let us, then, move ahead one step further in our national effort to maintain and protect one of our most precious national resources, our health, by making it possible for the physical plants of the schools to be more adequate for tomorrow's needs.

The Real Story Behind Kidnap of Mississippi Negro

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. POWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the May 14 issue of Jet magazine:

THE REAL STORY BEHIND KIDNAP OF MISSISSIPPI NEGRO—SOME WHITES FEARED SUPREME

In his last jailhouse letter, Mississippi kidnap victim Mack Charles Parker denied the rape of a pregnant white woman, called his accusing exbuddies "liars," and wrote that "God has given me willpower to carry on." Two weeks after his abduction from the Poplarville jail, there was still the touch of the divine will in the gruesome case, and the possibility that the obscure 23-year-old pulpwood hauler might be remembered in history.

The attempt to solve his kidnaping (he was awaiting trial at the time) caused the largest manhunt in any civil rights case in the South—including 40 crack FBI agents and teams of State law enforcers. The drive marked the initial Federal effort to smash forever an age-old Dixie custom, and the first real test of the FBI's prowess in the thorny southern racial picture. But with the extensive mile-by-mile search of swamplands, there was great doubt that hardcore Mississippi suddenly would mend its brutal ways.

Scores of dazed Negroes in the area whispered: "It's been going on for years and nothing has been done." And the rabid and predominant racists in the wealthy hometown of the late Senator Theodore Bilbo still echoed white supremacy views. Even with the FBI in town, one white man told reporters: "Parker's a good nigger now. The only good nigger is a dead nigger."

Mississippi's Negroes figured Poplarville someday (but not this soon) would be caught up in the rising civil rights tide. For years, law enforcers barred (without dispute) Negroes from streets after 8 p.m. No Negro has ever voted, or served on a jury, not only in the town but in the entire Pearl River County. Humble and penitent, its Negroes live in quarters outside the city. Said a Hattiesburg mother: "We've never allowed our kids to go into town. We ride 15 miles out of the way. That town's a hell hole."

Even mother Eliza Parker gasped in fear last February when she learned that her boy—the sole support of a seven-member clan—was arrested and charged in the rape of a white woman in Poplarville. She tried to hire a white lawyer ("not to upset anybody") but was turned down. Finally, in desperation, she hired (for $1,500, but only $80 was paid) Vicksburg's Richard Jess Brown, one of the four full-time Negro lawyers in the entire State. And he realized the momentous task—he would become the first Negro ever to appear in the town courtroom.

As tension mounted, Parker (never fully identified by his alleged victim) was whisked to the Hinds County jail in Jackson—some 80 miles away—and even newspapers were not informed of his whereabouts. When he was returned in April for the grand jury session, worried officials promised Attorney Brown he would be given "extra protection" on the trip back to town. And Lawyer Brown argued for moving the trial to another town, but was opposed by Sheriff Osborne Moody, and even by Judge Sebe Dale, who implied that "the good people would stand for law and order."

Meanwhile, other storm clouds gathered. Agents of the Civil Rights Commission launched a probe of Negro vote denial in the area, got affidavits and readied the first case in the State's "swamp" section. Then, a Hattiesburg minister, the Rev. John M. Barnes, 62, went to Washington and aired the discrimination charges before the House civil rights hearing (he later received threatening phone calls that his house would be blown sky high). And finally, the Negro lawyer refused to sidestep the vote issue and insisted on motioning that the indictment against Parker be quashed because Negroes were barred from the jury.

As the trial date neared, hopes for a conviction and the death penalty began to wane. There was talk that "the nigger lawyer" might destroy the State's case, based on circumstantial evidence (there were no witnesses). And even if he didn't, Lawyer Brown still had an ace in the hole. Last year, a Federal circuit court upset a Mississippi case involving a Negro convicted of murdering a white woman. The reason: Negroes did not serve on the jury. (The clincher: Pearl River County also had no Negro voters.)

Investigating FBI agents noted curiously the legal preparations of the mob (gloves and stockings to hide fingerprints, masks on faces) and the scarcity of evidence pointing to a body—a necessity in any prosecution. Also, there were questions being asked as to how the mob quickly found the jail keys, opened two cell block locks.

Belatedly, one newspaper pointed out that many whites had the belief that "even if Parker had been convicted a Federal Court might have set him free."

But as the surviving Negro prisoners daily scrubbed the jailhouse steps, ugly bloodstains refused to be washed out, dramatizing the fact that the same blood yet remained on some hands somewhere, some place.

REA Suffers a Blow With Eisenhower Veto

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BRADEMAS. Mr. Speaker, in the last few days Congress has twice voted on legislation of direct importance to all persons who depend on the Rural Electrification Administration program for their electricity.

Many of the farm people of Indiana, including thousands of the citizens I have the honor to represent in LaPorte and Marshall Counties, depend for their electric power on the Rural Electric Membership Corporations, the REMC's.

The Rural Electrification Administration program has for many years contributed enormously to American life by bringing the blessings of electricity to the farm families of our country and by stimulating the business and industry which produces and sells the appliances, machinery, and equipment needed by REA users.

Unfortunately, the rural electric systems of Indiana have been under severe attack by both the Handley administration in Indianapolis and the Eisenhower administration in Washington.

On April 15 the House of Representatives, by a margin of nearly 2 to 1, voted to uphold the integrity of the REA program by restoring to the Rural Electrification Administrator sole authority to pass on rural power and telephone loans. The bill, which was also passed by a similar margin in the Senate, would thus reaffirm the original intent of Congress that the Administrator of REA, who is appointed to office for a term of 10 years, should be free from political influence. Since 1953, however, the Secretary of Agriculture has had the last word on the approval or disapproval of loans over $500,000.

During the 1958 campaign I stated my conviction that the REMC's should be permitted to operate without having to engage constantly in political and legislative battles merely to defend their right to exist. REMC's are nonpartisan and should be permitted to remain that way. This is the reason I was glad to join with the great majority of my colleagues in Congress in voting to restore to the Administrator of REA the full authority to pass on loans independent of the control of the Secretary of Agriculture.

Mr. Speaker, with the passage of this legislation rural America could have again had confidence in the integrity of the loan procedures of the Rural Electrification Administration, and the farm families of Indiana and the Nation who use REA could have continued without the concern many now feel to enjoy the benefits of modern electric service.

REPUBLICANS KILL REA BILL

Unfortunately, Mr. Speaker, shortly after the House passed the REA bill, President Eisenhower vetoed it.

Then the U.S. Senate, by obtaining the necessary two-thirds margin, voted to override the veto.

A few days later, however, on April 30, nearly solid Republican opposition in the House of Representatives defeated a Democratic effort to override the veto. Voting to override were 274 Democrats and 6 Republicans; voting to uphold the veto were 142 Republicans and 4 Democrats.

I was among those who voted for the REA program and to override the veto. Although I regret that the supporters of REA were defeated on this vote, I am nonetheless proud to have been counted with the great majority of my colleagues in both the House of Representatives and the Senate for a program that means so much to so many of the people of rural America.

TVA Benefits Many

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. WOLF. Mr. Speaker, I would like to simply state that with all the debate we have heard on TVA I am still not certain that the greatest purpose to all the American people which the TVA has served, is as the conscience of the private power trust, not only in the region of the Tennessee River, but throughout the entire Nation.

Mr. Speaker, I visited the TVA back in its infancy and returned 20 years later. I was tremendously impressed by the great changes made during these years. The new industrial life which has come to this previously barren area has brought a fine new standard of living by creating many job opportunities. The new homes soon followed, along with the many demands which homebuilding creates. This again made more job opportunities, and so on.

Another aspect which is sometimes overlooked is the industry which has grown out of the many recreational advantages made available by the TVA lakes. For many years the country waited for the private power companies to develop fully our natural water resources. It is true that here and there they did purchase and develop a few sites. But in every case they had to be concerned with the question of whether the service they gave could be sold at a profit. They could not assume the responsibility for providing even electric service to all who wanted or needed it, much less for providing flood control, navigation ways and recreational areas for the benefit of all. Their resources were far too limited for this and they could never have justified full-scale river development to their stockholders had they made the attempt.

More than half the power generated by TVA is used by the Government at national defense installations. These atomic plants are serving our defense needs and providing medical and scientific progress for the entire country. We all benefit from it either directly or indirectly.

Instead of hampering the development of private power companies, the Federal power system is, in reality, promoting their development by selling a large block of power to them at wholesale rates. In 1956, private power interests served nearly eight-tenths—78.8 percent—of all consumers in the United States. In the same year they generated 67.2 percent of all power.

I would like to suggest, Mr. Speaker, that anything which tends to weaken the TVA ultimately affects these many factors made possible by the many great and forward thinking Congressmen who saw fit to establish the people's ownership of the water resources of this vital valley.

Previously I stated that the TVA has become the conscience of the private power industry. I would like to demonstrate my point by simply stating that prior to the coming of public power, electricity was costing nine times as much as it now costs in this area. This tremendous difference in cost dramatizes the need for the TVA. These are some of the reasons why I will always oppose any move to weaken this great project.

Poison in Your Water—No. 73

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Seattle (Wash.) Times of August 24, 1958, entitled "Swimmers Found in Polluted Waters":

SWIMMERS FOUND IN POLLUTED WATERS

A Seattle-King County Health Department report recently issued on Puget Sound and lake bathing beaches is studded with "closed" and "not recommended" notations.

But only Green Lake remains posted and notably free of bathers.

At Lincoln Park, listed by the health department as closed because of sewage discharges in the immediate vicinity, three youngsters from Queen Anne Hill were bathing on a recent warm day.

Steven Goldsmith, 13, explained that he, his brother, Chris, and their pal, George Graham, usually swim at Green Lake.

"But that's closed now," Steven explained.

ARE YOU KIDDING?

They hadn't heard that Lincoln Beach was closed, too. "Are you kidding us?" Steven asked.

Paul V. Brown, park superintendent, said Lincoln Park had been posted—but signs have a way of disappearing.

At Green Lake "Beach Closed" signs are implanted on posts in the water several feet from shore. They stay put. But the ebb and flow of tides bars such posting in the water at Sound beaches, Brown explained.

Health Department officials said their experience with posting has been equally bad. The Health Department signs, carry a warning, "Penalty for defacing or removing this sign, $100 or 30 days in jail or both." But they just keep disappearing.

The health department says it depends upon newspapers to relay its reports on beaches "not recommended." Public response this year has been good, an official said.

LIFEGUARDS USED

At Vancouver, B.C., where a general closing of polluted beaches has been ordered, 48 lifeguards have been ordered on duty to prevent bathing by children and to warn adults.

Brown said Seattle doesn't have the personnel for such a program. He also said the Vancouver problem is worse than Seattle's because the Canadian city uses tidal pools which allow pollution to collect.

Adequate Appropriations Needed for New Jersey-New York Port Channels

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony which I gave before the House Appropriations Committee, Subcommittee on Public Works, requesting adequate appropriations for the New Jersey-New York port channels:

STATEMENT OF REPRESENTATIVE CORNELIUS E. GALLAGHER, OF NEW JERSEY, IN SUPPORT OF ADEQUATE APPROPRIATIONS FOR THE NEW JERSEY-NEW YORK PORT CHANNELS, APRIL 27, 1959

The New Jersey district I represent is a peninsula with federally improved channels on its three sides. The appropriations being requested for an adequate improvement program for the Federal channels in New York harbor affect all three of these channels. As this committee can therefore readily see, the economic welfare of the district I represent is greatly affected by what happens on the waterfront.

On the east side of the Hudson County peninsula, which takes in my district, there is the New Jersey Pierhead Line channel. This particular channel is a shallow-draft channel which was authorized and constructed to relieve some of the congestion that is characteristic of Upper New York Bay in New York Harbor. The purpose of the channel was to draw off some of the harbor craft and other shallow-draft boats from the main ship channel and thereby eliminate danger of collision brought about by ship traffic congestion. Unfortunately, in the construction of this channel, the engineers underestimated the navigation requirements of flotilla tows—those towboats that have two or more barges in tow—and failed to provide sufficient maneuvering room to enter or leave the New Jersey Pierhead Line channel. As a result, this channel has not been playing its full role simply because boats have been unable to use it. With an ever-increasing amount of traffic in New York harbor, the need to provide this relief valve becomes more critical day by day. I therefore strongly urge this committee to allocate sufficient funds in the forthcoming fiscal year to permit this project to be fully completed and be made economically effective.

On the south side of the Hudson County Peninsula lies the Kill Van Kull section of the New York and New Jersey channels project. The completion of the work on the Arthur Kill section of this project is therefore of great concern and has my full support. The budget recommendation of $2,790,000 will, I understand, see the completion of this work in the next fiscal year.

To the west of the Hudson County Peninsula lies the Newark Bay-Passaic River channel. While this project does not immediately affect the Jersey City-Bayonne area, it, like all the other channel projects in the New York-New Jersey port district described in the Port of New York Authority presentation before this committee, is indirectly important to the people of my district. I therefore strongly support the need to allocate $30,000 to commence the study of im-

proving this channel, as well as the appropriations for the other essential channel projects in the New Jersey-New York port area.

I wish to express my thanks to you, Mr. Chairman, and to the other members of this committee for the opportunity and privilege to present my views concerning the economic welfare of the people I represent.

Jeanne d'Arc

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BOLAND. Mr. Speaker—

I come from God to tell thee to become the greatest king in the world. The very clay of France will be holy: her soldiers will be the soldiers of God: The English will fall on their knees and beg thee let them return to their lawful homes in peace.

Such are the words that George Bernard Shaw puts in the mouth of the Maid of Orleans in his drama St. Joan.

Joan of Arc is assuredly one of the most famous women of the past. As a heroine of history as well as the Catholic Church she has few equals. There is a great deal to learn from a woman like Joan. She represents the epitome of martyrdom, for she gave her life for France as well as for her own spiritual beliefs.

Coming out of the fields of her homeland in Lorraine at the age of 17, Joan announced to France and the world that she would not only lift the English siege of Orleans, but would crown the young and not overly courageous Dauphin as Charles VII in Rheims Cathedral.

In a sense this sounds just as preposterous today as it unquestionably did in 1429. But she did it. Not only did the maid provide the spark of French courage and faith that was sorely needed to save the kingdom, she went further still and took the dangerous step of acting as the political and spiritual conscience of her day.

There are many versions of Joan's life, her battles and her martyrdom. Most all of us know at least one. The almost universal appeal of this peasant girl of 15th century France lies, I suspect, in the fact that she is representative of that guileless, intuitive truth that individuals possess all too infrequently. History has shown that throughout the civilizing process we have sought truth, justice and knowledge but never too much of any one of these at any given time or from any given person. The lessons in this have been bitter. From Socrates to Jeanne d'Arc, the martyrdom of men of truth and enlightenment has followed a familiar pattern. Perhaps the greatest example known is the crucifixion of Christ.

Joan of Arc was beatified in 1909 and canonized by Pope Benedict XV in 1920. The festival that we commemorate today is in observation of the capture of Tourelles. I am proud to mark this day here in the land that is the citadel of individual liberty. May the spirit of Jeanne d'Arc never die.

Essential That H.R. 3460 Be Passed as Reported

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks, I wish to include the following comments on H.R. 3460, the bill now before the House.

I think it is highly important that this bill be passed by this body as reported from the Committee on Public Works.

The exhaustive study given to this proposal by the Public Works Committee fully supports the bill in its present form without amendments. To adopt restrictive amendments now to prevent TVA from issuing effective revenue bonds in the private money market for financing future power generation facilities would be highly obstructive.

There is no question in my mind, Mr. Speaker that TVA is known the world around as the single, most imaginative American contribution to resource development in the last quarter century. All over the world people are trying to emulate and adapt TVA for their own economic growth.

It is one of the supreme ironies of the day that this administration proclaims its enthusiasm for economic development projects abroad while it does everything in its power to undercut TVA here at home.

Not one cent has been appropriated to start new generation facilities for TVA in the last 6 years. We have been told from the other end of Pennsylvania Avenue that TVA should raise all the money it needs by issuing bonds. So now we have a second supreme irony. The bill before us would enable TVA to do just what the administration says it should do, but now spokesmen for the administration are trying to amend this bill out of existence.

Mr. Speaker, every power company in the United States knows that it must maintain new investment in plants on a continuing basis to keep its facilities in line with increasing demand for power. If TVA can obtain neither appropriations nor effective authority to raise money by selling bonds, the long term efforts of those who have always opposed TVA will finally be successful.

It takes at least 3 years to plan and construct a large generating facility for TVA. If the people of the Tennessee Valley and the United States at large are not to be deprived of the extraordinary range of benefits which TVA has given us over the years in terms of power, flood control, navigation and water supply, I believe it is essential that H.R. 3460 be passed as reported.

Is America Pricing Itself Out of Its Own Markets?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Punxsutawney (Pa.) Spirit of April 29, 1959:

IS AMERICA PRICING ITSELF OUT OF ITS OWN MARKETS?

(The following editorial appeared in the Saturday Evening Post of April 18, and is reproduced by permission of the Curtis Publishing Co.)

A lively controversy has been raging around the ability of foreign producers of gigantic turbines and electrical equipment to underbid their American competitors. A bid by the English Electric Co. for a set of turbines at the Greer's Ferry Dam in Arkansas was rejected by the Department of Defense in favor of a Philadelphia company, although the latter's bid was $300,000 higher than that of the British company. And TVA recently awarded a contract to a British company which underbid its American competitor by $5 million.

In both instances American producers have complained that considerations of national defense should restrict such installations to American corporations, although others suspect that unemployment in the area where turbines are produced was the basic reason for barring the foreigners.

Undoubtedly there is merit to the national-defense argument. Howecer, when security is a factor, outsiders should not be permitted to bid at all, instead of being invited to spend large sums working up plans and specifications, and then informed that the Buy American Act bars them from taking the job. On such clumsiness, good relations with our neighbors tend to founder.

As these episodes are repeated, people must surely begin to ask: "Why the American firms underbid in a field in which industry has long been preeminent?"

The clue to our difficulty as a competitor in the international field was indicated by President Eisenhower in a recent press conference. "I believe," said the President, "that above everything else the United States should keep its costs down and try to liberalize trade—our costs are just too high."

One factor in this unwieldy cost structure was brought out in a set of studies by the National Industrial Conference Board showing that wage costs represent an extraordinarily large portion of the national income. The Board's statisticians declare that after exclusion of all taxes, labor gets 83 cents out of every dollar generated in the national economy. This leaves a narrow margin for capital investment—the source of new equipment and expanded plants—to produce more jobs.

Undoubtedly some of this gap is explained by the low standard of living of foreign workers; their willingness—at least from necessity—to work longer and harder than we want to work; the effect of depreciated cur-

rencies and government subsidies. But there is, just the same, a lot of fat in our cost structure which can work to our serious disadvantage. For example, Daniel P. Loomis, president of the Association of American Railroads, in a recent speech declared that featherbedding rules and regulations cost the country's railroads an estimated $500 million a year.

According to Roger M. Blough, chairman of the board of United States Steel, from 1940 through 1957, hourly employment costs in the steel industry have gone up an average of 7.6 percent per year for 17 solid years. And, in contrast, the reports of the Department of Labor show that output per man-hour has risen by only 2.6 percent per year.

Featherbedding and shotgun wage increases in unionized industries are, of course, not the only offenders. There are undoubtedly considerable featherbedding and expense-account shenanigans in the front offices of many corporations. Government compounds the felony by saddling the economy with the insatiable demands of an expanding bureaucracy.

By and large, the excessive demands of producers are restrained by competition. As for the unions, although they are often able to force wages for their members beyond the point justified by productivity, they must face the possibility that by too drastic wage demands they could price themselves out of jobs.

In Observance of the Anniversary of Polish Independence Day

SPEECH
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. COLLIER. Mr. Speaker, Polish genius has demonstrated its presence in nearly every phase of human attivity. The West is indebted to the Poles in innumerable ways. In the arts they have been superb; in literature they have been no second-raters; in science they have had more than their quota among the great immortals. Of course, they are also noted for their bravery and daring, and for their almost endless struggle for freedom and independence. But in certain fields they are not as well known as they should be.

The Constitution of 1791 is proof that Poles deserve to be known in governmental reforms as pioneers in central and eastern Europe. That historic document marks not only a decided advance in progressive reforms in governmental institutions in Poland, but it also stands as one of the earliest attempts at reform by peaceful and deliberative methods.

Unfortunately, all the liberal and democratic provisions of that Constitution, and all the good and noble intentions of its patriotic framers, could not forestall impending dangers that were threatening Poland. As one partition followed another, leading to the eventual extinction of Poland's independence, it was, of course, impossible to implement the Constitution. But all patriotic and liberty-loving Poles have always held sacred the ideas embodied in that memorable document, and to this day they commerate its promulgation as a national holiday.

I gladly join all American citizens of Polish descent on the observance of the 168th anniversary of that historic event.

German American Chamber of Commerce, Inc.

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. BOSCH. Mr. Speaker, on April 27, 1959, a very significant occasion was celebrated in New York, the establishment of the German American Chamber of Commerce, Inc. This came about when the United States-German Chamber of Commerce and the German-American Trade Promotion Office were united. The celebration was in the form of a reception and dinner.

Under leave to extend my remarks, I include a telegram to the chamber from President Dwight D. Eisenhower, a telegram from Hon. Theodor Heuss, President of the Federal Republic of Germany, a letter from Hon. Nelson A. Rockefeller, Governor of the State of New York, and a speech delivered at the dinner by John J. McCloy, chairman, the Chase Manhattan Bank:

THE WHITE HOUSE,
Washington, D.C., April 24, 1959.

Mr. GORDON W. MICHLER,
Care of German American Chamber of Commerce, New York, N.Y.:

It is a pleasure to send greetings to the members and guests of the German American Chamber of Commerce. The spectacular advancement of the German economy in recent years has impressed us all. Two aspects of that development are particularly significant. First, it is a product of many individual efforts operating under a free economy—a system which both our nations held to be most productive for the material and social advancement of our peoples. On the other hand, on the national level, our citizens have accepted their responsibility to the broader needs of the free world community. I am delighted to add my congratulations and best wishes to those businessmen whose work contributes so much to the living bonds of friendship which unite the people of the United States with their neighbors in the Federal Republic of Germany.

DWIGHT D. EISENHOWER.

[Telegram sent by the President of the Federal Republic of Germany to the German American Chamber of Commerce, Inc.]
APRIL 27, 1959.

On this occasion marking the consolidation of the German American Trade promotion office and the United States-German Chamber of Commerce into the German American Chamber of Commerce, I extend my sincere good wishes for a close and prospering relationship in an enterprise of benefit to both our countries. May the Chamber flourish as an efficient instrument of cooperation between the United States and Germany.

THEODOR HEUSS,
President of the Federal Republic of Germany.

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, April 24, 1959.

Mr. GORDON H. MICHLER,
Chairman, German American Chamber of Commerce Inc., New York, N.Y.

DEAR MR. MICHLER: It is a great pleasure to have the opportunity to extend my cordial greetings to everyone present at the dinner tendered by the German American Chamber of Commerce to representatives of German industry attending the meeting of the International Chamber of Commerce.

I regret that the pressure of official duties precludes my being present. Your dinner, celebrating the first birthday of your combined and enlarged Chamber, is a significant occasion. It marks the growing ties of trade and friendship which your organization is steadily fostering between the West German Republic and this country.

To your guests representing West German government and industry, I should like to express my admiration for the impressive economic growth of West Germany. This sturdy new democracy stands as a notable symbol of progress and evidence of a free way of life that cannot be matched behind the Iron Curtain. Indeed, West Berlin has been called a golden thorn in the side of a ruthlessly regimented East German Communist economy.

My best wishes to your organization for all possible future success in its important role of strengthening the many commercial and cultural bonds now linking our two free nations.

Sincerely,

NELSON A. ROCKEFELLER,
Governor.

SPEECH GIVEN BY JOHN J. MCCLOY, CHAIRMAN, THE CHASE MANHATTAN BANK, ON APRIL 27, 1959, AT THE RECEPTION AND DINNER SPONSORED BY THE GERMAN AMERICAN CHAMBER OF COMMERCE, INC.

Ladies and gentlemen, it is a real honor to be asked to help in officiating at this marriage, christening, or consummation of marriage as this consolidation of the German American Chamber of Commerce might be called.

This comes at a particularly propitious time. In the first place, it occurs while the trade between the two countries is in real vigor. Secondly it comes at a time when the general relations between the United States and Germany, the new Germany, are in a particularly happy state. Thirdly, it comes at a time when serious issues are being tested—issues which will do much to determine the future of Germany, of Europe, and the relations of the United States to both. At such a time, it is well that we have an agency on a nongovernmental level, such as the German American Chamber, where German and American businessmen may advise each other and exchange ideas on the problems each face in their respective trade and business lives.

COMMON MARKET

With the establishment of the institution that we celebrate tonight, I also want to refer to this phenomenon which prior speakers have spoken of, the new movement, now definitely underway, the integration of Europe:

We have heard much of the rise of Soviet power. We are now beginning to hear also

of the rise of Chinese power. Both these developments have been unduly long in coming. But another postwar development quite comparable with the combination of these forces, if not even more significant, is the growth of European power through this trend toward integration.

Here we have an area of somewhere between 150 and 200 million people, over a million square miles and the center of most of the world's technical and managerial skills, not to mention its role as the great repository of western culture and art. A force in itself which, when integrated, is of such dimension and potential strength that continued insistence upon the weakness of Europe in relation to the strength of Russia, China, or the United States, is rapidly becoming quite artificial.

Here is a force with such power, moral, and material, that it need not bow to any accumulation of strength from any quarter of the globe. To speak of its function in the defense of the free world as no more than a trip wire, as some of our strategists have called it, is to me one of the most fantastic concepts which I have ever heard in connection with defense matters—and I have heard of a good many in the course of my experience. And at the core of this new strength is the new relationship which is developing between France and Germany. Both East and West are stirred by this new phenomenon, but without it, Europe would be incapable of integration and would remain an anachronistic example of divided peoples and nations as out of date as the old city states. When this combined strength and cultural leadership is meshed in with the strength and the moral power of the western Atlantic nations, there need be no fear, as I have said, of an imposed will from any quarter of the globe. On the contrary, with such strength of resources, we possess a full guarantee of both our liberties and our peace.

The days of desirable division on the European Continent, so long the object of astute diplomacy, have passed. New and broader forces are working. Newer concepts are demanded. Much of this has deep political implication, but at the heart of it are economic and business implications which throw a challenge to the commercial interests of Europe such as they have rarely faced in their long history. Nowhere does this challenge present itself more prominently than to the German businessman. Centrally located, the products of great industry and skill emanate from German industry, and the German businessmen are perhaps above all others in a position where they now have the responsibility of developing wisdom both in political and economic fields.

I doubt whether ever before in Europe there has been such a demand or such a need for business statesmanship. Old animosities have to be submerged. Goodness knows, we have done enough to each other to generate antagonisms and resentments that could last forever if we only allowed ourselves to dwell upon them. But if we cannot and should not entirely forget the past, we cannot now certainly afford to bear resentments based only on memories. I refer to one other thought and that is the great need—while we are in the process of putting together this great force which the new Europe represents—that business as well as political statesmanship should see to it that we avoid the creation of any new economic antagonisms. It will do us no good and the world no good, if we merely create within the Western World two or perhaps three economic areas with all the politicalisms, which could so readily flow from them, if we did that. Somehow, some way, must be found to achieve not the partial, but the full strength of the free world.

DULLES AND ADENAUER

The solution is not simple but I believe that the solution is one which business statesmanship and political statesmanship can find the answer to. I refer to the sharp issues which are facing us in the near future. It is unfortunate that at just this period we are compelled to rearrange our forces and our teams, so to speak, as we go forth to deal with these issues. The illness of Mr. Dulles means that we shall have lost at this critical juncture, a man whose intellect, force, and character have become almost a symbol of the firmness of the free world and of the capacity to deal with the maneuvers—whatever they may be—of the Communist offensive. But at the same time we find Chancellor Adenauer in the process of moving from his position where he has directed the day-to-day operations of German policy to the honored position of President of the Federal German Republic, where, no doubt, his influence will continue to be felt, but where his responsibilities will, of course, be less direct. Yet I do not see any change in the direction of American or German policy resulting from either of these events.

Secretary Herter I know long and well and his very selection together with the undisturbed continuity of those in the State Department, including Mr. Loy Henderson, who through the years have worked with Mr. Dulles and followed his leadership, is the best indication of the fact that the U.S. policy will be as steadfast as heretofore. Moreover, whoever will be the next Chancellor, I cannot believe that there will be any fundamental change in German policy. Knowing him fairly well, I am reminded of this Scottish adage: wherever MacGregor sits, is the head of the table. There may be something of this on the German scene.

ON BERLIN

I probably should not say anything about Berlin at this rather delicate period perhaps for fear of being called an interloper, but I see amongst this audience some of the former defenders of that city and I spent some time there myself during periods of some tension and I don't feel that I should sit down without paying my respects to the spirit and determination of the people of that city.

I visited Germany in the period between the wars on a number of occasions and never had much regard for the City of Berlin. Somehow it seemed to me a rather large sprawling sort of a city with nothing of the architectural beauty of a number of cities in Europe, but after being in Berlin in that beleaguered spot and sensing in these periods of tension something of the mood of the people, I came to feel, with all due loyalty to my German "Heimatstadt" Frankfurt, that Berlin had a greater appeal than any of the German cities. We always got a good bit of criticism down in the Zones, but we could rarely do any wrong in Berlin and that was perhaps one of the reasons why I became so fond of that city. You could be quite critical of the Americans down around Frankfurt, but you didn't get very far with it in Berlin. From somewhere out of the spirit of those people some new Lucius Clay will again strike the note, receive the response and take the action which will maintain not only the freedom of that city but the integrity of the whole Free World position.

May I say one thing more about Berlin. I do wish that we would stop vieing with each other in public in coming forward with compromise solutions in regard to how we should act in respect to Berlin. No sooner had the Russians stated their maximum position than the top columnists, and a number of Senators and others, including some interlopers, came forward with all manner of suggestions and sloganisms such as disengagement, getting off dead center, as contributions or supposed contributions to a proper settlement of the Berlin issue. One of our Allies seems already to have given away the Eastern frontiers and we seriously talk about confederation of the Soviet dominated DDR—whatever confederation such a circumstance means.

What I miss, is a statement of our maximum position. When the Soviets said they would occupy West Berlin, it seems to me we should have immediately said we wish to reoccupy Saxony and Thuringia. That is where our armies were when they were in West Berlin, and when some Senator says we must get off dead center in respect to our Berlin policy, it seems never to lie in his mind that the center might possibly be moved farther east. Not always farther west. There is not much space left in these days with the new speed tables in which to replace the center, if Europe is to remain free. Disengagement is a pleasant word to roll around the mouth but it's not so pleasant when we call it by its true name, withdrawal.

What disturbs me is that we strive to come forward with almost every conceivable position and suggest giving it away before we ever reach the negotiating table. There are a number of things, of course, that we could do at the table, but I don't like the idea of giving every intermediate position away before we even sit down. This is a technique which never commended itself to me in dealing with the Russians, though I think it is the experience of all those who have dealt with the Russians. To meet this Russian threat, and it is a threat, of course, from whatever angle you view it. It's a serious threat.

U.S. ECONOMY

Now let me leave politics. I come back to business. More particularly, I should say something about the economy of the United States. Bankers are always supposed to say something about the economy and look wise in regard to economic future. I'll try to go through that pose tonight. One think I would like to call your attention to is that one of the slogans that seems to have commended itself to our thinking in recent years, namely, that if the United States sneezes this induces pneumonia in Europe. Well, this has now proven not to be the case. We have had our sneeze and I don't see any fever in Europe. Europe seems to have been very able to have sustained our recession, a slight recession to be sure. I think this is another indication of the revised strength of Europe and it augurs well for the future.

So far as our own economy is concerned—by every index which one can judge these things—it seems strong and seems to be growing stronger. Of course, this is just the time when you had better look out, but I must say all the signs that I can see and read point to a vigorous future, at least as far as one can reasonably look into the future.

We have had some economic developments in this country which have caused some of our friends abroad a certain mixture of emotions, with some a certain sense of satisfaction, that the position of our currency is beginning to compare, let's say, somewhat less favorably with their own. In spite of the fact that the strength of the dollar had something to do in the not too remote past with the maintenance of some of those currencies. But on the other hand we have people that fear that the dollar might indeed grow weak. Of course, one can say if currencies have grown in strength in relation to the dollar, a great deal of energy, thought, time

and money was spent in just trying to bring that situation about. As for the future of our own currency, I cannot feel that our legislators and Government leaders will so ignore their responsibilities as to permit the dollar to assume a significant weakness. Perhaps we have been losing out in world markets, due to our prices. But in spite of the level of stock market prices, we are, in my judgment, not on the verge of a dangerous inflation. I don't mean to be too confident about this because we could readily slip. Our prices for the time being are relatively stable. There is a substantial amount of unused plant capacity still about. We have unemployment to an appreciable degree. More and more, as I see the clouds lifting, the prospect of a serious unbalanced budget seems to be disappearing.

In this country, I say to my German friends, we have really to excite ourselves to the need of a solid currency, particularly, when the rationalizers of little but persistent inflation urge it on as a wise Government policy. Fortunately or unfortunately we have not had the built-in fear of the experience of a real inflation, such as the Germans have undergone. This has given them an attitude which makes it unnecessary to argue about the ills of inflation. You, in the vernacular, have had it.

Over here we do have to argue, however, with some professors now and then—not all professors by any means—but it seems to me the only professors who can get the front page of the New York Times seem to be those who kick what is known as the sacred cow of sound money about. Now the President and the Secretary of the Treasury have struck the note of good financial sense and so has the Federal Reserve Board. They have been eloquent in what they have had to say regarding the need for a stable currency and a stable price system and I am sure they are determined. I have no doubt, however, that the most eloquent expression, that we could have, to top their resolution is the evidence of a balanced budget, but, as I say my guess is that we shall not be far from it in the ensuing year and I dare say that even with a balanced budget our economy will continue to grow, in spite of the professors.

Now I have rambled on, skipping from one subject to another. Perhaps I should return to my first thoughts which relate to businessmen and their responsibility to society and the public weal. Whether we be Germans or Americans, French, English, Italians—none of us can ignore that the great social and political forces that play around us in the modern world require statesmanship to deal with the problems of Europe and America and the underdeveloped countries in the world. Nor is all good to be found in the continuance of business prosperity. Statesmanship will frequently require the acceptance of harsh business sacrifices if we are to solve some of these problems.

May these two institutions which merge here tonight take the lead in accepting the great challenges and the heavy responsibilities which the making of a free world presents to all of us today.

Thank you very much.

The United States of America Way

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent editorial which appeared in the Jersey Journal, April 30, 1959, entitled "The United States of America Way":

THE UNITED STATES OF AMERICA WAY

Tomorrow in Moscow, Red Square will reverberate to the tramping feet of thousands of soldiers on parade. Trucks, tanks, guns will thunder through the streets. Hundreds of planes will roar overhead. Tomorrow the Communists will show off their armed power to the world. Tomorrow they will rededicate their Government to the principle that might makes right. It will be May Day, U.S.S.R.

Tomorrow in Journal Square and on Bergenline Avenue and on every main street in America, children will get along to school, people will tend stores, housewives will fill their shopping carts, traffic will move with no more than normal difficulty. It will be May Day, United States of America, with business as usual.

Or almost as usuual. In the courthouses, the schools and at some service club luncheons there will be special programs on Law Day, devoted—in President Eisenhower's words, to "public reaffirmation of their dedication to our form of government and the supremacy of law in our lives."

It is symbolic that there will be business as usual tomorrow. This is the essence of America's way of life. Whatever the argument, no matter how outrageous the adversary's stand, we in America believe in telling it to the judge instead of shooting it out.

It's a peaceful way of life, based on respect for the individual—a live and let-live policy. It includes a passionate belief that no matter what the wrong, the courts can set it right.

Our belief in the law is no minor matter. It pervades our every day. When we wait on a corner for a green light, we're inhibited as much by fear of transgressing the law as by fear for our safety. When the children's baseball breaks a neighbor's window there is no thought of evading payment for the damage. When the carrier boy drops the newspaper on the front stoop he knows he'll be paid at week's end. The law stands always before us as recourse for wrongs.

It serves us to settle grievances between individuals, between the individual and society, between giant corporations, between States and, if we had our way, between nations.

Any nation of the world which doubts our peaceful intentions, any of the leftist citizens of this country who argue in Russia's defense that it acts as it does out of fear of us, only need look at our heritage of living with the law. Our whole creed is one of nonaggression against our fellow man.

That is our May Day, our Law Day. Business as usual, with just a few extra thoughts about the guiding principle of our lives.

New Jersey-New York Transportation Agency Compact

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mrs. DWYER. Mr. Speaker, the unanimous and bipartisan action of the congressional delegations of New Jersey and New York in sponsoring legislation to grant the consent of Congress to the compact between the two States establishing a New York-New Jersey Transportation Agency is, I hope, an indication that prompt approval of the measure will be given by Congress and the President.

The extent of the seriousness of the present commuter crisis needs no further elaboration. This joint action reflects the degree to which the people of the metropolitan area are unanimous in demanding effective steps be taken to preserve adequate railroad commuter service.

The sooner Congress approves the compact, the sooner the interstate agency can begin its vital work.

Meanwhile, there are additional ways in which Congress can contribute toward a solution of the commuter problem—by amending the Interstate Commerce Act to require greater consideration of the public interest in passenger train discontinuance cases, by starting the process of constitutional amendment to prohibit nonresident income taxes, and by allowing income tax deductions for the necessary costs of transportation to and from work.

Redeveloping an efficient, low-cost mass transportation system in the New York metropolitan area—and in other highly urbanized areas in the United States—is an immensely complex job. It is an interstate and regional problem and responsibilities bear heavily on all levels of government in the area to do their part.

The Rural Electrification Administration

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. WOLF. Mr. Speaker, the President saw fit to veto the REA bill. I am happy to count myself among those who voted to override this veto.

I wish to make a brief statement of my views regarding the Rural Electrification Administration.

The REA is a Federal lending agency which loans funds to local nonprofit cooperative associations in 46 States. These cooperatives serve farms and other enterprises in rural areas which do not have electric service. By law they cannot serve anyone who already has central station service. In other words, they cannot take business away from anyone.

If serving these farms and other enterprises offered an opportunity to make a profit, the private companies would have brought their lines to them and thereby eliminate the need for REA service.

As you know, the rural electric cooperatives do repay their loans to the Government with interest, and their loan repayment record is unequalled. It is better than the record made by any other Federal lending agency.

It is true that the interest rate at 2 percent is low. Congress has seen fit to maintain that rate of interest to make

possible the serving of all people who require service. Many of them live in remote areas where costs of service run high. It is estimated that about half of the rural consumers do not pay their own way; the other half have to make up the difference.

The rural electric cooperatives do not provide unfair competition to the private companies. In fact, they provide a good market for privately generated power. In 1956, REA borrowers purchased 49 percent of their power from private power companies. In Iowa they purchased 82.4 percent of their energy from private power companies. This has meant good business for the power companies. The REA estimates that rural electric cooperatives will buy a billion dollars' worth of appliances and chore equipment in 1959. This means good business for the electrical industry.

If the 2-percent rate of interest to rural electric cooperatives is considered to be a preferential rate, I think it is only fair to consider certain benefits that the Federal Government grants to the private power companies.

Quick reference to the CONGRESSIONAL RECORD of June 19, 1957, shows that the Office of Defense Mobilization granted accelerated depreciation certificates to electric power companies in an amount that exceeded $3.3 billion during the period 1950 through May 1, 1957. In Iowa, the amount certified totaled $31.8 million, or nearly 10 percent of the U.S. total during the same time.

This, in effect, gives the companies interest free loans and results in enormous financial benefits. I do not believe anyone could deny that these benefits are subsidies.

An estimate of the subsidy benefits that will accrue to various companies for accelerated depreciation that was certified between 1950 and May 1957, has been made in Washington. According to this estimate, six Iowa companies will benefit in the amount of $47.8 million during the normal depreciation period of most of the utilities' facilities.

I am not attempting to make a point that one group is favored more or less than another, but I do want to emphasize that our Government is not helping one group to the exclusion of others. It attempts to treat all groups with fairness. We have a government, thank God, which is for all of the people, and in my small way I will help to keep it that way.

I believe that there is a place for both public and private power and I would not favor reducing the activities of either. I believe we have a stronger America because we have both forms of organization. For many years growth of private and public power has been parallel and one has not been reduced by the other.

What Law Day Is About

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Life magazine for May 11, 1959:

WHAT LAW DAY IS ABOUT

(Answers to primary questions about a great movement for world peace)

By Presidential proclamation Law Day U.S.A. had its second annual observance last week, with speeches, pageants, etc. across the land. Though sparked by lawyers, Law Day is not just another promotion to make more business for its sponsors. It is part of the very serious movement centering around the American Bar Association's Committee on World Peace Through Law. This committee's goal, according to Chairman Charles S. Rhyne, is nothing less than "to substitute the rule of law for the rule of terror among nations." Last week Mr. Rhyne released a question-and-answer statement of what his committee is up to. It contains so much sound argument and hopeful information that we here present a summary version.

Question. How do you plan to carry out the program?

Answer. The first step is to increase use of the World Court for the settlement of international disputes.

Question. To what extent is the World Court being used now?

Answer. In the 13 years since it was established the present Court has decided only 11 cases—less than one case a year. In comparison, the Supreme Court of the United States handles a thousand cases a year.

Question. What is the World Court's chief weakness?

Answer. Its chief weakness is that it does not have compulsory jurisdiction over disputes between the principal nations of the world. The United States, France and several other nations have gone through the form of accepting the Court's jurisdiction over legal disputes, but their acceptances are largely nullified by reservations of the right to determine whether each particular case is within the jurisdiction of the Court. The United States should assume leadership in creating respect and prestige for the Court by abandoning its insistence on being its own judge of this jurisdiction.

Question. But if this is done, how are we going to protect ourselves in some dispute that we honestly feel is domestic? Won't we be endangering our sovereignty?

Answer. The charter of the U.N. now expressly rules out the Court's jurisdiction over domestic matters. Specifically in the Iranian oil case the Court ruled against its own jurisdiction. Definitions of what constitutes an international case and a domestic case can be spelled out clearly and agreed to by the nations for the guidance of the Court.

Question. What other changes should be made in the Court?

Answer. It costs about $200,000 for a nation to take a case to the Court at The Hague—much too expensive for many of the smaller nations. We could start by having the present Court announce its willingness to sit all over the world in chambers of three judges. We could have intermediate courts of appeal on a regional basis. Such a world system would parallel the setup of the U.S. Federal court system.

Question. What kinds of cases would the World Court system handle?

Answer. The Suez controversy, the case of our fliers who wandered off their course behind the Iron Curtain, the Spanish-Morocco boundary dispute, many of the current Middle East disputes, and hundreds of similar incidents. In each case the courts could decide the truth or falsity of charges and countercharges which have so often brought the world to the brink of war.

Question. How would the World Court enforce its decisions?

Answer. Enforcement would depend in the first instance as it does now upon voluntary compliance. The pressure of public opinion is such that few nations want to stand before the world branded as outlaws for defying a World Court. A second step would be to have the courts of the member nations give full faith and credit to the decrees and judgments of the World Courts. This would mean that the national courts would use their machinery to enforce the World Court decisions.

Question. What is the opinion of U.S. leaders on this idea?

Answer. President Eisenhower, Vice President Nixon, John Fosther Dulles, Attorney General Rogers, and many leaders of the bar and others have expressed strong support.

Question. Isn't the idea of world peace through law utopian?

Answer. It is frankly idealistic—the same kind of idealism that inspired Washington, Jefferson, Madison, and our other great forefathers to found this Nation as a government under law.

Question. Will Russia be likely to go along with this idea?

Answer. Probably not, in the beginning.

Question. If she doesn't, won't that kill the whole thing?

Answer. The nations of the free world could not afford to let Russia's veto or refusal kill this new approach to world peace. The system can function without her. With all the nations of the free world using the system and abiding by its decisions, Russia would be put in a poor light with the neutral and uncommitted nations. As the court system develops its procedures and gains a reputation, tremendous pressure will be directed against Russia to join.

Question. Wouldn't world government offer more possibilities for peace?

Answer. Bitter experience has convinced us that we must build brick by brick—that we cannot expect a perfect superstate to come into being full-blown and solve all our problems.

Question. Wouldn't it be better to reorganize and improve the U.N. rather than to set up a World Court system outside the U.N.?

Answer. There is nothing contradictory in these two organizations. They can go forward hand in hand.

Question. Can't we rely on our military force to keep the peace? Our alliances?

Answer. Weapons of horror can neither guarantee the security of our own Nation nor form the foundation for peace. NATO

an other regional organizations have helped to stabilize peace. But the arms race, with its threats of universal doom, continues.

Question. Won't a new idea like this be difficult to sell to peoples and nations around the world?

Answer. No; because in a world sundered by differences of language, color, creed, and belief, the rule of law is the one concept understood as an ideal that nearly all men have in common. Today in all civilized nations, disputes between man and man are settled by law.

Question. Don't the intricacies of law offer obstacles?

Answer. The rule of law is not a new concept. There is no mystery about its principles. Throughout history the rule of law has meant the application of reason and fairness. Our Constitution is in fact a restatement of the principles of the rule of law as borrowed from the great lawgivers of the ages.

Question. Wouldn't it take a long time to draft a new code of international law—perhaps years?

Answer. Yes. But it is not necessary to wait until we perfect a written code. We could begin by using the well-known principles of law. These principles are applied daily by all lawyers.

Question. Is a world court system necessary to a rule of law between nations?

Answer. Yes. History teaches that a court system must precede disarmament within nations. Only after King's Courts proved their worth did the lords and barons of England dissolve their armies. Out in our own West, both the "good" and the "bad" men began to discard their six-shooters after the courts began to function.

Question. Why is the American Bar Association taking the lead in this movement?

Answer. The United States takes special pride in its form of government under law and because of its position has a special duty to foster this project.

Question. What is the American Bar Association doing about the U.S. reservation to acceptance of the Court's jurisdiction?

Answer. It has passed a resolution urging the Senate to repeal the part of the reservation that makes the United States the judge in its own cause.

Question. What are others doing?

Answer. Duke University, Durham, N.C., has established the World Rule of Law Center under the direction of Arthur Larson, former assistant to President Eisenhower. Harvard, Columbia, Chicago, Southern Methodist, and other law schools are doing extensive work in this field. Committees on World Peace Through Law have been established by numerous bar associations throughout the United States. The International Bar Association and the Inter-American Bar Association are cooperating closely. This spring our committee launched a series of five regional meetings of outstanding lawyers, in Boston, Charlotte, N.C., Chicago, San Francisco, and Dallas.

Question. What is the next step?

Answer. The committee contemplates a series of world regional meetings, culminating in the first world conference of lawyers in history.

Western Lore Is Venture for Haines

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. ULLMAN. Mr. Speaker, we are all aware of the importance in preserving for the future the relics of the West's colorful past. For this reason I am most happy to say that one of the finest antique collections in Oregon is going to be on public display in Haines, Oreg., a historic little city located under the shadow of the majestic Elkhorn Mountain Range in the heart of Baker Valley. This fine collection has been gathered during the past half century by my friends, Mr. and Mrs. Charles Langrell of Baker. The following article about the Langrells and their project I am sure will be of interest to my colleagues.

WESTERN LORE IS VENTURE FOR HAINES—LANGRELL COLLECTION TO BE FEATURED IN BIG BUILDING ON MAIN STREET

A development which will place perhaps the largest accumulation of antiques anywhere in the West in the forefront as a tourist attraction in this valley was announced here today by the Langrell family who secured a large granite stone building on the main street of Haines and will redesign its entrance with a full western-style front.

Already known throughout the region, the Langrell collection will occupy the entire large ground floor of the old former garage structure secured from Glenn Duncan on the south end of the same block as occupied by the IOOF hall.

Work has already been launched and the collection of western lore will be open starting June 10, Charles Langrell, Etha and Grier Langrell and Miss Catherine Tyler, who are undertaking the project, told the Record-Courier today.

COLLECTION IMMENSE

The collection is the product of 25 years of work and is presently stored at the Langrell's Trading Post on Broadway, and warehoused elsewhere. The displays which have attracted so much attention at the Trading Post are only part of the accumulation of pioneer items.

Renovation of the Haines building will provide extensive case and shelf display. A full length tiered case will be required for the outstanding china and glass collection alone. Crockery, hanging lamps, frontier cooking utensils and brass and copper, churns, old clocks, phonographs, organs, tools, bells, and furniture antiques are only a partial list of the class of items to be segregated and displayed at the Haines showplace.

Oil paintings from early-day Baker County establishments, items from the mines, and ox yokes are other items.

In outlining the venture the owners pointed out that the collection items are not for sale. In fact the idea Mr. Langrell had a quarter century ago when he began to save the antiques out of his secondhand store was born of the fact that all too many even at that time were being bought up by California and other outside collectors and that his efforts would henceforth be directed to preserving the lore for his own locality.

One of the remarkable attractions of the collection is the innumerable assortment of antique guns, including powder horns.

As the project develops adjacent space will provide display for larger items of the collection. Among these are a fire hose cart, a pumper firetruck, a stagecoach, an old hearse and sleighs.

In renovating the building linoleum will be placed on the floor, lighting installed and wall finish suitable for the showplace applied. The special treatment on the front will probably feature a balcony-type distinctively western design, Mr. Langrell said.

The owners will arrange hours suitable for both local and tourist interest and it is planned to make a small admission charge as the only means of sustaining the venture which will be advertised both by reputation of those who see it and by advertising.

TO CONTINUE BUSINESS

The removal of the antiques from the Trading Post will in no way alter the business here which will be continued. It will permit roomier display of the furniture and used goods stocks of the local firm, however, the operator pointed out.

HAINES PLANS

The Langrell move of antiques to Haines was explained to be the culmination of a long study of where best to establish the collection. The decision was prompted by the inability to secure suitable purchase or rental property in Baker for such a venture and by the unique opportunity of featuring the western attraction in Haines, it was pointed out.

The town has indicated hearty cooperation with the venture. John Henner, one of a number of persons interested in antiques at Haines, said his present plans call for a display of his items in his garage building and for the display of a number of pioneer model cars outside during the Centennial tourist season.

In the Ray Pullen old barbershop property elsewhere on the street the town is already arranging to provide a basic community antique collection and stopping place for tourists in the business district.

The Northeast Oregon Museum group is currently completing plans to feature its growing list of collections at permanent museum facilities which may be set up using the former Haines school gym under lease from the city. Negotiations are already ununderway for the transfer from the school to the city.

Secretary of Agriculture or Secretary of Processors?

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, upon checking over a list of the groups which Ezra T. Benson addressed during 1958, I am inclined to think maybe his title ought to be Secretary of Processors instead of Secretary of Agriculture. Over half of his speeches were made to business audiences, and only about one-seventh of the groups even pretended to be farm organizations. Under leave to extend my remarks, I would like to place in the RECORD an article from the May 1959 National Farmers Union magazine which includes Secretary Benson's 1958 speaking schedule:

BENSON SHUNS FARMERS, TALKS TO PROCESSORS

One reason Ezra Taft Benson, the Secretary of Agriculture, is no help to farmers is that he is busy helping the food processors and others who make money from low or fluctuating farm prices.

For instance, a recent press release from the public relations firm hired by the Corn Products Co., one of the biggest food processors, reads in part as follows:

"Mr. Benson flew here today from Washington to appear as featured guest speaker before the International Executive Management Conference of Corn Products Co., now in weeklong session at the Seaview Country Club."

Incidentally, the press release featured Benson's attack on a congressional bill for direct payments to farmers, saying it would "eventually bring down upon agriculture a regimentation more rigorous by far than anything our farmers have known." It also pointed out that Corn Products Co. buys about 100 million bushels of corn a year.

The extent to which Benson courts the processors, instead of talking to farmers, is best documented by his official list of speech engagements. Last year, for example, half of Benson's dates were to business audiences. Only about one-seventh even pretended to be farm audiences, and half of those were Farm Bureau.

In reading the following list of Benson's 1958 speeches, it should be noted that no speeches to Republican Party meetings are included, although it was an election year.

ADDRESSES BY EZRA BENSON DURING 1958

Ruritan Nation, New Orleans, La.

Association of Cotton Textile Merchants of New York.

National Press Club, Washington, D.C.

National Farm Institute, Des Moines, Iowa.

National Food Conference, Washington, D.C. (Sponsored by Farm Bureau).

Annual Farm Forum, Minneapolis Chamber of Commerce, Minneapolis, Minn.

Farm and Home Week, Ohio State University.

National Conference of Organizations on International Trade policy.

Franklin County Farm Bureau and other cosponsoring organizations, Preston, Idaho.

National Orange Show, San Bernardino, Calif.

American-Israel Society, Washington, D.C.

National Institute of Animal Agriculture, Purdue University.

Bond Club, New York City.

Federal Plan Quarantine Inspectors' National Association.

Danforth Farm Youth Center (Ralston-Purina), Gray Summit, Mo.

Winnipeg Chamber of Commerce, Winnipeg, Manitoba.

Super Market Institute, Atlantic City, N.J.

Annual Harvard Milk Day, Harvard, Ill.

Washington Food Group, Washington, D.C. (Trade associations).

Dairy Luncheon (including processors), Washington, D.C.

Fourth of July Celebration, Washington, D.C.

National Plowing Contest, Hershey, Pa.

Fort Bedford Celebration, Fort Bedford, Pa.

American Institute of Cooperation, Pennsylvania State University.

Farmers and Livestock Day, Toronto, Canada.

Heart of America Tractorama, Colfax, Ill.

Kansas Free Fair, Topeka, Kansas.

All Ohio Swine Producers Pork Picnic, Xenia, Ohio.

Rotary Club of Seatle, Wash.

National Affairs Forum, Chamber of Commerce, Pittsburgh, Pa.

National Association of Food Chains, Chicago, Ill.

Nebraska Mechanical Corn Picking Contest, Tekemah, Nebr.

South Bend Knife and Fork Club, South Bend, Ind.

Kansas City Chamber of Commerce, Kansas City, Mo.

Executives' Club of Chicago, Ill.

Arizona Farm Bureau Federation and Maricopa County Farm Bureau, Phoeniz, Ariz.

Economic Club of Detroit, Detroit, Mich.

Greater Grand Rapids Chamber of Commerce. Grand Rapids, Mich.

Professional Workers in Agriculture, Wisconsin State College.

Las Vegas Junior Chamber of Commerce, Las Vegas, Nev.

Nevada State Farm Bureau, Reno, Nev.

Weber County Farm Bureau and other county farm organizations in northern Utah.

Rotary Club and other civic organizations, Pocatello, Idaho.

Idaho Falls Kiwanis Club and other organizations, Idaho Falls, Idaho.

California Farm Bureau and Agricultural Council, Fresno, Calif.

National Grange, Grand Rapids, Mich.

Commercial Chemical Development Association and the National Agricultural Chemical Association, Beltsville, Md.

Conference of Bank Correspondents, Chicago, Ill.

Chicago Farmers' Club and International Livestock Exposition, Chicago, Ill.

U.S. Fruit and Vegetable Products Laboratory dedication, Winter Haven, Fla.

Vegetable Growers Association of America, Cleveland, Ohio.

New England Trust Conference, Boston, Mass.

Sunkist Growers, Los Angeles, Calif.

Our Prize and Public

EXTENSION OF REMARKS
OF
HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. PIRNIE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the May 5, 1959, edition of the Utica Observer-Dispatch.

Recently the Utica Daily Press and Utica Observer-Dispatch were awarded the Pulitzer gold medal for disinterested and meritorious public service as a result of their successful campaign against corruption, gambling, and vice, and the achievement of sweeping civic reforms in the face of political pressure and threats of violence. Through this award the newspapers have brought honor and distinction to upstate New York, since this prize has long been recognized as symbolizing highest journalistic excellence. It is essential to the cause of good government that the citizens be kept informed. In exposing that which is corrupt and in encouraging that which is sound, the press can do much to assure the existence of an effective civic conscience.

OUR PRIZE AND PUBLIC

The people who work on the Observer-Dispatch and the Press are proud of the honor bestowed upon us by the Pulitzer Prize administrators for "disinterested and meritorious public service."

We hasten to add that the Utica newspapers accept this national recognition as a challenge to live up to the high standards the committee selection implies.

And that we appreciate sincerly the support of those who comforted us and aided us in what was not an easy year for the newspaper people involved.

The leadership of Mason Taylor, executive editor of the papers, was the outstanding factor in the achievement. He doubled as news director and Press editorial writer in turning over the stones in the local cobble patches.

The hard work of assembling facts centered here in O-D managing editor, Gilbert P. Smith; the Press managing editor, Neal A. Bintz; Reporter-Editor Tony Vella and Reporter William H. Lohden. The scope of the Gannett Newspaper organization made possible the services of Jack Germond of the newspaper group's Albany bureau and Paul Martin, chief of our Washington staff. The late J. David Hogue, then general manager of the papers, backed the project warmly.

These all share principally in the honor of the award.

The effort to show area residents what was happening to their community in unpunished vice law violations and costly administration of public business is not something a newspaper finds pleasant. Newspaper people, too, are citizens and taxpayers. The fair name of their community is dear to them. But when a malignant growth needs to be eradicated, the operations must go ahead, no matter what the risks or the discomfort.

Exposure of maladministration is not the type of "news" that sells more papers. In Utica, many people of some standing could not believe conditions had become so serious, frowned upon "stirring up a mess." At times, the plugging to get the story was onerous, frustrating, and even hazardous.

We knew, of course, that newspapers could not do the task without backing and help from the public. To those who aided by writing letters or otherwise, our thanks. To those who are coming to see the need for more citizen action, we say, "Welcome aboard."

Our staff cherishes the Pulitzer Prize, but we appeal to all to see that conditions which inspired our activities have no chance to recur in this community. Active, intelligent participation in public affairs by more people will best guarantee a greater Utica free from evils and political shenanigans.

WILLIAM J. WOODS.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Next Year and the Next 10 Years

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. CHURCH. Mr. President, the junior Senator from Utah [Mr. Moss] addressed the Women's National Democratic Club here in Washington last Thursday night. He spoke discerningly and with clarity on the posture of this Nation as our Western civilization faces great dangers.

I was particularly interested in his discussion of the tasks we have assigned to the Select Committee on Water Resources by Senate Resolution 48, recently passed.

Mr. President, I ask unanimous consent that this fine address delivered by Senator Moss be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEXT YEAR AND THE NEXT 10 YEARS

(Address by Senator FRANK E. MOSS before the Women's National Democratic Club, Washington, D.C., May 7, 1959)

For a new Senator, Washington has many surprises, most of them pleasant. My biggest surprise, however—and I think I can claim an exclusive on this one—was to be asked to address Lincoln Day dinners. One of the first pieces of mail I opened was from former Republican National Chairman Meade E. Alcorn, requesting my preferences as to places to deliver Lincoln Day speeches.

And actually I would welcome the opportunity of talking to a Lincoln Day audience. I would like to remind them of the needs of the present day, as Republican Senator GEORGE D. AIKEN, of Vermont, did when he said in his speech this year:

"It is a mistake to give the public the impression that a balanced budget to be achieved at any cost is the paramount aim of our Republican administration.

"Lincoln had to choose between conflicting values and he chose the greater ones," AIKEN said. "He could have balanced the budget and lost the Union. He could have held down the national debt and perpetuated slavery.

"Instead of 'scaring the daylights out of people' by putting budget balancing first," AIKEN said, "Republicans should make clear that national security and a stable progressive economy are our paramount interests.

"The United States is a growing nation. The progress we have made to date is only preliminary to what the future holds for us."

In addition I would remind Republicans that Lincoln said this: "The dogmas of the quiet past are inadequate to the stormy present • • • as our case is new, so we must think anew and act anew." Surely the need to "think anew and act anew" was never greater than it is today.

For today we face new threats to our security, to our way of life, to Western civilization itself. The entire concept that was summed up in Woodrow Wilson's historic phrase, "To make the world safe for democracy," is in great danger.

This audience is thoroughly familiar with the nature and extent of that threat. We have seen the development of the fearsome weapons which, their creators tell us, are capable of blowing up civilization itself. We have heard the soothing statements of the administration prior to the launching of the first sputnik, and have seen revealed the rapidly increasing economic productivity of the Soviet Union.

We are aware that last year, for the first time, the Communist bloc, including the U.S.S.R., its East European satellites and China, produced more steel than did the United States. And of the even more sobering fact that half our capacity—an amount equal to the U.S.S.R. production—was idle. Put another way, the American furnaces that were idle last year could have produced as much steel as all the furnaces in the Soviet Union.

The totalitarian dictators know what kind of world they want it to be in the years ahead. They boldly plan for that world, and channel their productive capacity, their educational facilities, and their diplomatic maneuvers to making it that kind of world.

If we are to win in this kind of struggle, we must project our program ahead—we must decide what kind of world we want it to be twenty years from now. And within the framework of democratic individual liberty, we must devote the years ahead to the effort to create that kind of world.

And the competition of Russia is only one of the developments that make it necessary to take the long view, to plan ahead, to decide what kind of world we want it to be and set out consciously to make it that kind of world.

More basic than even that, are two other problems—the accelerating population of the world, and the increased use of Western industrial techniques.

The most famous of living English historians, Arnold Toynbee, has pointed out how the formerly backward nations of the world are beginning to use the mass-production methods developed by the West; and how—if they succeed in developing productive economic systems—their tremendous advantage in numbers is bound to tell against us.

There is no question as to the administration's program to meet these problems. As Senator AIKEN indicated, first, last, and all the time it is: balance the budget to stop inflation. And this administration policy is getting a free publicity ride on the tremendous "stop inflation" advertising program being conducted by American business.

Now, we Democrats want to see as much study of economic problems as possible, and it is a healthy thing for our citizens to take an interest in the budget, and to take the time and effort to study the problem and to make their views known. We are all aware of the tragic things that inflation can do to the economy of a country and to the people who live in it. We must also be aware of the complex nature of inflation, and of all those problems that have to do with our monetary system.

Many feel that deficit financing by the Federal Government is the sole cause of the rise in the price level that we call inflation. While it may be true that it is a contributing cause, a year-by-year examination of our Federal budgets and the rise in the cost-of-living figures clearly show that balancing the budget in one year does not necessarily mean stable prices that year. For example, the present Eisenhower budget is $13 billion out of balance, but there has been virtually no increase in the cost of living for the past 4 months.

No one seems to know precisely how to halt inflation, although we recognize many of the factors which contribute to it. For example, the tight-money policy was supposed to slow down borrowing and credit and thus to halt inflation, but this slowdown caused a business decline which resulted, in turn, in an increased Federal deficit due to loss of tax revenue. So we know that we must have a healthy and expanding economy to meet the fixed obligations of the Government with adequate tax income. If we do not, we are compelled to resort to deficit financing.

Let me say, however, that I am hopeful that we can balance the budget this year, and that this will contribute to stabilization of the value of the dollar. But in attempting to do this, we must not forget our primary needs of defense and of the economic well-being of our people. It is important to safeguard the incomes of those on fixed incomes. It is equally important to provide what is needed for education, for social security, for conservation of our natural resources, and for defense of the free world against the Soviet military and economic threat.

The administration is making the budget for this fiscal year an end in itself. Actually, it should be only a means to the greater ends—the needs for national security and necessary domestic programs.

With much of what I have said, many Republicans would agree, except that they would have a different definition of the word, "necessary." What do we mean by necessary domestic programs?

As an example, let's look at two domestic matters that I consider necessary: the solution of the unemployment problem and conservation of our natural resources.

As you know, we are in a period marked by rising output of our gross national product, and what has been described as a profit explosion. In these two fields, recovery is undoubtedly good. But in employment, we are witnessing a much slower increase.

Studies indicate that increasing productivity due to automation may make it impossible for many workers to ever get their jobs back.

Increasing productivity is what makes a high standard of living, and this is good news. It is only one side of the story, however. Unemployment is bad news, and this problem must be met. The areas most affected are finding it difficult to finance their local governments. Unemployment, the resulting lack of purchasing power and tax-paying power was one of the great contributing causes of the 13 billion deficit for this fiscal year.

If this problem will solve itself, so much the better. But a realistic look at our history for the last 30 years must show that unemployment is a symptom of more basic

economic problems which, if not met, will give us real trouble in many other areas including that of the budget.

The second question is how our irreplaceable resources upon which our prosperity has been built—land, water, minerals, forests, and the others—are to be handled to retain and enlarge their productive capacities.

One of the most necessary of these, and one that well illustrates the point, is water. Since my State of Utah has been a leader in water conservation, it is a subject that is very near to me.

Water was once a problem only to the West. But our water table is falling throughout the Nation, and there is grave concern on adequacy of resources. Almost the entire supply of water that is high quality, inexpensive, and readily available is in use already.

Our population increase, as well as our increase in standard of living, must be provided for by conservation. And our requirements per person are rapidly accelerating. What was good enough for our grandfathers is not good enough for us. We are becoming used to automatic washers and automatic dishwashers. The Saturday night bath has been replaced by almost daily showers. The small patch of lawn in front of the cottage has given way to many beautifully landscaped areas for home, schools, and churches. We are building newer and larger golf courses, parks, and recreation areas.

Our industry is geared to large production of thousands of items that require great quantities of water, for instance 200,000 gallons to produce 1 ton of rayon, 300,000 gallong to produce 1 ton of aluminum, and 600,000 gallons to produce 1 ton of synthetic rubber.

Today we are using about 240 billion gallons of water a day. By 1975, if our 175 million population grows to 225 million as expected, even our present rate of consumption would outstrip our resources. It is expected that by 1975 we will need 350 billion gallons a day, or more than a 90-percent increase over the amount used in 1950.

As an example of how we Democrats are attacking these problems of the future, the Senate has, by resolution, set up a Select Committee on Water Resources. The resolution was the result of action taken earlier in the session by the Western Conference of Democratic Senators. The committee consister of Members of the Senate from the Committees on Interior and Insular Affairs, Public Works, Interstate Commerce, and Agriculture and Forestry.

Its task is to determine the water resource projects that will be needed between now and 1980 to supply the requirements of population, agriculture, and industry. The committee will report its findings and recommendations to the Senate not later than January of 1961.

In addition to conservation through storage and regulation of flows, the committee will study recent technical advances, including desalinization of brackish and saline waters, reduction of loss through evaporation, seepage control, and waste-water salvage.

Water development programs must be started well in advance of requirements. Relatively small projects take 10 to 15 years for the careful planning that must be done and for construction. Measures needed to meet 1980 requirements should be started as soon as possible.

A whole speech could easily be devoted to the history, features, and benefits of one of these great developments, the upper Colorado storage project, now underway in my State of Utah and surrounding States.

This project has been under consideration for more than 50 years. Some land withdrawals were made as early as 1904.

When completed, the project will develop an area of 100,000 square miles. It will consist of four large main-stream dams, one on the Green River on the Utah-Wyoming border, one on the Colorado on the Arizona-Utah border, one on the San Juan in New Mexico, and one on the Gunnison River in Colorado.

One million kilowatts will be added to upper basin power capacity, 132,000 acres of new land will come under irrigation, and 234,000 acres will receive supplemental water.

It will provide the water and power for full development of the more than 200 different minerals found in the Colorado Basin area, as well as open up great new recreation areas to boating, fishing, and refuges for ducks and other migratory birds.

One specialized but very important aspect of the conservation problem is the Federal-State conflict of Federal preemption of water rights. This, like all water problems, is most acute in the West, but will become more important to the entire country as conservation and allocated use becomes widespread.

The settlement of the West required cultivation of land which did not enjoy sufficient rainfall. This meant irrigation, which, in turn, meant storage of water during wet seasons for use in other places during dry seasons. As soon as water that originates one place is put to use somewhere else, the question arises as to ownership.

Since the first Utah settlements, water law has developed on the basis of beneficial use. Whoever first puts water to beneficial use owns it. And this property right is more valuable than the land itself. All existing water rights have been secured under State law and now the Federal Government refuses to recognize those State laws and the individual rights granted under them, as binding on itself.

This controversy has accelerated as more Federal projects have been built in the West, and court decisions have held against the States.

Legislation to establish Federal recognition of indivdual water rights has been introduced in the last several sessions of the Congress, and I am the author of a water rights law this year. All previous bills have failed, largely because of the opposition of the Federal departments that deal with western lands.

You will have a better idea of the scope of the problem if you realize that the Federal Bureau of Land Management administers 176 million acres in 26 States and 298 million acres in Alaska, and that 74 percent of Utah is federally owned.

We in the West, who have had the experience with this problem, believe that the orderly development and expansion of water conservation demands the recognition of State laws, and the willingness of the Federal Government to apply for water rights in the same way as other users do.

The Problem in Germany

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I made on "The Problem in Germany" before the Bicentennial World Affairs Forum of the Foreign Policy Association of Pittsburgh on May 1, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF HON. MIKE MANSFIELD, OF MONTANA, BEFORE THE BICENTENNIAL WORLD AFFAIRS FORUM OF THE FOREIGN POLICY ASSOCIATION OF PITTSBURGH ON MAY 1, 1959

INTRODUCTORY REMARKS

Thank you for your kind words of introduction. They are deeply appreciated though undeserved.

Ladies and gentlemen, your welcome has been warm and generous and I shall do my best not to wear it thin. As you know this is my second visit with the Foreign Policy Association of Pittsburgh. To have been asked to come again is both a pleasure and a reassurance. It is a little like being reelected to the Senate. I am honored and I am most grateful to you, as I am to the citizens of Montana, for giving me a second chance.

Before proceeding to my remarks for this evening, I want to express to you, to your hard working and able director, Mr. Higgins, and, in truth, to all the foreign policy associations throughout the country, my admiration for the very significant public service which you perform.

May I take this means to state publicly what I have said many times privately about one of your members present with us this evening.

He served outstandingly in the European theater in World War II. He assumed command and set up a command post for Americans in Bogota, Colombia, when a revolution broke out in that country during the Ninth Inter-American Conference in 1948. He commanded our troops in Korea at the most critical and difficult stage and from there, he went to Europe and became Supreme Commander of NATO. He rounded out his career as Chief of Staff of the U.S. Army and has retired here at Pittsburgh to become one of your outstanding citizens.

I refer, of course, to Gen. Matthew B. Ridgway, who was and is not only considered a soldier's soldier, but perhaps most important during his entire military career he was a statesman's soldier as well.

There was a time when the Nation faced the problem of getting adequate and prompt information on developments elsewhere in the world. That problem has largely been solved. Modern means of communication bring the people of the United States, just as soon as it is made, almost more news than they can handle.

A related problem, however, remains. It is illustrated by a New York Times nationwide survey of public attitudes on the Berlin situation. The survey, made several weeks ago, showed that while an overwhelming percentage of Americans favored "standing firm" in the Berlin situation almost 40 percent did not know that in standing firm in Berlin we were standing over a hundred miles inside Communist Germany. According to the Post-Gazette of today an even more startling show of public ignorance or apathy has come from Britain. A recent opinion poll there revealed that 3 Britons in every 10 had never heard there was a dispute over Berlin.

This suggests to me that while the problem of supplying the news from abroad in sufficient quantity is being met, the problem of filling in the background and of giving the news perspective in terms of the Nation's needs and interests has not yet been adequately met. It is precisely in this field that the work of the Foreign Policy Association is most useful. As a Member of the Senate and the Committee on Foreign Relations, I applaud you for your contribution to public understanding of the vital international issues which confront the Nation. I express

the hope that you will go on doing even more in this connection.

I am here, tonight, to participate with you in a small way in your important work I am here to discuss one segment of the international situation—the question of Germany.

At this point in the unfolding of that question I believe it is reasonable to say that as a Nation, we know that there is such a thing as a problem in Germany. Further, that we realize that we must "stand firm" in Germany. More recently, we have heard too of the need for not only "firmness" but also "flexibility." Let me try, tonight, to go beyond those slogans, for, in truth, that is what they are. Let me try, tonight, not merely to reiterate the need of being firm or flexible or firmly flexible or flexibly firm. Rather, let me try to explore with you the problem which confronts us in Germany and the possibilities of dealing with in ways other than disastrous war or disastrous diplomatic retreat.

THE PROBLEM IN GERMANY

The problem which confronts us in Germany is a segment of the worldwide problem of establishing equitable, rational, and evolving, conditions of peace. Today the crisis looms in a divided Germany and a divided Berlin. Tomorrow the scene of principal danger may shift to the Middle East. The day after it could be in the Far East that the clouds of conflict gather.

Since the end of the second war we have lived with a succession of international crises in these and other regions of the globe. It is as though the world were a vast and dangerous mine. We have rushed from one point of imminent or actual cave-in to another in a never-ending struggle to shore up the sagging roof of peace. We have timbered with a Berlin airlift, with a military defense of South Korea, with vast aid programs in Europe, Asia, and elsewhere, with troops in Lebanon and with naval power and other measures in the Formosan Straits.

These costly and strenuous improvisations represent our efforts to prevent a complete collapse of peace. It is doubtful, however, that what these measures have produced in the principal zones of danger—in Germany and Central Europe, in the Middle East and in Asia—this patchwork of timbering on which the fate of civilization rests—would meet a minimum safety code. The fact is that a dangerous world, no less than a dangerous mine, is not made safer, in any permanent sense, by patchwork. Improvisations may be unavoidable, as interim measures, as desperate measures. They ought not to be confused, however, with peace. On the contrary, improvisations may conceal an encroaching danger to ourselves and to the rest of the world by creating the illusion of stability, by permitting the postponement of essential, fundamental changes until it becomes perilously late to make them.

Something of that sort, I believe, lies at the root of the present problem in Germany. For years now, there has existed in that nation a kind of surface stability.

This is the appearance of that stability. In Western Germany which houses about 50 million Germans, the responsible, representative government of the Federal Republic, its capital in the city of Bonn, functions with a high degree of effectiveness. West Germany has one of the most productive and dynamic industrial economies in the world. It also has the substantial beginnings of a powerful German military establishment. Beside this establishment, there are garrisoned over 275,000 other NATO troops—French, British, and American—many with their dependents.

To the east of the Federal Republic is a Communist-held German territory, much smaller in area and with a population of only 17 million. Many Germans regard this region not as East Germany but as Central Germany, having in mind the Polish-annexed territories beyond the Oder-Neisse as the true, the unredeemed east. For our purposes tonight, however, I shall speak of the region as East Germany or Communist Germany. In this sector of the divided nation, there is poverty, stagnation, and oppression from which vast numbers have fled to the west in recent years. Increasingly, however, we hear reports of plans, if not the beginning, of an economic revival in the east.

There is Communist rule in Eastern Germany. A German totalitarian regime exists there by virtue of its own and Soviet power and the acquiescence, however sullen, of the East German people. As in the west, a German military establishment has been reconstituted in the east, under Communist control. It is supplemented by many divisions of Soviet Russian troops.

This brief sketch of a divided Germany also fits in microcosm, with some variations, the present situation in a divided Berlin. A principal difference is that Allied and Soviet Russian forces still retain tangible, visible responsibility for what happens, respectively, in the western and eastern sectors of the city. Garrisons of both are present and the Russians control the routes through East Germany over which French, British, and American forces must pass, from their bases in West Germany to their outpost in Berlin.

Under the ultimate control of the Allies, West Berlin has its own municipal government with Willy Brandt as its able, outspoken mayor. Under Soviet control, a sector of East Berlin—Pankow—serves as the seat of the Communist East German regime.

Among Germans of the two zones of the divided nation and the two parts of Berlin there is considerable contact, official and unofficial, in trade and in other matters. There is no formal recognition, however, of the one by the other. In fact, of all the principal countries involved in the German situation, only the Soviet Union recognizes both the West and East German Governments.

That, in brief, is the look of stability in Germany. The arrangements which underpin this stability are those which evolved at the end of World War II. They were designed originally for the temporary occupation of a defeated Germany. But what began as an expedient took on a kind of permanence with the breakdown in relations between the Soviet Union and the Western nations.

All around the rim of Germany changes have taken place. Within West Germany and East Germany, respectively, changes have also taken place. But between the divisions, the arrangements for stability have not changed in essentials for years.

All of the nations involved have recognized at one time or another that these arrangements are inadequate. We and other Western nations have said, in effect, that they must be changed. The Soviet Union has admitted that they should be changed. The German leaders—East and West—know that sooner or later they will be changed. All involved have paid at least lip service to the basic requirements of change, that is, to the need for reunification of Germany and of its capital of Berlin and to the need for a final liquidation of World War II.

However, no nation has really moved from the position it assumed years ago on how these admittedly necessary changes should be brought about. The Western position has been based, at least until recently, on the contention that there should be free all-German elections as the prerequisite to reunification and a peace settlement. The Russians have been vague on this matter but it is apparent that even if they use the same language as we do, they do not mean the same things. They clearly do not accept a unification of Germany by free all-German elections, if it means, as it would at this time, the obliteration of German Communist political influence in East Germany. It may be that they are not really prepared to accept unification under any circumstances unless it means the domination of all of Germany by communism.

In the meantime, all have managed to live with the existing arrangements, with a divided Germany and Berlin, part free and part Communist, with a Germany no longer at war but not yet fully at peace. On only two occasions have these arrangements been seriously challenged. They were hit by the Stalin-imposed blockade of Berlin in 1948. Then, in 1953, the Communist political structure in East Germany was shaken by worker uprisings. Both attempts, as you know, failed. The Western nations committed enormous resources in the Berlin airlift and in the supply and reconstruction of West Berlin. Finally, Stalin was persuaded to abandon his attempt to force us from the city and to unify it under Communist control. The East German revolt which we supported with very articulate enthusiasm was suppressed by Soviet military power and the hope of a spontaneous unification of all Germany under freedom, in that fashion, was set back.

Since 1953, the status quo has not again been subjected to a major test anywhere in Germany. To be sure, there have been incidents which have sent tremors through the stability but they did not upset it. Just last November, for example, Mr. Khrushchev warned that he would change the status quo at Berlin. He did not schedule the execution of the change, however, until this month. Now, apparently, it has been postponed, pending the results of the coming conferences.

In short, the German situation is still held together by the same provisional, improvised arrangements which have held it together for years. These arrangements are tied to certain basic conditions, conditions which must prevail if the stability in Germany, in its present form, is to continue. We must see clearly what these conditions are if we are to measure the scope of the problem which confronts us. Let me, therefore, outline them at this point.

First, the present stability in Germany depends upon the absence of decisive accidents or provocations between the military forces of the West and the Soviet Union. It is conceivable that there may be hostile or threatening contact between these forces, as indeed there has been, without a collapse. This contact, however, cannot go too far. At some undetermined point, military accidents or provocations are likely to set off a chain reaction which will engage in a decisive fashion the prestige—the face, so to speak—of the principal powers. At that point the irrevocable slide or plunge into the abyss of war will have begun.

That, then, is one condition of the continuance of the status quo in Germany, of the present stability which is neither peace nor war. There must be an absence of hostile accidents or provocations between the military forces in Germany which go beyond the point of no return.

The second condition is German acquiescence, the acquiescence of the people of the East as well as the West in the systems under which they now live. Let me say, parenthetically at this point that I do not suggest that this is desirable. I merely say that it is one of the factors which underlie the existing stability.

As a part of acquiescence, Germans must be willing to accept the continued division of their country, the continued presence of foreign troops in great numbers in their land and the military arrangements which join one segment of the nation to NATO for pro-

tection and subordinate the other to the Warsaw Pact.

The third basic condition of the status quo is that the Western Powers and the Soviet Union must also tolerate the existing division of Germany and the present arrangements for occupation of a divided Berlin. In short, if the German people must accept the status quo, the Western Powers and the Soviet Union must not challenge it, at least they must not challenge it with anything much stronger than words. Further, the peoples of the West must be prepared, as must the people of the Communist bloc to pay the ever-increasing costs of defense establishments and the instruments of cold war which are made necessary in part by the existing arrangements for keeping the status quo in Germany.

In stating these conditions, I emphasize again that I do not advocate them or subscribe to their desirability. I merely note them as underlying the present situation in Germany, as the conditions precedent to its continuance. These conditions are not the foundations of an equitable, rational, and evolving peace in Germany and central Europe. They are the patchwork timbering of an improvised truce. Nevertheless, they are the conditions on which the lives of the German people, the people of Europe and, in a larger sense, the survival of a recognizable human civilization now depend.

If one of these conditions is changed in any significant fashion, I cannot see that the present situation in Germany is likely to persist. It seems to me that it must either evolve into something more durable or it will collapse in the chaos of war, limited, or unlimited.

Putting aside for a moment Mr. Khrushchev's announcement that the proposes to alter one of the conditions of the present stability, that is, the arrangement at Berlin, what of others? Can these others, in any event, be counted upon to support indefinitely the existing situation? I do not see how they can be. I believe that these other conditions have already changed markedly beneath the surface calm, that they are continuing to change and that they cannot change much more before the churning shall break through the surface.

In that sense, I am persuaded that the present stability in Germany was in the process of erosion long before Mr. Khrushchev's announcement last November. Indeed, I said so in the Senate many months prior to that time.

Let us look for a moment at the present state of these conditions of stability, these basic conditions which must prevail if there is to be no change in the German situation. Take the first—that there must be no military accident or provocation in Germany which goes beyond the point of no return. It is obvious that none, so far, has done so. But there have been grave near-misses. The Berlin blockade was a massive near-miss. Since that time there have been other incidents, provocations. I need not catalog them. You have seen reference to them time and again—to the buzzed transports, to the challenged convoys, to the downed planes and the detained soldiers. I do not know which of these incidents may have been prompted by higher Soviet headquarters and which may have come about by the whim of some local commander. Given a conducive set of circumstances, however, it is far from inconceivable that any incident of this kind might go out of control.

Apart from deliberate provocation, there still remains the very real danger of military accident, if not on our part, then on theirs. The chances of accident multiply when forces are poised—as they are in Germany—at swords-point and are keyed tight by the electrified atmosphere of cold war, of propaganda war. They multiply again as the countdowns of the new weapons quicken and their delivery times shorten. They multiply still again as these devices of incredible devastation find their way into more and more hands. In this sense, then, a basic precondition of the status quo in Germany has indeed changed, quite apart from any recent change in Soviet policy with respect to Berlin. It has changed in the sense that the margin for military error or provocation has narrowed. The prospects are, moreover, that the margin will narrow still further as time goes on.

I believe, too, that it is reasonable to suggest that the acquiescence of the Germans—East and West—the second basic condition on which the status quo rests, has also changed significantly and will continue to change. It is, of course, difficult to document the sentiment of a whole people. We are informed, however, that there is great unexpressed discontent in East Germany. We know, moreover, that there are movements for reunification and neutralization in Western Germany, even if we cannot measure their strength. We must assume that currents of a similar and probably stronger kind flow through East Germany even though Mr. Gallup has yet to conduct a poll in that region.

It is obvious that the defeated Germany, the disarmed Germany, the shattered, starving Germany for which the present improvised arrangements of stability were devised, no longer exists. As I noted earlier in my remarks, at least in one zone—in the West—there is a revitalized nation. Furthermore, in both zones, there now exist German military forces and political structures manned by Germans, even if, in the East, they may not be controlled ultimately by Germans. In both zones, finally, a new generation is coming into its own—a generation which was young in the days of defeat but which, now and in the years immediately ahead, will inevitably rise to leadership in Germany. In these circumstances, it would be unrealistic in the extreme to believe that the arrangements for stability which exist in Germany—devised in another hour and for another setting and modified only within each zone separately—will continue to serve for the indefinite future. In short, we must face the likelihood that the second condition of the status quo—the continued acquiescence of the German people in division and quasi-occupation may well be drawing to an end. We must reckon with the strong possibility that, increasingly, Germans will seek their unity and national equality by whatever means may be available if constructive machinery to facilitate it in peace and order does not exist.

As for the third basic condition on which the present stability in Germany rests, I have already noted that if we are to go on as we are, the Western nations and the Soviet Union must not challenge the existing arrangements with anything much stronger than words. In fact, except for occasional dangerous but limited military incidents and provocations, neither has challenged it, in any other fashion in recent years. Further I said that both the people of the Western nations and the Soviet Union must be willing to pay the ever-increasing costs of defense establishments and the instruments of cold war to keep a rough equilibrium of force not only in Germany but throughout the world. That, too, has been done until now, although I would be less than honest if I did not express my deep concern over continuing reports that the Soviet effort in this respect is greater than our own. I am not in a position to evaluate those reports. The official secrecy—necessary and unnecessary—which engulfs this question cannot be easily penetrated by Members of Congress. The disquieting reports, however, come from highly qualified and competent sources and they do not auger well for the future. They certainly raise doubts about the likelihood of maintaining the present stability in Germany or anywhere else for that matter.

Finally, the third condition of the status quo also depends upon the maintenance of the present arrangements at Berlin. We now know that these arrangements have been challenged. Mr. Khrushchev has assailed the Western position in Berlin and demanded that it change. He has done so, however, only in words and, in that respect, his challenge is not new.

What is new, what does threaten the status quo is the strange action by which Mr. Khrushchev proposes to bring about this change. He proposes to withdraw himself from Berlin, that is, he says that he will remove Soviet forces from the city and from the routes of access to it. Our official answer has been equally strange. We have said, in effect, that the Russians cannot leave the city and the routes of access, that they certainly cannot leave it in spirit and perhaps not even in body. After trying for many years to get the Russians out of the areas into which they sprawled after World War II, here is one place that we do not wish them to leave.

The reason for this is clear. If the Russians do quit Berlin, they will turn over the instruments of control to East German Communists. That opens, for the Soviet Union, a large field of maneuver in the war of nerves. But in a more fundamental sense, the action will also work a change in the underlying conditions of the status quo in Germany. It will increase the strains and stresses on the essential military restraints which are a part of the present stability. It will do the same to German acquiescence which is also a part of it. In short, the entire German situation will move into a period of grave instability out of which is likely to emerge either a new status quo or conflict.

There has been a great deal of speculation on why Mr. Khrushchev has threatened to take this step. One may assume, of course, that Mr. Khrushchev has been motivated by what he believes will be ultimately to the advantage of the Soviet Union and world communism. I would hope that we are equally motivated by what we believe to be to the advantage of the United States and to world freedom.

What is significant at this moment, is not so much the ultimate aims of Soviet communism. We know what they are and it is of little value to intone them again and again as though this litany will somehow protect us from them. More significant is the question of how Mr. Khrushchev proposes to serve Communist interests through Soviet policies at a moment in history when the transcendent interests of civilization, and of the human species itself, rest in delicate balance between survival and nuclear obliteration.

No one who is not privy to the operations of Mr. Khrushchev's mind and the inner working of the machinery of Soviet communism can be certain of what lies beneath the Soviet maneuver at Berlin. The move could have been motivated by a combination of any of a score of reasons, some logical, some illogical, some groping toward peace, some stumbling toward war.

The interpretation of the charades of Soviet policy may be a fascinating game. As I have already noted, however, this game is essentially speculative. What seems to me most important at this point is not to guess at the obscure contents of the Soviet mind but rather to get clearly in our own minds what it is that we—the western nations—seek in this situation. What is most important is to make certain that what we seek is reasonably related to the situation that exists in Germany today, not to one

which we would like to exist or one which may have existed years ago and no longer exists.

If the interests of this Nation, of freedom, and of human civilization lay only in maintaining existing arrangements in Germany, if Mr. Khrushchev's maneuver at Berlin were the only threat to these arrangements then, indeed, it would be sufficient to counter that maneuver merely by standing firm.

Is that, however, the case? I think it is clear that Mr. Khrushchev's maneuver at Berlin is not the only danger to the status quo in Germany. Further, I question whether an effort to maintain that status quo indefinitely is, in fact, in accord with the interests of this Nation, freeedom, and human civilization.

To be sure, we shall stand firm at Berlin and in Germany. I know of no responsible person in the Government of this Nation who holds otherwise. I certainly do not hold otherwise. Moreover, I know of no statesman in the Western World who holds otherwise. We shall stand firm because to permit the forces of freedom to be frightened, cajoled, or driven from Berlin—the future capital of all Germany—will be to remove one of the props of the present stability in that country before another firmer support is in place. Let us not, however, confuse the necessity for standing firm in that sense with a mere maintenance of present arrangements in Germany for the indefinite future.

I am not persuaded that the interests of this Nation, of freedom and of human civilization lies in an indefinite continuance of the present military situation in Berlin and in Germany, a situation which, increasingly, will permit an accident or an irresponsible local provocation to precipitate the suicide of civilization. I am not persuaded that these interests are served by perpetuating arrangements in Germany which offer little prospect of progress toward peaceful unification to the German people. I am not persuaded that these interests are served by the ever-mounting costs of the arms rivalry of the cold war, and the propaganda war—costs which are occasioned in great part by the existing situation in Germany.

What I am trying to suggest, in short, is that it is not enough, in our own interests, merely to stand fast in Germany, as an end in itself. It is not enough merely to seek to sustain an existing situation which is ceasing to be adequate for minimum stability in Germany and central Europe. Rather, we must stand fast in order to go forward, in order to establish more equitable, rational, and evolving conditions of peace.

That is the challenge of the impending conferences on Germany. We must strive in them, it seems to me, to create a less volatile situation in Berlin, not merely by changing the Western position in that city as the Russians have suggested but perhaps by altering the status of the entire city, by internationalizing all Berlin under United Nations or other satisfactory international auspices as an interim arrangement. We must seek a readjustment of the military situation in all of Germany and Central Europe in a fashion which promises to reduce the danger of war by accident of provocation. We must seek, finally, a beginning on the spread of full political freedom throughout Germany and on German unification and, to that end, we must enlist in far greater measure than heretofore, the participation of the Germans themselves—East and West.

I realize, fully, that we shall not get anywhere with negotiations to these ends if the Russians are not of a mind, in their own interest, to move in a similar direction. As I have said, I do not presume to know the contents of the Soviet mind at this time, nor do I know of anyone who does. I do know that regardless of Russian intentions we shall not begin to move toward these ends unless we ourselves are clear as to where it is we want to go. We require at this point in time, beyond all else, a frank recognition of the importance of a change in Germany, a change not in the manner expounded by the Russians and not necessarily in the manner first projected by ourselves years ago. Rather, we need a change which conforms to the realities of the present, a change brought about by concessions which match concessions. To this task, we—all the western nations—must bring a new dedication, a new determination to develop equitable, durable, and evolving conditions of peace.

Miss Diane Collins

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. FOGARTY. Mr. Speaker, this morning I had the pleasure of attending a meeting of the President's Committee on Employment of the Physically Handicapped at which awards were made to the winners of its national essay contest. It is with a deep sense of pride that I am able to report to this House that a young lady from Coventry, R.I., tied for third place in that nationwide contest.

The young lady is Miss Diane Collins, of 11 Capewell Avenue, Anthony, R.I. Miss Collins is a senior at Coventry High School. She has long exhibited leadership qualities both in academic and extracurricular activities. All of us in Rhode Island are very proud of her accomplishments including the latest honor received from the President's Committee. We extend to her our most sincere congratulations and include in these congratulations her parents, Mr. and Mrs. Lloyd Greene, her teachers, and Coventry High School itself.

The subject of Miss Collins' essay was "Hiring the Handicapped in Our Town—Meet Stan Stockwell." She has developed well the proposition that the physically handicapped of this country constitute a large reservoir of skills, energies, and talents which must be tapped. We, who are so closely and intimately connected with the problems of the handicapped, realize the value of encouraging their employment. We are aware that the most promising aspect of the picture is that every year industry absorbs more and more of the severely disabled persons than they did the year before.

Much of the credit for this is due to programs such as that sponsored by the President's Committee under the able leadership of my good friend, Gen. Malvin J. Haas. Projects of the type of the national essay contest are valuable sources for making all the Nation aware of what is being done and what is hoped for in the future to give more of the handicapped people a chance at gainful occupations. For this, we all owe to Mel Haas a vote of sincere thanks.

Mr. Speaker, under leave to extend my remarks, I include the essay written by Miss Diane Collins entitled, "Meet Stan Stockwell." I also include a newspaper item written by John B. Lake, Jr., in the Providence Sunday Journal of April 26, 1959, which includes some details of Miss Collins' wide and varied activities:

COVENTRY GIRL PLACES HIGH IN NATIONAL CONTEST

(By John B. Lake, Jr.)

The pride of Coventry High School, Diane Joy Collins, 18, has done it again.

One of the top 10,000 high school seniors in the country and still a contender for a National Merit scholarship, she was disclosed yesterday to be one of five prizewinners in the national essay contest sponsored by the President's Committee on Employment of the Physically Handicapped.

Blond, brown-eyed Miss Collins, whose elementary and high school record shows straight A's, tied for third place in the nationwide competition with Brian O'Leary of San Antonio, Tex.

When Miss Collins won first prize in the Rhode Island contest earlier this month, Governor Del Sesto recognized her outstanding ability and offered her a summer job in his office. She quickly accepted.

For her achievement in the national contest, her school will receive a wall plaque. She will receive $250 and a trip, expenses paid by the Disabled American Veterans to Washington, D.C., to receive her award on May 7 from Vice President RICHARD M. NIXON. All winners will be guests at the President's annual committee meeting there May 7-8.

Harold Stanzler, personnel manager at Collyer Insulated Wire Co., Pawtucket, chairman of the Rhode Island Governor's Committee on Employment of the Physically Handicapped, will be at the Washington ceremony and will participate in a panel discussion on programs of local committees.

OTHER WINNERS

Other winners of the national contest were Barbara J. Zimmer, Glen Ridge, N.J., first prize, $1,000; Elizabeth O'Brien, Somerville, Mass., second, $400; Margaret O'Meara, Lake Charles, La., $100.

The five winners competed against thousands of public and parochial school juniors and seniors.

The daughter of Mr. and Mrs. Lloyd Greene of 11 Capwell Ave., Anthony, Miss Collins is editor of her high-school yearbook and a member of the art club. She is a member and former secretary of Quidnick Baptist Church Youth Fellowship and South County Youth Fellowship.

A member of the Future Teachers Club of Coventry High School, she plans to attend Gordon College in Beverly Farms, Mass., and major in English, then teach high school.

AN AVID READER

An avid reader, she had read "Little Women" and other books before she entered the first grade at Quidnick School, according to her mother. Principal Reuel Sheldon of Coventry High School says her scholastic success is the result of natural ability and hard work. Her trademark is a briefcase full of books, although she has varied interests.

In 1957, she won a State Lions' Club essay contest on safe driving. She didn't even drive then, although she has learned since. She has been a top student in the Voice of Democracy oratorical contest at her school.

For the past two summers, she has worked as a waitress at Rummey, N.H., Bible Conference, a summer camp for adults. When

at home she studies 2½ hours nightly, and no TV or radio until it's completed.

Besides Gordon College, Wheaton College in Wheaton, Ill., has accepted Diane. She may decide to study there, if she wins financial help through a national merit scholarship.

HIRING THE HANDICAPPED IN OUR TOWN—MEET STAN STOCKWELL

Jerusalem, A.D. 21. In the busiest section of the market place squats a thin, wrinkled old man known as Old Jonas, the blind beggar. In his youth he lived with his parents, but since their death many years ago, all that Jonas can do is sit in the marketplace and ask alms of passers-by. Children taunt him; adults avoid him. Because of his physical handicap, this is the most Jonas can expect from life.

London, 1550. Tom is a cripple, one of his legs hopelessly twisted from his having been run over by a carriage. Tom used to work for a tavern-keeper but was replaced after his accident. He has found no other work. Not that he has not tried—but wherever he goes, his ungainly limp makes him the object of fear and ridicule. Such cruel treatment has twisted Tom's mind almost as badly as his leg.

Our Town, 1959. Stan Stockwell, his wife Jane, and their little son Eddie live in a modest but nice duplex house here in Our Town, a pleasant suburban community similar to any you'd find in New England—or in the Midwest—or anywhere in America. Until recently Stan drove a delivery truck for Greenview Milk Co. He liked his job. The company was fair to its employees, the pay was good, and the work was pleasant.

Several months ago, however, Stan was in an automobile accident. He was on his way to catch a bus home from work. A car, apparently out of control, came speeding past. Stan was unable to get out of its path and was struck. As a result of the accident he lost his right leg.

Like Jonas in ancient Jerusalem and Tom in old England, Stan Stockwell has joined the ranks of the physically handicapped. Times have changed, however. Stan does not have to face the open ridicule and loathing which accompanied the physically handicapped in times past. Although he must be out of work for a time, Stan will not find it necessary to beg on the street corner, and his family will not have to face poverty. Social security benefits have made such a situation a thing of the past. Furthermore, Stan's one disability does not outweigh his many capabilities. Certainly he will be able to find work when he is well, or will he?

* * * * *

When Stan thought about returning to work, naturally his first idea was to see the firm which had employed him before the accident—Greenview milk Co. Greenview's reputation for fairness and reliability made Stan quite confident that, although unable to drive, he could obtain other work there. During Stan's absence, however, Greenview had come under new ownership.

Stan was not sure how this would affect him, but he knew that the new management was advertising for workers, and he had confidence in himself. So he went to see the personnel manager at Greenview.

Stan was totally unprepared for Mr. Burton's attitude. "I'm sorry, Mr. Stockwell," he said, "but I don't see how we can use you. In our business we can't afford to hire men who do not meet our company's physical requirements. I'm afraid we simply can't use you. Good day."

Stan was discouraged as he left Mr. Burton's office. "What am I up against?" he asked himself. "Does the fact that I've lost a leg mean that I'm to be branded as only half a man? There are positions open at Greenview that I could hold with the proper training. If it's like this everywhere I go, what what am I going to do? My sick benefits won't last forever. How can anyone be as biased as Burton, anyway? If it were his leg, and if he were looking for a job—but then, he's only abiding by company policy. Some policy."

Stan does not have problems as serious as those of the handicapped in A.D. 21 or 1550. But he has just had his first encounter with attitudes which are just as outmoded. Greenview Milk Co. is oldfashioned. First, its policy relating to physical standards for various positions is out of date. Greenview has a single minimum standard for all jobs, regardless of their nature. Secondly, Greenview holds to the old idea that handicapped employees are poor workers and bad business risks, in spite of statistics which show otherwise. Third, Greenview and companies like it are allowing the valuable abilities of men like Stan Stockwell to go unused. In many cases this results in poor mental attitudes and a deterioration of these abilities. Fourth, Greenview is weakening the Nation by rendering a portion of its manpower useless and adding the support of the physically handicapped to Government expenses. It is unfortunate that there is a firm like Greenview in Our Town.

Stan Stockwell was an intelligent, mature young man, and he did not remain discouraged for long. That evening he and Jane read the want ads carefully and made a list of available positions for which he was suited. The next day Stan began to make the rounds. After finding at several places that either the position had already been filled or he was not wanted, Stan came to the last firm on his list—Century Watch.

The attitude of Mr. Carroll, the personnel manager at Century, was quite different from that of Mr. Burton. "You seem to be the type of man we're looking for," Mr. Carroll said. "Your lack of experience is a hindrance, but we didn't advertise for experienced help. This work requires much manual dexterity. If tests show that you have it, there's a position for you."

Several days later Stan was at Mr. Carroll's office again. "Mr. Stockwell," said Mr. Carroll, "the aptitude tests indicate that there are two areas of work here for which you are well suited. We're going to start you in Department 7. Report for work tomorrow."

In the weeks that followed, Stan learned his new job quickly and thoroughly. Today he enjoys his work, has earned a promotion, has the respect of his coworkers, and is confident of his ability to support himself and his family.

Like thousands of other handicapped men and women in Our Towns all over America, Stan Stockwell, given a fair chance, has proved his ability as a worker. Modern, fair-minded employers like the people at Century have made this possible. They realize that a person physically unable to hold one position may fill another with ease. It depends on the person's abilities, not his disabilities. That is why Century considers the physical requirements of each particular job in the plant, and why its employees are placed according to their aptitudes.

The people at Century know that the records of the handicapped are just as favorable as those of the unimpaired in the areas of trainability, adjustment, observance of regulations, safety, attendance, and productivity. Century is building a better America by offering handicapped citizens a chance to be emotionally well-adjusted and economically independent, by cutting Government expense, and by increasing manpower and production. We are proud of firms like Century Watch which take a lead in hiring the handicapped in our Nation, in our State, and right here in Our Town.

Congratulations to Harry S. Truman on His 75th Birthday

SPEECH

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. ROOSEVELT. Mr. Speaker, in joining with Speaker RAYBURN and the majority leader [Mr. MCCORMACK] in congratulating former President Harry S. Truman on the most happy occasion of his 75th birthday, I know I join a goodly number of his friends not only across this country but around the circumference of the entire world. As the majority leader has said, I remember the occasion in San Diego, Calif., when I happened to be with my father at the time of the Democratic Convention which chose Harry S. Truman as Vice President of the United States. It was a happy thing for the country; it was a wise decision from which our Nation and the world have definitely benefited.

Here is a man who possesses those wonderfully endearing qualities which mark him an honest-to-goodness human being; and President Truman never stopped being human and natural from the time he was born, I daresay, up to his present birthday. He was his own salty, practical self as Senator and President, and certainly now as the elder statesman he is "big as life and twice as natural."

I have an honest admiration for President Truman, which is all the more honest perhaps for a certain skepticism I once entertained in my less discretionary years. That I have since come to regret deeply this momentary lapse is a fact that is well known to Mr. Truman. He assumed the responsibilities of the Presidency in the midst of one of the most crucial times our country and the world have ever faced and he made some of the most difficult decisions a President has ever been called upon to make.

Fortunately for us and for the rest of the world, Harry Truman came to high office so well grounded in the subject of history, so imbued with the principles and ideals of our Government, and so well equipped by practical experience to cope with both domestic and international politics that he was able to make far-reaching decisions with the greatest success.

I think that a remark made to me once by an eminent American is something that will always go down in the history books, when he said that Harry Truman had a greater understanding of the meaning of what the Presidency of the United States really meant than almost any other man who ever held the office. Mr. Truman understood the duties of the executive branch of the Government and his own duties as President.

Mr. Speaker, I could, of course, list as has already been listed, many of his contributions to world peace, such as Greek-Turkish aid, the Marshall plan, the point 4 program, the Berlin airlift, the fight against communism in Korea; and I

could also point to his courageous stand in the field of civil rights at a time when his humanitarian beliefs were more important to him than winning an election.

Somehow, though, I think the greatest tribute I can pay President Truman on his diamond jubilee celebration is to say that here is a man—a man with roots sunk so deeply in his country's soil, and with such devotion to his fellowman, that he has had the courage to be himself, to think independently, and to dedicate himself wholeheartedly to doing the very best job he knew how at all times.

May he enjoy many, many more birthdays and give us all the continued benefit of his commonsense approach to the problems facing us from day to day.

Congratulations to Harry S. Truman on His 75th Birthday

SPEECH
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. FLYNN. Mr. Speaker, I have no prepared text today, but listening, as I am, in these hallowed Halls to the wonderful eulogies that have been delivered to what I believe is one of the greatest men that this country and the Democratic Party has ever produced, I cannot restrain myself from adding a few words to what has been said.

Mr. Speaker, I had the distinct privilege of being a delegate to the Democratic Convention in Chicago in 1944 when this great man was nominated as Vice President on the Democratic ticket, and I had the privilege again of being a delegate in 1948 to the convention at Philadelphia when Harry Truman was nominated for the Office of President. And, I will never forget, as I know those other delegates will never forget, the Philadelphia convention. It was a convention of gloom, one where the delegates in convention assembled had a defeatist attitude such as I had never seen before; where the average delegate felt that he could not stop Harry Truman from seeking the nomination, but if he did win it, the effect would be that we would go down to defeat. And, that situation prevailed until the final night of the convention when, at about 3 a.m. in the morning, Harry Truman, nattily dressed in his white suit, with his wife and daughter, walked out on the veranda of that great convention hall with the doves released, flying in the rafters, and delivered a message to this assembly. He delivered an impassioned and forthright message. He ticked off in rapid succession what his administration had done in the last 2 years. He convinced all present of his sincerity, ability, and determination to improve the American way of life. He motivated everyone present to go out and work for his program of social justice. They were motivated to go out across the country and elect to the Presidency this great man with that set of ideals and principles. We all said then, "If Harry Truman can only talk to enough people, the way he talked to us tonight, Harry Truman will be the next President." And that feeling of gloom that pervaded the convention vanished into the morning air, about 4:30 in the morning, and the delegates left sparked with the spirit of victory.

Harry Truman inaugurated the whistle-stop campaign. He stopped at every corner in this country. I was at the meeting in Madison, Wis., which was attended by the gentleman from Iowa, and I can join him in everything he had to say about that meeting. I followed that delegation to Milwaukee, Wis., where he attracted the largest political crowd that has ever before or since attended any meeting in that city. And Harry Truman went on to the great and glorious administration that he had.

He was led by principle. He was motivated by a desire to do that which is right for the common and ordinary man. He was guided only by his conscience. There was no corporation, nor individual, that could buy his support or cause him to deviate from the right as he saw it. He acted in the interests of the little man. He acted in the interests of the underprivileged of this country. He raised their way of life. He improved the Nation as a whole, Republican and Democrat alike, not only in economic ways, but in social justice. This Nation is better for having had a man, an ordinary man such as you and I, who filled that presidency and stuck to the principles as he did, and who was never swayed from them; a man who was right not only in the little decisions but in the major decisions, both national and international.

I am proud to say that I am a Democrat and that my party has produced in my lifetime a leader such as Harry Truman. I want to join with my colleagues here this afternoon in saying, "Happy birthday, President Truman."

Congratulations to Harry S. Truman on His 75th Birthday

SPEECH
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. BOLLING. Mr. Speaker, it is a pleasure to be able to join in honoring former President Harry S. Truman on his 75th birthday. A man nearly all of whose adult life has been dedicated to public service and who at the age of 75 still continues to make a real contribution to the public good is rare in the history of any democracy. Mr. Truman's place in history is assured by the great decisions he made greatly. His courage never falters under fire of governments or men. His perception and understanding of the problems of the world as well as those of our country continues to be a very real public asset.

I know we all, regardless of party, join in wishing him good health and many more years of productive and happy life. May God bless and keep him.

Aluminum Marketing

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. HARTKE. Mr. President, during the Easter congressional recess I visited several countries in Europe as a representative of the U.S. Senate and the Committee on Interstate and Foreign Commerce. While in Germany I had the opportunity of discussing coal and aluminum marketing with officials of the Federal Economics Ministry in Bonn. The U.S. Minister for Economic Affairs in Bonn recently sent me memorandums outlining my conversations with officials of the Federal Economics Ministry and I ask unanimous consent that these memorandums be printed in the Appendix of the RECORD.

There being no objection, the memorandums were ordered to be printed in the RECORD, as follows:

MEMORANDUM OF CONVERSATION
APRIL 1, 1959.

Subject: Discussion of aluminum marketing.
Place: Federal Economics Ministry, Bonn.
Participants: The Honorable Vance Hartke, U.S. Senator; Mr. August Bourbon, staff member, U.S. Senate; Ministerialrat Dr. Heinrich Sennekamp, Mr. Storz, Dr. Pickard; economic counselor, Mr. William C. Ockey, U.S. Embassy, Bonn, Dr. Vaeth, Mr. Sommer; Mr. Thomas C. Stave, second secretary, U.S. Embassy, Bonn.

Senator HARTKE began his remarks by complimenting West Germany for the rapid economic progress it had made since the end of the war. He then described Soviet economic warfare in the world aluminum market since the war, particularly since 1957, when Soviet aluminum appeared on the British market on a cut price basis. He noted that Britain had been acquiring most of its aluminum from Canada, and that the Soviets then offered aluminum at a price of 2 cents below whatever price the Canadian producers were quoting. By the end of 1957, the proportion of Soviet aluminum in Britain had increased considerably while the Canadian proportion had decreased. Canada, in January 1958, petitioned the British Government to take antidumping action against the Soviets, but no action was taken, whereupon the Canadian producers, in April 1958, were forced to cut the free world price of aluminum 2 cents per pound, with a resultant decrease, during 1958, of both profits and tax revenues. Noting the erratic pattern of Soviet aluminum shipments, Senator HARTKE described the move as "sharpshooting" rather than "dumping."

Mr. Sennekamp thanked Senator HARTKE for his compliments, adding that much of the West German progress would not have been possible without U.S. Marshall plan aid. He then confirmed Senator HARTKE's opinion on the Soviet maneuver, stating the same effect on aluminum prices in Germany had been seen during the 1957–58 period. He indicated, however, that there was no longer

such a problem as far as the German market was concerned. He explained that in 1956 there was an aluminum shortage in Germany, which then entered into contracts for imports of limited amounts of Soviet aluminum. When the licenses for these shipments expired, however, new licenses were not granted. Furthermore, Mr. Sennekamp said, aluminum was not included in the recent West German-Soviet trade agreement, despite Soviet efforts to have the item included. He continued that in 1956 the Federal Republic entered into long-term contracts (up to 1961) for aluminum imports from Canada and Norway, which countries will supply most of its import needs. He estimated that West German production of primary aluminum in 1959 would be about 150,000 tons, with consumption about 190,000 to 200,000 tons. The difference of 40,000 to 50,000 tons would come through contracts with Canada and Norway. He predicted, however, that the Soviet Union would again enter the world aluminum market, since its processing industry cannot keep up with Soviet production of pig aluminum. He said this was also true with tin, zinc, and other nonferrous metals. Mr. Sennekamp also explained that the Federal Republic has a basic tariff of 7 percent on aluminum imports, but that imports of up to 40,000 tons are free of such duty, which covers practically the entire gap between domestic production and consumption. He expressed his opinion that 7 percent is not a high rate, since practically all other countries, including the United States, have a similar rate, while others, particularly France and Italy, have much higher rates. Senator HARTKE said the United States had no complaints with Germany on the question of tariffs, but that a problem had arisen on the Belgian tariff on semifinished aluminum products.

Senator HARTKE then expressed the interest of U.S. aluminum producers in developing new markets for aluminum, particularly in other areas of the world. Mr. Sennekamp commented that German producers had a like interest, and were cooperating with U.S. industry in hopes of developing new uses. He mentioned that within a few weeks a group of German architects would be visiting the United States to confer with representatives of the building industry here. Senator HARTKE said he would be glad to assist them in making contacts with U.S. firms, mentionning Alcoa, Harvey Aluminum, Reynolds Aluminum, and the institute, National Homes, which is developing a prefabricated house constructed almost entirely of aluminum. He said he would like to see an exchange of ideas, and suggested the possibility of using the United Nations as a clearing station.

Mr. Pickard then said he was an official of the Vereinigte Aluminumwerke (VAW) which represents 70 percent of West German aluminum producers. He described the problem of building up the industry after the war, and stated that although German per capita consumption was not as high as the United States, it was nevertheless going well, following U.S. pioneer work. He said the VAW had good contacts with U.S. producers, but would appreciate efforts to intensify what has been done so far, including the use of Senator HARTKE's good offices. The Senator said that by lending their brains, the Germans would be contributing to the economic welfare of the United States; that it was in the German interest to see a strong United States. He said that, due to apprehension over economic conditions, some U.S. producers were delaying planned expansion, mentioning specifically a contemplated new Alcoa plant at Evansville, Ind. Mr. Pickard agreed that cooperation was important, adding that he expected to be in the United States in June, and would like to meet with U.S. aluminum producers.

Mr. Sennekamp then said he would like to learn of expected future aluminum production in the United States. He noted that present U.S. annual production has increased to about 1.5 million tons, with consumption about the same, and that U.S. representatives have expressed interest in making sales to Europe, including Germany. Mr. Prichard interjected that the German gap between production and consumption is pretty well taken up by Canadian and Norwegian contracts. Senator HARTKE said that this was why a factual information exchange was necessary, in order that no country is hurt. He repeated that efforts should be made to increase consumption. He noted that the U.S. population is growing, and that there should be a growing need for aluminum. Mr. Pickard then commented favorably on U.S. efforts to develop a demand for aluminum in South American countries.

After a mutual exchange of good wishes, the meeting was ended.

MEMORANDUM OF CONVERSATION

APRIL 1, 1959.

Subject: Discussion of coal marketing.
Place: Federal Economics Ministry, Bonn.
Participants: The Honorable Vance Hartke, U.S. Senator; Mr. August Bourbon, staff member, U.S. Senate; Ministerialdirigent Richter, Ministerialrat Dr. Steinhaus, Ministerialrat Dr. Estner, Ministerialrat Dr. Prescher; Mr. Thomas C. Stave, second secretary, U.S. Embassy, Bonn.

Senator HARTKE said he wished to discuss the adverse effect on the U.S. coal industry and on U.S. public opinion caused by the recently imposed West German coal import restrictions, which he understood was based on German unilateral action. He said that unemployment in the United States was relatively high (6 percent in 1959 as compared to 2½ percent in Germany), particularly so in certain coal mining areas such as Kentucky (15 percent) and West Virginia (nearly 25 percent). He said that total coal production in the United States had been declining for some years, despite shipments to Europe, including West Germany. He said he understood the coal industry had expected to ship about 9 million tons to Germany in 1959. Mr. Richter interjected that in 1958 Germany had imported about 13 million tons, of which 11.2 million tons came from the United States.

Senator HARTKE stated he understood that, prior to 1958, German industrialists had signed long-term contracts with U.S. coal producers, covering a total of 40 million tons, and that the German industrialists had entered into such contracts upon the request of the Bonn Government for reasons of defense. He said he believed that a New York Times article in September 1958 was the first indication U.S. producers had of German contemplated controls, which was followed by the German tariff and quota imposition in January 1959. He indicated that U.S. coal producers believed this constituted a breach of contract.

Senator HARTKE stated that both countries have the capacity to produce more coal than they can consume or export, and thus have common economic problems. One such problem would be the difficulty of reopening a mine once it has been closed. Other problems are created for related industries, such as transportation. He said that political problems are also created, and that the relative importance of each of these problems must be considered. He mentioned a Joint Economic Council study earlier this year on the poor economic situation in the West Virginian coal mine area, which had received considerable U.S. newspaper publicity. He stated that, as a result of the U.S. economic recession and unemployment in the coal mining industry, Congress was disturbed over the effect the German import restrictions will have on future economic relations between the two countries. He said he was not there to say that the U.S. problems would be solved by raising the restrictions, but neither did he believe the German problems would be solved by imposing them. He thought that the net benefit to Germany of the import restrictions could be more than offset by damages which might be caused by U.S. policy. He asked if any of the Germans present had any comments to make before he continued.

Mr. Richter said he was especially interested to learn of the high unemployment in Kentucky and West Virginia. He said he had visited the United States and noted several differences between the United States and German coal industries. He said he had observed that U.S. mines were generally no deeper than 100 meters, while German mines average 750 meters in depth. He said U.S. mining is more highly mechanized, and that the rate of productivity is six times as high as in West Germany. German miners normally work a 5-day week; U.S. miners, 3 to 4. He noted also that German coal mining is concentrated in the Ruhr area, thus constituting greater potential political trouble than in the United States, where mining is more widespread. Mr. Estner commented that, with their greater depth, closed German coal mines would be more expensive to reopen than American mines.

Mr. Richter said he believed the Senator was misinformed in having stated that long-term contracts had been signed upon the Bonn Government's request. He explained that this was done on the initiative of the importers who found long-term contracts more profitable, since they could obtain better rates from shipowners. He said that, prior to September 1958, because of mounting surpluses, both at the pitheads and in the stocks of consumers, the Government suggested to importers that they reduce the number of new contracts. Since this measure was not adequate, the Government imposed an embargo in the form of permitting no new contracts, and finally the Economics Ministry had to take new steps, in the form of duty-free import quotas. Mr. Richter said the German authorities do not yet know what the result of these measures will be, and probably will not know until they expire on December 31, 1959.

Mr. Richter expressed a German belief that the American public is either misinformed or has misunderstood the German efforts, if it is really felt that the Germans treated their contracts as mere scraps of paper. He said reasonable compensation had been offered both to German importers and to U.S. exporters, and that German visitors to the United States reported they had found full understanding there on the matter of compensation. He said a heavy financial load had been placed on the German mining industry, and that he would be grateful if the Senator would explain to the U.S. public that the Germans were not considering the contracts as mere scraps of paper.

At this point, Mr. Richter was obliged to leave the discussion.

Dr. Steinhaus then described social problems in the Ruhr area, which he said were important to both Germany and the United States. He said the Ministry was forced to impose the import restrictions so that not too many minors would be laid off. He emphasized that the Ruhr is a small area with a great industrial potential. He mentioned the density of population, 1,152 persons per square kilometer. He said that even though the Government did not favor the idea of import restrictions in principle, it was concerned because of the radical elements in this densely populated area, which could result in an uncontrolled political development. He said that only 200 miles from the Soviet Zonal border, it constituted a hotbed

of political activity. He said he could not overemphasize this danger.

Senator HARTKE said he could appreciate the German problems, including the Berlin situation, and that the United States was aware of the necessity for cooperation in solving them. Nevertheless, he said, Germany should also appreciate that the German restrictions had the effect of aggravating serious economic problems in the United States, and could thus have an adverse psychological effect on Congress. He said that, for example, Congress was concerned about the effect of unemployment in the U.S. automobile industry, and that one of the States is in such a poor financial status that it is in danger of going bankrupt. He said that the United States had overextended itself financially in the past few years, and suggested that Congress might be inclined to cut down foreign aid as a result. He commented on the fact that West Germany had received considerable U.S. economic assistance, and likened the effect of the recent German restrictive measures, which was hurting the U.S. economy, to that of a "wet towel." He expressed his hope that the Federal Government would take steps to lift the coal import restrictions.

The 10th of May, a Rumanian National Holiday

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I recently prepared for radio broadcast on the occasion of the Rumanian national holiday which was celebrated on May 10.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The 10th of May is the Rumanian national holiday, the day on which the free Rumanian nation celebrated its independence. Since the present Communist regime has forbidden the people of Rumania to commemorate this day of national pride, it is fitting that we use the occasion to make clear that the free world has not forgotten the unhappy fate of the captive peoples behind the Iron Curtain.

For more than a decade the nations of Eastern Europe have lived under the grim shadow of Communist rule, enduring ceaseless and methodical oppression from regimes backed by the armed might of Soviet Russia. All of the terrors common to the modern police state have been used to integrate these nations into the Communist system, and to destroy, in the process, every desire for nationality and freedom.

That the Communists have largely failed in their efforts has been made abundantly clear in recent years by revolts in Hungary, Poland and East Germany. The revolt in Poland resulted, for a time, in some small measure of freedom for the people of that nation. But in Hungary, the rebellion was crushed with shameless brutality, despite the overwhelming censure of world opinion.

The role of the Russian army in suppressing these revolts revealed the extent to which force is the basis for Communist control in Eastern Europe. The Kremlin leadership knows that without an army and a vast police apparatus to underpin its rule the Iron Curtain would vanish overnight.

Today, thousands of Iron Curtain refugees still continue to flee into free Europe. Their flight from Communist tyranny testifies that the quest for freedom remains constant, despite relentless efforts by the Communists to seal off every avenue of escape.

For those who must remain behind, Communist domination will be endured with the hope that someday the light of freedom will penetrate the Iron Curtain, heralding the dawn of a better life. Their willingness and ability to resist the encroachments of communism shows that hope has not died among the captive peoples. It must be the earnest prayer of all Americans that this desire for independence will someday be fulfilled in Rumania, as in the other nations in Eastern Europe.

Honors Paid to Medical Alumni by George Washington University

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. COTTON. Mr. President, it is appropriate that we pause occasionally to recognize and honor individuals who, in the practice of their profession, render outstanding and dedicated service to their fellow men. Among such persons are many members of the medical profession.

On April 30, 1959, the George Washington University paid a fitting tribute to five distinguished graduates of its school of medicine: Dr. Charles Stanley White, class of 1898; Dr. Edgar Copeland and Dr. Henry C. Macatee, class of 1900; Dr. A. B. Bennett, class of 1901, and Dr. William C. Clark, class of 1904. These men have been engaged in their profession for an aggregate total of more than 300 years and are still active in the practice of medicine in Washington, D.C.

As an alumnus of George Washington University, I join the university and its general alumni association in saluting these graduates for their long and great service to the community, for their sustained interest in the forward-looking development programs of the university, and for their cooperative efforts to improve medical education facilities.

I ask unanimous consent to have printed in the Appendix of the RECORD the text of the scroll of appreciation presented each of these outstanding doctors by Otto W. Schoenfelder, president of George Washington University General Alumni Association.

There being no objection, the scroll was ordered to be printed in the RECORD, as follows:

Your distinguished achievements and services are in the highest tradition of the George Washington University School of Medicine and are known and honored by members of your profession everywhere. For more than 50 years you have served the people of the Nation's Capital with the utmost skills in times of sickness, accident, and disease. Your great gifts of healing have been a source of improved community health and well being through all these years. The George Washington University and all its alumni join in honoring you for the work which has meant so much to so many people and to express thanks for your long and untiring service on behalf of humanity.

Sanitary Regulations Relating to Milk

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "National Milk Sanitation Act," prepared by myself, and dealing with the subject of legislation relating to sanitary regulations in connection with milk.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATIONAL MILK SANITATION ACT

I am pleased to be a sponsor of the bill called the National Milk Sanitation Act. Last year in the House of Representatives I joined Congressman LESTER JOHNSON, of Wisconsin, in sponsoring this legislation. This year, with Senator HUBERT HUMPHREY and other Senators, I am sponsoring it in the Senate while Congressman JOHNSON and some of his colleagues are again sponsoring it in the House.

The bill has been improved over the version of last year, and the climate for this necessary legislation has also improved.

SANITATION OFFICIALS' APPROVAL

Last year's bill faced the opposition of many of the State and local sanitation officials who feared that the legislation would interfere with the enforcement of their sanitary regulations. Hearings were held on the bill to study the recommendations and objections of these officials. The Association of State and Territorial Health Officers developed a set of principles which they wished to have embodied in this legislation, and the bill as it is written this year includes these principles.

Last year the bill provided that all milk moving in interstate commerce must meet the sanitary requirements of the United States Code.

The principal change in the bill this year is that it provides that no milk meeting the sanitary requirements of the United States Code can be excluded from interstate commerce. There are additional provisions for further inspection of milk shipped in interstate commerce to insure that the milk meets State and local sanitary regulations after shipment.

Milk not meeting the United States Code requirements may also be entered in interstate commerce, but it must meet any sanitary requirements imposed by State or local officials.

ELIMINATION OF INTERSTATE BARRIERS

There have grown up in the United States over the years many barriers to interstate commerce. Some of these barriers, like those now affecting the milk industry, have originated as legitimate sanitary protection but have later become economic barriers to free trade as changes in transportation and sanitation have made the original barriers obsolete.

This bill offers a solution to this problem, since it provides for the interstate shipment of milk and still affords adequate and modern sanitary protection for any milk in in-

terstate commerce. It continues the jurisdiction of State and local sanitary officials over milk coming into their areas.

MINNESOTA SUPPORT FOR LEGISLATION

There has long been concern in the State of Minnesota, as well as in other Midwestern States, for the free shipment of milk in interstate commerce. Gov. Orville Freeman and Attorney General Miles Lord of Minnesota have made many and various attempts to break through barriers to such free shipment of milk, and their efforts have been supported by the legislature.

The Congress should share such concern and support this one effort to eliminate barriers which have become obsolete so that free competition in the milk industry can be reestablished, while at the same time every sanitary protection is provided for milk shipped in both interstate and intrastate commerce.

Proposed Repeal of 22d Amendment to the Constitution

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. BRIDGES. Mr. President, much has been said recently regarding attempts to repeal the 22d amendment to the Constitution.

I am definitely opposed to any move to lift the ban on a third term in the Presidency. When the amendment was adopted and ratified, I felt that it reflected the feelings of the American people as a whole. I believe it carries out the wishes of our Founding Fathers, and that it certainly should have a longer trial period.

The Washington Daily News published an editorial entitled "No Third Term" on Tuesday of this week in which the newspaper takes a firm stand against the repeal movement.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, May 5, 1959]

NO THIRD TERM

Efforts to repeal the no-third-term amendment appear to be dying of boredom. Not even the spirited advocacy of ex-President Truman, before a congressional committee yesterday, has put much life into this crusade.

The amendment was, as Mr. Truman said, prompted by the extra terms of Franklin D. Roosevelt. But the repeal movement is bipartisan.

Nevertheless, we think it should have a far more extensive trial. One argument is that a President in his second term—if it is his final term—loses influence and can't get his legislative programs enacted. That isn't always such a bad idea.

Most of our Presidents come into office with the point of view, more or less, of the private citizen. They are intent upon economy and efficiency, want to cut expenses and ease tax burdens. But the job seems to do something to them. After months of dealing with a multitude of department heads, all wanting more, they tend to mistake the word of the bureaucrats for the voice of the people. They may come up with legislative programs that practically demand a fishy eye from Congress. Possibly that is why some of their laws don't get passed.

We've had 33 Presidents, all bound by tradition to retire after the second term until F.D.R. broke the mold. Despite this supposed handicap the country has been administered fairly well and the tradition—now the law—has effectively prevented anyone from usurping permanent political power.

We still think two terms is plenty, and that it ought to be kept in the Constitution.

Conservation

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. RANDOLPH. Mr. President, in our State of West Virginia we are intensely interested in practical programs of conservation. One of the leaders in this effort is Irving A. Cohen, of Charleston, who is an editor and speaker whose contributions to this important work are noteworthy. Members of the Izaak Walton Club, of Fairmont, had the privilege of listening to Mr. Cohen at a recent meeting. I ask unanimous consent that his splendid speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If there is one place where I feel at home it is here in the city of Fairmont. It is too bad that somehow or other my headquarters were never established in your wonderful city. Here I have many loyal friends, and here in the city of Fairmont and Marion County reside some of the most wonderful sportsmen that it has ever been my pleasure of coming in contract with.

I have appeared here on several occasions and have talked on many subjects. Many of you are faithful readers of my outdoor column which appears in the West Virginian. I receive many letters from this area and each and every letter is answered as rapidly as I possibly can do so.

Again I want to thank you folks for inviting me back to this wonderful city.

Tonight I am going to dwell a little on the subject of conservation education. There are many matters of interest that I might have discussed with you but I have been convinced for a long time that nothing is more important nor more vital to wise management of natural resources both now and in the future.

At the outset, let us define conservation education. This is necessary because what is involved does not always have the same label in each agency and organization. As I am using it tonight, it means the broad effort to secure public understanding of the causes of resource problems and the means of solving them. It involves all communications media, it means use of information, extension and educational services. The last category specifically refers to technical advice and other cooperation needed by our educational systems to get conservation properly taught in our schools.

Thus, it is the complete effort across the range of all ages and all groups and I am not leaving out the important need to report to our various governmental administrations and legislatures so that they will have a clear appreciation of what is needed. Without their support, there never will be an adequate program of conservation education.

Even though I know it is not necessary to tell this wonderful audience why conservation education is so important, I am going to repeat the rensons for the benefit of others who may subsequently read these remarks. I do this because, unfortunately, only a relatively small percentage of sportsmen and other resources-minded people are in organized clubs and know the story. It is, therefore, the balance of the public and the legislators who reflect their thinking who must understand the importance of conservation education if adequate funds are to be available in all agencies to carry out this important approach to the problem of natural resource management.

One of the most compelling reasons for conservation education is that conservation education itself is misunderstood. I regret to say that far too many people think of it just as an activity of fish and game departments to get their particular programs activated, and as many of ous who are interested in conservation know nothing could be further from the truth.

Education in this field is needed so that there will be complete public recognition that conservation involves interrelated wise use of the basic resources of minerals, soil, water, plants, and wildlife. It is also necessary to make people realize that human survival and the American way of life are involved rather than the welfare of the resources management agencies.

Our scientists can develop methods and procedures to get the greatest possible use of resources for the most people for the longest possible time. To achieve such goals, however, people must implement these plans of resource scientists. That can be done only when people understand why the programs are needed, how they were developed and the necessity and manner of their participation in them.

In a nutshell, conservation is a favorable state of mind. Public information, education, and extension are thé tools required to reach that end.

I would like to deviate from the general terms for one moment that I am using and would like to refer to a specific problem which is seriously limiting public opportunity for hunting and fishing recreation and which needs educational treatment. This is the problem of bad hunting and fishing manners by a comparative few which are closing more and more rural areas for many good sportsmen. A few examples are hunters who descend on an unposted farm, cut fences, shoot cows and poultry, and shoot too close to a farmer's home. A hunter deliberately shoots a farmer's hog. I know one case where this was done. The next hunters who came along were told to leave the premises even though the farmer said he knew they were not that kind of fellows.

I am not talking about something which happens somewhere else; these are actual facts right here in our State, and the story is the same everywhere. The same kind of thing decreases the opportunity to go fishing. This is another of the many pressing reasons why we must expand the conservation education effort.

It was not many years after the first settlements were made in West Virginia that many of the citizens realized the need for some regulations of the natural resources on which their livelihood depended. Even though some laws were passed during those early days, many of these laws were not stringent enough; and as the years and decades passed our State conservation department was formed, at which time fishing and hunting regulations were made which even today form

the basis for many of our present laws. At first many of these laws were unpopular because it is just human nature to resist curbs on human activity, but today fish and game legislation is one of the accepted methods of managing these great resources.

In the evolution of fish and game management, most of which has actually taken place within the space of a few decades, there has been a tendency to place tremendous emphasis upon regulations; and, with the steady increase in the hunting and fishing activity throughout the country, the need for regulations to guard against depletion of game and fish supplies has certainly been justified to a great extent. However, we often lose sight of the fact that laws alone cannot always do the job. In fact, we sometimes have a tendency to overdo this phase of fish and game management by thinking up a new law every time a problem pops up. The job of streamlining fish and game regulations is not an easy one and probably never will be, but the need for great care in seeing to it that only the necessary and least complicated regulations are passed is becoming increasingly important.

One of the most effective ways that you sportsmen can help in the management of fish and game resources is to back your local sportsmen's organizations. With modern transportation and shorter work weeks enabling hunters and fishermen to cover the entire State, the idea that local regulations affect only a few is not always valid. In making fish and game management decisions we must take into consideration what is best for the entire State but they must not loose sight of the fact that there are local conditions which must be considered and some regulations may only apply to local situations. But in the interest of uniformity, it may be necessary to take a good long look at the statewide picture and base our decisions accordingly, whether it be laws or some other management technique, and here is where conservation education can do its part.

Hunting and fishing regulations, particularly those which apply to the entire State, are quite often controversial by their very nature. This is so because of the wide variation of opinions and preferences of sportsmen. Sometimes the decisions that the lawmakers and those in the conservation department have to make as to what is best for the State of West Virginia are difficult because of many factors involved in reaching a conclusion which would be fair to the majority. But underlying all of this is the democratic process which seeks the proper road after weighing all facts and arguments.

Coservation education, as I define it, is not a job that one single agency can do by itself, it is a responsibility to be discharged by all departments and organizations, both governmental, State and private, who are concerned with management of these resources. Each one must make certain that this part of the conservation program is understood. When you have this complete understanding, you also insure proper balance between the various individual segments of the total program.

All of us should make the task of securing public understanding of our programs the responsibility of all of our citizens, not just a job of management but the job of education.

The Federal and State Governments can share in this task through their recognized responsibilities to carry on programs for education of the public. However, most of this big conservation education job must be handled at local levels and through the representatives of the State of West Virginia. That is because our American system places most of the responsibility for administration of these resources with the States. This particularly applies in the matter of getting adequate conservation education in the schools. Also in this big conservation education task our Federal agencies have certain responsibilities by law and they must see to it there is public understanding and participation in each of these areas.

I am very happy to say that both of our U.S. Senators, the Honorable JENNINGS RANDOLPH and the Honorable ROBERT C. BYRD, and all of our Members of Congress from West Virginia, are in accord and are doing their utmost in Washington to help in lending their aid to conservation education.

I do not mean that our Federal agencies should attempt to dictate the pattern of educational efforts but I do mean they should take leadership in the expediting of cooperative approaches so that joint efforts by all of our agencies will be most effective.

Your local Izaak Walton Club, under the leadership of Corley Fleming, is doing a wonderful job, as is the Marion County Federated Association through Jimmy Allard, in conservation education.

Conservation education should be a very important item in the schools of every city and county in the State of West Virginia. That is why various organizations, State groups and interested individuals have to share some of the responsibility for bringing conservation education about.

In the meantime, let us keep plugging away, all of us, doing everything, anything, within our power with limited staff and funds, and get our people to keep pitching away at conservation education, because they, like you and me, are convinced that conservation education is the key to wise use of our natural resources now and in the future.

Thank you.

The Burden of Double Taxation

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Bayonne (N.J.) Times commenting on a proposal I have made to help end the burden of double taxation on New Jersey residents working in New York or the city of Philadelphia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW YORK'S AHEAD

We loved the revival of the Revolution's "Taxation without representative is tyranny" in the current debate about New York State's income taxes on New Jersey residents, but we don't expect it to prosper now as it did in 1776. It won't be long before New York blandly tells us that if we choose to live in New Jersey and work in New York, we make a free choice, without compulsion of any kind. It is a choice that New York is entitled to ask us to pay for, and we are left in perfect freedom to decide whether the price is too high. If it is not, well and good. If it is, no one compels us to work in New York or live in New Jersey.

We still like Senator CASE's plan of amiably levying an income tax on New Yorkers who work in New Jersey. It would be precisely parallel to what New York is doing to residents of New Jersey, and it would improve New Jersey's bargaining position quite dramatically. New Jersey residents who work in New York don't vote there. New Yorkers who work in New Jersey do. The fatal weakness of New Jersey's case is that we have nothing whatever to negotiate with; all the trumps are in Albany. Senator CASE offers a way to get a few trumps in Trenton, and it seems silly to turn down his plan without checking into its possibilities.

Excerpt of Address of Howard E. Simpson, President of Baltimore & Ohio Railroad

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. BEALL. Mr. President, on Monday evening, April 27, it was my pleasure to be present when Howard E. Simpson, president of the Baltimore & Ohio Railroad, spoke at the dinner sponsored by the National Coal Policy Conference at the Statler-Hilton Hotel, Washington, D.C. The very excellent speech was entered in the CONGRESSIONAL RECORD of April 28, 1959, by Hon. LEON H. GAVIN, Republican Representative representing the 23d Congressional District of Pennsylvania. The insertion in the RECORD appears on page A3497.

I recommend the reading of this speech. The B. & O. president, Mr. Simpson, has been in railroad business 47 years, and has been president of the Baltimore & Ohio Railroad Co. for 5½ years.

I ask unanimous consent that an excerpt from the speech be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The fuels issue is not a simple fact of open competition for a market. * * * The issue, as I see it, is this: Is the present policy assuring this country a steady supply of fuels and transportation service susceptible of rapid growth and expansion and able to serve without interruption in a time of national emergency?

Certainly, the coal industry adequately passes these tests. It is a stable domestic enterprise, and is capable of immense expansion in time of need, provided it does not have to contend with further shrinking of its market. The railroads pass the same tests with a wide margin. Like coal, they are a realiable domestic industry. Furthermore, railroad charges are regulated by public authority. Granted fair and equitable Government policies for transportation, the railroads can absorb striking increases in traffic volume.

Continued shrinking in the market for solid fuels will seriously affect the ability of the railroads to move coal, and it will also force a contraction of the overall plant, thereby making the rail industry less able to serve the entire traffic needs of the country. For the prime characteristic of the American railroads is that they are volume carriers. Without volume they cannot exist—certainly not under private ownership and operation. Moreover, in terms of importance to the Nation, the railroads are the only true common carriers. They are the only form of transportation that can, and

will, haul anything, at any time, in any quantity, between any points on a continent-wide system.

The railroads have built-in flexibility enabling them to expand the use of their roadway, or fixed plant, capacity almost indefinitely and with a minimum drain on the country's resources in time of need. In World War II, the railroads were sufficiently flexible to increase and expand their facilities and operations, with the result that they handled 91 percent of the military freight and 97 percent of military passengers. This is one of the reasons why, in military logistics, the railroad is regarded as basic.

The issue before us, then, is whether this country is to have a steady, dependable—and expandable—supply of fuel, whatever the future may bring, and, secondly, whether we are to have a strong, reliable system of railroad transportation for all of our traffic.

The business interests of the coal industry, or of the railroads, or of the consumers of coal are really not the issue here. The real issue is our Nation's economic strength and security.

I emphasize that the railroads—the Nation's strong arm of security—face the future with confidence. An important reason for that confidence is our conviction that leaders in Government will promptly consider and adopt a fuels policy that will be sound and farsighted, and, in addition, protect its citizens in peacetime, as well as in times of national emergency.

Congress Costs Too Much

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Congress Costs Too Much," written by George Rothwell Brown.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS COSTS TOO MUCH
(By George Rothwell Brown)

WASHINGTON, April 16.—Are American taxpayers, who have just passed through their annual ordeal, getting their money's worth from the Congress itself? Is the legislative branch of the Government costing too much?

A strong case can be made out to support the conclusion that what should be the Nation's "watchdog of the Treasury" has become a reckless freeloader, at the expense of the public. The tab for running Congress has been going up in recent years at a most alarming rate.

The cost of the vast legislative mill on Capitol Hill in fiscal 1935, when the "spend, spend, spend" philosophy had just begun to take hold, was $18.3 million.

This was only 24 years ago. The present Congress is costing Mr. Taxpayer $125.1 million, and the end is not in sight.

The whole discouraging tendency at the Capitol is toward more and fancier spending. Congress has become one of our greatest luxuries, as well as a constitutional necessity.

It is difficult for the average citizen, with his nose to the tax grindstone, to believe that the institution of Congress today is worth to him $106.8 million a year more than it was worth to him just a little more than two decades ago. It performs the same functions; its workload is no heavier.

How did Congress fall into these extravagances?

The Senate has added a costly new office building for more than $30 million, and the House is now in process of erecting a third office building for its own use, which will cost the taxpayers around $70 million, and for which $22.5 million is carried in the current appropriation bill. Both of these expensive marble structures are unnecessary. They should never have been authorized.

But the biggest boost in the high cost of Congress has been in the salaries which the Senators and Representatives have voted themselves. They sure have been generous.

The total annual bill for the salaries for the 96 Senators, in fiscal 1935, was a rather modest $864,000. Today the total for Senators' salaries has soared to a whopping $2.3 million a year.

In the same period the salaries of the 435 House Members have increased from $3.9 million in 1935, to $10.6 million in fiscal 1959.

For many years the salary of Senators and Congressmen was $5,000 a year. By 1935 the figure had grown to $10,000. Today the salaries have skyrocketed to $22,500 annually.

In addition, every Congressman is allowed an average of $38,000 a year for office help, and if it hadn't been for the regular annual disclosure of nepotism at a critical juncture this year the House would have voted itself an additional $14,000 for each Congressman's staff.

Congress we must have, but it sure does come high.

Strategic Location of Portland, Oreg., on Worldwide Air Routes

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. NEUBERGER. Mr. President, a glance at the surface of a globe will disclose why my home city of Portland, Oreg., has such a strategic location as a center of air transportation. The globe reveals that great circle routes charted from Portland are the shortest from the west coast to many points of the vast Western and North Pacific regions of the world.

Portland, under the able leadership of officials of the port of Portland, has developed this geographic asset by improvement of its airport and airport terminal facilities. I think no city in the Nation presently has aircraft facilities superior to those being developed in my hometown. One of the benefits of this progress was noted last week when direct air service was inaugurated between Portland and Kodiak, Alaska. Portland is an aerial gateway to our new State of Alaska—and to Hawaii, Tokyo, the Far East, and many points in Europe. I am pleased that Oregon is so situated that it is closely linked to the newest States of the Union. This good fortune will permit us to expand and progress together.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a news story by Mr. Rolla J. Crick, staff writer of the Oregon Journal, giving details of the historic ceremonies interconnecting Portland and Kodiak through the facilities of Pacific Northern Airlines. Inauguration of this service is another link for strengthening of our national ties. The article was published in the Journal of May 3, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PNA LINKS PORTLAND, KODIAK ON DIRECT RUN
(By Rolla J. Crick)

KODIAK, ALASKA, May 3.—Another corner of Portland's back yard has been made more conveniently accessible with inauguration by Pacific Northern Airlines of direct air service to Alaska's southwestern playground.

Kodiak, home of the gourmet's delight, the king crab, now is only an overnight flight from Portland via swift Constellation airliners.

The new PNA service cuts Portland-to-Kodiak time in half and reduces costs 12 percent.

Balmy 52-degree temperatures and the annual king crab festival greeted passengers from Oregon and Washington when the inaugural flight landed. The mildness was surprising, but probably should not have been. Kodiak is due north of Hawaii and spring is chasing snow in Alaska.

On hand for the ceremonies was Kodiak's mayor, Merrill Coon, Rear Adm. A. W. McKechnie, commandant of the Alaska sea frontier, and airline officials led by PNA President A. G. Wooley, former Alaska bush pilot.

A cake was cut, Portland roses were presented by Frank Womack of the Portland Chamber of Commerce, and the entire group breakfasted at the Elks club.

Kodiak hospitality was unbounded. Everything was free, from taxi trips around the city and the Air Force White Alice project to air tours over Kodiak Island and its neighbors.

This is a city of some 4,000 residents, exclusive of personnel stationed at the nearby headquarters of the 17th U.S. Naval District. Its rapidly developing economy is based primarily on an expanding fishing industry and secondly on tourism and big-game hunting.

Indicative of the latter, the nearly 11-foot hide of a Kodiak bear, fiercest and largest of the world's carnivorous animals, was being cleaned on the local docks.

Fish canneries are running at full steam processing clams and shrimp taken from nearby beds. The king crab season ended 2 weeks ago.

Shrimp-catching and processing promise a new source of wealth for Kodiak. The operation started last December and it appears that 200,000 cases will be processed this year. The going price is $8 a case.

Along with the addition of direct twice-weekly PNA service to Kodiak, the city is being linked to the Aleutian chain on the west by Reeves airways.

The PNA flight continued from Kodiak to Anchorage, where connections were made for the return to Portland.

Intrinsic Value of Summit Meetings

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an article from the Houston Chronicle, dated April 12, 1959, entitled "Summit Part of Red Plot: Russians Seeking 'Status Quo,' O.K. To Keep European Loot," written by Gen. C. A. Willoughby, who is one of the outstanding leaders of World War II.

I think this article is worthy of the attention of the Senate and the public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUMMIT PART OF RED PLOT—RUSSIANS SEEKING "STATUS QUO" O.K. TO KEEP EUROPEAN LOOT

(By Gen. C. A. Willoughby)

Nikita Khrushchev's drive for a summit meeting has succeeded with Britain's Harold Macmillan acting as the honest broker. However, Russian declarations show no palpable concessions. They were more conciliatory in 1952.

The intrinsic value of summit meetings can be ascertained by simple, historical recollection.

3,400 MEETINGS

In the last 25 years, the United States has had 3,400 meetings with the Communists, including Teheran, Yalta, Potsdam, Panmunjom, and Geneva. The negotiators spoke 106 million words, or about 700 printed volumes.

This talkfest led to 52 major agreements. Soviet Russia has broken 50 of them. It is boring to quote Lenin: "Promises are like piecrusts, made to be broken."

The Communist philosophy of diplomatic negotiations was stated in 1931 by Dmitri Manuilski.

Manuilski later presided over the United Nations Security Council for a time, which should be a telltale index to the quality of that overrated body.

Manuilski's timetable is interesting: "War to the hilt between communism and capitalism is inevitable.

TIME TO COME

"Today we are not strong enough. Our time will come in 20 or 30 years. The bourgeoisie will have to be put to sleep. So we will launch the most spectacular peace movement on record.

"The capitalists, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends."

The Russians precipitated the Berlin crisis for well-known, well-defined objectives in the framework of their ruthless but brilliant strategy. But conversely a study of cause and effect will place responsibility for a critical situation almost entirely on the West:

1. Panicky demobilization in 1945, while Russia armed to the teeth.

2. Fatuous reliance on a supposedly exclusive deterrent.

3. Failure of Western Europe to maintain even peacetime armaments.

4. Silence of NATO commanders on a visibly weakening shield.

WANT LOOT

Against this background of military fumbling the Russians seek to retain the loot acquired with the help of Hitler, plus the loot handed over to them at Yalta and Potsdam. They want acceptance of the status quo at the highest level, which is at the summit.

Behind this acquiescence, the Russians anticipate even more important gains: The resulting collapse of resistance by captive millions whose only hope has been the West. The smiling farce of hobnobbing with the Kremlin, as at Geneva, reverberates from Warsaw to Sing-Kiang.

England precipitated World War II over the Polish corridor (loot of Versailles) and acquiesced in the Russian seizure of eastern Poland, Russia, in turn, assuaged the Poles by throwing them East Germany from the Oder-Neisse line.

UNCHALLENGED CZECHS

The Czechs went unchallenged in the brutal expulsion of 3 million Sudeten Germans in 1948 and the confiscation of every stick and stone of Sudeten properties. Poles and Czechs are proposed as members of the meetings.

The division of Germany (and Korea) is expected to be legalized and become permanent.

The summit is expected to devise some face-saving formula.

(This article copyrighted by Maj. Gen. Charles A. Willoughby, 1959.)

Oil Import Restrictions

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Berkshire Eagle, Pittsfield, Mass., dated April 30, 1959, which recognizes the very able job being done by freshman Congressman SILVIO O. CONTE, in representing the Massachusetts First Congressional District. I think that this editorial clearly summarizes the understanding and ability shown by Congressman CONTE in dealing with issues of both national and local importance. I wish to further point out that Congressman CONTE has also shown his competence in understanding the complex issues in the international field as evidenced by his recent speech in the House of Representatives in support of the Development Loan Fund. I believe that the people from his district can depend upon Mr. CONTE to continue his very commendable representation in the House of Representatives.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONTE FIGHTS FIRE WITH FIRE

From the start of his public career, one of Congressman CONTE'S prime assets has been a talent for focusing attention on limited and specific issues which serve to dramatize a larger and more general political problem. His current campaign against the oil import restrictions established by the President earlier this year is a good case in point.

The specific issue here is the phoniness of using "national security" as a pretext for fattening the bankrolls of domestic oil producers by arbitrarily curbing the importation of cheaper oil products from abroad. As Congressman CONTE pointed out on the floor of the House earlier this week, the inevitable effect of this will be to impose higher fuel prices on the public, to the particular economic detriment of New England.

This in itself is a valid issue. But it also has broader significance as an illustration of the sort of thing Congressman CONTE was talking about several weeks ago when he told the GE Foremen's Club here that Congressmen and Senators from New England and the Northeastern States should be more ready to forget their partisan differences when necessary to join forces as a regional bloc on issues where they have a common economic interest.

As Mr. CONTE points out, the Northeast has been rather outmaneuvered on this score. Congressmen from the South, the Midwest, and the Northwest have joined hands with great effect, and often at the expense of the Northeast. This area contributes heavily to the multi-billion-dollar farm program but receives a negligible proportion of farm subsidies in return. We help subsidize the competitive economic development of other areas through public power projects and similar Federal programs while getting exceedingly little of this largesse for ourselves. And we suffer from a tariff policy which (as illustrated by the oil import quotas) serves in large part to benefit other regions at our expense.

Ideally, of course, there would be no regional blocs on Captitol Hill, and no organized pattern of subordinating national to sectional interests. But the ideal and the reality are far apart. Sectionalism is one of the major facts of life in Washington, and if spokesmen for the Northeast continue to operate less effectively than those of other sections, they will continue to see most of their tax dollars going to bolster the interests of competing areas. As a practical matter it is hard to dispute Congressman CONTE'S contention that it is time of fight fire with fire.

Centennial of the War Between the States Emphasizes the Need for Acquisition of Battlefield Sites

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. YARBOROUGH. Mr. President, the owner of some land on which the two battles of Bull Run were fought, recently leveled with bulldozers some earthworks which were thrown up during the bloody fighting in the second battle. Breastworks the men built with spoons, cups, knives, the bare hands in 1862, were leveled in a few hours nearly a century later.

The National Park Service could not stop the bulldozer which leveled these historic breastworks, because they were on private property. This is just another illustration of why I believe the National Park Service should be supported in its desire to purchase the lands on which some of the War Between the States' most important battles were fought. These areas should be preserved for the students of history and the everyday Americans of tomorrow. Acts of heroism of past generations are acts of encouragement for future generations.

Putting off the acquisition of these precious lands means that other historic landmarks may be destroyed. And private ownership is claiming more and more of the land. At historic Gettysburg, for example, commercial businesses and housing developments

threaten to cover the land on which our forefathers fought and died in the turning point of the great struggle.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials. The first appeared in the Washington Post and Times Herald for Wednesday, April 29, 1959, entitled "What Price Glory?" The second is from the editorial sheet of the St. Louis Post-Dispatch for April 27 to May 3, 1959, under the title, "Custard Stands at Gettysburg."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 19, 1959]

WHAT PRICE GLORY

It is shocking that battlefields like Manassas and Antietam should be open to commercial spoliation on the eve of the centennial of the War Between the States. At Manassas, where two great battles were fought, one resident who owns land on the battlefield even went so far as to level out the surviving breastworks with a bulldozer. Such desecration was possible because the National Park Service does not own the land on which this and other remnants of the battles of Bull Run stands. Surely the Park Service deserves the widest support in its request for some $900,000 to purchase privately owned land which lies within the Manassas Battlefield Park.

The fate of Antietam, site of the bloodiest 1-day battle of the Civil War, is no less dismaying. The Park Service is seeking to acquire about 1,800 acres of the original battlefield site at an estimated cost of $300,000.

[From the St. Louis Post-Dispatch, Apr. 27–May 3, 1959]

CUSTARD STANDS AT GETTYSBURG

President Eisenhower's Representative in Congress, JAMES M. QUIGLEY of the 19th Pennsylvania District, has appealed to the White House to join in efforts to acquire ground which ought to be added to the National Park Service holdings in the Gettysburg battlefield area. Congressman QUIGLEY says that unless protective steps are taken, "custard stands and beer parlors" will soon outnumber the grave markers and the monuments to the men of both the Blue and the Gray who struggled there in early July 1863.

The Representative from the Gettysburg district does not want the land acquired for withdrawal from productive use. On the contrary, he and others who are concerned about the future of the Gettysburg area are eager for the National Park Service to own the land but to lease it for approved cultivation. This is true of much of the area now owned. The famous peach orchard of military history is again a peach orchard. But those who own privately adjacent battlefield areas cannot be expected to decline attractive offers from would be commercializers. That is why Park Service holdings should be increased.

In barely 2 years, the Nation will begin its 4-year observance of the 100th anniversary of the Civil War. Between now and then historic battlefields—Gettysburg, Antietam, Wilson's Creek, and others—ought to receive friendly interest and wherever possible, increased protection. It would be strange indeed for the centennial to find the foot of the commercial trespasser marring what Lincoln called hallowed ground.

Tributes to P. O. Davis, Director, Extension Service, Alabama Polytechnic Institute

---

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the last official letter of our beloved P. O. Davis, who recently retired as the director of the extension service at Auburn. This letter includes just a few hundreds of well deserved tributes to this wonderful man, with whom it has been my pleasure to work during my nearly 24 years service as a Member of Congress from the First Congressional District of Alabama. There is certainly little that I may add to these expressions of esteem and affection, but in placing them in the RECORD for all to see, I do want to wish P. O., as he is affectionately known by thousands of his friends and admirers and fellow workers, and I am including his sweet wife in this wish, many years of well deserved happiness in his retirement. I know he will give all of use in our delegation the benefit of his advice and counsel in the years to come, as he has in the past:

OFFICIAL LETTER NO. 953

ALABAMA POLYTECHNIC INSTITUTE,
EXTENSION SERVICE,
Auburn, Ala., April 30, 1959.

To All Extension Workers:

This is it, the last official letter by me, No. 953. The first was issued on October 26, 1940, 19 years ago.

Weekly thereafter the aim has been to inform, to suggest, to inspire, to encourage, to keep in touch with, all for the good of extension work and workers.

A major aim has been to keep "me" in the background, to see you and the service rather than self, because all achievements are due to you the workers at Auburn and in the counties, all working with and for farm people.

But this one is different. It's a series of quotes from letters recently received. Of course they are personal but they're about you, too. Therefore, modesty permits my sending them to you in this the last issue by me.

They are only a few from hundreds received for which I'm both humble and grateful, will ever be. Here they are, most of them without names, the first by the board of the Alabama Farm Bureau.

"On the eve of his retirement as Director of the Extension Service of Alabama Polytechnic Institute, we express the very sincere appreciation of ourselves and those we represent to Hon. P. O. Davis for the many years of excellent service he has rendered to agriculture and the public in general; and for the very splendid contribution he has made to organized agriculture in Alabama and the Nation.

"He has received many awards and honors for his achievements during the years, including the Distinguished Service Award of the American Farm Bureau Federation.

"His ability, efficiency, courage, and leadership throughout the years of his service have resulted in an enduring contribution to the welfare of the people he has served. This contribution is a foundation and inspiration to those who follow him.

"We wish for Mr. and Mrs. Davis many years of happiness.

"We appoint him an honorary member of this Executive Committee and invite and urge him to attend meetings and participate in discussions of such committee."

Inscription on a beautiful silver tray presented by the Alabama Cattlemen's Association:

"P. O. Davis in appreciation for outstanding service to Alabama Agriculture presented by Alabama Cattlemen's Association."

"Your retirement will perhaps enable you to look back a little, though I suspect that you will never overcome your impulse to keep eyes forward. Surely few men in the whole field of agricultural education have exercised so definite an influence in so large a specific area with such conspicuous gains. You have led your State's farmers from poverty to prosperity, and given Alabama agriculture an impetus and momentum which you may now watch as it goes on up." (Wheeler McMillen, Farm Journal, Philadelphia.)

"Not all of us know the ins and outs of your trials over the years. Those of us who know some of them appreciate you all the more. But there are few in the State who do not know the courage you have shown in the leadership of farm people through a period of years when that leadership was a vital factor to progress and—at times—to their very survival. You've been known outside the State as a dedicated leader—inside it as a devoted servant." (Bill Kennedy, Farm and Ranch, Washington.)

"The contribution that you have made to the progress of your native State will long be of benefit to your beloved Alabama. Your intelligent, determined, and selfless service in the field of agriculture will be the future yardstick for public servants. To have known you and your work as it progressed was a high privilege." (Ed Norton, Birmingham.)

"I would like to take this opportunity to expresse to you my very deep and sincere appreciation for the manifested interest you have shown in the social security program and its effect upon the Alabama farmer. Also, for the fine cooperation you and your staff have given us in getting the social security story to our friends, the farmers. Without this assistance we could not have accomplished the objectives already attained.

"I am just 1 of the more than 3 million of persons in Alabama who have benefited greatly from your leadership of the farmers in the State. The footprints you have made up and down and across Alabama in the interest of agriculture, and the improvement of the farm family's lot, will be lasting and permanently recorded in the memory of all of us."

"Samuel was a dedicated man. Like Samuel you have been truly dedicated to your responsibilities and opportunities. You, of course, have been dedicated to your church, State, and the country. You have always had service to the people as your ultimate goal.

"To you extension service has been a mission and not merely a means of a living. So you can have a lot of comfort in that you have been dedicated to a great mission and the results over the State are the proof.

"Your counsel on a national level has been of immeasurable value to the extension service over the country. You have sponsored progressive movements when courage and initiative were necessary. Many times you

have given extension on a regional and national basis leadership so badly needed."

"We all know that through the effective leadership that you have been able to provide, and the ground work that you have laid, the extension service will continue to be effective in helping people throughout the State."

"Your leadership has been an inspiration and the guidance you have given to extension service work will be long felt throughout Alabama.

"While you will be retiring from active duty as director of the Alabama Polytechnic Institute Extension Service, I know that you will not be retiring in spirit and that you will be pulling for all of us as we continue with the job in extension work that must be done to make Alabama a more prosperous agricultural State and a better place in which to live."

"The decision (made by you and Dr. Duncan) to let us remain as caretakers of the building enabled me to stay in college.

"From that day until now, I have observed your great concern for the welfare of Auburn, Auburn students, and as director of extension your unquestioned concern for the welfare of extension workers and farm people. * * * I know of no one that has worked harder to improve the lot of farm people than you."

"All of my dealings with you have been fair, honest, sincere, and there has always been that pleasant relationship so vital for all good work.

"Humanity has benefited from your efforts in getting the many fine programs started and accomplished over the 21 years as our director. We will miss you in the extension service."

"You have meant much to the rural people of Alabama and the entire south. Also, the urban people have profited greatly these years you have been associated with the farm program. Alabama is a much better State for having had you as a farm leader."

"You have over the years been an outstanding leader in extension work, and we are certainly going to miss seeing you at the regional and national meetings. Your philosophy and ability to recognize challenges and opportunities for extension have meant much in helping to strengthen the work throughout the country."

"You have made an especially fine contribution to the agricultural life of our State and your strong influence in the moral and spiritual life of our people, both young and old, will be long remembered. There must be great satisfaction in knowing that you have rendered a full measure of service to those with whom you were associated."

"Your many contributions to the betterment of rural living throughout the south will always stand as an outstanding tribute to your leadership."

"You have served well the position of director and at the same time you have served in a great way the farmers and all rural people throughout the State.

"We hope you will continue in your very capable manner to contribute to the upbuilding of our rural population through your newspaper writings and otherwise."

"Your leadership and guidance have caused extension work to have a tremendous impact on agriculture of the State and much of the progress made has been a result of your devotion and untiring efforts. I am sure your influence on the agriculture of the State will be felt for many years to come."

"I appreciate the many efforts you have made in making it possible for our extension service to serve better the people and in making it more pleasant to do the county program through your leadership in financing our county and State personnel and other needs of our organization, as well as your personal encouragement."

"You are the very best. You have made a great contribution to the agricultural economy in the State and the Nation. You have served your State well and rendered a great service to your fellow man."

"There are many words of praise for you which are yet unspoken. Many do not realize yet where credit is due for the benefits they have received—past, present, and future. The progress agriculture makes in the future will bring your reward."

"Your professional creed has included honesty of purpose; devotion to the job at hand; and hard work far beyond the call of duty.

"As director of the extension service you have striven to lead us to the end that the people whom we serve would be better informed and for that reason they would enjoy richer and better lives and that Alabama would be a better place to live.

"Personally, I know you as a good neighbor; a friend of whom anyone would be proud; and a citizen that has meant much to his community."

"Your leadership has meant much to the members of the extension service and to the farmers of Alabama. It has been through your guidance that the Alabama extension service has reached the highest level in the field of education."

"I shall never forget our first conversation concerning employment when you said: 'We in extension work for the people to promote better living conditions on the farm and in the home.' "

"You never lost sight of the masses of rural people. You also, as we observed, realized the value of higher education, scientific investigation, and experimentation. These principles have helped build our great agricultural school at Auburn and extend its influence into every area of our religious, agricultural, industrial, and economic life.

"Therefore it is with deepest gratitude that we thank you for the counsel given us, the inspiration brought to our church and community people, and for the faith you always expressed in our rural people, particularly the value of the church."

"The outstanding job you have done has left an indelible imprint on the progress of agriculture which can never be erased by any amount of time."

"Your many friends will remember always the unselfish devotion and tireless hard work with which you have filled your office. You can reflect back on the unexcelled contribution you have made to Alabama agriculture with a great deal of pride and with a sense of complete fulfillment and satisfaction, knowing you have left behind you a record no other man could have possibly achieved." (George Williamson, Montgomery.)

"You indeed served Alabama Polytechnic Institute and the people of Alabama faithfully and efficiently for many years. You have every reason to be proud of the fine record made in building up the excellent agricultural extension service for your State."

"I would like to say sincerely that you have done an outstanding job as the director of the extension service. You have so many friends, not only in our State but over the country, and you have helped so many people other than your own employees."

"I am sure it has been thrilling to you, as director, to see the extension service grow and expand and go forward in ever greater service to more and more people under your guidance. Surely there can be no deeper satisfaction than to strive and then see your dreams come true and your efforts through the years bear fruit."

"The farmers of Alabama will always love and admire you as being one of the greatest agricultural leaders of our time."

"You are widely known and respected in the field of agriculture. Your leadership and philosophy reaches far beyond the boundaries of this State.

"You have worked hard to make the extension service in Alabama a real service to the farm people of this State. You have also worked hard to improve the position and prestige of extension personnel. Your efforts have proven to be sound and effective."

"Yours is certainly a job well done as director of Alabama Polytechnic Institute's Extension Service. Your lifetime of devotion to the needs of the Alabama farmer has certainly paid off in many dividends for farm families, farm communities, and industry as well as throughout our State."

"I have looked to you for wisdom in connection with the affairs of the cooperative extension service over the years I have been connected with it. I know that your leadership has contributed greatly to the advancement of agriculture—not only in Alabama, but all through the Nation."

"You have been a real inspiration to extension workers throughout the South during the past two decades, and your influence has been felt much farther than the boundaries of the State of Alabama."

"My sincere thanks to you for your guidance, patience, and cooperation in helping me build a better extension program in the countries where I have worked. I shall not forget the principles of extension taught by you and shall use them often."

"Yours is a long and illustrious leadership with the extension service of the Alabama Polytechnic Institute. You have worked hard and unselfishly to help thousands of farm men, women, and youth of this State to live longer, healthier, and happier lives, and have succeeded well in your efforts. Proof of your success is found on every farm and in every home throughout Alabama."

"It has been a genuine pleasure to have known you as a student at Auburn and to be closely associated with you as a member of the Alabama extension service.

"Your fine leadership and guidance have been a real and lasting inspiration to me, which I shall always cherish."

"I take this opportunity to express my appreciation for the years of distinguished service rendered by you as director of the Alabama Extension Service. I am especially grateful for the progress, in the Negro extension division, which was made possible under your administration. Two, among many, things for which we are most grateful are the extension building at Tuskegee and a more adequate Negro advisory staff."

"To us our extension service and our Mr. P. O. Davis have been synonymous. Your retirement causes us to think back over the years and marvel at the great progress made by farm families during your years of service. * * * We, along with all of Alabama, are grateful."

Letter from southern directors at meeting at State College, Mississippi:

"As we come together for the spring conference of southern extension directors we find that we have no one to fill your usual and important role of 'Mr. Chairman, I so move'. Also, your appropriate jokes and terse, pointed comments are sorely missed. We had all looked forward to seeing you officially at least one more time.

"We hope that you will cherish the small gift from us, not for its intrinsic worth alone but also for the respect and admiration for you that we want it to convey. You have made a major contribution to the shaping of extension to its present state of development in this country.

"We shall miss your sound judgment and unfailing good humor. You will always have a place around our conference table and it is hoped that you will see fit to visit with us often.

"Our best wishes go to you and Mrs. Davis for many years of continued happiness and

for the enjoyment of a well earned rest. We are grateful for the privilege of having been associated with you."

"It was my privilege and good fortune to be able to participate with the group in the letter and small remembrance, which no doubt have been delivered to you by this time. This action does not in any way express the deep feeling of respect and admiration that we have for you. I just want you to know that I personally am going to miss you at our extension conferences. I can think of so many times in the past when your counsel and sound thinking prevented us from making some hasty and ill-considered decisions. You can be proud of the influence which you have exerted in shaping the extension service over the past 25 years. I hope that you will not completely forget us and that you will, in the future, honor us with your presence at some of our conferences." (Luther H. Brannon, director, Oklahoma State University, Stillwater.)

All good things must come to an end; and this is it. To each of you, for your splendid work and your excellent qualities I'll ever be grateful. You will enjoy working in the same way with Dr. York and he with you.

My continued best wishes are yours.

Sincerely yours,

P. O. DAVIS, *Director.*

Elements in the Berlin Crisis

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. HUMPHREY. Mr. President, it is commonplace to say that the Berlin crisis is incredibly complex. Every informed person knows this. It is precisely because of this complexity that we need a high quality western leadership. I think Secretary of State Herter has made an excellent beginning in his recent Paris conferences.

Dr. Kenneth W. Thompson, associate director, the social sciences, the Rockefeller Foundation, has written a brief but penetrating essay outlining five major elements in the present Berlin situation. He emphasizes the need for imaginative leadership.

Mr. President, I ask unanimous consent that the article, "Elements in the Berlin Crisis," which appeared in the April 13, 1959, number of Christianity and Crisis, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELEMENTS IN THE BERLIN CRISIS

(By Dr. Kenneth W. Thompson)

Five elements that make up the present state of the Berlin crisis are worthy of enumeration. First, Khrushchev, no less than the West, faces internal problems and plainly hopes for a dramatic political and economic victory. The Soviet leader has promised his people that the new 7-year plan will carry Russian production beyond American levels of output. While the present pace of Soviet economic development has been distressingly successful, stresses and strains have also been considerable.

British experts estimate that Soviet defense spending has stabilized at 14 percent of total budgetary expenditures, but this has been achieved through a substantial expansion of the budget and without appreciable improvement of the position of the ordinary Russian. With the continuing pressure that antiparty groups are exerting, Khrushchev may well hope for a spectacular political triumph at the summit that would more solidly assure promises of a better life.

Second, Khrushchev in his conversations with Walter Lippmann, Adlai Stevenson, and Senator Humphrey, and Mikoyan in his American visit, reflected undisguised anxiety over the rising power of China in the East, a nuclearized West Germany in the West, and restiveness in the satellite world. As the Economist observed: "Western statesmen, preoccupied as they are with the Communist * * * menace * * * often fail to understand that the Russians, too, fear attack." Although the ultimate aims of Soviet domination have not been altered in the least, the Russians appear genuinely concerned over the threat of encirclement by those who distrust them and oppose their aims.

Moreover, top Soviet experts tell us that we mislead ourselves by thinking that Soviet policy is monolithic, marked by unchangeable rigidity and united on questions of means, methods and tactics. Soviet aims are unquestionably fixed, but if history teaches anything it is that Soviet policy is not immutable. For them as for us, internal reforms and intraempire adjustments are dependent on moves on the diplomatic front. Prime Minister Macmillan has doubtless had much to say on this in his meetings with President Eisenhower.

Third, like it or not, the British have taken the diplomatic initiative at a point where Western leadership gave signs of falling into a state of paralysis. On balance, most informed observers believe that Macmillan's Moscow visit was a constructive move in the cold war. His firm position on Berlin may have reduced the chances of Soviet miscalculation. His warnings to Premier Khrushchev that the Western allies, including the reputedly most flexible partner, would not yield to Russian blackmail over Berlin may serve to check any Soviet adventure growing out of Khrushchev's blunt ultimatum. Furthermore, Macmillan's televised address to the Russian people reciting national achievements, aspirations, and intentions cannot help but add a sobering and instructive note for at least some of his Russian listeners. His visits to Bonn, Paris, and Washington are helpful in bringing firsthand impressions of the climate of Soviet thinking and of their policies and intentions.

Whether he will prove the architect of a negotiable program for talks at the summit remains to be seen. At the very least he has compelled his associates to consider a set of questions that are long overdue. One gains the impression that he has also established the principle, both east and west of the Elbe, that outstanding problems must be settled by "jaw-jaw," as Mr. Churchill put it, rather than with hydrogen bombs. Those Americans who saw Macmillan's visit to Moscow as little more than an election stunt have had to reconsider, for his toughness in the discussions undoubtedly led to Khrushchev's sharp and slightly desperate attack midway through the talks.

Fourth, the sprinkling of news from the private talks between the President and the Prime Minister foreshadows a slightly more hopeful approach to the techniques and methods of diplomacy. Macmillan, like Secretary-General Hammarskjold, has apparently made his point that grandstand diplomacy, with all its trappings of premature press releases and public speeches for domestic consumption, serves little purpose in dealing seriously with the Russians.

The search for more viable techniques, recognizing all the time that even the best will not assure success, in the major unfinished business in American foreign policy. It seems probable that Mr. Dulles himself might have contrived a more hopeful approach had he not been struck down by his tragic illness. In this connection Americans need to remind themselves that the Macmillan visit had the Secretary's approval and support. The point is well taken that who leads whom to the summit on the Western side does not matter at all, so long as it is done with open eyes.

All hands must recognize that while the Western case may be legally invulnerable, at the same time our political and military position is not impregnable. Even if we assume that Khrushchev means business and the chances of conflict are grave, this would hardly be an excuse for not searching out the most hopeful diplomatic avenues of approach.

Standing firm is only half a policy unless it is coupled with a negotiating position that is clear and understandable to western European opinion. This includes more clarification than the President has offered thus far on the relationship of types of Soviet provocation and the measures we are prepared to take. Verbal threats by the Russians call for one course of action, merely technical changes such as transferring authority to stamp documents to the East Germans call for another, and an all-out civilian blockade quite another set of measures. Such issues will be met not by counterultimatums but by careful preparations in the foreign ministries and at the conference table of the Allies.

Fifth, the need is now clear to discover as fully and carefully as possible Soviet intentions and the points on which accommodation is possible. A denuclearized zone at the heart of Europe might not be too high a price to pay. If a situation viable enough to last for 5 or 10 years could be created, both sides might gain in the process.

The Russians may be willing to wait for Socialist governments in Britain and Germany, whose concessions might go beyond those of any of the present governments. On the other hand, disturbances in the satellite countries and the failures of de-Stalinization may prompt them to nail down certain points at this stage in the cold war. Diplomatic probings are one way of discovering whether or not there is flexibility in the present situation. In any event, something more than text quoting from the writings of Lenin or Stalin seems called for if the West is to uncover Soviet aims and intentions.

No reasonable man would maintain that the diplomatic logjam has been broken or assert that the end of the cold war is in sight. On the contrary, some signs point to the insensification of the struggle. Yet evidence also is at hand that the Soviets characteristically make their sharpest and most belligerent moves at a point when they may be willing to accept new political arrangements.

In the present context Soviet fear of thermonuclear weapons, especially in the hands of their historic German foes harnessed to NATO, could conceivably be the issue on which they might bargain in kind. Whether or not the West has it in its power to package claims and grievances without reducing its power position in Europe seems to be an open question. At a time when the causes for confidence are pitifully few, it is reassuring that the charges and countercharges of appeasement are less strident and frequent.

A recent survey of American public opinion is illuminating. Thirty-nine percent of the people are so poorly informed that they are not aware that West Berlin is an enclave within Communist territory. They favor a policy of standing firm but also support negotiations. This should give heart to an administration not noted for its political

courage and should relieve troubled leaders from any illusion that they are prevented from taking diplomatic initiative by a suspicious and restraining public.

Past Secretaries of State have often been prisoners of the people, but the same can hardly be said today. The signs are clear to those who would see that if our leaders choose to lead, the people will follow. In the end, this is perhaps the most hopeful development on the present unhappy world scene.

Our Responsibilities in World Affairs—Address by Senator Fulbright

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. SPARKMAN. Mr. President, on the evening of May 7, 1959, the very learned and distinguished chairman of the Committee on Foreign Relations, the Senator from Arkansas [Mr. FULBRIGHT], delivered the Gabriel Silver lecture on international understanding at Columbia University in New York. His subject was "Our Responsibilities in World Affairs." It was a fine presentation and thought provoking. I ask unanimous consent, therefore, that it be printed in the Appendix of the RECORD:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR RESPONSIBILITIES IN WORLD AFFAIRS

(Remarks of Senator J. W. FULBRIGHT, chairman, Senate Committee on Foreign Relations; Gabriel Silver Lecture on International Understanding, Columbia University, May 7, 1959)

In the Constitutional Convention, when it was proposed that each session be opened with prayer, Alexander Hamilton jumped to his feet with an objection. "I am opposed on principle," he said, "to calling on any foreign power for help."

As a new chairman of the Senate Committee on Foreign Relations, this narrow view from a Founding Father is not at all to my liking. On the contrary, I seek help from various sources—and especially from the "foreign power" Alexander Hamilton tried to keep outside the 3-mile limit.

I have come to do this for many reasons. In the first place, I have had pointed reminders that a chairman of the Senate Foreign Relations Committee is also a Senator from a single State—a State whose people have legitimate local interests which demand his attention in the Congress. If he fails to speak the local voice—while trying at the same time to serve the national interest—it seems safe to make one prediction about his future. The people of his State will see that he has time to write his memoirs, following the next election.

In the second place—and this is much more important where foreign affairs are concerned—the chairman and his committee colleagues often find themselves in a constitutional no man's land. We want to do our best to contribute to the energy, the strength of will, and the clarity of purpose which the effective conduct of our external relations demands. But the question constantly is: How can we make this contribution when the constitutional boundary line between the Senate and the Executive in this general area is so uncertain?

In times past, the rivalry between the Senate and the Executive, over the conduct of foreign affairs, found both too weak to advance, too strong to surrender—and may I add, too proud to ask for mercy. We want to avoid such a result today. But the practice of the matter is shot through with problems.

For example, if my committee colleagues and I tried to detail a solution to any crisis of the moment in our foreign affairs, the immediate effect would be an increase in the post office deficit. For there would follow a flood of mail charging us with a dangerous usurpation of the Executive's constitutional responsibility for the conduct of foreign relations. On the other hand, if we tried to lay down guidelines for the longer range problems of foreign policy, the same letterwriters would inform us that we have a special taste for the fuzzy and impractical, when America's real need is for specific solutions to the latest problem in the headlines.

Meanwhile, whether we deal with the problems of the here and the now, or with those of the day after tomorrow, my committee colleagues—indeed all the Members of the Senate—face a further complication. The professionally trained personnel, and the complex communication network that is involved in formulating and executing foreign policy, are not, and should not be, under the direct control of the Senate. They are, and should remain, under the direct control of the President—if for no other purpose than to read and answer Mr. Krushchev's latest note, but it is a complex system.

To all this, there is a more immediate reason why I feel the need of guidance from above. It is, quite simply, that you have asked me to speak this evening about "Our Responsibilities in World Affairs." The danger here takes the form of an analogy to a German professor who spent his life writing a three-volume treatise on the "Secret of Hegel." When the work was finally published, the reviewer observed that the "author should be congratulated for having written so much about the secret of Hegel yet managing just the same to keep the secret to himself."

Still, despite the danger that you will apply that same judgment to what I have to say, let me come to my theme by putting three questions. First, what are the issues of foreign policy which now face the Nation? Second, among those issues, which are as transient as the wind, and which are like the deep current of a river? And third, what is the proper role of the Senate with respect to those issues? Our responsibility in world affairs is to understand these three issues and then to take appropriate, effective action to meet them.

The issues of foreign policy that we face are born of three revolutions abroad in the world. One is the revolution of nationalism. The second revolution is in the will for improved living conditions. And the third is the technological revolution. Each of these has an inner connection with the other. All share the common word "revolution." All defy the attempt of any single nation to exercise a full control over the course the three revolutions take. All three would have occurred if Karl Marx and Joseph Stalin had never been born. And perhaps most ominous of all, few Americans seem yet to have grasped the full significance of these three worldwide revolutions.

Let me take them up in order.

First, nationalism: We must disabuse ourselves of the notion that the American War of Independence had anything in common with the spirit of nationalism that is now sweeping through the newly independent countries and through most colonial areas. Our own case was one where American Englishmen had demanded English rights from British Englishmen—including the right to be represented in the British Parliament. Indeed, had Benjamin Franklin's plan for representation been accepted by King George III, with a little stretch of the imagination one can conceive of a sequel, admirably suited to be scenario material for Hollywood.

Specifically, in the year 1860, the population of America for the first time exceeded that of Great Britain. Hence the American members of the English Parliament would have been in the majority and would promptly have voted to move the English Crown to this country. Whereupon there would have followed the spectacle of Queen Victoria sailing up the Potomac River, to be greeted at the Georgetown landing by her new Prime Minister—Abraham Lincoln.

Unfortunately for Hollywood, Benjamin Franklin's plan was rejected and we had our revolution. But unlike the general case nowadays in nationalist revolutions, the racial factor did not enter into the picture. The social factor did not enter either, since the chief revolutionaries in America were card-carrying English Whig gentlemen of the highest pedigree. Nor, for that matter, was the technological element a motive for revolution. The greater part of England, like the greater part of the United States, still lived off a barnyard economy in rural isolation.

Today, by marked contrast, the national revolutions going on all around us represent, only in part, a desire for political independence for its own sake. They also express a desire to erase the memory of racial subservience; a desire to be the author of one's own history, and a desire to stand in the sun with a distinctive national personality. For the latter reason, it is closely related to the demand for better living conditions, for the prestige and the respectability associated with industrialization and material prosperity.

In the maturity of our own industrial civilization, it is easy enough for us to sermonize the newly independent nation on the theme that the producer, not production, should be the object of social effort; that the human soul, and not the human body, should be the paramount good one ought to seek. But we can scarcely blame these people if, to our sermonizing, they answer: "It is true enough that man does not live by bread alone; but at least he lives if he has bread." Nor can we blame them if they go on to add: "Unless we can get bread-producing machines from the West, then we will get them from the Communist bloc, and, if necessary, in the Communist manner."

Meanwhile, the daily spectacle unfolding before our eyes is the way the Soviet Union has identified itself in many countries with the cause of nationalism while we are identified with that of imperialism. Why should this be so, in defiance of all logic and the history of our actual interests? The reason, I suspect, is that the Soviet Foreign Office and the Politburo are better at simple arithmetic than are the American State Department and the National Security Council. For the Soviets and their local Communist agents make it appear that they are on the side of the people; whereas we make it appear that we are on the side of the oligarchs who rule the people. Too often we find our friends and allies liquidated as a new group takes over.

To be sure, both we and the Soviets use the same words—peace, freedom, democracy, self-government, social justice, and independence. And I suppose that we ought to take a certain pride in the fact that these words, first taught in the West, express such universal hopes that the Soviets have seized upon them for their own purposes. Yet it is infuriating to see that in the Russian translation and application, these words are twisted into a caricature of the meaning we give them. It is all the more frustrating to observe that it is the Russian version, and

not our own, which so many other peoples of the world have adopted for their own usage—to their own eventual sorrow.

Still, we have to deal with the world, not as we would like it to be, but as it is. And as much of the world is, the Soviets, by parading themselves as the example of a peasant people made over swiftly into a giant industrial power, have become the merchants of hope. We, on our part, have been made out to seem the defenders of hopelessness, and the arch beneficiaries of a status quo outstripped by history.

What can we do about all this? It does not lie within our power to prevent the Communists from peddling hope; but it does lie within our own power to prevent ourselves from representing despair.

I turn now briefly to the second world force I mentioned—the demand for improved living standards.

The material wealth of this world is poorly distributed, to say the least. The United States, with 7 percent of the world's population, produces 50 percent of the world's wealth. At the other end of the scale, India, Pakistan, and Indonesia—to give but three examples—have more than 20 percent of the world's population, yet produce only 7 percent of its wealth.

The implications this has for us, as the greatest of all creditor nations, are plain enough, if only we would stop snoring with our eyes open. Our creditor position demands that we give our debtors a chance to buy in our markets by selling their own products here more readily. Our position also demands that we export more capital to underdeveloped countries so that they can increase their own industrial production to our mutual advantage. For it is a demonstrable fact that the greatest volume of foreign trade from which everyone stands to gain is carried on not between industrial and nonindustrial nations. It is carried on within the community of industrial nations—between the United States and Canada, the United States and Great Britain, the European Common Market, and so on.

We are in for serious trouble if we think that we are at liberty to get richer while most of the rest of the world gets poorer. In a poker game played with stacked cards, and where all the chips come to be concentrated in relatively few hands, the other players will be tempted to do one of three things: to change the rules, to quit, or to shoot from the hip. Leaving the economics of the matter out of account, the political imperatives of the universal demand for a rising standard of living are such that, unless we act sensibly to help meet it, the Soviets will appropriate that demand for their own purposes, in the same way that they have captured and distorted nationalism.

The technological revolution is the third force within whose context we must give form and focus to our foreign policy. My comments on this score, like those which have come before, will have the character of truisms. Yet they are worth reemphasis just the same.

Technology works in chain reactions. For example, the improvement in transportation and communication was in part responsible for the growth of nationalism. From the same cause, the poor nations of the world could better see how the rich nations lived. This in turn spurred the demands of the poor for economic development—even as those same technological advances made it feasible to meet the demand. And so on and on—up to the final step in the chain reaction, namely, the creation of military weapons that can destroy everything.

Now the key point in all this is, that technology is becoming progressively internationalized. No nation now has a clear monopoly over its secret. Nor can any nation fully control its social and political effects, with the precision of an experiment conducted in a laboratory. If the Soviet Union, for example, is quite different in an industrial sense from what it was less than a decade ago, the pressures of technological change have unleashed social and political pressures that the rulers of the Russian state have not fully subdued.

One thing, however, can be said in this general connection. If the Soviet Union did not start the worldwide technological revolution, any more than it started the other two revolutions I have mentioned, it is exploiting all three to its advantage in a degree to which we are not. And the reason, I suspect, is that they know more clearly what they want to do and work harder at it.

Consider, for example, our relative performance in the matter of economic growth. The figures are not so spectacular as the sputniks and missiles, but they are more alarming.

Briefly, even when we discount the U.S. recession year of 1958, Soviet industrial growth during the 1950's has been in excess of 2½ times the American growth rate—9.5 percent a year as against 3.6 percent. And the rate in Communist China is even greater than in the Soviet Union. I recognize the need for a qualification—that the percentages are computed from vastly different base points of reference. Still, despite this qualification, and despite the element of spread-eagle oratory in Khrushchev's promise that the Soviet Union will outstrip the United States per capita production by 1970, the threat is real enough. Whether it materializes in 1970 or later, it will surely come unless the disparity in present trends of growth is changed.

To be sure, the theoreticians in the U.S. Chamber of Commerce would have a rough time of it. For they have taught us that free enterprise is inherently and absolutely more productive than any other system; and moreover, that democracy and capitalism are one and the same thing. They would therefore be hard pressed to explain how it was that communism, based on State capital, outdistanced us in the production of things.

I also recognize that if we were no longer the richest nation in the world, we might suffer in the eyes of the underdeveloped nations—who would then look to communism and not to us as having the more promising method of economic advancement. Yet the Soviet growth has already been such as to impress many underdeveloped countries with this general idea.

What ought to count is not wealth per se, but what one does with it. Indeed, if we could be sure that the increased Russian production would be applied in full to an increase in Russian living standards, we ought to welcome the development. Paul Henri-Spaak, the wise and distinguished secretary general of NATO, has said that "a rich Communist is probably less to be feared than a poor Communist." We might even look forward to the day when the Soviets become as snug and complacent as we have become. In fact, when I lie in bed at night wondering what I can do to help the cause of peace in the world, my fancy starts to play with this idea that we should use some $20 billion of our $40 odd billion defense budget on the purchase of television sets, hi-fi phonographs, ankle-deep carpets, block-long automobiles—and give the lot of these annually to the Russian people as a free gift. The argument can be rather persuasively made that something of the sort will eventually happen through the growth of the Soviet Union's own economy.

But the fanciful elements to one side, what worries me about this argument is the emphasis on "eventually". Eventually can be a long time; and even then we would still be faced with the growing and ominous power of Communist China. In the meantime, we must deal with a set of variables that enter into the international politics of the present hour, and promise to continue to do so for the next decade or two.

It seems to me that within this time span, the growing Soviet wealth can be used by the Kremlin to meet the following objectives: (1) reinvestment to make possible still further expansion; (2) increased living standards; (3) greater arms production; (4) more loans and other investments in underdeveloped countries generally and perhaps also in Communist China and the East European satellites; (5) trade wars with the West.

We do not know, of course, in what proportion these purposes will be served. We do know that the Soviets can switch from one purpose an another as it suits their convenience. Khrushchev has bluntly and forthrightly declared economic war on us. We discount at our peril his seriousness of purpose and his ability to carry it out.

Indeed, in my judgment one of the most difficult problems we face is how to meet Soviet trade practices. For in a growing line of products, the Soviets are reaching a point where they can disrupt world markets and world trade patterns almost at will. This has happened already with tin, aluminum, and benzene. And the list is growing, while the practice itself finds the decentralized, private trading economies of the West poorly equipped to deal with this kind of competition from the Soviet Union.

Frankly, I do not know how to meet Soviet economic warfare. But I do know that we must start at once to think about the problem in a systematic way. I also know how not to meet the Soviet economic challenge. I know that it cannot be met so long as we make a balanced budget the sole and overriding aim of Government policy—as if Government itself were just a bookkeeping operation. If that is all there is to it, then we would be well advised to abolish the Presidency, the Congress, and the courts, and install some certified public accountants in their place.

I also know that Soviet economic warfare cannot be met so long as it is our national policy to pay a one-fifth higher price for generators to be used in an Arkansas dam, merely to give the order to a Philadelphia firm instead of to one in England. If American business cannot compete even with British business, which works in approximately the same kind of economic framework, how can we ever expect to compete with Russian buisness, which operates as a political arm of the state?

The question as to how we allocate our resources is certainly as important, and in many respects, more important than the rate of our economic growth. What counts is the uses to which the growth is put. Leaving the question of quality to one side, we ought to be sobered by one single representative fact. It is that the Soviet Union devotes 8 percent of its gross national product to education, while the United States devotes but 3 to 4 percent. Yet there is in the United States an enormous margin for luxury that could be drawn upon for purposes that are in the interest of the whole Nation, without depriving anyone of what would still remain the highest material standard of life in the world.

The question we have to decide is a question of priorities. It is not—or need not be—difficult to resolve. For it does not call for a choice between guns and butter, or between electronic computers and television sets. It may call for a choice between better schools and teachers, or more country club memberships. But this could hardly be called an austerity program. Moreover, the whole of the educational and other programs that we need for national strength—here at home and abroad—would bear all the more lightly on the Nation if we could

but cast off the anchor of economic shibboleths that keep up tied to a rate of economic growth of 2 to 3 percent a year. The Rockefeller Brothers Fund report last spring put the attainable minimum rate of growth at 5 percent a year.

I know that this figure was described as visionary by the apostles of economic standpattism. Yet I also recall that the same adjective was used in 1941 when Franklin Roosevelt called for the production of 50,000 airplanes a year. The standpatters did not begrudge him what they felt was just a propaganda gambit to frighten the enemy. Yet they were certain among themselves that such an actual production goal was unattainable. As the event proved, Roosevelt was guilty of a gross understatement of purpose. For we were producing 100,000 planes a year before long.

We could do much the same sort of thing for our current needs, if we had the leadership that could make its own vision and its own determination the source of the Nation's vision and determination.

Why do we keep kidding ourselves that we can get along with a little more when we know very well that we need a great deal more? Why do we congratulate ourselves that the shortage of classrooms, far from getting better, is simply not getting worse? Why do we think it is progress if we stand still?

In my judgment, we give too little attention to the long-range questions of national policy, and too much, relatively, to short-term tactical problems. Since last summer, our national attentions has been focused, in turn, on the Middle East, the Far East, and Europe. Jarred by a revolution in Iraq, we sent troops to Lebanon and vowed that we needed a long-term policy to bring peace and stability to the Middle East. Then we withdrew the troops from Lebanon, and the Middle East continues to fester like a running sore. It is without peace, without stability, and without much of a policy on our part.

Next we were confronted with the crisis last fall over Quemoy and Matsu. During that period, a few people pointed out that what was really needed was not so much a solution of the Quemoy-Matsu question, but a long-term policy which would take into account the realities in the Far East. Then the Chinese Communists turned off the heat as suddenly as they had turned it on, and today, several months later, we are no nearer a Far Eastern policy then we were before.

At the moment, our attention is centered on Berlin. I do not want to minimize the gravity of the Berlin crisis. It could supply the cause of world war III; just as the Middle East could have supplied it; and might yet; just as Quemoy and Matsu could have supplied it, and might yet.

The point is that we have to keep Berlin in perspective. It is illustrative of many of the long-term issues between us and the Soviets; but in itself it is only a short-term tactical move on their part.

I think the Berlin crisis will be settled. I hope it will be settled in a way which will lead to a broader settlement of at least some of the issues which divide Eastern and Western Europe. But the most ideal settlement one can imagine would still leave us with many serious problems in other parts of the world; and especially it would leave us in our same position vis-a-vis the Soviets in the economic competition which will determine whether or not the United States remains a first-class power.

And after the Berlin crisis is settled, we have to be prepared to meet another crisis somewhere else. So long as we stay on the defensive, it is folly to assume that the Soviets will not continue to probe and trust and keep us off balance.

Our Government ought to take to heart the sage advice of Demosthenes: "As a general marches at the head of his troops, so ought—politicians—to march at the head of affairs; insomuch that they ought not to wait the event, to know what measures to take, but the measures which they have taken, ought to produce, the event."

It would be rather satisfying, just once, we could get in the position where it is the Soviets who are reacting to our initiatives and not the other way around.

In order to get into such a position, a number of things are necessary.

We need a State Department that is hospitable to new suggestions instead of foreclosing all inquiry with an automatic "no".

We need more concentrated Executive energy instead of buckshot spray in the White House.

We need more broad international vision and less local politics in Congress.

We need a national resurgence of self-awareness about where we stand in history.

But above all, we need to learn how to talk to each other again—to reach a working agreement on what our paramount national interests really are.

THE ROLE OF THE SENATE

It is on this last point, which is central to all the others, that I think the Senate has its greatest role to play.

Despite the large measure of agreement on many of our foreign policy actions in recent years, we do not have in this country a national agreement on what our role in the world really is. We agree on the kind of world we want to live in—we agree that we want it to be peaceful, prosperous, secure, and preferably one in which the Communists have gone away some place else. But these are ideal objectives. The likelihood of attaining all of them is as improbable as the hope an elephant might have of turning itself into a ballet dancer. In any case, we have only the foggiest notions of how even to approach our prescription for an ideal world.

Here again, it is necessary to distinguish between short-term tactics and long-term policy. We do have a deep-seated national unity in regard to protecting our rights in Berlin. But we do not have anything like this same kind of unity in regard to meeting the Soviet economic threat. Indeed, we are not even united on the nature and magnitude of that threat.

The kind of national agreement on our world role which I have in mind is akin to the sort of natural consensus that has been present in support of British foreign policy for many generations. In many respects, it is an unspoken agreement which in large measure is taken for granted and which, in turn, takes a great deal for granted. It is the kind of agreement which develops over a period of years as a result of much public thought and discussion. But it is also the kind of agreement which creates a national confidence and assurance out of which come predictable public reactions to specific situations.

It is the lack of this sort of agreement that has made so much of our recent foreign policy both half-hearted and halfway. If Americans were thoroughly convinced that we were in the world to say and were well-settled in our own mind as to how we fit into the world, we would not go through our annual soul-searching debates over foreign aid. We would not go through our quadrennial wrangles over the reciprocal trade program. We would not be trying to fight change arcund the world. Instead, we would be trying to influence the direction the movement for change takes and we would be in tune with it. We would be exercising the world leadership role in which, in large part, we are defaulting.

Our defaults in world leadership are not exclusively faults of foreign policy. The image which we present to the world is based on many policies we think of as domestic in nature. This is one of our weaknesses. We have failed to relate domestic policies to foreign policies.

For the same reason, we have sacrificed the interests of the whole people to the demands of the few—the few who prefer high prices to full steel production, the few who prefer uneconomic protective tariffs to low prices, the few who oppose the use of our resources for education, housing, highways, and who, in effect, prefer that our resources go into the high profit luxury trades.

In short, our foreign policy has represented the lowest common denominator of national agreement because too many people and too many special interests have been given a practical veto over policy.

It is precisely at this point that I think the Congress as an educational institution—has its greatest opportunity. That is the opportunity of increasing the understanding of all Americans of the interaction of domestic and foreign policy, so that the parochial interests of the few may not thwart the Nation. Not until we agree in the very marrow of our bones that most of our domestic policies have foreign policy aspects and most foreign affairs affect our domestic life will we be able to discharge our world responsibilities.

As has often been said, there are limits on what the United States can do abroad—just as there are limits to what the Senate can do about the general conduct of foreign policy.

Constitutionally, our role is essentially negative. We can refuse to ratify treaties or to pass legislation which the President wants. We can attach reservations to treaties or we can amend bills to bring them more nearly in line with our own views. But these actions, too, are more likely to be effective if they are negative than if they are positive. We can, for example, keep the President from spending money by denying appropriations. But we cannot force the President to spend more money, simply by increasing appropriations. We can advise the President that he ought to enter negotiations for a given treaty. But we cannot force him to do so.

For both constitutional and practical reasons, the Senate should not concern itself obsessively with the day-to-day conduct of foreign policy. I repeat that this is the prerogative of the executive branch, and properly so. I also repeat that the Senate itself is very poorly equipped to engage in administrative matters.

But over and beyond this, the Senate can, I think, make a useful contribution through the public discussion of long-range, basic problems of foreign policy. I have touched on some of these problems today, and I have alluded briefly to others. In the months ahead, I intend to explore these further.

I have said many times that we in the United States operate under a most extraordinarily difficult system of government. Democracy may have reached its peak in our country, but it is an extremely complicated piece of machinery to operate. It requires of the people that extra measure of determination and ability often characteristic of a few individuals in a community, but seldom a characteristic of most of the people. It requires especially education and self-discipline.

I hope in the months ahead we may draw on the wealth of information, the ideas and professional ability that are to be found in academic communities such as this. Unfortunate experiences during the past decade have, I fear, seriously damaged good relations between government and the academic world. We have both suffered. Government misses the bold, astringent, pragmatic, inventive

ideas which flowed from the academic communities of the Nation in the early days of the Roosevelt Presidency. The social science faculties of the universities doubtless miss an interplay with the problem-oriented workings of the Government in its day-to-day affairs.

I am making a systematic endeavor, in my position as chairman of the Committee on Foreign Relations, to promote a better two-way communications channel between Government and the universities especially at the policy level. The Committee on Foreign Relations has contracts with some 20 educational institutions (including the Russian Institute here at Columbia) in connection with an overall foreign policy review which we expect to have completed by early next year. This is an attempt to spur the rate at which ideas can flow directly from the universities to the practicing politician.

The Committee on Foreign Relations has also been promoting a series of informal exchanges between outstanding scholars in the field of foreign affairs and Members of the Senate. This is not an isolated phenomenon. Similar activties are underway in the House of Representatives and in fields other than foreign policy.

Perhaps out of this process and out of literally thousands of discussion and study groups throughout the country, there can be developed the kind of agreement on our foreign policy objectives which is based on a habit of the mind; the kind which will come only after we, as people, have steeled ourselves to look unpleasant facts in the face and to react rationally instead of trying to wish them away.

There is nothing inevitable about the survival of the United States. Survival is the reward of civilizations which meet the responsibilities history thrusts upon them. It is the job of you, of me, of every American to see to it that our country, in this age, meets those reponsibilities.

Every generation has what Franklin Roosevelt called a rendezvous with destiny. We Americans in 1959 have to determine—and soon—whether we are going to keep our rendezvous.

I hope it is not later than we think.

Truman Diamond Jubilee

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. HARTKE. Mr. President, last Friday Indiana Democrats celebrated the Truman diamond jubilee in Gary, Ind. I had the honor of speaking to this group, which was participating in the national celebration of President Truman's 75th birthday. I am very grateful that I was asked to participate in this celebration, since President Truman was good enough to open my campaign in Fort Wayne, Ind., last fall. I ask unanimous consent that my remarks in Gary at the Truman diamond jubilee celebration be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR VANCE HARTKE, DEMOCRAT, OF INDIANA, AT TRUMAN DIAMOND JUBILEE, GARY, IND., MAY 8, 1959

Griff, Ray, mayors, friends, and fellow Democrats all, this is my first trip back to Gary since the eventful election of last November.

Many times since then I have been reminded of the day the people of Lake County were so patient that night and so wonderful to me on election day. I regret sincerely that Senate business has not permitted me as much time in Indiana as I would like to have. God willing, I shall tour the State again following the present session of Congress. Perhaps we can visit again then.

I am reminded also tonight of another election campaign, one that took place 10 years before the one in which I was privileged to head a statewide victory ticket. I refer, of course, to the 1948 election campaign.

Well we remember that Harry S. Truman stood almost alone at his nomination in Philadelphia. Among the few with him was the late Alben W. Barkley.

During the campaign that followed, we heard everywhere that everyone had deserted Harry Truman and the Democratic Party. Gone were the extreme conservatives of the day. Gone were the extreme liberals of the day. Down the path between these extremes went Harry S. Truman, a plain-speaking man who took his case directly to the people.

There were those then and since who thought of President Truman as a lightweight. And there were those of us who insisted all the time that history would record Harry S. Truman as one of the great Presidents of all time.

I remember Harry Truman, too, when the time came to open our campaign last fall. It was he who responded to our beckoning. And how he packed the galleries and the vast area floor of the Fort Wayne Coliseum.

"I don't give 'em hell," he declared. "I just tell the truth and it sounds like hell to some of the people."

I remember Harry Truman as a man who has principles and stands by them. I remember Harry Truman as a man who acted boldly and with great courage.

Tonight Harry Truman—a man warm of smile, hearty of handshake, practical as a Missouri farm boy, wise as a world renown statesman, political as only a real party man can be—turned 75 years old. Nobody in his right mind expects Harry Truman to collapse in his rocking chair, go back to Independence and retire. We would be disappointed if he did. America would be less rich if he did.

We need men like Harry Truman today.

I wonder sometimes when I hear of certain people high in our Government complain about dynamic leadership if we have gone so far in the few years since President Truman's occupancy of the White House that we have forgotten what real leadership is. One thing for sure: When H.S.T. was living in the White House, there was never any question about who was boss, where we were going or how we were going. Our allies knew where we stood. Our enemies knew where we stood. Above all, we ourselves knew where we stood.

Right or wrong—and over and over we are learning how overwhelmingly often he was right—Harry Truman made decisions and stuck by them. Yet, he was never arrogant.

Remember, he was not too big to visit Wake Island to see General MacArthur. Yet, when the general failed to heed orders from the President, Harry Truman fired him.

When the time came for a decision on dropping the atomic bomb, Harry Truman consulted and prayed. Then he ordered the bomb dropped. "I did not like the weapon," Mr. Truman said. "But I had no qualms if, in the long run, millions of lives could be saved."

This capacity to make decisions was brought to my mind again only yesterday. The day before I was privileged to have breakfast with Mr. Truman in the company of several other Senators. That was Wednesday. Then, on Thursday, I read in the Washington Post that President Eisenhower before leaving for a golfing holiday had decided that the 22d amendment to the Constitution was perhaps a good one. This is the amendment barring a President from serving more than two terms.

Over and over, President Eisenhower has told news conferences that he believes the amendment is bad. Suddenly, and without any apparent new information, he decides it is right.

I wonder if he is just trying to disagree with President Truman.

Of course, Mr. Truman made other decisions, but I believe a few—mostly in the field of foreign affairs—are sufficient to recount here tonight to prove the very greatness of the man.

Is there doubt in anyone's mind here tonight that the Truman doctrine, the Marshall plan and point 4 preserved the free world? Without them, I fear, the Middle East would have been lost, Europe would still be in the depths of postwar darkness and despair if not indeed wholly behind the Iron Curtain, Africa would be lost and Asia would be more Communist than it is.

The Truman doctrine rescued Greece and Turkey. Mr. Truman continued his efforts to rebuild these strife-torn lands so that now they are bulwarks guarding our interests in the Mediterranean and the Middle East. Turkey, for instance, is all that stands between Soviet Russia and the vast oil reserves of the Middle East. Turkey, for instance, has supplied proportionately more troops for U.N. actions than we have.

Then there was Italy. Communists had reached a pinnacle of success in that land. They were in position to take over peacefully and through the ballot. But Harry Truman's bold action aided the gallant fighters for democracy in that war-torn land.

In Berlin the Russians had moved to block our supply lines. Harry Truman did not sit idly at the White House or Burning Tree Country Club or Augusta Golf Club. He ordered the Berlin airlift. And thus we stopped effectively for the first time, Russian expansion.

From this, all our allies and the neutrals of the world were on notice that we had principles and that we would, above all, stick by these principles.

The Marshall plan has rebuilt Europe until today the Western countries of the continent are proud proof that our system works. I wish you all could see, as I have recently, the vast difference between East and West in Germany. And what has happened in West Germany has happened everywhere in Europe among our allies.

Mr. Truman's point 4 program is a bold, imaginative program to provide technical know-how to backward countries. It has taken the stigma of colonialism from us. It has helped countries help themselves. It has built new free countries loyal to us and our way of life—vital allies in a life and death struggle.

You know and I know that Harry Truman's most controversial decision was Korea. When he made it, Congress backed him to the hilt. The vote was virtually unanimous. But when the war dragged on, his critics called it Truman's war.

But Harry Truman, student of history, knew that we had taken such bold steps in 1931 when Japan invaded Manchuria we might have prevented World War II. Truman's war may, in turn, have prevented World War III. It has certainly delayed it. Historians agree on this.

President Truman also brought about unification of our Armed Forces, better social security, advances in civil rights, progress in slum clearance and housing, NATO.

But I think that we Americans remember Harry Truman best for his fighting campaign of 1948, when he made 356 speeches in 35 days. And what did Mr. Truman say later on of this? He said, "I am always glad to do anything I can to help the Democratic Party, whether in marbles, money, chalk, or time."

Happy birthday, Mr. President, for all the people of Indiana, for lovers of freedom everywhere. Thank you for your inspiration. May God keep you with us many more years.

Works for Peace

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. MOSS. Mr. President, the senior Senator from Minnesota [Mr. HUMPHREY] was in Salt Lake City on the 25th of April, and he delivered a speech there at the Jefferson-Jackson Day dinner.

As always, he treated his subject with insight and clarity. The address is extremely timely. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Nearly 8 years ago—on May 24, 1951—President Truman said, "The only kind of war we seek is the good old fight against man's ancient enemies—poverty, disease, hunger, and illiteracy."

His words were drawn from the heart and the wisdom and the history of the American people. But he knew, as we know, that words, however eloquent, are not enough; nor do good intentions, however generous, suffice.

They must result in works for peace.

It is 10 years since President Truman enunciated what became known as the point 4 idea—the idea of aiding the peoples of the underdeveloped areas of the world.

That idea did not spring out of empty air. It was firmly grounded in the lifeblood and life experience of the missionaries our great churches have for generations sent out to all corners of the world.

The strength of our best missionaries is that they not only preached the faith to all peoples, but they also fed the hungry and healed the sick.

They have gone beyond charity. They have been willing to walk out into the fields and villages and show people how to grow more abundant crops—how to live better and more meaningful lives. They have trained them to be their own nurses and their own doctors.

In a day when we hear much of the ugly American it is well to remember these dedicated Americans. For they were the real progenitors of the point 4 idea.

There is much talk today of the need for Americans abroad to speak the language of the peoples among whom they work. I have joined in urging the importance of this.

But our missionaries needed no urging. They knew that they would save few souls speaking a language that nobody understood. They learned the languages—even the dialects—of those they sought to help. In fact, in some cases they ventured into such unexplored lands that it was they who compiled the first dictionaries. Often they had to invent a system of writing the language where none existed before.

In a very literal sense, they gave the great gift of literacy to the peoples among whom they lived.

Those who are suddenly concerned about the competition with communism in Asia, Africa, and the Middle East do not realize that we had a very long head start upon them. While the early Bolsheviks were wrangling over the cafe tables of Europe, our missionaries were at work helping people grow two blades of wheat where only one grew before—helping them to resist disease—helping them to lift the burden of illiteracy.

But despite this head start, we have dissipated much of our lead. In too many underdeveloped areas of the world, the Communists are making far more headway than we.

Why? Not because of the righteousness of their ultimate cause, for it is an oppressive and godless cause.

It is because of the Communists' total dedication to their goals—a total dedication which today the West is not equaling.

Too many Americans have lost the zeal and dedication that motivated the missionaries of the past.

Perhaps this is because we have lost the spirit that guided the missionaries: the desire to help people for no other reason than that they are our brothers; that they are God's children; that they are hungry and need food, or sick and need healing.

Today, our aid to poor nations springs not so much from love as from fear—fear that if we do not help others, they will be lost to the Communists.

Our efforts to help other countries too often seem determined by how many Communists they have in their midst. The country which is short of Communists must sometimes be tempted to import them.

But to our missionaries what was important was that these were people who needed help. Their actions were motivated by the appeal of the scriptures, not by the fear of the appeal of Karl Marx and Lenin.

It is the spirit of the missionaries from which point 4 drew its inspiration—and this is the spirit in which it got underway.

It is a measure of the soundness of the point 4 idea that it has survived under the present administration. It has even survived administrators who came to the job convinced it was a sort of operation rathole.

But, as with so many of the fine programs this spiritless administration inherited, the spirit has slipped from it.

It has been sold too often as something—against communism—rather than for humanity.

It has been pictured too often as a painful expedient—a necessary nuisance that we can wind up next year, or the year after.

Here is another lesson to be learned from the missionaries of our churches. Their dedication to the great work overseas was not for 1 year, or for 2 years, but for many.

So, too, we must recognize that the task of helping other nations to help themselves is a continuing task. It will not be finished next year or the year after.

To be effective, our foreign aid program should be established on a longer term basis, so that both we and those we seek to help can plan ahead, can rely on a sustained effort—and can be spared the annual agonizing reappraisal to which we subject the very existence of foreign aid.

This will not prevent modifying the program as conditions dictate. Congress will still have annual control over the moneys appropriated.

But if in fact it will be necessary to continue our aid programs over a longer period, why do we not recognize this just as we recognize it in countless domestic programs, which do not live on a year-to-year basis?

I like to talk to people who have spent their lifetimes in remote areas of the world, for there is a genuine nobility in this self-sacrifice.

But they recognized that there is a danger as well, the danger of paternalism.

There comes a time, painful to all of us parents, when our children grow up—when we must begin to work with them rather than for them.

Most of our missionaries are wise enough to recognize this, and to move forward to the higher challenge of partnership.

This is the great opportunity before us today—the opportunity we are so largely missing.

It does us no good to complain that the Communists are busy everywhere, preaching their own secular heresy.

It does just as little good to complain that, as "Ivans-come-lately" in the field of overseas aid, they are peddling their loans and their technicians in many crucial areas of the world.

It does no good to proclaim that point 4 began as an American idea that the Communists have appropriated for themselves.

The real trouble lies not in what they are doing. It is how much less we are doing than we could and should.

Today in Congress we are debating the details of a meager and unimaginative program.

While we debate, a new world is coming into existence around us. Most of Asia has achieved freedom since the war. New nations are being born every year out of Africa. Latin America is only now achieving the full fruits of freedom.

This new independence and liberty carries with it strong desires for self-help—desires we should strive to foster.

Here is what one of our point 4 workers reports from Chile:

"The United States has helped to establish an 'aided self-help housing program' in a Santiago slum. When the program was started, many had doubts that unskilled people could do the work. One night a Chilean official went out to inspect the job—the work was done after regular hours, often by floodlight. Here was a man using a trowel, and doing beautiful work. The official said to him:

" 'You must be a mason.'

" 'No, sir,' the man replied. 'I'm a tailor.'

"Surprised, the official said: 'But this is very good work.'

" 'Sir,' " the tailor replied, 'you perhaps do not understand. It is my own home that I'm building.' "

In a very real sense—in the largest sense—it is their own homes, their own nations, which millions of Asians and Africans are now building.

They do not expect miracles—the Asian peasant does not dream of driving in his Cadillac down a six-lane superhighway to does not want a tractor or a combine to work his fields. Rather than a fancy machine he does not understand, he needs to know how to care for his ox when it is afflicted by disease. He needs a simple pump for getting water out of the ground and onto his land.

In short, what he does want—and very deeply—is a better life for himself, and above all for his children.

The overriding fact is that mankind is on the move—and at least half of it in a hurry. We can seize the opportunity to move with them—or run the grave risk that they will move without us, or even against us.

I hope that there is enough of the missionary spirit in all of us that we will play our full part in this great chapter of the world's unfolding history. I hope that we will do this because it is the right thing to do, and not solely out of fear of our adversaries.

All Americans need is to be themselves. Why is it that so many feel embarrassed by the prospects of doing something noble and disinterested?

The mistakes made out of greatness of heart are forgiven—the mistakes of meanness, never.

I would much rather stand in the Senate and defend my Government against the charge of having spent generously to help India achieve the goals of her 5-year plan than to join in some future inquest, as to why we gave too little and too late.

Parenthetically, I may say that I am willing and anxious to stand in the Senate and defend the Republican administration's requests for funds to help other nations—though they too often reward Democratic Senators for their support of these overseas programs by calling us spenders when we propose doing something about schools, health, housing, social security in our own country.

I reject the word "spender" when I support the administration's foreign aid programs—they are an investment in the economic health of the world and in peace.

And I equally reject the word "spender" when I support domestic aid programs—they are an investment in the economic health and well-being of our own Nation.

As President Eisenhower said in a special message to Congress on foreign aid, "It is not the goal of the American people that the United States should be the richest nation in the graveyard of history."

Our aid to other nations should not be a partisan matter. To help our fellow man is a goal all Americans should share alike.

But the goal is not attained by words alone. Effort, action, enterprise, and dedication are required.

In this, I fear there has been a difference between Democratic and Republican administrations.

Under President Truman, the deeds more nearly matched the words. The point 4 idea did not end with Mr. Truman's second inaugural address. It was translated into action, a living program.

But what, I ask, has become of President Eisenhower's fine atoms-for-peace address before the United Nations in 1953? Have our deeds matched the President's eloquent words?

I fear not. In the atoms-for-peace field we are not leaders, we are laggards. Our promised contributions of nuclear materials to help in peaceful atomic research have not been forthcoming. We have allowed nations far smaller than we to take the lead.

Too often, it has seemed that the words are the words of Eisenhower, but the acts are the acts of the Old Guard.

What the world needs today is not massive retaliation, but massive doses of health, education, and food.

We must move on the offensive, and declare war against mankind's most ancient and terrible enemies of hunger, disease, poverty, and ignorance.

We need a bold new "food for peace" program, dedicating our God-given abundance to serving the need of humanity—rather than complaining about it.

We need a dramatic, worldwide "health for peace" program, with vastly expanded international medical research—and perhaps a white fleet of mercy ships carrying our medical know-how and wonder drugs to the disease-ridden and suffering in the far corners of the earth.

We need to launch a broad program of world educational development—a plan for education for peace.

These are truly the works of peace.

There is, in the affairs of nations as well as men, a tide which

"* * * taken at the flood, leads on to fortune;
Omitted, all the voyage of their life
Is bound in shallows and in miseries."

That tide is rising, is already lapping at our shores. Please God, we shall have the wisdom, the courage, and the vision to take it.

Canal To Connect Lake Winnipesaukee With the Sea

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. COTTON. Mr. President, there is evidence of a new interest in the construction of canals in many areas of the Nation, particularly since attention has been focused on the opening of the St. Lawrence Seaway. Edward J. Gallagher writes an interesting editorial in the Laconia Evening Citizen, of which he is publisher, advocating one of these in my own State of New Hampshire. I ask unanimous consent that the editorial from the April 28, 1959, issue of the Laconia Evening Citizen be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CANAL TO SEA?

In New York last week at the publishers' meeting we heard much talk about the opening last Saturday of the St. Lawrence Canal, which will move ocean traffic more than 2,000 miles inland to Duluth, Minn. Everyone agreed that the expenditure of hundreds of millions on this long-contemplated project will pay off handsomely, and requirements of the people due to growth in population in the next three decades will easily offset temporary loss of business to communities on the eastern seaboard.

The St. Lawrence Canal, lifting vessels by the series of locks on the westward journey nearly 250 feet above the level at Montreal and Quebec, suggests the strong possibility that some day a canal will connect Lake Winnipesaukee with the sea, as John Goodhue has been advocating. Governor Powell in his program for developing greater commerce, for the State, recreationally, and otherwise, might propose action on the Goodhue canal.

It does no harm to keep the project in mind, and it could become a reality, as the St. Lawrence Canal now is, after a half century of dreaming, planning, and appropriating.

Mother's Day

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. SCOTT. Mr. President, since the origins of Mother's Day are so closely associated with the Commonwealth of Pennsylvania, I ask unanimous consent to have printed in the Appendix of the RECORD the program for the 11th annual memorial service at West Laurel Hill Cemetery in Philadelphia, and a brief article by Maude Olivia Hickman, historian of the Old Washington Tree Chapter of the DAR.

There being no objection, the program and article were ordered to be printed in the RECORD, as follows:

PROGRAM FOR MOTHER'S DAY, MAY 10, 1959, 51ST ANNIVERSARY, 11TH MEMORIAL SERVICE, HELD BY MOTHER'S DAY, INC., MISS MAUDE O. HICKMAN, PRESIDENT, FOR ANNA JARVIS, FOUNDER, WEST LAUREL HILL CEMETERY, PHILADELPHIA, PA.

Fourth Naval District firing squad and buglers.

Invocation: Rev. Harry N. Johnson, pastor, Grace Lutheran Church, West Philadelphia.

Pledge of allegiance to the flag: Boy Scout Troop No. 113, leader, Mr. H. Talley.

The National Anthem: assemblage.

Welcome: Miss Maude O. Hickman.

Solo, "O Blessed Day of Motherhood" (by Carl F. Mueller): tenor, Mr. Samuel Smith, Grace Lutheran Church, West Philadelphia.

Address: Dr. Frederick E. Maser, pastor, Old St. George's Methodist Church, Philadelphia (1707–1959).

Chorus, "M-o-t-h-e-r" (by Howard Johnson): Pillar of Fire children's choir.

Wreath by Allied Florists of Greater Philadelphia, Inc., Mr. Emil C. Esslinger, secretary, placing wreath of 51 white carnations on grave.

Benediction: Rev. Harry N. Johnson.

Salute: firing squad, Fourth Naval District.

Taps: Fourth Naval District.

MOTHER'S DAY

The founder, Miss Anna Jarvis, born May 1, 1864, in Webster, W. Va., 1 of 11 children, only 4 living to maturity. The family moved to Grafton, W. Va., in 1865, where Miss Jarvis' early life was spent. After completing grade school, she entered Female Seminary in Wheeling in 1881, being graduated in 1884, and was immediately employed by the board of education as a teacher in the Grafton public schools where she taught for 7 years. The superintendent of schools said: "In all my wide experience as a teacher and superintendent, I have never known her equal as an efficient and capable teacher." Anna Jarvis was a woman of very keen intellect, broad vision, high ideals, and commanding personality, and was a fluent, logical, and convincing speaker.

The real origin of Mother's Day dates back to the period immediately following the Civil War when Mrs. Anna Reeves Jarvis, the honored mother, organized the mothers of her community. The new organization wondered how their families would ever be reunited after the war was over. Mrs. Jarvis met this problem of family hatred after the close of the conflict by announcing a

"Mother's Friendship Day." A special invitation was given to every Union and Confederate soldier and their families. It was truly a wonderful sight to see the boys in blue and the boys in gray shake hands and say, "God bless you, neighbor; let us be friends again." Mrs. Jarvis, for a period of 20 years expressed her desire that someone, sometime would establish a day for mothers, both living and dead. It was this kind of work and works of a similar character that impressed her daughter to establish Mother's Day to perpetuate her mother's idea and make the day a memorial for all mothers.

About 1896, Miss Anna Jarvis came to Philadelphia, where her brother Claude was located in business, and became secretary of the literary department of Fidelity Mutual Life Insurance Co. After the death of her father, Granville E. Jarvis, in December 1903, the mother came to Philadelphia to reside with her son and daughters at 2031 North 12th Street. It was there 3 years later that Mrs. Jarvis died, May 9, 1905, at the age of 72. The following year, Miss Anna Jarvis asked friends to come to church the first Sunday in May to commemorate the anniversary of her mother's death. By 1907, she had acquainted John Wanamaker, the great merchant, with her plans to establish a Mother's Day. He thought the idea a good one and urged her to start the movement. By her untiring efforts, writing ministers of churces, mayors of cities, Governors of States, the first official Mother's Day was founded on Sunday, May 10, 1908.

Anna Jarvis continued her zeal and efforts meeting Senators, Congressmen, and Governors. The first to issue a State proclamation was William M. Glasscock, Governor of West Virginia, on May 8, 1910. Miss Jarvis never ceased her efforts and in 1914, at her request, the second Sunday in May was named as Mother's Day. The resolution was passed by both Houses. President Woodrow Wilson approved and the Great Commoner, William Jennings Bryan, as Secretary of State, proclaimed it. In the President's proclamation which immediately followed, he ordered that, on the second Sunday in May, the flag should be displayed on all governmental buildings in the United States and in our foreign possessions. Later, Representative Heflin, of Alabama, author of the resolution said, "The flag was never used in a more beautiful and sacred cause than when flying above the tender, gentle army, the mothers of America."

Anna Jarvis traveled abroad extensively promoting Mother's Day until 46 foreign countries observe Mother's Day on the second Sunday in May. The dream of the mother had at last become a reality through the daughter, who always said her mother was the mother of Mother's Day and she the founder. She chose the white carnation as the emblem, being her mother's favorite flower and the emblem of purity and love. Then, too, she said, "Everyone would buy one" for they were selling for 10 cents per dozen. In a year or two, the prices for one started at 5 cents and continued to advance until now they sell for $1 and even more. She fought the commercialization always, for she founded the day as a religious and sacred day to remember and honor and revere our mothers, dead or alive. For this noble work, she was honored not only in America, but at the courts of foreign countries.

Miss Jarvis' last public appearance was in April 1943 at a church mothers' club, honoring a sailor who sacrificed his life, but saved his ship, all officers, and men in World War II. She was going blind and on November 3, 1943, she was placed by friends in a sanatarium in West Chester, Pa. Being totally blind, she died November 24, 1948, at the age of 84, the last of an illustrious family.

Miss Jarvis is buried beside her mother in West Laurel Hill Cemetery, Philadelphia. Upon her tombstone is a bronze plaque of her likeness, dedicated on Mother's Day, May 8, 1949.

Federal Projects in West Virginia

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I submitted last Friday to the Committee on Appropriations, in behalf of certain projects in West Virginia.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR BYRD OF WEST VIRGINIA

Mr. Chairman, I appreciate this opportunity to appear before the committee in behalf of certain projects in West Virginia. I shall try to be as brief as possible, knowing that the committee has much work to do, and desiring, as I do, to avoid imposing upon your generosity and courtesy in permitting me to present this statement.

Mr. Chairman, I wish to recommend and urge that the committee give careful consideration to the following projects, these being of the utmost importance to my State of West Virginia from the standpoint of flood control, regulation of waterflow, and, in some instances, growth of river traffic.

OHIO RIVER LOCKS AND DAMS

Project	Estimated cost	Amounts that could be used	Remarks
1. Racine	$51,700,000	[1] $50,000	Tentatively proposed replacement structure for locks 23, 22, and 21.
2. Belleville (authorized)	64,100,000	[1] 125,000	Replacement structure under study for locks 18, 19, and 20.
3. Opossum Creek	52,200,000	[1] 150,000	Replacement structure under study for locks 12, 13, and 14.
4. New Cumberland	41,500,000	[2] 6,800,000	Will replace existing locks and dams 7, 8, and 9 on Ohio River.
5. Pike Island	63,500,000	[2] 5,000,000	Replaces locks and dams 10 and 11.

MONONGAHELA RIVER LOCKS AND DAMS

6. Opekiska	21,900,000	[2] 1,000,000	Completes cost of construction.
7. Hildebrand	12,460,000	1,278,000	Do.
8. Dam No. 8	3,500,000	725,000	

FLOOD CONTROL

9. Williamson	640,000	[1] 71,000	
10. Princeton	1,000,000	[2] 500,000	$55,000 appropriated for planning in fiscal year 1959.
11. East Rainelle	775,000	[2] 500,000	$40,000 appropriated for planning in fiscal year 1959.
12. Summersville Reservoir, Gauley River.	46,800,000	[2] 2,000,000	

[1] Planning.
[2] Construction.

Mr. Chairman, item No. 1, Racine locks and dam, will replace obsolete and inadequate locks and dams Nos. 21, 22, and 23, which are 38 to 41 years old, with one modern structure to accommodate the increasing volume of Ohio River traffic. The engineers report a benefit-to-cost ratio of 2.8, and they indicate that the money requested can be efficiently utilized in fiscal 1960 for advance engineering and design work.

Item No. 2, Belleville locks and dam, contemplates the construction of a modern, nonnavigable dam and two locks of 110 feet by 1,200 feet and 110 feet by 600 feet usable dimensions on the Ohio River in the vicinity of Belleville, W. Va., about 285 miles below Pittsburgh, Pa., and located in Meigs County, Ohio, and Wood County, W. Va. Obsolete and inadequate locks and dams Nos. 18, 19, and 20 will be replaced with one modern structure to accommodate the increasing volume of Ohio River traffic. The engineers' benefit-to-cost ratio for this project is 2.7.

Item No. 3, Opossum Creek, locks and dam, contemplates the construction of a modern, nonnavigable dam and two locks of 110 feet by 1,200 feet and 110 feet by 600 feet usable dimensions on the Ohio River bordering Marshall County, W. Va. Existing obsolete and inadequate locks and dams Nos. 12, 13, and 14, will be replaced by a single modern structure to accommodate increasing Ohio River traffic. The Engineers report a benefit-to-cost ration of 2.2.

Item No. 4, New Cumberland locks and dam, will replace existing locks and dams Nos. 7, 8, and 9 on the Ohio River, some of which locks are in imminent danger of collapse. Traffic is presently moving through lock No. 7 in grave peril because a lateral movement of the hill and esplanade adjoining the locks is pushing this lock into the river. Facilities would be blocked for many months if collapse should occur. The Corps of Engineers has assigned a benefit-to-cost ratio of 2.7, but it is thought that this estimate may be far too conservative.

Item No. 5, Pike Island locks and dam, proposes construction of a dam and two locks to replace obsolete and inadequate locks and dams Nos. 10 and 11, which were constructed between 1904 and 1916. The engineers report a benefit-to-cost ratio of 1.8 to 1, an estimate which is thought to be very conservative.

Mr. Chairman, the Ohio River is one of the most important inland waterways of the world. It is the vital link between the northern industrial States, such as West Virginia, Pennsylvania, and Ohio, and the South and southern gulf ports. The prod-

ucts which it bears in vast quantities are iron and steel; coal and coke for the manufacture of iron and steel; fuel oil, gasoline and other petroleum products; sulphur; limestone, and iron and steel scrap. Tonnages of traffic are very large and have been constantly increasing. For example, in 1945 annual tonnage was about 34 million; in 1950 it approached 50 million tons and in 1957 it was over 81 million tons, of which over 13 million tons consisting mainly of coal, oil and gasoline, and iron and steel products, passed through the project area. Traffic shipments of steel on the Ohio River have increased 414 percent over what they were in 1945. Coal shipments have increased 225 percent. Petroleum shipments on the Ohio have increased 181 percent over 1945, and shipments of chemicals have increased 244 percent. Overall traffic on the Ohio River has increased, in the past 43 years, at a rate nearly three times the rate of growth of the gross national product. Tonnage shipments on this river are now one and one-half times those of the Panama Canal and they already exceed the expected ultimate capacity of the St. Lawrence Seaway by about 50 percent. It can easily be seen that the traffic on the Ohio River is undergoing a tremendous growth change.

The basic iron and steel industry is dependent upon river transportation via the Ohio River. Steel manufacturers at Pittsburgh, Pa., Weirton, W. Va., Steubenville, Ohio, Wheeling, W. Va., and points downstream use the river extensively to ship their finished products. The heavy concentration of steel production below Pittsburgh receives practically all of its requirements of coking coal in barges which traverse the Ohio, and much of its limestone and other important operating supplies are delivered in the same manner. Their dependence upon river transportation is not merely a matter of operating economy, but if river shipments were halted for any appreciable length of time their operations would be critically curtailed. Mr. Chairman, a failure to provide the funds I have requested will mean a costly delay in replacing the obsolete and inadequate facilities on this heavily traveled waterway.

Item No. 6, Opekiska locks and dams, will replace existing locks and dams Nos. 14 and 15 of the Monongahela River. This will complete the modernization of the upper Monongahela. Vast reserves of metallurgical coal lie in the area along this portion of the river, and completion of the project will make possible better access to these reserves.

Item No. 7, Hildegrand locks and dam, a replacement for existing locks and dams Nos. 12 and 13, is an integral unit in the comprehensive plan of improvement of the upper Monongahela River. Traffic from this area consists principally of coal, sand, and gravel while traffic from downriver points into the area consists of petroleum and steel products. Although the increase in traffic through this reach of the river has been substantial through the years, the lack of adequate navigation facilities on the upper river has hindered movement of much greater prospective tonnage of coal reserves from the continguous area. These reserves are ample to sustain for an indefinite period of time a much greater production rate than that currently being utilized. An improved waterway will provide a water outlet for a large part of the production of the Fairmont coal district similar to that now existing on the lower river. The increased channel width and depth along with increased lock sizes for the upper river will permit full loading of standard coal barges and the efficient movement of Monongahela River standard six-barge tows without breaking and reassembling the tows during lockage, resulting in appreciable transportation savings through reduced line haul costs, more efficient use of towing equipment, fewer lockages, and savings in operating time. It is anticipated that extension of a deeper channel will result in additional movement of petroleum products in the upper river. Bulk storage centers at the head of the existing deep draft navigation below Morgantown are actually on the fringe of the area to which distribution is now made by truck. Upon provision of adeqaute navigation facilities, Fairmont, which is the geographical hub of the service area, will probably develop as a storage and distribution center for gasoline. The life of existing locks and dams Nos. 12 and 13, which were constructed during the period 1901–3, cannot be extended to meet the burden of a greatly increased traffic. In addition more economical operation and maintenance for the Government will result from replacement of these old and obsolete structures with one modern lock and dam at the Hildegrand site.

Item No. 8, Dam No. 8. Completion of this project, together with the Hildegrand project, would give the steel industry better access to the rich coal reserves in the upper Monongahela River. Under existing conditions, barges navigating pool 8 must be loaded to less than 70 percent capacity due to the restricted depth of the upper reaches of pool 8.

Item No. 9, Williamson. The total cost of this project is estimated at $707,000, of which $665,000 is Federal and $42,000 is local. To date, $4,000 has been appropriated to cover costs of preauthorization studies. The project is located on the right bank of Tug Fork in Mingo County, W. Va., about 57 miles above the junction of Tug and Levisa Forks which form the Big Sandy River. The plan of improvement which contemplates construction of about 2,700 feet of concrete wall, 3 pumping stations and appurtenant work. The project will provide protection to almost the entire city of Williamson from floods equal to the maximum of record (January 1957). The Engineers' benefit-to-cost ratio for this project is 1.2 to 1.

Item No. 10, Princeton. The Engineers' benefit-to-cost ratio for this project is 1.8 to 1. The plan of improvement provides for enlarging, straightening and clearing Brush Creek, Christian and Glady Fork for a total distance of 21,000 feet together with necessary alterations of railroad and highway relocations. The plan of improvement will give protection from flows about 20 percent greater than that experienced in June 1924, the maximum for which there are reliable data.

Item No. 11, East Rainelle. The project is located on Meadow River in Greenbrier County, W. Va. The proposed plan of improvement provides for widening and deepening the channel of Meadow River for 2.47 miles below the mouth of Sewell Creek; improving the channel of Sewell Creek, a distance of 5,450 feet upstream from its mouth and improving Boggs Creek for a distance of 3,230 feet above its mouth. The plan of improvement will provide near complete protection to East Rainelle from floods equivalent to that of record and partial protection from greater floods. The engineers' benefit-to-cost ratio for this project is 2 to 1.

Item No. 12, Summersville Reservoir. Construction of this project will materially affect the well-being of a large segment of the population of the greater Kanawha Valley, in which Charleston, W. Va., is situated, and will be a major factor in attracting new industries because it will not only contribute to flood prevention but it will also insure an even and ample flow of water for industrial plants in the Charleston area during the dry season. An appropriation of $2 million would permit work to be initiated immediately toward the construction of the access roads, spillways, and other necessary preliminary operations. Completion of the Summersville project would considerably reduce a flood hazard that exists in the narrow and densely occupied industrial Kanawha River Valley. Extreme floods of record have inundated virtually the entire valley floor, and the occurrence of a great flood similar to that of 1861 under the present congested condition of the valley would result in stark tragedy. The flood of 1861 covered the area now occupied by the Charleston business district to depths ranging from 2 to 11 feet and residential areas were flooded to like depths. The Bluestone Reservoir, on New River, controls but 4,565 square miles of the drainage area above Charleston, which totals 10,420 square miles, and it is apparent that additional reservoir control is required to assure dependable protection from major floods. The industrial developments on the flood plain at and below Charleston, located at the confluence of the Elk and Kanawha Rivers, include great basic alcohol, ammonia and chlorine products plants which help to make the Kanawha Valley one of the greatest chemical centers of the world, a major U.S. naval ordnance plant, and large general manufacturing industries, all of which are of utmost importance to the national defense and economic welfare. A major portion of the processing and manufacturing works of the Carbide & Carbon Chemicals Corp. is located on a large island in the Kanawha River downstream from Charleston. The island is subject to inundation by major floods, and if flooded, damage to the property on this island alone would amount to over $6 million. The major industries located in the flood plain have a combined value of over $1 billion and an extreme flood, similar to that of 1861, would result in a major degree of destruction to most of the plants and force some of them out of operation for undetermined but long periods of time. This project will also make available a source of water which will be of general benefit to downstream areas as a result of low flow regulation.

Completion of the project at the earliest possible date is very desirable to furnish flood protection in the highly industrialized areas downstream. The Kanawha Valley has experienced rapid industrial expansion in recent years and many new industrial developments continue to locate in the flood plain. A high percentage of the industries crowded into the narrow valley are essential to the national economy of the country and the Kanawha Valley industrial center is considered to constitute one of the major flood risks in the Nation at this time.

Mr. Chairman, I thank you again for permitting me this opportunity to appear in behalf of the items I have covered. I trust that the committee will give favorable consideration to each and all of the projects mentioned.

I Wish a Tax Cut Could Aid

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. HRUSKA. Mr. President, Mr. Melvin E. Rasdal of Ogallala, Nebr., a good and loyal friend of many years' standing, wrote me a few days ago:

You have undoubtedly seen the agriculture editorial in the April 20 issue of Life.

Our daughter Gerry, who lives on a farm—medium size for this area, 1,440 acres—has

written them a reply which I have had reproduced.

Am enclosing a copy of her letter to them and a couple of copies of her article, which may be of interest to you.

My friend Rasdal is a hardheaded businessman. He is an owner and farmer of land out in his area. He is an independent thinker. As such, I am sure he is justifiably proud of the letter written by his daughter, Geraldine, Mrs. E. E. Kleist; and I am sure that such pride is equally held by her mother.

She writes vigorously and realistically—as her parents and as her life in the West have taught her to do. Her thoughts make sense.

Just as an example, I quote one of the paragraphs which she composed:

You say the well-situated farmer can take care of himself and, therefore, needs no subsidy to stay in business. Please be more specific; if you can really tell us what to do, our ears are open and you have our rapt attention. It does not seem fair to me to snipe at the large holder, surely his investment is proportionately large. But if we do remove subsidies and controls, let us remove them all. Let us operate in a totally free economy, entirely dependent upon supply and demand. Among controls to be eliminated will be antitrust regulations, tariffs and import quotas, price agreements, collective bargaining, wage and hour laws. Let us omit subsidies in the form of tax-free depletion allowances on petroleum, natural gas and minerals, those inherent in the Government cost-plus contract, war reconversion payments to business after World War II, those paid direct to public carriers and in the form of reduced postal rates to magazines, newspapers and advertisers (and here goes your job, because then most of us can no longer afford our subscriptions). As a matter of fact, Congressman MARSHALL, in a recent study, found these figures as regards this situation: farm support losses from 1933–57 were $5.1 billion, but these mail subsidies from 1946–56 were $6 billion, and the reconversion payments mentioned totaled $43.3 billion. I'm not an economist, and I cannot name enough large business subsidies to make my case, but it is time to stop picturing the farmer as an ogre of American economy. When you are ready to "sock" that man for raising the price of your food and your shirt, take another look at the cost-of-living graphs. The minor decreases they show for the past few months have resulted largely from lower prices paid farmers for their produce. Any increases you find at your grocers must be credited to the processor or transporter.

Mr. President, the unfairness and inaccuracy of some of the city press and some representatives from urban districts in regard to the appropriations bill for the Department of Agriculture, totaling an amount approximating $7 billion, is very unfair.

Even a very casual analysis of this total will show that only a small portion of that $7 billion will ever reach the pockets of the farmers.

For example, about $3 billion of this budget will be earmarked for price support loans on commodities which the Government will eventually sell for about $2.5 billion, or give away under various foreign aid programs.

Another $1 billion will be paid to private firms for storage of surpluses.

About $1.5 billion will be used to finance sales abroad at cut-rate prices. This is not farm aid; it is foreign aid, and should be considered and referred to accordingly.

The school milk and lunch programs and food distribution to the needy, plus food label protection, pest and disease control, and improvement of food quality, take about one-half billion dollars.

Part of the agriculture budget is used to finance loans to the Rural Electrification and to the Farmers Home Administrations. These are gilt edge investments and will be repaid in full, with interest. These total about $650 million.

When the nonfarm items in the budget are removed, only a little more than $1 billion actually will reach the farmers, and that mostly for carrying out practices prescribed by the Government for conserving our soil, water, and other natural resources.

Mr. President, I highly commend the letter of Mrs. E. E. (Geraldine) Rasdal Kleist to my colleagues in the Senate, and to all readers of the CONGRESSIONAL RECORD.

I ask unanimous consent that it be printed in the Appendix of the RECORD, under the title, "I Wish a Tax Cut Could Aid."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

I WISH A TAX CUT COULD AID

TO EDITOR OF LIFE MAGAZINE:

Some Sundays ago a gentleman being interviewed on an NBC program, remarked we had not come far toward our goal of international peace because we could not really communicate, that we had developed no international language. Then he added that even in this country where we speak the same language and idiom, there were insurmountable barriers to communication, because of sectional and occupational differences in ideology.

A good share of the responsibility for this lack of understanding rests squarely upon the shoulders of our mass media publications, including Life magazine.

I am speaking specifically of your editorial "A Tax Cut You Can Aid," in the April 20, 1959, issue. To begin with, I do not follow the journalistic policy which counts it an honor to have a byline on a news story which purports to be factual, and, therefore, should be the same no matter who the author might be; and then presents, with all the courage of an anonymous letter, an unsigned editorial. I don't suppose this matters; I looked over your list of editors, and I don't know them. I did notice, however, you maintain a library and support a research staff. Are not editors, as well as reporters, required to check with them?

By now, I am sure, it is apparent I am a rural denizen. More than that, I am wife and partner, both by law and way of life to that anathema to the American economy, a wheat farmer.

I would like to have as my guest, for a few days, any of your editors or reporters. I would like to show them our operation and the operations of some of our friends and neighbors, people who farm big and people who farm small, as well as those, like us, who stand between.

Your editorial talks of farmers putting entire farms in the soil bank and doing nothing. I would like to know where such farmers live. In our area, the price of land, tax rates, etc., make this economically unfeasible; land cannot profitably be taken out of production.

The assertion as regards storage charges is accurate, but who set such a ridiculous fee? The farmer would gladly have binned surplus at a much lower rate. Yet, in print, it seems the farmer gluttonously milks the public funds therefor.

We have an intolerable surplus of wheat, and no one would rather see it disappear than the farmer. Yet the recommendations of a commission to explore the possibilities of research for extended industrial uses of grain (appointed by Eisenhower and headed by grainman LeRoy Welsh of Omaha, Nebr.) are ignored because the current Agriculture Department says they are already conducting such research. Have you heard of any such? The agricultural schools and stations in this vicinity are busy extending yields, not markets, and as they are currently set up, that is all they can do.

When the industrialist or businessman sets up shop, he sets the lowest price at which he can make an adequate profit and if people don't buy, he quits. The farmer plants, and after gambling on weather, bugs, and the unknown caprices of development, must sell for whatever price he is bid. He cannot control his selling price at all. Of course, like the business man, he can quit, but is this really what the public wants? Only an approximate 10 percent of our present population, I have read, is actively engaged in farming, but another 35 percent is in work directly connected with farming, that is, in the furnishing of farming supplies to the operator and in the marketing of his produce. Do you realize the segment of our population he takes with him when he goes down? Where are all of us to go?

You say the well-situated farmer can take care of himself and, therefore, needs no subsidy to stay in business. Please be more specific; if you can really tell us what to do, our ears are open and you have our rapt attention. It does not seem fair to me to snipe at the large holder, surely his investment is proportionately large. But if we do remove subsidies and controls, let us remove them all. Let us operate in a totally free economy, entirely dependent upon supply and demand. Among controls to be eliminated will be antitrust regulations, tariffs and import quotas, price agreements, collective bargaining, wage and hour laws. Let us omit subsidies in the form of tax-free depletion allowances on petroleum, natural gas and minerals, those inherent in the government cost-plus contract, war reconversion payments to business after World War II, those paid direct to public carriers and in the form of reduced postal rates to magazines, newspapers and advertisers (and here goes your job, because then most of us can no longer afford our subscriptions). As a matter of fact, Congressman MARSHALL, in a recent study, found these figures as regards this situation: Farm support losses from 1933–57 were $5.1 billion, but these mail subsidies from 1946–56 were $6 billion, and the reconversion payments mentioned totaled $43.3 billion. I'm not an economist, and I cannot name enough large business subsidies to make my case, but it is time to stop picturing the farmer as the ogre of American economy. When you are ready to sock that man for raising the price of your food and your shirt, take another look at the cost of living graphs. The minor decreases they show for the past few months have resulted largely from lower prices paid farmers for their produce. Any increases you find at your grocers must be credited to the processor or transporter.

You speak of the jolt to the small farmer on marginal land. How small? How marginal? This area where I live is wheat country. We've experimented with other crops, but it is a rare year when anything else can be made to show a profit. We raise good wheat, so high in gluten quality that millers send from far away to mix it with

wheat grown elsewhere for the gluten necessary for good baking. Therefore, after a period of adjustment, we would, perhaps, fare well on the open market since, currently, poor grades of wheat are supported on the same basis as our high-grade milling wheat. A leading factor in the loss of world wheat markets by the United States has arisen from this lack of standards which has extended to wheat offered for export. Wheatgrowers associations from several good wheat areas have had representatives at foreign trade fairs, have sent delegations abroad and received delegations from abroad, and have set up permanent bureaus with paid agents in various countries which buy wheat. Each time the story is the same; if we can guarantee delivery as per sample they want to buy at a good price, but to date difficulties have been placed in the way of such guarantees because they discriminate against other wheatgrowers. Worse, the potential customer tells us, they have received, in the past, not only poor grade wheat, but wheat that has been full of contaminating material. This is in spite of strict inspection of our wheat when it is received at our local elevators and its supposed protection and continued inspection as it proceeds upon its way.

But we wheatgrowers are not the only persons concerned with this price of wheat. The United States is also oversupplied with corn, sorghums, other small grains, and ensilage grasses. When the wheat price becomes low enough to compete with these as a feed grain, the price of meat tumbles too. And even in an industrial society, such as we have become, agriculture is still the foundation industry. Therefore, this one ghost, the supported wheat price, becomes an army of spectres to haunt us all.

Do I sound as if we do not want out? Or as if I do not think there is a way out? Every farmer I know wants out of this controlled situation, but he also likes to eat and to feed his family. He knows there is no quick reform; if you drop this bucket of water it will cause a flood. About the way out? The farmer is no longer a rube any more than the factory worker is a tenement dweller, but he still must be the individualist of fable. Differences of opinion in local discussion, differences of policy among farm organizations, differences in farming practices from area to area have so far made a united farm front with a strong lobby impossible. However, opposition to farmers and to any farm program such as one currently finds in the press does nothing to improve the situation and can only bring ruin to us all.

GERALDINE KLEIST.
(Mrs. E. E.)

The Current Methed of Paying Our Retired Servicemen Is Unfair

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. YARBOROUGH. Mr. President, under the military pay bill passed in 1958, members of the Armed Forces who retire after May 31, 1958, receive pensions based upon a percentage of the current pay for persons on active duty. This is much higher than the percentage of those members of the Armed Forces already retired.

A straight 6-percent increase was granted to those who retired prior to May 31, 1958, and the new bill carries provisions which make persons with equal service and rank receive different allotments, depending on their retirement date.

It is unfair treatment for prior retirees who served their country honorably and well, both in combat and peacetime. It is discriminatory in favor of some military retirees, and against other military retirees.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two resolutions and two editorials.

The first resolution, by Texas State Senator Henry B. Gonzalez, was passed by the Texas Legislature in April 1959.

The second was passed March 19, 1959 by the San Antonio, Tex., chapter of the Military Order of the World Wars.

The first editorial appeared in the Saturday Evening Post for March 21, 1959, under the heading, "The Military Pay Act Does Injustice to Retired Servicemen."

The second is from the Austin (Tex.) Statesman for February 20, 1959, written by Mr. R. O. Zollinger, and entitled "Chiseling of the Retired."

There being no objection, the resolutions and editorials were ordered to be printed in the RECORD, as follows:

"SENATE CONCURRENT RESOLUTION 41

"Whereas there is now pending before the Congress of the United States, legislation concerning the improvement of benefits for retired members of the U.S. Armed Forces who retired prior to June 1, 1958; and

"Whereas there apepars to be no basis for the gross discrimination against retired personnel who retired before June 1, 1958, as they are, by reason of past meritorious services, equally entitled to the increased benefits granted personnel who retire, or have retired after such date; and

"Whereas this false distinction violates the basic precepts of fair play, and the circumstances of retirement should not penalize these honorable members of our society, who must meet the present ever increasing cost of living the same as personnel that retired after June 1, 1958: Now, therefore, be it

"Resolved by the Senate of the State of Texas (the House of Representatives concurring), That the legislature of the State of Texas respectfully requests the Congress of the United States to enact legislation that will increase the retirement benefits of the retired personnel, who retired prior to June 1, 1958, so that they will be treated equally with personnel who retire, or have retired, after such date.

"BEN RAMSEY,
"President of the Senate.
"WAGGONER CARR,
"Speaker of the House."

I hereby certify that Senate Concurrent Resolution 41 was adopted by the senate on March 25, 1959.

CHARLES SCHNABEL,
Secretary of the Senate.

I hereby certify that Senate Concurrent Resolution 41 was adopted by the house on April 3, 1959.

DOROTHY HALLMAN,
Chief Clerk of the House.

RESOLUTION OF THE MILITARY ORDER OF THE WORLD WARS, SAN ANTONIO, TEX., CHAPTER

Whereas military retirement and its firm tie-in with active duty compensation is perhaps the most powerful long-term career incentive existing within the military compensation system; and

Whereas the Cordiner Committee said of this recommended feature now abandoned by Public Law 422 of the 85th Congress: "The Committee has therefore concluded that the incentive value of this existing military retirement program depends to a major degree upon its integral relationship with active duty compensation and the confidence which has been built up in the military body that no breach of faith or breach of retirement contract has ever been permitted by the Congress and the American people"; and

Whereas it is estimated that the cost to the Government of this amendatory legislation will not exceed the sum of $25 million for the first year, with an annual diminution of this amount because of attrition until no part of this sum is longer needed; and

Whereas this law should be amended to comply both with the recommendation and with the long standing tradition which has been, and remains, the major incentive to retention of military personnel, as well as being economically feasible to the Government: Now, therefore, be it

Resolved by the San Antonio, Tex., Chapter of the Military Order of the World Wars, at San Antonio, Tex., this 19th day of March 1959, That we urge upon the Congress the enactment of amendatory legislation to Public Law 422 of the 85th Congress to restore the incentive feature embodied in this historical relationship between active duty pay and retired pay, in order to insure the highest caliber of personnel for our national defense.

In witness whereof, I have hereunto set my hand this 19th day of March 1959.

ROBERT E. JOSEPH,
Colonel, U.S. Army, Retired,
Commander.

[From the Saturday Evening Post, Mar. 21, 1959]

THE MILITARY PAY ACT DOES INJUSTICE TO RETIRED SERVICEMEN

The recommendation by a Committee, headed by Ralph J. Cordiner, which was assigned by the Defense Department to investigate service pay, was that pay for naval, military and airmen who have earned their retirement should be geared to the current pay which is received in active service. In other words, if the pay for an admiral or an Army sergeant on active duty is increased 10 percent, his pay after he retires will be increased by 10 percent. Up to this point, this is how service retirement has been handled for many years, and that is how it is treated in the Military Pay Act of 1958, as to those retired after its effective date, June 1, 1958.

However, in the bill passed at the last session of Congress, this relationship between active-duty pay and retired pay is, with certain exceptions, not applied to men already retired. They were given a flat 6-percent increase across the board. This results in all sorts of anomalies, including one mentioned by the Washington Star in which a major general who retired a few months before the bill became law received approximately $1,900 a year less than an officer of equal rank who retired after the effective date.

A difference between military retired pay and civilian retired pay, which stays put no matter what happens to the pay of active workers, is that the retired military man is not really retired at all. He is still subject to the Uniform Code of Military Justice; he is subject to recall in emergency or at the pleasure of the Defense Department. Thus it is logical that his pay on the retired list should be geared to his pay when on active duty. But the central reason is that pay in the armed services is generally less than for

the same grade of ability in civilian life, and some added compensation at retirement is fair and just.

It seems to us that restoration by the new Congress of the traditional relationship between the pay of active-service officers and men and the pay of retired military personnel would pay dividends in several respects. In the first place, of course, it would correct an injustice to the officers and enlisted men already retired, who are certainly hit as hard by inflationary prices as will be the men to be retired later. But the change could also have an important effect on the ability of the services to persuade men to make military service a permanent career.

[From the Austin (Tex.) Statesman, Feb. 20, 1959]

CHISELING OF THE RETIRED

The fairness of the retirement pay system for officers who have served their country faithfully and well is in question. Why should one group of officers get less than another of equal rank and attainment?

Yet that's the provision now operating. Simply because one group retired before what appears to be an arbitrarily set date, June 1, 1958, they get less retirement pay than had they retired after that date.

The case of two colonels provides an example which shows the lack of justice in two pay schedules for those of equal merit and service.

The first retired before June 1, 1958. Yet he gets $139 less per month retirement pay than the other colonel who retired after June 1, 1958, with even less service.

We will not here go into the complex details of kinds of service because to a layman they tend to confusion. But what is happening is discrimination of a distressing order. It means that one group of colonels, for instance, are drawing less pay because of retirement before June 1, 1958, than those retiring after that date.

The date has no significance either as to war or peace other than a cutoff point which favors one group retiring after that date and penalizes the other group, both having equal merit and service, because of retirement later. The colonel retiring after that date gets $139 per month more than the one retiring earlier.

These men in both classifications have given most of their lives to the service of their country, yet one group receives the due of recognition in retirement pay that is denied the other group simply because of a date marked on the calendar.

A number of bills in both Houses of Congress have been introduced to rectify this injustice and equalize the pay of retired officers of the uniformed services.

They provide that notwithstanding any other provision of law—the one setting up the arbitrary date of June 1, 1958—that retired pay of any officer entitled to retired pay under the terms of the Career Compensation Act and entitled to such pay on May 31, 1958, shall be based on the pay scales which became effective June 1, 1958, under the provisions of the law passed by the 85th Congress.

Stipulation is made in these bills that nothing in the proposed act shall operate to reduce the pay of any member of the uniformed services now on the retired list.

The House bills have been referred to the Committee on Armed Services.

Considerations of equity, fair play, and refusal to further discriminate in the amount of retirement pay dictates that this adjustment be made to rectify the injustice involved. It is to be hoped that Congress will act speedily.

The morale of those now serving their country, many in internationally sensitive posts, will be tremendously strengthened by abandonment of this arbitrary calendar measuring stick.

Middleburg, Fla., and Chicago, Ill., Have Much In Common When It Comes to Young Folk

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. BENNETT of Florida. Mr. Speaker, problems connected with growing up are not as different in different sections of our country and in various-sized communities as accounts sometimes would lead us to believe. I bring the attention of Congress to a "Study of the Chicago Board of Education Summer School Program" as prepared by Hirris C. Long, superintendent of public instruction of Clay County. Mr. Long has been particularly interested in the utilization of schools on a year-round basis and this has also been a strong interest of J. P. Tynes, principal of the Middleburg School, in Clay County. A national leader in the movement toward year-round schools with three-quarters of the school year compulsory, is S. B. Jennings, Middleburg, Fla., a son of one of the outstanding Governors of Florida. Mr. Jennings has sent me a statement entitled "What Leading Educators and Scientists Say About Our Schools." I include it at this point in the RECORD.

WHAT LEADING EDUCATORS AND SCIENTISTS SAY ABOUT OUR SCHOOLS

(By S. B. Jennings, Middleburg, Fla.)

Dr. Robert M. Hutchins warns: "An uncriticized culture cannot long endure." (Rickover.)

H. G. Wells remarked: "Civilization is a race between education and catastrophe."

Dr. Grayson Kirk, president of Columbia University, New York City, in the NEA Journal, March 1959, advocates dividing the academic year in higher education into three parts, one of which would, in effect, replace the present 6-week summer school. He calls this a trimester. Scores of millions of dollars in physical plants remain largely idle for several months.

Dr. Conant (Look magazine, Oct. 14, 1958) said: "The school year will be longer. In this time of classroom and teacher shortages, educators are worried about having their buildings stand empty for up to 3 months every year. The school year may be lengthened; regular summer schools will be put to better use."

On March 17, 1956, John K. Norton, of Teachers College, Columbia University, said: "It is generally recognized that one of the primary blocks to adequate local and State support of education is the more than $60 billion Federal budget."

President Grayson Kirk warned that the primary purpose of any school is education, not social adjustment. "The student becomes educated by hard work, not by entertainment."

From the Institute for Social Science Research: "There is nothing wrong with U.S. high schools today that the communities themselves cannot fix if they put their minds to it." (Dr. Conant, San Francisco, quoted in Florida Times Union, Jan. 28, 1959.)

"Item 17. Tuition-free summer school. Work should be available for the bright, as well as those repeating a subject." (Dr. Conant, San Francisco, quoted in Jacksonville Journal, Jan. 28, 1959.)

"Soviet schools run 10,742 hours; American 10,710 hours. But they get through in 10 years, we in 12. We pay $64.42 per capita for education, the Soviets $36.42. (From Institute for Social Science Research.)

Admiral Rickover said: "I believe we can win the race, but not on a 180-day school year. The future belongs to the best educated nations. Let it be ours."

It seems to me that we need better utilization of equipment, buildings, and teachers; and curriculum should be academic and not entertainment.

Mr. Speaker, now I would like to conclude with the inclusion in the RECORD of the study made by Mr. Long which is as follows:

A STUDY OF THE CHICAGO BOARD OF EDUCATION'S SUMMER SCHOOL PROGRAM

(By Hirris C. Long, superintendent of public instruction, Clay County, Fla.)

The history of public education in the United States presents a vivid picture of how the needs of our people have been served by our schools throughout the years. As our social structure has changed from a rural agricultural to an urban industrial economy the requirements of more education and more diversified offerings have been met by broadening the curriculum and extending the program. These additions have resulted, over the years, in the lengthening of both the school day and the school year. The quickened tempo of modern living has brought about even greater demands, and the schools have responded with summer programs providing courses which are designed to stimulate the more capable students to greater progress, as well as those offerings which serve to strengthen foundational areas for slower students enabling them to keep pace with their classmates.

The summer schools have been part of the program of the Chicago public schools for nearly 50 years. During this period several patterns of organizations have been used in providing this service for Chicago's pupils. As early as 1909, the Chicago board of education included appropriations for "vacation schools" in the budget. However, a nominal registration fee paid by the students helped to defray expenses. By 1931, the summer program included 20 elementary schools, 7 junior high schools, 12 high schools, and 2 public colleges, offering classes for the appropriate levels of students.

As a part of the retrenchment program during the depression years, the board of education deleted appropriations for summer schools from its 1932 budget. However, the public demand for summer school opportunities for children was such that programs were provided for students on a self-supporting-tuition basis beginning in the summer of 1932. The board of education granted the use of buildings and textbooks, while tuition fees were established to cover the salaries of principals, teachers, clerks, and janitors, and the cost of incidental supplies. This pattern continued for the next 22 years, and by 1954 the summer program was financed by a fee schedule as follows: High school—one major, $20; two majors, $35; and elementary schools, $20.

The fees received through this program were prorated among the staff in proportion to the normal salary levels of those participating. In the summer of 1954, 9,253 students enrolled for courses under this tuition arrangement.

Recognizing the importance of providing equal opportunities for all pupils regardless of their ability to pay tuition, the Chicago board of education included an appropriation for summer schools in its budget for 1955. This expanded program of services was enthusiastically received by the children of Chicago as it shown by the enrollment of 1955 of 12,732 and by 1958 the number had grown to 35,126. Of this 1958 enrollment, 26,530 were in the high schools, 8,596 in the elementary schools of which 4,440 were regular students and 4,156 remedial.

The importance of this educational opportunity for youngsters can be further appreciated when it is noted that 1,402 graduated in the 1958 summer school—691 from the elementary schools and 711 from the high schools. All evidence indicates an increasing interest in this program in the years to come.

Advantages accruing to pupils and to the school system as a result of tuition-free summer schools may be summarized as follows:

1. Pupils are enabled to complete the elementary and high school course of study in fewer than 12 years.

2. Gifted children are provided with special opportunities on the high level of their abilities.

3. Slow pupils are enabled to keep up with their normal grade.

4. Those entering military service at 18 years of age are helped by securing more schooling before being called to service.

5. Pupils with reading problems are afforded extra help.

6. Students are enabled to change from a February to a June graduation.

The cost of operating summer schools is moderate, with salaries of principals, teachers, and clerks constituting the major portion. The summer program uses existing facilities and the services of the assigned maintenance and operational staff. The cost of providing summer school opportunities in 1958 in both elementary and high school, was approximately $40 per pupil, as compared to $150 during the regular semester. This is direct evidence that the provision of a summer school program reflects wise stewardship of the public's resources.

More efficient use of the school plant is brought about as a result of the summer program. Both buildings and educational equipment are utilized for the full year instead of remaining idle during the entire summer.

This additional service to boys and girls is provided with no additional capital investment and actually helps reduce the need for more school buildings, by enabling pupils who have failed to be promoted with their class, thus eliminating the need for extra classrooms for this retained group. In 1958 the summer elementary school graduates alone made 691 seats available for additional students in September 1959. This is the equivalent of 1 average elementary school building; also the 711 students who graduated from high school were removed from the school rolls 1 semester early, and released approximately 23 classrooms.

This program is sought by youth on the basis of their individual needs. Reflecting the high level of motivation of those seeking this opportunity, the quality of work done in this program has made a significant contribution to the educational level of the student body served.

These students come because they wish to learn more about certain subjects for enrichment purposes, because they wish to remove academic deficiencies in fundamental skills and stay with their class and agemates, and because they wish to accelerate their program of education and graduate earlier than they would in the conventional pattern. Housed in the ample facilities available and using instructional materials which would otherwise lie idle, these boys and girls receive an outstanding program of education from experienced members of our teaching staff.

CHICAGO'S SUMMER-SCHOOL SESSION CONCENTRATES ON ACCREDITED ACADEMIC WORK

The Chicago Board of Education offers mostly academic subjects during this 8-week summer session. They offer very few recreational activities such as swimming, gym, softball, baseball, arts and crafts, story telling, library services, etc. This type of summer recreation is sponsored by the Chicago Park District, supported by a special tax levy.

The school system of Chicago has thus eliminated all exclusively recreational courses and offers only the recreation that can be normally found during the regular school term, and pupils wishing to participate must be enrolled for academic subjects.

TAX SUPPORTED BY THE CITY OF CHICAGO

The Chicago Board of Education supports the summer school entirely from local tax sources. No State aid is obtained for this program. A concerted legislative program is planned to obtain State aid for the summer-school session.

SUMMARY

In effect, the Chicago public schools have developed a pattern of summer-school organization which provides for a 12-month school opportunity for the youth of the city on a positive basis through the attractiveness of the program.

ACKNOWLEDGMENT

In concluding this study of the summer-school system of the city of Chicago, I wish to express my appreciation to Mr. Benjamin C. Willis, superintendent of the Chicago City Schools, for arranging a meeting in Chicago for me and Mr. J. P. Tynes, principal of the Middleburg School, who assisted me in this study. I also express appreciation to Mr. David J. Heffernan, assistant superintendent, and to Dr. Burton Duffie, director of the summer-school program, for the data, information, and time given, and for the many courtesies extended to us.

I hope that this study will lead to an enlarged opportunity for all of our children—to keep busy, out of trouble, escape boredom, and have an expanded educational program in keeping with the ever-soaring horizon of the missile age.

State of Oregon Preparing 100th Birthday Party

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 11, 1959

Mr. NEUBERGER. Mr. President, the principal event of Oregon's 1959 statehood centennial celebration—the Centennial Exposition and Trade Fair—will not open until June 10, but the State of Oregon is alive now with the excitement of its 100th birthday party.

Robert McBride, a talented young writer on the editorial staff of the Oregon Daily Journal in my hometown of Portland, has written an excellent story, which was published in the travel section of the New York Times of Sunday, May 10, 1959, describing current and coming centennial events, and natural attractions available to visitors who come to Oregon this year, to help us celebrate 100 years of statehood.

I ask unanimous consent that Robert McBride's article, entitled "Oregon's Jubilee Year is Under Way," be printed in the Appendix of the RECORD, together with a second article on Oregon's centennial which I wrote for the New York Times of Sunday, March 29, 1959. The title of my article is "Oregon Celebrates Its Centennial Year."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Sunday, May 10, 1959.]

OREGON'S JUBILEE YEAR IS UNDERWAY

(By Robert McBride)

PORTLAND, OREG.—The residents of this State celebrate at the drop of a tree or a rose or a raspberry, and this centennial summer will be their biggest, wildest blowout in more than 50 years.

Among the things to see and do will be the largest exposition and international trade fair in the West in a decade. It opens June 10 in Portland, with dozens of rodeos, festivals, parades, symphony concerts, operas, frog-jumping contests, sham holdups, fistfights and national Indian games to follow.

The centennial is just now getting into its stride and the excitement will not ease until late September. Not since the Lewis and Clark Fair of 1905 has so much money been spent and so much time been given toward making Oregon attractive to the summer traveler.

The only way of traveling in which one can truly experience the sweep and throb of this land is on horseback. But the next best way is by automobile.

The old Oregon Trail begins at Independence, Mo. It is concrete and asphalt now, but much of the land on the other side of the ditch will look to today's travelers the way it did from the seat of a covered wagon in 1859.

Eastern Oregon is an area of rolling plains, deserts, mountains, and cool forests. It is ranch and farm country. They do not grow corn as high as an elephant's eye, but they grow real cowboys and straight-backed herefords, and they have some of the wildest scenery in America.

MESAS AND VALLEYS

In the Big Basin country of southeast Oregon, rimrock mesas reach into quiet valleys and meadowlands, deer and antelope roam undisturbed, and hundreds of other species of birds and animals live under the protection of the Malheur National Wildlife Refuge.

The eastern division of the refuge extends from the head of Malheur Lake to the southern extremity of the lake at French Glen, a distance of 53 miles. Both these points are marked by high, steel towers which carry the symbol of the refuge, the sign of the flying wild goose. Adjacent to the refuge are hundreds of thousands of acres of land ranged by great herds of cattle and sheep.

Malheur Lake, its 40,000-acre maze of marsh, and its bullrushes and cattails is the breeding, resting, and feeding place for more than 200 species of water birds, including bitterns, rails, ibis, avocets, willets and snipes of several varieties in the refuge. Here, also, is the habitat of the fabulous American egret.

To the south and east of the 160,000 acre refuge are the incomparably beautiful and lonely Steens Mountains and the Blitzen Valley. The setting here harks back to the time when the West was young. Cattle ranching goes on as it has since pioneer times. Stately sandhill cranes, Canada geese, fat mule deer and noisy terns mingle with the cattle in the great meadow lands of the Blitzen, which falls south from Malheur Lake.

COOL AREA

East of the valley the Steens rise to a cool 9,000 feet, offering pleasant relief in summer from the heat. An ideal camping spot in the Steens is Fish Lake, eighteen miles of graveled road from French Glen.

No camping is allowed in the refuge itself, because there are no developed campsites and the danger of an uncontrollable fire in the meadows is great.

In a setting of lingering snow banks, rustling, quaking aspens and mountain mahogany, 7,600-foot-high Fish Lake is the air-conditioned summer retreat of this entire area. Its 25 acres contain both brook and rainbow trout. Camping facilities are good.

The Steens Mountains are one of the United States' best examples of fault-block formation. The area has several great gorges half a mile deep, chiseled out by ancient glaciers of the Ice Age.

This wonderland of pristine charm has been largely missed by both the tourists and by Oregonians themselves, because the paved highways lead to the places where there is more manmade comfort, food and entertainment.

But those who can take dust in the eyes and the bumps of corduroy roads, the modest fare of a country hotel, or eating out with the cowboys, should steer off the well-traveled trail at Burns, and drive south to the Malheur Refuge. There one can obtain information and directions about where and how best to see and enjoy this wild land.

Just south of Ontario and Nyssa, near the Oregon-Idaho border, is another magnificent fishing and camping spot. This is in the lake behind Owyee Dam. It is 55 miles long and has 300 miles of shoreline, hemmed by a jumble of mountains and sheer cliffs.

Wildlife experts call Owyhee Lake the finest untapped piece of recreational water in eastern Oregon. One must see the lake to appreciate its fantastic desert rock formations. One sails past cliffs and pinnacles with all the colors of the Southwest's deserts. Leslie Gulch, on the upper lake, is comparable to Bryce Canyon National Park.

BIG BUCKS

Hunters get in their boats and fade away from civilization by going far up the lake to hunt the biggest bucks in Oregon. They camp on the shore and bring their bucks out by boat. Crappie are caught by the bucketful and bass reach 8 pounds.

Owyhee Lake is so big that it cannot be fished hard enough to even keep up with the bass and crappie production, according to fishing experts. Mallards by the thousands flock onto the reservoir in the fall, and decoy hunting along the shores is excellent.

The breaks of the Owyhee are the last stronghold of the wild horse of the West. Indian petroglyphs may be seen on the lake cliffs.

Also in eastern Oregon, the traveler will find special centennial events every week in nearly every county.

The Harney County Pioneers' Days will be held at Burns, June 13. The June parimutuel races are scheduled at Ontario, June 10–13.

One of the biggest rodeos and roundups of the West will be held at Pendleton, September 16–19. This is always a colorful and fast-moving show, and this year it is expected to be particularly exciting. One of the features of the roundup is a national Indian encampment. More than 2,000 representatives of American Indian tribes will be camped on the roundup grounds. The encampment will feature a series of races, authentic Indian games and dances.

No report of the natural grandeur of Oregon would be complete without mention of the back-country lakes of the Cascade and Wallowa Mountains. Between 700 and 1,000 of these lakes are found in the two ranges, many of which can be reached by road.

Most of the lakes are stocked with trout and many of them may be reached over well-maintained U.S. Forest Service trails. Others have never had a trail blazed to their shores.

In addition to the pleasure of fishing these lakes, pack trips into them gives one a chance to see some more of Oregon's rugged mountain scenery.

VARIED SCENERY

Here are great areas of uncut forests, sprinkled with flower-filled mountain meadows, deep canyons flanked by snow-laden peaks, and cascades of clear water rushing down the slopes. Here also are deer, bear, game birds, songbirds and small animals. Here are views of Jefferson Park from the Skyline Trail and the breathtaking granite peaks and mountain meadows of the high Wallowas.

Moving on to special centennial events in central Oregon, one might want to visit the Saturday afternoon horseshoe-pitching contests throughout June in Prineville. Those who like rocks, plain or fancy, will be able to see plenty of them at the All Rockhounds powwow in prineville, July 3–5.

The National Field Archers Association will holds its tournament at Bend, July 27–30. Redmond will celebrate the Oregon potato with a festival, September 26.

County fairs and rodeos will be held throughout the central Oregon area by the dozen. At these celebrations the visitor can experience the exhilaration of small-town life in a festival mood.

Albany, a town at the hub of a great timber-producing area, is the host each year to a World Championship Timber Carnival. Set for July 2, 3, and 4, and billed as spectacular, inexpensive and thrilling, the carnival will offer some of the best log chopping, bucking, speed climbing, topping, birling and jousting to be found anywhere.

The center of the centennial, of course, will be the Exposition and International Trade Fair in Portland. Opening with the exposition, June 10, will be the Portland Rose Festival, always an impressive show.

If the pompous, flower sweet pageantry of the Rose Festival's grand floral parade makes the spectator hungry or dries his throat, Portland has dozens of good bars and restaurants. A good steak costs anywhere from $3.50 to $6. Seafood here is among the best.

The exposition will, at the very least, be an entertainment-filled fair. A huge midway is to be set up and about $25 million will be spent on exhibits from atomic energy to Tillamook cheese. Daily and nightly water-ski shows will be staged on the Oregon estuary of the Columbia River, adjacent to the centennial grounds. The trade fair will be second only to that of New York.

The Garden of Tomorrow, 3½ acres of flowers, shrubs and floral displays, will feature a special Japanese garden with a teahouse and a floral clock 32 feet in diameter, planted with several thousand flowers. It will tell time.

Fist fights and gun duels will be features of the Frontier Town. Nightly shows have been booked for the arena of the 11-acre centennial building. Harry Belafonte, Roy Rogers, Japan's Kabuki Dancers, the Ice Capades, and the Aqua Follies already have been signed.

No visitor to Oregon, winter or summer, will want to miss seeing the thundering, sublime, lonely Oregon coast. It is 400 miles long, mostly paralleled by U.S. 101 and nearly every inch owned by the State of Oregon.

There are times when one can walk for miles on sandy beach, with the furious surf of the Pacific pounding in one's ears, without seeing another soul or even another footprint.

ON THE DUNES

Deep-sea fishing, sun bathing on the great Oregon Dunes, golfing, clam digging, surf fishing, overnight camping beside a driftwood fire on the beach, and any number of other possibilities await the traveler.

One of the famous sports of western Oregon is white-river boating on the McKenzie River. The visitor on a trip down the McKenzie may feel that he has never seen so much violent, cold water in so great a hurry. His light boat will pitch and toss in the deep troughs and powerful curlers formed by boulders strewn liberally in narrow channels running steeply downhill.

He will look back at these rocks, which the skilled guides have avoided, and he will swear that they seem to be settling resentfully back to the bed of the stream after leaping to clutch at the boat.

Much of Oregon stands on its 100th anniversary of statehood as it stood when the classic American settler, the pioneer-farmer, first unyoked his oxen in the Willamette Valley.

Barely a century separates the stone, steel, and glass skyline of Portland from the log cabin and the fur trade. The State's population is only 1,750,000, and nearly half of this is concentrated in the metropolitan Portland area.

OVERNIGHT CAMPS

However, since two or three times the average number of tourists are expected this year, hotel and motel reservations should be made early. There are scores of roadside camps and parks with tourist facilities along every major highway. It costs only $1 to stay overnight in most of the camps. All have water and other camping necessities.

One should write the Oregon Centennial Commission, 400 Jackson Tower, Portland, for help with obtaining accommodations in advance. Special tourist information and hospitality centers are being opened in nearly every town of any size in the State, particularly along major highways.

These centers will be staffed with volunteers who can help the traveler plan an entire vacation in Oregon or send him to the nearest historical marker with an armload of information about everything from wildflowers to salmon fishing. The hospitality and information program has been thoroughly planned.

[From the New York Times, Mar. 29, 1959]

OREGON CELEBRATES ITS CENTENNIAL YEAR

(By RICHARD L. NEUBERGER)

(Mr. NEUBERGER, junior U.S. Senator from Oregon, is a native son of that State and the author of many books and articles about its wonders.)

Oregon, always a bonanza for tourists because of its vast and verdant outdoors, is offering many additional inducements this year as part of the centennial observation of its admission to statehood in 1859. While Conestoga wagons still creaked on the Oregon Trail, the scenic realm which gave the troubled trail its name came into the Union on the eve of the Civil War.

Even Oregon's traditional and annual events of long standing, such as the Portland Rose Festival and the Pendleton Round-Up, will be far more elaborate than ever before in tribute to the fact that Oregon is now 100 years old and the first of all the States of

the Pacific Northwest to attain so lusty an age.

Yet, despite a long list of manmade spectacles which will be part of the centennial celebration, Oregon's dominant attraction continues to be the grandeur of its mountains, valleys, and timbered seacoast. It contains more fir and pine forests, more State parks, and more fish-filled rivers than any other State. Beyond each horizon are innumerable mountain meadows which invite the pitching of a tent. Oregon is an easy place to hook a trout and fry it in bacon fat over a crackling campfire.

The first Americans to explore Oregon were the great frontiersmen, Meriwether Lewis and William Clark. Even they, accustomed to cosmic and sweeping panoramas, were awed and impressed by the dimensions and majesty of the Oregon outdoors. So it has been with virtually all other visitors ever since. Oregon inspires its guests.

U.S. 101 clings to the Oregon seacoast for nearly 300 spectacular miles, looping like a hatband around sheer rock ramparts and then swooping down to wide beaches of glittering white sand. This is a shoreline which offers every possible sort of recreation—digging and raking for claims and crabs, ocean bathing, mountain climbing, hikes in dense evergreen "rain forests," trolling for salmon offshore and casting for steelhead in riffled streams that pour foamingly to the sea.

ROADSIDE SPOTS

The highway is dotted with modern motels and restaurants. Many of these will bake your salmon and fry your razor clams, while you wait at the table with a heaping cocktail of the Dungeness crab that you have brought from one of the crabholes dotting the beaches while the tide was out.

Although the National Park Service has warned of our "vanishing" shoreline elsewhere in the Nation, this stern admonition fortunately does not apply to Oregon. All the beaches, without exception, were reserved for the public by Gov. Oswald West back in 1909. Mr. West, who still lives in the State, recently saw a magnificent park beside the Pacific named in his honor. Many such parks offer forested campsites barely a mashie shot from the nippy surf, with its booming breakers.

Appropriately, in this centennial year, Oregon's first national historic shrine is under construction by the Federal Government near Astoria on the seacoast. It will be the Fort Clatsop National Memorial, marking the site where Lewis and Clark spent the winter of 1805–06 after the first overland crossing of this continent by Americans.

Their log stockade has been rebuilt and a modern museum building will be added. Legislation also is contemplated to give national-monument status to the "Oregon dunes," a picturesque stretch of shoreline where towering desertlike billows of sand form huge ramparts above the ocean.

MOUNTAINS AND SHORE

Oregon is both a mountain State and a seashore State. Besides having one of the country's most picturesque seacoasts, it is ribbed with four or five lofty mountain ranges. These offer the traveler a wide variety of opportunities.

Timberline Lodge, on the glacial slopes of Mount Hood, is one of the most unusual resorts in America. It contains notable examples of the native arts of the Northwest in drapes, blankets, mosaics, decorations and newel posts of Indian design. Ski lifts and ski runs dot the slopes near Timberline Lodge, and there also is a new steam-heated swimming pool amid Hood's eternal snows.

A comparatively short distance from the lodge, which is the only such inn anywhere in the 153 national forests of the United States, sprawl many campgrounds for the pilgrim who prefers somewhat more primitive or rustic quarters.

The Skyline Trail threads along the crest of the Cascade Mountains for 250 miles in Oregon. A wayfarer can spend weeks on this rugged path and never see another person. He can almost imagine himself in the solitudes with Lewis and Clark before the white man came—except, perhaps, for that airplane between Portland and San Francisco winging far overhead.

But this is the big wilderness. It is not a realm of wide open spaces like the Nevada or Arizona deserts. It is characterized by dense evergreen forests. From every knoll or pinnacle, the nomad can see an endless blanket of fir, spruce, and pine. He realizes why Oregon, with 434 billion board-feet of softwood timber, is the leading State so far as lumber production is concerned.

Oregon's people are profoundly conscious of their roads and highways. Indeed, Oregon was the first State to levy a tax on motor fuels to be used directly for the construction of roads. It also was the first to paint a white strip down the center of highways for guidance on foggy or rainy nights.

With the assistance of Federal funds, U.S. 30 and U.S. 99 are under conversion to four-lane express highways. These are the main roads bisecting the State from east to west and from north to south. Secondary paved roads also are receiving extensive improvements. Unless the motorist wants to take his car to the most remote fishing or hunting retreats, he can be certain his wheels will be on hard surface all during his sojourn in Oregon. Roads loom large in Oregon's State budget.

PROPOSED BRIDGE

The next such development may be still more spectacular. Plans are underway for a bridge 7 miles in length, to connect the States of Oregon and Washington at the mouth of the West's greatest river, the mighty Columbia. The span, to cost approximately $28 million, would be part of U.S. 101. This would eliminate the longest ferryboat voyage on the principal road paralleling the Pacific's shoreline from Canada to Mexico.

It also would be of great importance to the tourist trade generally, because this is one of the most popular areas on the entire Pacific coast for fishing, boating and surfbathing. And trolling for salmon in the Columbia has become a much more successful pastime since inundation of the Indian fishery behind the Dalles Dam began to permit larger numbers of migratory fish to escape to their spawning grounds in the distant solitudes.

But the pilgrim can travel comfortably to Oregon even if he decides not to bring his own sedan or convertible. United, Northwest, Western and West Coast are among the leading airlines which serve the State with daily flights. Pan American soars to Hawaii from Portland's recently refurnished international airport.

Several railroads operate streamliners into Oregon. These include the Southern Pacific, Great Northern, Northern Pacific and Union Pacific. The equipment features vista-dome cars and the latest pullmans. The Union Pacific even has a diner with a dome.

TICKET PLAN

The secondary passenger trains of the Northern Pacific and Great Northern—the Mainstreeter and Western Star, respectively—now offer travelers a bonus in that sleeping-car space can be purchased with only a coach ticket. These two systems enter Oregon over the route of the Spokane, Portland, and Seattle Railway.

Although plans were underway long before Oregon became 100 years old, it is significant that both the Sheraton and Hilton Hotel chains are invading Portland with impressive new structures in this centennial year. The Sheraton project is scheduled for completion next December. Target date for the Hilton Hotel is April 1961.

Furthermore, the city of Portland itself is constructing an elaborate exposition-recreation center, which will make Oregon's principal metropolitan community far more suitable for large conventions and meetings. In the past, such facilities have been lacking.

Portland also is building one of the West's most elaborate zoological gardens, with a miniature streamlined train which will wind through the wooded hills that are one of the city's most striking natural characteristics. This "zooliner" has been heralded as without counterpart anywhere in the Nation.

Principal event of Oregon's centennial celebration will be the Exposition and International Trade Fair, to run from June 10 until September 15. It will be on the shores of the Columbia River just north of Portland, with exhibits on hand from approximately 50 countries. Its inaugural will come a day after the opening of the Portland Rose Festival, which this year is scheduled from June 9 to 14. The famous grand floral parade will take place June 13, and the next day the golden rose ski tournament is slated for the white slopes near Timberline Lodge.

ROSES AND GLACIERS

Oregon is that kind of State—roses flourish within sight of eternal glaciers. Indeed, much impetus to make the rose the national flower of the United States always has come from public opinion in Oregon. Along with the Senators from the States of New York and Pennsylvania, I am sponsoring a bill to proclaim such a policy for the country.

Other events of importance scheduled for Oregon's centennial year are the annual canoe fete at the University of Oregon May 15, the McKenzie River White Water Parade at Blue River June 21, the Albany Timber Carnival July 3 and 4, the Bend Water Pageant July 3 to 5, the Oregon Fish Festival at Astoria August 26 to 31, and the famous Round-Up at Pendleton September 16 to 19.

Many of these events are quite extraordinary. The Timber Carnival specializes in contests of skill and brawn associated with the lumber industry, such as trying to stay on logs floating in a millpond. The McKenzie White Water Parade features rowboating through the rapids and riffles of a river that is the favorite trout stream of ex-President Herbert C. Hoover.

Officials of the Oregon State Centennial Commission anticipate at least 8 million people will visit the exposition and trade fair alone, which they herald as the greatest fair to be held in the West since the San Fancisco World's Fair of 1939. In addition to countless industrial and manufacturing exhibits, the fair will include dramatizations of significant occurrences out of Oregon's historic past.

THE WILD WEST

These will recreate jolting stagecoach rides with the Wells Fargo Express, frontier Indian villages and the robberies of pioneer railroads running on wooden rails. President Eisenhower has already signed an official proclamation passed by both branches of Congress urging the entire country to join in celebrating Oregon's 100th birthday.

But despite all these extensive plans the principal attraction to visitors still will be Oregon's plethora of magnificent scenery. The trade fair and the rodeos and even the rose festival will be long forgotten when the rock ramparts of the Columbia River Gorge, the stately white spire of Mount Jefferson and the timbered headlands of the Oregon seacost continue to be rich and vivid in countless memories.

Address by Paul M. Butler

EXTENSION OF REMARKS
OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, May 7, 1959

Mr. HART. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD excerpts from an address delivered by Paul M. Butler, chairman of the Democratic National Committee, before the Ford Hall Forum at Boston, Mass., on April 26, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY PAUL M. BUTLER, CHAIRMAN, DEMOCRATIC NATIONAL COMMITTEE, BEFORE THE FORD HALL FORUM, BOSTON, MASS., APRIL 26, 1959

At the outset of this discussion, I consider it important to make clear what is meant by the term "human rights." I believe that the term "human rights" means those rights with which every man and woman has been endowed by virtue of his or her creation as a child of God. They are rights which are founded in the principles of religion and morality.

The recognition of these human rights by the individual and by the state is essential to freedom, justice, and peace in the world.

So said the General Assembly of the United Nations in December of 1948, when, in drawing upon the various religious, cultural and national backgrounds of its members, it adopted the Universal Declaration of Human Rights. And so thought Thomas Jefferson in 1776, when, in drawing on the various religious and cultural backgrounds of the American colonists, he authored the Declaration of Independence.

The human rights specified in these two great documents were not created out of thin air, for these two great declarations represent the proclamation or codification in different eras of those rights belonging to man for which the struggle for recognition has been going on since the dawn of history. Proclamations such as these are the noblest expressions of the demands which we in our better moments make upon ourselves in order to secure those rights of which men are inherently possessed. The recognition of these rights is the prerequisite of any form of community life in which the dignity of the human being and the sanctity of the human personality are respected.

In 1776 Thomas Jefferson declared in the Declaration of Independence: "Man is endowed by his Creator with certain inalienable rights. Among these are life, liberty, and the pursuit of happiness. To secure these rights governments are instituted among men."

Thus Jefferson established the moral basis upon which our society was to be founded. The whole world watched to see whether American deeds would carry out his noble words.

The process of review and enlargement of what are considered to be fundamental human rights in America began almost immediately after the proclamation of the Declaration. In the next 15 years, the American people produced such documents as the Articles of Confederation, the Constitution and the Bill of Rights, in which were set forth more elaborately and specifically certain rights of citizens deemed appropriate for protection. Among these were included the rights of free speech, free press, free assembly, trial by jury, freedom of conscience, the right of petition, the prohibition of cruel and unusual punishment, etc.—all basic rights which were quite revolutionary in their day, but which most Americans today would include in any list of their concept of fundamental human rights.

Less than a quarter of a century after he had written the Declaration, Thomas Jefferson, ever mindful that the price of liberty is eternal vigilance, by those in public office as well as by the public itself, undertook to secure human rights and enlarge the freedom of the people by his action, among other things, of founding a political party. It was the first political party to concern itself with human rights as well as property rights. Jefferson knew that liberty would flourish best in a society where property, political participation and education were broadly based. He knew that each generation has the responsibility of reinterpreting the rights of man in the light of changing times. He knew that the best way to maintain the freedom of each was to enlarge the liberty of all. These were the purpose then for which Jefferson created the Democratic Party. Its moments of greatness have come when it has lived up fully to the beliefs of its founder.

When the opposition party upon occasion has embued itself with the spirit of Jefferson and his devotion to human rights, on those occasions when it has shown greater concern with people than with property, it has rendered its best service to our Nation.

Since Jefferson's time, the great forces of conscience molded by our Judaic-Christian tradition, the rising level of popular education, and the great proliferation and effectiveness of public and private groups dedicated to strengthening the forces of freedom, working ultimately through the mechanism of our political parties, have wrought changes in our concepts of the relationship between the citizens and the state and the relationships among citizens, which have extended our sights and improved the fabric of our democracy.

Thus over a little more than a century and a half, the American concept of human rights has grown as the Nation has grown and has been enlarged to include many other rights, some guaranteed by statute, others set forth as noble expressions of ideals to be achieved.

For example, we extended our concept of human rights to include: in the Jacksonian period such fundamental concepts as universal, white, manhood suffrage, universal and free public education, and the right of fuller access to participation in Government; in Lincoln's time, to include the abolition of human slavery and citizenship for newly freed men; in the time of Bryan, Theodore Roosevelt and Woodrow Wilson, to include the concept of equality of economic opportunity, the dignity of labor, and the right of protection of employees and the public against the ravages of the factory system. Women's suffrage came to be considered a fundamental right in the time of Wilson, as well as the right to the creation of a social and international order in which other human rights could flourish.

The immortal era of Franklin D. Roosevelt provided us with the concept of the right to security against the hazards of old age and unemployment, the right to freedom from want and freedom from fear, the right of free collective bargaining, and the right to employment at decent wages, with provision for adequate leisure.

These concepts were extended under the farsighted administration of Harry S. Truman to include the right of every family to a decent home, the right of every individual to decent medical care, and the right to an education commensurate with one's abilities.

Many of these rights, especially the latter ones which I have enumerated, are more controversial than others, and many are still in the process of evolution. But this is natural, since we tend to forget that rights which were won by our fathers and their forefathers, while accepted as a matter of course by us, were, generally speaking, bitterly controversial when the battle for them was first waged. And we must remind ourselves once again, as Jefferson did always, that the concept of human rights is an evolving one, constantly establishing new frontiers. * * *

Under the vigorous moral leadership of Franklin Roosevelt, Eleanor Roosevelt, and Harry Truman, backed up by political energy and political skill, great strides were made in the field of human rights.

The first great stride was a facing up to the complexity of the problem and to the great areas of neglect which needed to be corrected. Closed consciences were opened to injustices long ignored.

The second great stride was really a series of steps—carried out by Executive orders—dealing with ending discrimination in housing, employment, in Government service, employment on Government contracts, and military service, and appointments made on the basis of ability regardless of color or racial origin.

President Truman was never one to rest on accomplishments until the job was finished. Thus in the report of his Committee on Civil Rights, he listed the defects which existed (some of which he was later able to correct) and charted a future course which is still a valid guide toward the realization of our highest human aspirations.

The most important accomplishment of the Roosevelt and Truman administrations in this field, however, was the creation of a climate of opinion and executive leadership which even without action on the part of Congress made possible later progress in these matters, both in and out of Government.

It would do violence to truth to imply that the Democratic Party was solely responsible for all the progress made during the period I have just mentioned.

It was the executive branch of the Federal Government which was showing the way to the other branches and rallying the political and moral support necessary to sustain such action and to break down age-old prejudices and barriers. There was no question in any citizen's mind about where the President of the United States, Mr. Roosevelt and later, Mr. Truman, stood on this issue.

This is what I feel is most lacking in the situation today. There has been steady, sustained and even monumental progress in the human rights field in the last 6 years, but virtually none of it is due to the actions or leadership of the President of the United States or the executive branch of the Government. In fact, much of it has been accomplished without the specific endorsement of the President and in spite of the failure of the President to provide leadership in meeting this problem.

For example, there have been the court decisions in 1953 which have led to the abolition of segregation in places of public accommodation in the District of Columbia, and the monumental decision of the Supreme Court in 1954, outlawing segregation in the public schools. Here historic progress was made with the Supreme Court showing the way. It had nothing to do with partisan politics in spite of the attempts of Mr. NIXON and many other leaders of the opposition party to present these decisions as Republican achievements because they were handed down while a Republican administration was in the White House. By the same logic, I suppose that Democrats could make the same partisan claims by pointing out that both

cases were initiated under Democratic administrations.

More recently, there has been the significant action of the Democratic 85th Congress dealing with the protection of voting rights. While this bill fell far short of reasonable objectives, it was the first civil rights bill enacted by Congress since the Reconstruction. It was passed not because of, but largely in spite of, the vacillating leadership of the President, who told a news conference while the bill was under consideration in Congress that he hadn't even read parts of the bill and didn't understand other parts. This bill also demonstrated conclusively that, once we can get the Republicans to support human rights rather than play politics with them, we can pass other bills which are needed.

So much for the past. It is much easier to be critical of the policies of others than to be constructive in proposing a course of future action. What ought we to do now and in the near future, if the course of human freedom is to be advanced with a minimum of difficulty?

First of all, it seems to me that we must recognize that the problem of prejudice and discrimination, of denial of human rights because of race, color, or creed, is not a problem which is limited to one section of our Nation. It is national in scope. Racial strife such as has occurred recently in several Northern States is no less a blot on the national conscience because it occurred in the North. The fact that discrimination in the North and West is more subtle than the codified prejudices which exist in the South, or that the shabby treatment arising from the vicious "gentlemen's agreements" in the North is less publicized than the sensationalized results of the actions taken by certain legislatures in the South, should in no way absolve the North of guilt.

Bigotry, hatred, and mob violence know no geographic boundaries.

The South is absolutely right when it says that the North and West have their own ghettoes and their own problems of prejudice in their own back yards.

But this in no way can be used to excuse the degrading practices of State-approved discriminations, the pitiful and irrational policies of massive resistance, the threats made and violence done to peace and order, and the attempted defiance of law which has been manifest in many Southern States in the past few years. Pointing the accusing finger at the other fellow in no way changes the ugly picture which certain unthinking southerners seem perfectly content, indeed zealous, to project to the rest of the Nation and the world as the image of the modern South. We must recognize, both in the North and in the South, that there is a tremendous job to be done in each section, as well as in the Nation as a whole.

Once we make it clear that we are dealing with a national problem, then it should not be deemed antisouthern or anti any other region to talk about how we can go about improving race relations and securing the full rights to which all Americans are entitled.

Secondly, we must stop thinking of the South as a monolithic region, where everybody has the same attitude and the same interests. Too often the image we see of the South is that drawn by the extremists and those who easily give way to the urgings and the pressures of those who are highly organized, extremely vocal, but least informed.

I am afraid that one of the tragic consequences of some of the more unfortunate incidents which have occurred in the South in the past few years has been the tendency of the rest of the Nation to forget the monumental contributions which the South has made to the enrichment of American life throughout its history and the many fine leaders it has produced and is producing today in so many walks of life. We are generally unmindful, for example, of the many examples of courage shown by a number of southern leaders who, although they face predominantly white electorates, have refused to join the hue and cry for massive resistance and other doctrines of desperation.

We pay little attention to the fine work which so many Southern Members of Congress are doing in such fields as health, education, foreign affairs and economic policy which is extending the areas of human rights in these fields to citizens generally. We all too easily forget that five Southern Senators with considerable courage voted for the Civil Rights Act of the 85th Congress and that a number of Southern Members of Congress refused to sign the "Southern Manifesto." We forget also that tremendous progress has been made toward school integration with the support of governors of a number of formerly segregated border States such as Missouri, Oklahoma, Kentucky, West Virginia, Delaware, and Maryland, and that token integration has taken place, upheld by gubernatorial action, in Tennessee, North Carolina, Texas, and Virginia, and will take place later this year in Florida.

We are often unmindful of the attitudes of a large body of southern white persons—I believe it to be a majority—who, while they do not approve of the Supreme Court decision of 1954, are willing to obey the law. We show an insufficient appreciation for many civic, religious, and youth groups in the South who are working on this problem with considerable skill and courage.

Having realized these things, having understood the necessity for patience, the time necessary for adjustment, and the variation in community feelings and differences, we must make it unmistakably clear that it is the intention of the Government, and the sentiment of the overwhelming majority of the people of the Nation, to see to it that the law is upheld and that the decisions of the courts are respected in the North and in the South, no matter which party controls the executive branch of the Government.

While there may be room for adjustment and accommodation in applying the law, there can be no compromise with ultimate compliance with the law by every citizen of the United States.

In order to accomplish this, I believe that the Persident of the United States should be asked once again to specifically approve and lend his moral force to the endorsement of the 1954 Supreme Court decision as morally right. I believe that he should be requested once again to use the great prestige of his office to call together the responsible political, religious, educational and other community leaders of both races for discussion as to how the Court's decision might be implemented on a gradual yet firm basis and as to how a climate of general acceptance of the legal principle can be created.

I believe that the Congress of the United States should pass appropriate human rights legislation which would include a specific endorsement of the Court's school ruling as the recognized law of the land.

I believe also that the Congress should recognize that the time has come to legislate on the implementation of the Court's school decision. Through our failure to act earlier, we have placed too heavy a burden on the courts and on the elected officials of Southern States, who, after all, must operate under frightful pressures to implement the 1954 decision.

While there is a great deal to be said for the conciliation idea emphasized in the proposal which Senator LYNDON JOHNSON has made dealing with this problem, his proposal, in my opinion, has the great demerit of offering nothing to back up conciliation. I am afraid that there really would be no inducement provided for conciliation, or nothing to conciliate about, if communities would choose to continue to ignore the Court rulings. One must conciliate towards an objective. That objective must be ultimate equal compliance with the law, with reasonable allowance for local adjustments as to time and methods in moving toward that objective.

Consequently, I believe that if the conciliation idea were to be given even greater emphasis and more specific provision in the general approach taken by the bill of Senator DOUGLAS and 16 other Senators to provide technical assistance, financial grants and other aids to communities willing to desegregate; and if this were backed up, as it is in the Douglas bill, with ultimate authority in the hands of the Secretary of Health, Education, and Welfare to draw up desegregation plans, seeking full advice and assistance of local groups; and if, as the Douglas bill once again provides, adequate authority were placed in the hands of the Attorney General to initiate action to carry out plans so drawn and to initiate proceedings on behalf of those whose rights under the 14th amendment have been infringed or denied, Congress would be meeting its responsibility to find constructive ways by which the law of the land could be carried out. * * *

In addition to these actions, it seems to me that we should extend the life of the Civil Rights Commission with its vital protections of voting rights, take appropriate Federal action to combat the disgraceful bombings of churches, synagogues, etc., and give consideration to taking appropriate action, both on the Federal and State levels, to eliminate the poll tax as a barrier to voting in those few States where it remains.

At the same time, we would realize that the greatest legislative progress against discrimination in housing, employment, etc., has been made on the local and State levels, so that we must redouble our efforts in those States where there are no such laws now on the statute books. * * *

Speaking for my own party, let me say that it is clearly and unmistakably in the finest traditions of the Democratic Party for the national leadership of our party to speak out clearly, humbly, yet very distinctly, in both North and South, on behalf of the cause of human rights whether they be in political, economic or other areas. It is our challenge and moral responsibility as the Nation's only truly national party, not only to heal wounds, but to right wrongs, not only to bring our Nation and our people closer together, but to give it a new birth of freedom.

Ohio Congratulates J. Edgar Hoover

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. SCHERER. Mr. Speaker, this week the entire Nation, with the exception of the criminal and subversive elements and some from the extreme left

wing, join in paying tribute to J. Edgar Hoover, Director of the Federal Bureau of Investigation, on the completion of 35 years of outstanding and dedicated service as head of the most efficient and highly respected agency in the Government. I am proud that the senate of my State unanimously adopted a resolution congratulating and commending the Honorable J. Edgar Hoover on his 35th anniversary as Director of the FBI. The resolution follows:

SENATE RESOLUTION 51

Resolution to honor J. Edgar Hoover on his 35th anniversary as Director of the Federal Bureau of Investigation

Whereas the members of the 103d general assembly have learned of the coming 35th anniversary of the Honorable J. Edgar Hoover, as Director, Federal Bureau of Investigation, May 10, 1959, and wish to honor the outstanding and dedicated service of this devoted public servant; and

Whereas the Honorable J. Edgar Hoover has for 35 years protected the people of the United States and the State of Ohio against spies, saboteurs, and those who seek the forceful overthrow of established government; and

Whereas as Director of the FBI, Mr. Hoover has rendered unparalleled service in the enforcement of Federal criminal laws and in cooperating, collaborating with, and rendering outstanding contributions and cooperation to the law-enforcement agencies of Ohio; and

Whereas his devotion to his country and to good government are remarkable examples of patriotism and those high principles so admired in the State of Ohio: Therefore be it

Resolved, That the Senate of Ohio hereby expresses its hearty commendation, warmest congratulations, everlasting gratitude, and sincere good wishes to the Honorable J. Edgar Hoover; and be it further

Resolved, That this resolution be adopted and a copy be spread upon the journal and that the clerk of the senate transmit a duly authenticated copy of this resolution to the Honorable J. Edgar Hoover, to the Governor of Ohio, to the President of the United States, and to the Attorney General of the United States.

Congressmen Need To Be Told People Want Gasoline Tax Hike To Keep Road Program Moving

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Knoxville Journal of May 8, 1959, which relates to the proposal to increase the gasoline tax to expedite the road program:

CONGRESSMEN NEED TO BE TOLD PEOPLE WANT GASOLINE TAX HIKE TO KEEP ROAD PROGRAM MOVING

The Democrat-controlled Congress has made it very clear, despite certain speeches by Senator LYNDON JOHNSON in behalf of sweet economy, that it has very little regard indeed for the President's determination to hold to a minimum budget and to have that budget balanced. Numerous bills are in the hopper which, if passed, will overspend the President's proposals by billions of dollars.

But there are two ways to balance a budget. One is to reduce spending to the amount of revenue available and one is to increase revenues to the total needed. The majority in Congress is also dragging its feet on support of the tax increase proposals submitted by the White House, notably the one which would increase the Federal gas tax by a cent and a half.

This hike in gasoline taxes was not proposed by the President as a political measure, because nobody wants to pay more taxes, even a cent and a half more on each gallon of gas. He proposed it only because every competent authority in the country had concluded that, unless there is such an increase, the gigantic Federal-State highway construction program will in perhaps a year grind to a halt, simply because the money will not be available to carry it on.

Thus the public, and especially that overwhelming part of it that uses motor vehicles of any kind, has the choice of either paying this relatively small additional tax or of putting off indefinitely the completion of the kind of highway program they have been led to believe they would have.

Certainly there could be no fairer tax than this one which falls upon the very people who derive direct benefit from expenditure of the funds they produce. Congress would be in a bad light, indeed, if it chose the other alternative to levying an increased gasoline tax, namely, paying for the road program out of the general funds of the Treasury. Or it would appear in even worse light if it persisted in spending the needed funds as they resulted from more Treasury borrowing.

We think that Members of Congress should hear from the people on this issue, urging them to support the President's proposal to increase the gasoline tax. The citizen may be certain that if this method is not approved, the cost of the new highway program will come out of his hide in some other, and less just, form.

Inflation Robs Us All

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. DERWINSKI. Mr. Speaker, I wish to have printed in the RECORD an editorial which appeared May 1 in the Park Forest (Ill.) Star, concerning inflation and entitled "Inflation Robs Us All."

The editorial reflects the opinion of many people in the Fouth Congressional District of Illinois, which I have the honor to represent. In the past few weeks I have received thousands of letters calling my attention to the problems of inflation as felt by the average citizen, particularly people on fixed incomes.

The editorial as it appeared follows:

[From the Park Forest Star, May 1, 1959]

INFLATION ROBS US ALL

People living on pensions or other forms of fixed income are already abundantly aware of inflation's heavy toll. So are those trying to get along on insurance payments, including those on which premiums were paid in sound, full-value, hard-earned American dollars.

At the present rate, many more people will learn the bitter lesson each year that "Inflation Robs Us All." This particular phase of inflation's inroads on much of our society is easy to explain effectively.

What of the man who has yet to reach retirement age? Generally speaking, he is inclined to think that more money in his pocket on pay day is a good thing, no matter what the circumstances.

But wage scales don't mean a thing to the unemployed, and continuing inflation is a disease which can kill off a great many jobs in the United States. It cannot be forecast with accuracy when it will be cheaper to import various products than to make them at home, but it can be said with dreadful certainty that inflation speeds the day.

All of us want a better standard of living—one which is achieved by normal economic growth and increased production efficiency. None of us, however, wants an illusion of greater wealth which is in fact only a mortgage on the days or years ahead.

It is inconsistent, for example, for a labor leader or anyone else to claim credit in one breath for obtaining a pension program and to claim in the next breath equal credit for supporting inflationary, spendthrift methods which will destroy the value of that very pension program.

For these and many other reasons, we are heartily in accord with the crescendo of opposition to the inflation spiral. We urge you to let our representatives in Congress know of your opposition.

Government by Formula

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. WESTLAND. Mr. Speaker, more and more restrictions are being placed on the basic freedoms of the American people by the very Federal Government which, according to our Constitution, is dedicated to preserve these freedoms.

One word, I believe, summarizes the reason for this encroachment. The word is "bureaucracy," meaning government by bureau heads. This leads to rigid, formal administration according to their whims. It is government by formula. There are numerous cases to document this trend, but one which I am familiar with is the proposition that Snohomish County in my own State of Washington should become part of the Seattle Standard Metropolitan District.

This example of the loss of a basic freedom points out the present trend of rigid rule by formula. The Bureau of the Budget arbitrarily has created a criteria that says if a certain percentage of the labor force in Snohomish County works in Seattle, Snohomish County must become a part of Seattle. The percentage to which I referred is 15 percent. It so happens the Bureau estimates that 23 percent of the Snohomish County residents work in Seattle. Even if all of these workers wanted to be included in the Seattle Metropolitan District, they

would not represent the majority of people who reside in Everett and Snohomish County. I have serious doubts that even a minority of the estimated 23 percent want to be included in Seattle.

Every day we talk about human values, yet some are willing to subject us to rule by bureaucratic formula and statistics. It seems to me we need a new set of statistics to deal with the human element of our society. I think the people of Snohomish County have a right to choose for themselves whether or not they are to be included in the Seattle Metropolitan District.

Furthermore, I believe that further study by the Bureau of the Budget would prove their own statistics wrong, particularly if the Bureau of the Budget looked to the future. Planning directors from the Puget Sound Regional Planning Council have taken a look at the population expectations and have become amazed at what they have turned up. Snohomish County, they feel certain, is going to show the largest percentage gain of any county in the Puget Sound area. With a population of 112,000 in 1950, the count for 1957 was 135,000. The 1960 census is expected to show the county at 144,000 and the growth over succeeding 10-year counts will jump to 189,000, 251,000, 324,000, and 371,000.

The planners when they began comparing notes found that all of them were basing their compilations on a much slower rate of growth than the Federal Government was anticipating. They started again using U.S. Census estimates released November 1958, substantially higher than previous estimates and reflecting the unpredicted continuing high birth rate. The committee said that while the greatest share of growth in the region between 1960 and 2000 is expected to continue in King and Pierce Counties, the greatest rate of growth and the greatest growth in terms of percentage of the total region is expected in Kitsap and Snohomish Counties.

In the case of Snohomish County this rate of growth is already high and is expected to continue high during the projection period. With this growth in mind, it is hard to conceive that the vast part of the population in Snohomish County will find employment in the Seattle area.

The contrary is true. It is common knowledge that large cutbacks in employment are due at Boeing where the majority of the Snohomish workers in Seattle are employed. On the other hand, oil refineries moving into Snohomish County will mean increased employment opportunities for local residents. There are three oil refinery companies ready to open up these opportunities.

Fred Powell, vice president of Standard Oil Co., according to the Everett Daily Herald on April 30, 1959, said the proposed refinery at its site south of Mukilteo will be twice as large as the huge installation now under construction in Hawaii. While the Hawaii facility is considered a huge installation, the Snohomish County refinery will cover a 2,300-acre site. Meanwhile other industries continue to thrive and grow.

It is clear that the population of Snohomish County is growing, its industry is expanding and the employment for its workers in the Seattle area faces a decline. Common sense, therefore, indicates that the people of Snohomish County should be left alone and should be allowed to determine their own destiny. But the rule by formula continues.

I was advised last week that the Bureau of the Budget has made Snohomish County a part of the Seattle Metropolitan Standard area. I have been further advised that this designation will be reviewed following the completion of the 1960 census. This review probably will take place in June 1960. It seems foolish to me to include Snohomish County in a metropolitan area in May 1959 when there is a distinct possibility that in June 1960 it may be excluded.

Force in Readiness—Discouraging Red Nibbling

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. WILSON. Mr. Speaker, one of the continuing issues before the Congress relates to what constitutes an adequate strength for the Nation's force in readiness, the U.S. Marine Corps.

The fact that Congress has strongly expressed its view that maintenance of the statutory 3 combat divisions and 3 air wings of Marines requires an absolute minimum of 200,000 combat-ready Marines is well known.

Just as well known is the Pentagon defiance of congressional intent expressed in the order of last November to reduce the corps by 12½ percent below appropriated strength to 175,000.

A recent editorial in the San Diego Union briefly, but impressively, cites cogent reasons for the growing concern with which our citizens watch the dissolution of combat-ready Marine units as the corps reduces its strength.

Many informed Americans regard the loss of these trained fighting men, occurring in one of the most dangerous periods in the Nation's history, as but one more example of the depth of Pentagon hostility toward the country's most professional, most combat-ready force in being.

I believe this editorial will be of interest to all our colleagues who have fought so long to provide the Nation with this incomparable force in readiness. I ask permission at this point to have it printed in the RECORD with the hope that it may serve as one more reminder to us all that congressional efforts to insure to the Nation a strong Marine Corps must continue unabated:

FORCE IN READINESS: DISCOURAGING RED NIBBLING

Communist aggression is a continuous threat that requires continuous readiness on our part. We must be as deeply concerned with containment by a flexible, hard-hitting and fast-moving force-in-readiness as we are with the massive deterrent to general war afforded by our nuclear might.

One of the Nation's leading military analysts, George Fielding Eliot, describes containment as being concerned "with a level of flexible power which can be applied in due measure wherever necessary to prevent Communist expansion at the expense of the free world."

The U.S. Marine Corps historically has been the Nation's force-in-readiness. The Marines, in conjunction with the Navy, have served as the fire brigade. Lebanon and the Formosa Straits are two recent examples in which the Navy and Marine Corps prevented the growth of potentially large conflagrations.

The cutback in Marine Corps strength from 200,000 men to 175,000 is disturbing militarily and psychologically. Militarily it constricts the flexible power which must operate behind our shield of nuclear deterrence. Psychologically it might well cause the Communists to intensify their nibbling away of free world perimeters.

Our naval leaders have pointed out that the all-out deterrent of our H-bombs and atomic bombers did not discourage the Soviets from digesting Iraq. It did not influence the Chinese Reds away from their naked aggression in Tibet.

There will be other situations. It is all important but not all inclusive to perfect weapons systems to equal or surpass those of a potential aggressor. The deterrent effect of these machines may cancel the possibility of total conflict. If so, aggression will turn in another direction: the perimeter or brush-type war in which huge rockets and mass destructive capability would not be employed.

We must have the forces-in-readiness available to put down, quickly and decisively, outbreaks which otherwise might spread until they are out of control. In our efforts to deter general nuclear war we cannot afford to neglect the capability for actions of more limited scope.

This is what Adm. Arleigh A. Burke, Chief of Naval Operations, means when he warns the United States to keep its guard up against lesser events. The Communists are not neglecting both types of warfare. They believe nuclear and limited warfare can be integrated into a single plan.

As aggression turns, we must turn with it. And the hub is a flexible force-in-readiness operating behind the great nuclear shield.

Daylight Saving Time

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. NELSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and petition from certain members of the Minnesota House of Representatives urging the passage of H.R. 1354, "A bill to amend the Standard Time Act of March 19, 1918, so as to provide that the standard time established thereunder shall be the measure of time for all purposes." Because of the confused state of daylight saving time in Minnesota, a number of State representatives from the Minnesota Legislature are pe-

titioning the Representatives in Congress to support H.R. 1354. Their letter to me and a copy of the signed petition are attached and I ask that they be inserted in the RECORD:

STATE OF MINNESOTA,
HOUSE OF REPRESENTATIVES,
May 4, 1959.

Hon. ANCHER NELSEN,
House of Representatives,
Washington, D. C.

MY DEAR MR. NELSEN: Enclosed is a message expressing our feelings about House Resolution 1354. All of the undersigned are duly elected State representatives of the State of Minnesota.

Our daylight saving time is in a confused state. It is, also, at the present time, before the Supreme Court and it is impossible to say what their decision will be. We are all very favorable to this bill and hope this petition will help you in its passage.

Again I would like to say, all of the undersigned are members of the Minnesota House of Representatives, both conservatives and liberals.

Sincerely yours,

ALVIN O. HOFSTAD,
State Representative.

To the House of Representatives in Congress assembled:

The undersigned citizens respectfully petition your honorable body in favor of the enactment of H.R. 1354, entitled "A bill to amend the Standard Time Act of March 19, 1918, so as to provide that the standard time established thereunder shall be the measure of time for all purposes," being a bill to make the Federal Standard Time Act nationally binding and effective for all governmental and business purposes the entire year, aganist State legislation or local action for daylight saving time, and to restore standard time to the Nation.

Graham Fuller, Ivanhoe, Minn.; Delbert F. Anderson, Starbuck, Minn.; George P. Grussing, Clara City, Minn.; Teman Thompson, Lanesboro, Minn.; Aubrey W. Dirlan, Redwood Falls, Minn.; Victor Johnson, Lake Bronson, Minn.; H. J. Henning, Pelican Rapids, Minn.; George W. Karvonen, Deer Creek, Minn.; Martin McGowan, Appleton, Minn.; J. J. Kelly, Marshall, Minn.; Marvin Schumann, Rice, Minn.; Fred H. Huebner, Donnelly, Minn.; George Krenik, Le Center, Minn.; Lawrence Cunningham, Pipestone, Minn.; Alvin O. Hofetad, Madison, Minn., 24th District; Cliff Graba, Sebeka, Minn., District 51; George Mann, Windon, Minn.; Harvey A. Wilder, Crookston, Minn.; B. J. Bergson, Twin Valley, Minn.; Peter X. Fugina, Virginia, Minn.; Birger Nurminen, Aitkin, Minn.; M. K. Hegstrom, St. James, 9th District; Howard Ottinger, Chaska, 21st District; L. B. Erdahl, Frost, Minn., 7th District; Earl W. Iverson, Ashby, Minn.; Dan Conroy, Dumont, Minn.

Bridge Across Mouth of Columbia River on U.S. Highway 101

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 11, 1959

Mr. NEUBERGER. Mr. President, U.S. Highway 101 is one of the greatest scenic highways of the North American continent. It parallels the magnificent Pacific seacoast, and it also serves the site of the new Fort Clatsop National Memorial, presently under construction near the mouth of the Columbia River.

The recent 1959 session of the Oregon State Legislature authorized $28 million in bonds, to be used in part for the construction of an epic bridge across the mouth of the West's greatest river, linking the States of Oregon and Washington via U.S. Highway 101. This legislative accomplishment is due in no small measure to the leadership of State Senator Dan Thiel and State Representative William Holmstrom, of Clatsop County.

On May 4, 1959, Gov. Mark O. Hatfield, of Oregon, formally signed the bond legislation for the Columbia River bridge in the city of Astoria, the historic community at the Columbia's mouth. A detailed article in the Astorian Daily Budget of May 5 has described this significant event. I ask unanimous consent that the full text of the article be printed in the Appendix of the RECORD.

I am particularly pleased, Mr. President, to make this request because, as a member of the subcommittee on Roads and Highways of the Committee on Public Works, I have long been a supporter of the proposed great bridge spanning the mouth of the vast Columbia River.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREE PENS USED IN SIGNING

Gov. Mark Hatfield will invite the Washington Highway Commission and Toll Bridge Authority to Oregon within 2 weeks for a planning conference regarding the Astoria Bridge, he revealed Monday evening here.

Hatfield spoke briefly at a delayed ceremony in which he signed the bill providing for $28 million in bonds to finance construction of the bridge and improvement of Highway 42 in southern Oregon.

The ceremony was delayed a half hour to wait for arrival of Senator Dan Thiel and Representative William Holmstrom, who flew to Astoria from Salem in a plane piloted by Douglas Olds, city school superintendent, to participate in the ceremony.

PAIR DELAYED

The two legislators had been held up by press of legislative business.

Governor Hatfield told the audience of about 150 people in the circuit court room of the courthouse that he had called the State Highway Commission into all-day session Monday morning to discuss the bridge project with W. C. Williams, State highway engineer, also in attendance.

"I can assure you that the commission is fully in accord with this legislation," Hatfield said.

Hatfield added that he would send written invitations to members of the two Washington agencies as soon as he returned to Salem. He noted that Gov. Albert Rosellini is ex-officio chairman of both the highway commission and the Toll Bridge Authority.

"We hope to have serious discussions with the Washington agencies underway within 2 weeks," Hatfield said.

USES THREE PENS

The governor signed the bridge bill with three pens, giving one to Thiel, one to Holmstrom, and one to Mrs. Floyd Wright, widow of the former port commission president who was a leader in the bridge effort.

The governor signed the bill at a big table in front of the judge's bench. He was flanked by Thiel, Holmstrom, Mrs. Wright, and Mayor Harry Steinbock of Astoria. Circled behind the table were members of the Royal Chinooks drum and bugle corps, the governor's official corps, and Hatfield thanked them after the ceremony for their services.

After the signing, the Governor turned the printed act over to Officer Newell of the State police, driver of the State Cadillac in which he came to Astoria, for safekeeping.

Governor Hatfield paid tribute to Thiel and Holmstrom as the two most responsible for the bridge legislation, among many who had done much work for it.

SEES SYMBOL

He also said he hoped that this bridge would be a "material symbol" and lasting monument of Oregon's centennial year.

The Governor arrived at the court house steps promptly at 6 p.m., where he was greeted by Mayor Steinbock, Vice President Beryl Swails of the chamber, and other local officials.

The Royal Chinooks formed a guard of honor as the Governor entered the court house, then marched behind him up to the circuit court rooms.

William Manion, post commissioner and master of ceremonies for the event, noted that this was a historic occasion as it was the first time the Governor of Oregon had ever gone outside the State capital to sign a bill.

Manion called for abandonment of an insular attitude and development of a go-ahead spirit to make this area the greatest resort area in the United States, which he said it could become with the help of the bridge.

STRETCHES TALK

Manion, scheduled to talk for only 3 minutes, had to keep going for about 20 minutes more as the ceremony was delayed awaiting arrival of Thiel and Holmstrom.

Their plane was landing at the airport just after the ceremony began.

There Representative Holmstrom received the sad news of the death Monday afternoon of Mrs. Holmstrom's father, James Cutler of Gearhart, but he continued to the ceremony anyway. Holmstrom remained in Astoria Monday night while Thiel returned to Salem with the Governor.

Thiel and Holmstrom each spoke briefly after arriving in the court room and then the Governor spoke and signed the bill.

The Greatest Problem

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. WESTLAND. Mr. Speaker, among the great volume of correspondence I have received from people who support a balanced budget and realistic Government spending is a resolution from Delta Grange No. 760. This Whatcom County Grange is situated about 5 miles west of Lynden, Wash., in my district. Delta Grange has consistently throughout the years since its organization on September 23, 1920, taken an active interest in the welfare of the country and has supported the principles of government as stated in the American Constitution.

At this time I want to include in the RECORD the resolution to which I have referred. The resolution follows:

WHATCOM COUNTY, DELTA GRANGE NO. 760

BALANCED BUDGET

Whereas inflation is one of the greatest problems facing farmers as well as everyone else; and

Whereas Government spending for defense will remain with us for some time; and

Whereas the principal cause of inflation is Government spending in excess of income: Therefore be it

Resolved, That Delta Grange No. 760 urges our Congress to balance the budget; be it further

Resolved, That the budget be kept within the expected income and in case the expenditures prove greater than the income due to war or other great disaster, the following Congress must provide some source of revenue to bring the budget back in line; be it further

Resolved, That copies of this resolution be sent to Washington State Grange, Senators JACKSON and MAGNUSON and Representative JACK WESTLAND.

AUDRAIN CHRONISTER,
Master.

MARY K. BURK,
Secretary.

U.S. Trade Deficit—What It Means

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. HENDERSON. Mr. Speaker, the economic position of the United States internationally has been deteriorating steadily for some time. Today evidence is mounting rapidly pointing to the development of an actual crisis.

Probably the most telling feature in the international scene is the greatly increased productivity achieved by other countries in recent years. This should come as no surprise, since in the past 10 years we have exported close to $30 billion worth of machinery.

While no detailed information is available to show precisely where all this machinery has been installed, it seems fair to say that many of our industries, including recently several of our mass production industries, have found imports increasing while their foreign markets have been shrinking.

Unemployment in this country threatens to become chronic because our capital is finding the investment climate here less attractive than formerly with the result that absorption of the unemployed is not taking place. Scores of companies in many lines of manufacture are studying the possibilities of making manufacturing arrangements overseas as a means of participating in foreign markets and, in some cases, shipping to this country. A substantial number of companies have already taken the step. Others are in the process while others are beginning to explore.

Until investment at home is made more attractive it will not come forward in the volume necessary to absorb the present unemployed and the added labor force coming on the market each year. A considerable part of our exports are already subsidized. Until we come into a more favorable competitive position more subsidization will be needed if we are to maintain our export position; but this will only aggravate our problem because it will mean a greater burden on the Treasury and that means higher rather than lower taxes.

Mr. Speaker, under leave to extend my remarks at this point in the RECORD, I ask to insert an address on this subject by O. R. Strackbein, who has kept abreast of these developments. I believe that Members will find much food for reflection and concern in this address:

U.S. TRADE DEFICIT—WHAT IT MEANS

(Address of O. R. Strackbein, Chairman, the Nationwide Committee on Import-Export Policy, before the Compressed Air and Gas Institute, Hot Springs, Va., May 1, 1959)

An official report from the Department of Comemrce shows that in 1958 the United States had an adverse dollar balance of $3.4 billion in our total foreign account. This balance includes all transactions and not merely the physical products of commerce. Our exports of physical goods actually exceeded our imports by a little over $3 billion; but that alone is not what determines the direction of the flow of gold. To cover this it is necessary to look at all the transactions, such as tourist expenditures, investments abroad, foreign aid, etc.

When all movements are taken into consideration we find the United States nearly $3½ billion behind in 1958 in her foreign account.

This is a different picture from the one usually spread on the record. The information fed to the public is that we export more than we import and that we are draining the other countries of dollars and drying up their treasuries. This is true only in the case of physical goods; and would not be true then if we left out the foreign aid and subsidized agricultural shipments. The picture is false so far as draining of gold from other countries is concerned.

The fact is that in the past 4 or 5 years, with the exception of 1957, the tide has run against us. In 1958, of the total deficit of $3.4 billion, some $2.3 billion was accounted for by actual outflow of our gold. It is not we who are draining foreign treasuries but foreign countries that are draining our gold away.

There are those who continue to say that all the foreign aid money and all the dollars that otherwise go overseas always come back in the form of purchases of goods from us.

This is a fallacy of the first water. The 1958 experience plus the experiences of 1955 and 1956 thoroughly disprove the claim. We have lost some $7 or $8 billion in the past 5 or 6 years in our international transactions; and that means that these dollars have not come back.

How long will it be before the changed situation in our competitive standing before the rest of the world is recognized for what it is; and how long will it take before our trade policy is altered to fit the realities?

What we witness today, not only in the deficit in our foreign account, but in the decline in our exports and the high level of our imports, is not something that has mushroomed overnight. It is something toward which we have in fact been moving with both our domestic and foreign economic policies for years.

If what we see before us today had not happened we might well have been surprised, for it is the natural and logical consequence of our policies. What are these policies and what combination of them has been responsible for the present situation?

We began 25 years ago a set of policies that were calculated, if they were successful, to carry this country to the position in which it finds itself today. We sought to inflate the economy by various devices based on the principle of pump priming. We instituted farm price supports, crop curtailment, and purchase of surplus farm output; we enacted minimum wage laws, the 40-hour workweek and overtime provisions. We established by law a system of universal union recognition, including collective bargaining. We adopted social security policies, including unemployment compensation, old-age assistance and retirement benefits. We gave legislative support to many other interferences with the free market.

Altogether we provided all sorts of economic cushions to prevent any deflationary movement from developing into a depression. Public spending as a means of keeping the wheels of industry moving became a widely accepted policy. I do not here offer any comments on the merits of this domestic legislation. I am concerned with its effects on our international competitive standing.

The whole drive was aimed at increasing the purchasing power of the people and to keep it from slipping dangerously below the level attained at any time. To this end we passed the Full Employment Act of 1946; and have generally been guided by the resolve to prevent the development of a depression.

In 1941 we became involved in World War II. If the policies of the preceding decade had not succeeded on their own, they were given a tremendous boost by our war-spending and subsequently by our defense spending and thus were assured of success.

We have in any event, whether as the result of these policies or of the war and the cold war or both, enjoyed high prices for farm no less than industrial products, high and increasing wages, successive records in the height of our total national product, record exports and imports, and until 1958 very high employment, hovering around the 65 million mark, including millions more of women workers than had ever previously invaded our mills and plants and service trades.

Yes, we succeeded very well in pushing this country onto a high economic plateau; and that was our purpose or a byproduct thereof.

Since the war we have also helped a number of other countries economically. This outgo itself further stimulated our own industry. In recent years most of these other countries have also boomed and reached production heights never previously attained. England, Germany, and France offer outstanding examples. In Latin America prosperity also erupted here and there.

Underneath all this, far-reaching economic changes were at work. Quite aside from tremendous technological developments, the relative competitive standing of this country in relation to other countries underwent a very significant transformation.

How did this come about?

Before the war our lead over other countries in mechanization and technology, and particularly in mass production, was impressive. Our large mass production industries had little to fear from foreign competition. They thrived on exports. To some extent their position after the war in the enjoyment of record exports was a case of living on borrowed time. By this I mean to say that during the war the accustomed foreign markets of England, Germany, Japan, and other countries fell into our hands. The demand was so great in fact that we found it necessary to establish export controls. For several years after the war we held these foreign markets; and they were seller's mar-

kets still clamoring for goods. In fact, they looked to the United States as a source of supply because the war-torn countries could not meet the demand. The great exporting countries of Europe and Japan were not yet in a position to reassert their prewar position.

On top of the demand from the countries that we thus continued to supply, notably in Latin America and Asia, we also began to ship heavily to the war-wrecked countries under the Marshall plan. This combined demand helped swell our exports. We had not even met all the pent-up demand in this country after the war when the Marshall plan added foreign aid as a further demand on our production machine.

Then came the increased defense outlays, triggered by the Korean outbreak. Wages and prices moved up with our prosperity, and by the time the other countries were back on their feet and actively reentering world trade we had escalated high up the economic scale.

In the meantime, going back to 1934, we had also embarked on a trade policy that had exactly opposite economic principles at its base from those underlying our domestic programs. Our trade agreements program was aimed at freeing market forces while our domestic policies represented direct governmental interference with the free play of these forces. While inwardly, on the domestic scene, we moved rapidly away from the free market in favor of a regulated economy, outwardly we embraced Adam Smith's philosophy of 1775 and moved toward free trade. In fact we slashed our tariffs very drastically. The protection of our tariff has been reduced some 75 to 80 percent since 1934, most of it since 1947 when we signed the General Agreement on Tariffs and Trade.

This sharp reduction of our tariff would of itself have made our already-exposed industries more vulnerable to import competition than before, and would have brought more and more of our industries previously immune to imports, such as the great mass production industries, including automobile and steel manufacturing, to a position of vulnerability.

But much more happened. Under the Marshall plan and under the steam of the growing purchasing power of other countries, innumerable new machines and great quantities of the latest equipment were shipped from this country overseas for installation in foreign plants, mills and factories.

What was the purpose of this machinery? Obviously its purpose was to improve efficiency of production, beyond simply rebuilding the bombed-out plants. Billions of dollars worth of such machinery and equipment was installed in a number of countries. In a matter of several years numerous foreign factories had machinery as modern as ours and in many instances more modern than that in many of our factories. Concurrently we received and conducted thousands of foreign productivity teams through our factories to teach them our production techniques.

However, the old wage-gap between this and other countries not only did not close; it remained wide apart. While foreign wages have risen in recent years they did not begin to rise as soon or as sharply after the war as did wages in this country. Consequently much foreign competition is now more difficult to meet than formerly.

That is why our present situation should offer no surprise. While we have become more vulnerable as our domestic policies bore fruit, we made ourselves doubly vulnerable by building up our competitors and tearing down our outward defenses. Our action took the form not only of tariff reductions but slack enforcement of our antidumping law and relaxation of the Buy American Act.

Thus after 25 years of hoisting our economy on stilts and tearing away our tariff while building up the productivity of other countries we find ourselves suddenly in an unenviable international competitive position.

It would be the utmost folly to continue our present exposure, especially when some slight modification of the Trade Agreements Act and some tightening of the Buy American Act and better enforcement of the antidumping law would assure us a reasonable economic defense. We simply cannot maintain the kind of economy we have built over the past decades if we leave it outwardly exposed as it now is and as many now acknowledge who long refused to recognize the ultimate outcome of our policies.

Our foreign trade policy is incompatible with our domestic economic program. It is contrary to our farm price support policy; it conflicts with our wage and hour law; it is at odds with our policy toward union recognition and collective bargaining; it runs counter to our restrictive immigration law; it promotes automation as a means of lowering labor costs and thus adds to unemployment; it promotes the flight of domestic industries to other countries thus bypassing potential jobs in this country, and at the same time attracts imports to this market while shrinking our exports.

Needless to say, the State Department interposes itself squarely across the path of revisions of our foreign trade policy. It knows nothing better than buying our way through with favors and supports, a process that in time will beach our economy as the tide flows out.

The Informational Media Guarantee Program of the USIA

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. HALPERN. Mr. Speaker, in yesterday's New York Times there appeared an article by Mr. J. Donald Adams, weekly literary columnist for the Times, expressing concern that very meager funds were being allotted for the informational media guarantee program of the USIA for fiscal 1960.

This program is intended to provide an incentive, particularly for American book publishers, to sell American books overseas through assuring conversion of foreign currencies received from such sales into dollars. In other words, under the program, an American book publisher, upon selling books in country X, can turn the local currency of country X over to the program administrators for dollars, thus encouraging him to expand his sales abroad. The administrator of the program then sells the local currencies to government departments and agencies which might need them and receives dollars in exchange. These dollars are used for the purpose of paying other American publishers for local currencies received by them from book sales, and so forth.

Thus, a revolving fund is established, but a gap must necessarily exist between the sales of local currencies for dollars to other Government agencies by the program, and the payment of dollars to American book publishers for the conversion of the local currencies which they receive. Congress recognized this fact last year by authorizing annual appropriations to restore in whole or in part the amount of impairment incurred against the fund up to the close of the last previous fiscal year.

What is the value of this conversion program? It is a potent weapon in the struggle against communism by providing in plentiful number copies of many of our greatest works on democracy to the peoples of the world. As Mr. Adams points out in his excellent article, without an awareness by the Members of Congress of the tremendous significance of the program, and without their support, "the battle for men's minds which lies at the heart of the cold war cannot be won."

Mr. Adams explains that we are being outsmarted in this ideological contest, partly because Russian publishing is a state enterprise, and thus is able to move quickly and freely, and partly because too many of our people's representatives in government fail to see that men's spoken and written words can be more powerful than the hydrogen bomb.

The program has been making great strides. Works like "The Federalist Papers," Judge Learned Hand's "The Spirit of Liberty," "The Life and Selected Writings of Thomas Jefferson," Carl Sandburg's biography of Lincoln, and many more which interpret the American experience, have been sent overseas, particularly to Africa and Asia, where the demand and the need are most acute.

The program cannot exist, however, without the help of Congress. As of July 1, 1958, the total impairment incurred in the program from its inception in 1948 to that date totaled $13,493,830. A request of $7.6 million for fiscal 1960 was made to the Bureau of the Budget. This was reduced to $3.5 million.

This is a basic minimum figure if the program is to continue on any effective basis. Because I am deeply disturbed that America keeps losing opportunities to combat the menace of communism on all levels overseas, and keeps failing to make the necessary effort, almost seeming at times to be willing to lose by default, it would be an extremely serious matter if this $3.5 million request were to be reduced any further.

The article by Mr. Adams is so eloquent on the problem and the need that I ask that it be printed in the RECORD as a part of my remarks.

SPEAKING OF BOOKS

(By J. Donald Adams)

Several weeks ago this column made a plea for the importance of exporting more American books which explain the American experience to those parts of the world where they are most needed—the continents of Asia and Africa. I pointed out that this must be done at prices which the peoples of Asia and Africa can afford; otherwise we would be making a futile gesture. That plea was addressed primarily to American publishers and to the U.S. Information Agency. More properly, it should have been addressed to Members of the Congress, for without their cooperation the battle for

men's minds which lies at the heart of the cold war cannot be won. I come back to this topic because the situation is a serious one the issue of which will be determined in the present session of Congress. If the necessary objective is to be reached, it can be done only with the aid of every American who will take the time to let the Senate and House Appropriations Committees know that he is concerned about our failure to meet Russian competition in this most vital area of the cold war.

American publishers, through the American Book Publishers Council, are doing their part, and so is the USIA. What both these agencies face is the reluctance of Congress to appropriate the money necessary to push such a program to an effective conclusion. As I remarked before, "this need demands as much, if not more thought, than the race over space satellites and intercontinental missiles." We are being outsmarted in this ideological contest, partly because Russian publishing is a state enterprise, and thus able to move quickly and freely, and partly because too many of our people's representatives in government fail to see that men's spoken and written words can be more powerful than the hydrogen bomb.

In the last few years we have made tremendous strides, as was recently pointed out by Congressman BARRATT O'HARA of Illinois. Five years ago (I quote from the CONGRESSIONAL RECORD), there were no copies available anywhere in the world on a grassroot level of the books in which our forefathers found their inspiration. Not even the Constitution of the United States and the Declaration of Independence had been translated into foreign languages so that they could be read and understood by the peoples in awakening lands and as hungry for democratic inspiration as were our forefathers. * * * Meanwhile, in every bookstall and in every language and at prices within the reach of everyone were the works of the architects of the ideology of communism."

The picture has changed, but not nearly enough. The USIA has been sending abroad such books as these (and this is only a partial list): Emerson's "Essays, The Federalist Paper," Judge Learned Hand's "The Spirit of Liberty," "The Life and Selected Writings of Thomas Jefferson," Paul M. Angle's "Lincoln Reader," Carl Sandburg's biography of Lincoln, Thoreau's "Walden," De Tocqueville's "Democracy in America" and John Stuart Mill's "On Liberty." Not all of these were American books, but if they were not, they either interpret the American experience, like De Tocqueville, or explain, like Mill, the principles by which we, out of our English heritage, live, and pursue our objectives.

By such works as these we must counteract the impression made by motion pictures which misrepresent us abroad, by "ugly Americans," and by the comic books which are a travesty of the American experience.

Are these efforts effective? This is what Congressman O'HARA heard from Robert A. Lincoln, public affairs officer at Damascus last year, when Mill's "On Liberty" was published in Syria (its first edition in any Asiatic language): " 'On Liberty' was issued in Syria with some misgivings on the part of the publisher, who was uncertain whether an intellectual title of this nature would have much appeal. The translator, however, played a strong role in convincing him that both sales and reader interest would be high, and this proved to be correct. * * * The price of the book was 2½ Syrian pounds, or about 56 cents. In terms of Syrian purchasing power that will buy three packs of a good grade local cigarette or one locally manufactured undershirt. It is a moderate price for a locally manufactured book."

American publishers must rely on congressional help. As Curtis Benjamin, president of the American Book Publishers Council, points out in the council's campaign, our own book industry "faces two obstacles which it cannot overcome unaided. One is the comparatively high cost of producing a book in the United States; the other is the shortage of dollar exchange in many countries. The Russians have neither of these problems to solve. Soviet publishing is state subsidized, and exported books are sold for nominal sums paid in the currency of the importers."

Clearly, the issue is up to Congress. If we are to win in this area of the cold war, it must support financially the informational media guaranty program of the USIA, which guarantees that the exporting publisher receives in dollars the payments he collects from his customers in their currency. Yet this program was slashed for the fiscal year 1958–59 and now faces a further reduction. We must act, and fast.

Speech of Hon. Overton Brooks, of Louisiana, Chairman of the House Committee on Science and Astronautics, Before the Controllable Satellites Conference, American Rocket Society-MIT, Boston, Mass.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid and informative address made by our distinguished colleague, the chairman of the Committee on Science and Astronautics, the gentleman from Louisiana [Mr. BROOKS], before the controllable satellites conference, American Rocket Society, Massachusetts Institute of Technology, Boston, Mass. There is no one better qualified on the legislative level to discuss the technical subject mentioned in the within address than our friend from Louisiana [Mr. BROOKS]. As chairman of the standing Committee on Science and Astronautics, Chairman BROOKS is making an outstanding record. Under his leadership the House committee is also making an outstanding record. Under the leadership of the gentleman from Louisiana [Mr. BROOKS], the committee will make marked constructive contributions toward the use for peaceful purposes of present and future discoveries in the great area commonly known as outer space:

It is a source of great pleasure to me as chairman of the House Committee on Science and Astronautics to speak to the people assembled here tonight under the auspices of the American Rocket Society and the Massachusetts Institute of Technology.

While I am neither a scientist nor an engineer, I share your interest in this vital field of astronautical achievement. One aspect of space technology and exploration never ceases to impress me, and that is the number of years scientists and engineers have been giving serious attention to moving even farther into space. I doubt whether many people working directly in these areas realize that more than 50 years ago Robert H. Goddard was laying a firm foundation for the accomplishments that would be made beginning in 1957. Dr. Goddard, who rightfully deserves the name of father of American rocketry, was busy in 1909 and even before working out the difficult problems associated with the use of rockets to send payloads into space, to the moon, and to the planets.

I have long felt that the tremendously important contributions of Dr. Goddard deserve far greater national recognition than has transpired to date, and I have, therefore, been both delighted and gratified to learn from Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Administration, that the new space flight center, now being constructed at Beltsville, Md., will be named the Goddard Space Flight Center.

The Goddard Space Flight Center will consist of specially designed laboratories and will be staffed by outstanding scientists and engineers working to solve new problems connected with space technology and exploration. There, too, will be located important data reduction devices which are tied in to the extraordinarily complicated tracking equipment used to follow the course of space vehicles.

Many years ago Dr. Goddard said, "It is difficult to say what is impossible, for the dream of yesterday is the hope of today and the reality of tomorrow." I hope that the people who work at the Goddard Space Flight Center in the years ahead will be inspired by his courageous thinking.

It is with pleasure that I note the presence at this gathering of the gracious Mrs. Goddard, who did so much to inspire her illustrious husband in his work.

I think it is particularly appropriate to take note of this latest honor accorded Dr. Goddard before this group and in this city, where he spent a considerable portion of his early life before returning to Worcester, where he was born and later attained success.

I was also gratified to learn this evening that the American Rocket Society has decided to erect a memorial to Dr. Goddard in Worcester.

The subject matter before this conference is one of great importance to the United States and the free world and one which is of great concern to me personally and to my committee. In addition to the obvious military implications of controlled satellites, there will also be innumerable peaceful uses of manned maneuverable satellites. Our imagination is inadequate to appreciate the many economic benefits that may arise from this.

In a recent speech at the University of Maryland, Prof. George P. Sutton, our new chief scientist at the Defense Department's Advanced Research Projects Agency, and past president of your society, predicted that special controlled satellites will be used for the development and testing of interplanetary rocket engines and other equipment.

The Science and Astronautics Committee follows developments in this field as well as in other areas of space research. We have realized that even true satellites will not remain indefinitely in fixed orbit. Perturbations resulting from the influence of the moon and the sun will necessitate means to kick them back into orbit by remote control, or change their orbit, or perhaps service them with a manned space vehicle. This will be especially important in the case of satellites whose functions require that they remain permanently in a given orbit, such as the communication relay satellites.

An important series of satellite launchings is now underway at the Pacific Missile Range which will do much to increase our mastery of control techniques. I refer, of course, to the Discoverer satellite program.

This program is being carried on by the Advanced Research Projects Agency of the Department of Defense. It is designed to overcome such tremendous satellite control challenges as command communication, stabilization in orbit, command change of attitude in orbit, capsule ejection from outer space, and recovery of the capsule at a predetermined time and place.

Discoverer II, which returned to earth a few days ago, is regarded as having substantially advanced the art of controlling satellites.

As you know, the capsule which was ejected from the satellite over Spitzbergen in the arctic regions was not recovered. Plans called for it to be ejected over the Hawaiian area where ships and planes were waiting to spot it. However, due to initial malfunction of a part of the timer mechanism in the satellite, ejection occurred prematurely. Timer control was achieved on the 22d pass, but, unfortunately, automatic ejection had already occurred due to the action of a so-called fail-safe device.

Discoverer III is expected to be launched in approximately a month. This time it is planned to have the capsule carry four white mice now undergoing testing at Sunnyvale, Calif.

We are hopeful that the capsule can be directed to a safe landing in the Hawaiian area and that the tiny passengers can be retrieved alive.

If so, this will be the first time any living thing has orbited the earth and been recovered. It will represent a significant step forward toward the day when man can venture into space.

The mice are now undergoing testing for emotional and physical stability by an Air Force biological team. Scientists are greatly interested in the biological reactions of the mice, including oxygen intake, heart respiration, and the physiological and psychological effects of weightlessness, such as the effect on their digestive processes and upon their nervous systems.

As a preclude to ejection of the capsule from Discoverer III, the satellite's attitude will be changed in orbit. It will be turned initially into a tail first position and then turned 60 degrees down from the horizontal by means of compressed gas jets.

When in this position a series of explosive bolts will cause the capsule to eject from the satellite. Immediately thereafter, a retrorocket will be fired which will slow the capsule and direct it into a reentry trajectory.

At an altitude of about 50,000 feet, a switch, operated by the force of deceleration, will release a 20-pound parachute which will slowly lower the capsule, now weighing about 35 pounds, to the water.

C–119 airplanes from Hickman Feld scouting the Hawaiian area hope to spot the parachute visually because of its bright orange color, by signal from the radio beacon or by means of the plane's own radar, since the parachute is equipped with a reflecting undercoating of aluminum. If an airplane is within the immediate vicinity of the capsule as it falls, it is planned to snatch it out of the air with specially designed equipment. Destroyers waiting below will be ready to retrieve it should the aerial grab fail.

The conically shaped capsule, which will float on the water, has a diameter across the bottom of 2½ to 3 feet and a height of about 2 feet. It contains a radio beacon which will emit signals for about 10 to 18 hours, sufficient time, it is believed, to enable the waiting planes and ships to detect it.

The Discoverer II is believed to have passed within several hundred miles of the North and South Poles. It was visible to the naked eye in the North and South Pole regions. Our people at the U.S. IGY station at the South Pole saw it pass overhead on 22 consecutive passes. It appeared to them as a bright small moon. The satellite was also observed by individuals at the Admiral Byrd station, several hundred miles from the South Pole.

Considerable control was exercised over Discoverer II from the ground below.

It may be of interest o review the separate elements of these automatic controls, as well as ground-initiated commands. On various passes over the tracking network in the Alaska-Hawaii-California area, the satellite was commanded to relay its telemetry data to the ground and did so several times successfully.

Discoverer II was also commanded, on its second pass, to incorporate an actual orbital period of 90.5 minutes into its automatic control equipment to insure capsule ejection at the proper time and place.

Due to initial malfunction of a segment of the satellite's timer system, an orbital period of about 95 minutes was incorporated in response to the command from the ground. There was no opportunity to correct this error until after the 17th orbital pass. In the meantime, the capsule was automatically ejected, over the Spitzbergen area apparently, instead of over Hawaii.

Timer control of the satellite was accomplished on the 22d pass, but by this time the capsule had been ejected.

A second major form of control to which the Discoverer II was subjected is known as attitude control or stabilization. Prior to second stage ignition and injection into orbit, Discoverer II was placed into a horizontal position by means of an inertial reference package and a hydraulic control system, aided by an infrared horizon scanner.

Upon ignition, the pneumatic jet control system was replaced by a hydraulic control system which gimballed the Bell second stage engine, maintaining the satellite in a horizontal position during orbital injection. The infrared sensitive horizon scanner continued to operate, relaying corrections to the second stage guidance system.

After the Bell engine cutoff, the pneumatic jet control system resumed operation. Compressed gas under high pressure was metered to a series of external jets which stabilized the satellite as it orbited the earth.

A third form of control over the Discoverer took place when the satellite's attitude was changed in orbit as a prelude to capsule ejection.

The control functions applied to the Discoverer II required relatively small amounts of energy. A considerable increase in space propulsion energy will be required in order to accomplish a change in orbital altitude and direction or to maneuver a satellite from orbit to orbit.

In this regard, it is worthy of note that ARPA is planning a more advanced program than the Discover, dubbed "Mrs. V," for maneuverable, recoverable space vehicles. A major effort is also being directed toward the development of advanced space propulsion through the study of the feasibility of ion, plasma and charged particle jets.

The members of our committee are keenly aware of the importance of such developments to both the civilian and military space efforts of the United States. Such early programs can lead to the preciseness of control which will be required for interplanetary travel as well as for the development of maneuverable space vehicles which can operate in space in much the same manner as aircraft now perform in the atmosphere.

Many problems must be solved before man can venture safely into outer space, but if we have the vision and the courage to forge ahead, success will surely crown our efforts. Above all we must not be afraid to try, again, and again, and again, until we succeed.

We must be prepared to meet failure, as well as successes. Dr. Arthur Kantrowitz, director of the Avco-Everett Research Laboratory, put it well, I think, when he told our committe in a recent hearing: "I would feel better about our space program if I saw us making more mistakes than we do."

"Let's take a chance," said Dr. Kantrowitz. "Let's have the courage to risk making a mistake."

I cannot close without a word of caution about the state of our research "reservoir." If we are to continue to forge ahead, we must not lose sight of the importance of supporting the search for new knowledge. Only in this way can we replenish the well from which all progress flows.

We want results, yes. But we must prepare the way for results by laying the groundwork in advance, by continually searching for the truth. Here is where we will find many of the failures Dr. Kantrowitz referred to, but out of failures will come success.

Dr. Wernher von Braun, who heads the Army ballistic missile development program at Huntsville, Ala., says, "We are too busy with crash programs and are in danger of forgetting the long-range requirements which lie ahead and which will demand much more really new knowledge. We are concentrating upon doing things now with existing systems or with those which can evolve from existing technology."

"If we delay initiating basic and supporting research until the things down the road are upon us," he warns, "it will be too late. We will suddenly find ourselves brought to a stop by the exhaustion of our resources."

I agree 100 percent with Dr. von Braun and it is for this reason that I have introduced H.R. 5266 in Congress to set aside 10 percent of all Government expenditures for research and development for basic research. I plan to press for enactment of this legislation.

It has been a pleasure to appear before you and to address this body. The men and women assembled here tonight are making a real contribution to the welfare of the United States and the progress of mankind.

The great unknown, awesome in its immensity, stretches before us. Great adventures beckon us. We must always keep our eyes on the goals ahead, undaunted by failures. If we do so, success will surely be ours in the end.

Thank you.

West Berlin Knows It's the Big Stake at Geneva

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. COHELAN. Mr. Speaker, staff reporters Chalmers Roberts and Murray Malder have given an excellent and objective account of the situation in West Berlin on the eve of the Geneva talks in the May 10, 1959, issue of the Washington Post and Times-Herald. I hope it will be widely read.

I noted with interest the reference to our military garrison of 11,000 men as a token force serving primarily a psychological and morale function. No-

body, of course, can deny that this is part of their mission in Berlin. From a strictly military point of view, and in the final analysis, it is doubtful whether they could hold West Berlin too long in the event of a crisis. However, it is here asserted, as one who recently inspected the garrison, that the battle group in Berlin under the command of Gen. Barksdale Hamlett is a highly skilled fighting unit. It combines superb qualities of intelligent comprehension of its delicate diplomatic role, with an alert battle readiness that reflects sober realization of its military position. The officers and men in the Berlin Command are playing a vital role. They come from a tradition that gave us Bastogne and the Berlin airlift.

I commend this garrison to my colleagues and to my countrymen. They should not be overlooked:

WEST BERLIN KNOWS IT'S THE BIG STAKE AT GENEVA

(By Chalmers M. Roberts and Murrey Marder)

WEST BERLIN.—Looked at from here, there is a disarmingly simple meaning to the East-West Foreign Ministers' Conference which opens at Geneva Monday.

In the hearts and minds of West Berliners, the decision which confronts the free world in the talks about to begin in the Palais des Nations is this: Is the West prepared to abandon, however indirectly, the psychological offensive in the cold war which West Berlin and its 2 million free citizens represent?

Here in West Berlin, the outlook naturally enough is first of all the narrow one. When you stand in the middle of West Berlin looking down the broad and busy avenue which runs seemingly unobstructed under the historic Brandenburg Gate and into Communist East Berlin, your field of vision is narrow indeed. The enemy here is close at hand and free Berlin, whatever the legal rights involved, is dependent on Soviet sufferance for its access to the free world.

A DUAL SYMBOL

But Berliners know, just as Soviet Premier Khrushchev knows, how great are the stakes involved here. When you shove aside the underbrush of words which have piled up on both sides of the Iron Curtain about what is called the Berlin crisis, the vista is not narrow but very broad.

For the loss, even the blunting of West Berlin's current role could very well have the effect of ending today's instability in East Germany to Khrushchev's satisfaction and of creating instability in West Germany, which in turn would unhinge the Atlantic alliance.

The city serves as two symbols. First and most important for the West is its significance as an outpost of western life deep in Communist territory. Its second function is an a symbol of potential—but not foreseeable—German reunification in freedom. Khrushchev wants to eliminate or at least diminish the first symbolic meaning. He cares so little about the second that he is content for the present at least to leave it as a history-book footnote.

A CARD AT A TIME

For 5 months Khrushchev has played upon his dual symbolism with great diplomatic cunning and remarkable success. Like a poker player dealing out his own cards from all parts of the deck and turning them face up one at a time, Khrushchev has managed to keep the West in a state of uncertainty and disorder while still holding onto his hole card.

Khrushchev first said in November that West Berlin should be converted in to a demilitarized free city shorn of its United States, British, and French garrisons. Hostile subversive activity directed against any nation would be banned. Communist East Germany would make the sacrifice of assuring access to the city until the distant day when East and West Berlin might again become the capital of a united Germany.

Eliminating the garrisons would completely end West Berlin's function as a Western outpost. The garrisons are only token forces of about 11,000 men which serve a plateglass function: their presence signifies Western determination to hold West Berlin for the free world, for any attack on them would bring on world war III.

WHAT IS, IS

By making an alternative offer later to permit some Western troops to remain in West Berlin—provided a Soviet token force joined them—Khrushchev helped clarify his real intentions.

Khrushchev is using the pressure he created on the city to bargain over Western access to it in return for recognition of the conquests which Soviet communism has made in Central Europe since World War II.

The Soviet Premier expressed his intentions exactly in a Moscow press conference in March: "Two wars took place—the First and Second World Wars—and what fell off the capitalist carriage, that is to say, what broke away from capitalism and changed over to the rails of socialism, cannot be switched back to the past."

"Let us stop arguing," said Khrushchev, "about this question and let us register what exists. Let us live in peace and not interfere in one another's internal affairs."

TIME TO CONSOLIDATE

By living in peace, of course, Khrushchev does not mean abandoning the battle between communism and capitalism. He means continuing it on terms most advantageous to communism—with a reduction of the West's willingness to use the threat of war to head off communism's advance.

As Khrushchev and other Communist leaders see the world, the Red Star is rising triumphantly, boosted by the Soviet sputnik and missile advances; a period of relaxed European tension will now permit the Soviet bloc to consolidate its gains before the next step forward.

"Don't be hasty, therefore," Khrushchev told East Germany's Communists at Leipzig. "The wind is not blowing against you. Think everything out."

West Berliners, who showed the world their nerve during the Berlin blockade in 1948–49 and in the years before and since, did show a few signs of jitteriness when Khrushchev's demands on West Berlin first burst forth in November. Some few hundreds pulled out of this Communist-encircled outpost and some capital fled the city, too. But the amounts of both were relatively insignificant and have been more than replenished.

PERSONAL ASSURANCE

The fact that West Berlin as a whole has stood firm under Soviet pressure is a remarkable evidence of mass courage. Yet Berliners are not totally unshakable, either. They glance about for signs of reassurance continually, especially from the United States.

When an American based here chats over the garden fence with his West Berlin neighbor about what the American will plant "next fall" or "next spring," the word quickly spreads around the neighborhood. It is these signs of personal faith which are the most comforting.

As Khrushchev's declared strategy shifted its focus away from the narrow issue of West Berlin and toward his real goal of firming up the Communist status quo, tension eased here. West Berliners are very aware, however, that if Khrushchev has trouble attaining his broad goal, he can again tighten the squeeze on this city.

West Berliners are particularly concerned about the British desire for "flexibility." By instinct, they tense up on hearing such comments as that of Britain's Earl of Home in the House of Lords last week saying that Britain foresees "a fruitful field opening up toward real coexistence."

British Prime Minister Macmillan's trip to the Soviet Union produced no hope here for a real relaxation of tension. Instead, there is nothing but uneasiness about Britain's role in the forthcoming talks, coupled with the hope that United States firmness will outweigh any British plan to accept the status quo in Europe, however indirect that recognition may be.

BAIT FOR IKE

Nobody here, any more than in Washington, London, Paris, or Bonn, expects three or four weeks of talks by the foreign ministers in Geneva to bring any solution of the Berlin issue. The prevalent opinion in all the Western European capitals is that at most the Geneva talks should produce Khrushchev's bait to get President Eisenhower to a summit conference.

Some senior diplomats in Western Europe are inclined to think that if Khrushchev does decide that some such bait must be forthcoming at Geneva, it will be offered on an extraneous issue: ending nuclear tests. The gap in those lengthy talks, also being held in Geneva, has narrowed of late, and it would not take too great a step by Khrushchev to close or nearly close it.

The Russians got Mr. Eisenhower to the 1955 summit meeting by signing the Austrian treaty. This time a real indication of a test suspension agreement could do the trick.

It is not of course impossible that the Soviets will offer a new move at Geneva on the Berlin and German issue. Current Western tactics are to put forward the so-called package plan on Berlin, German reunification and European security and then sit back and wait for a Soviet offer to bargain.

Perhaps the majority of Western diplomats, however, tend to believe that the Russians will simply put forward their own package calling for a free city with some United Nations presence to dress up the move, plus a German peace treaty which would simply formalize the present division of Germany and bring diplomatic respectability to Walter Ulbricht's Communist East Germany.

Berliners here, like the West Germans in Bonn, are wary of a United Nations role. They would accept some sort of presence, perhaps, but certainly nothing which would take from the hands of America, Britain, and France the firm control of West Berlin. It may be, some think, that Khrushchev will have a new twist to offer at Geneva on the United Nations involvement.

It is often said, especially from the military standpoint, that West Berlin is indefensible—which it is—and therefore a Western liability. Nothing could be more wrong than to judge only the city's military status, however. Here in West Berlin the evidence is overwhelming that this free city is all the headache to the Communists that it has so often been called.

A constant stream of refugees from the East flows through here to the West. There is a daily influx of East Berliners to see the sights and sense the atmosphere of West Berlin, and every day between 600 and 1,000 East Berliners crowd the U.S. Information Agency's Amerika Haus to read West German papers and to see films of life in the West.

The contrast between the crowded affluence of West Berlin and the drab bareness

of East Berlin may indeed distort the economic disparity, as the economists believe. But the psychological impact is massive. Here the opinion is general that Khrushchev's Berlin crisis owes its origin in considerable part to Ulbricht's feeling that East Germany cannot be stabilized unless and until something is done to blunt the effect of West Berlin.

It may well be that the Soviet tactic at Geneva will be to play upon the thinly veiled differences among the Western Allies by picking this and that item from the Western package. Indeed, Neues Deutschland, the Communist East German paper, the other day front-paged a cartoon showing two workmen looking helplessly at a huge package marked "Western Package" which they could not move through an open door marked "Entrance to Geneva Conference." The caption on the cartoon read: "It won't work. If the package is not taken apart, it will block the entire Conference."

Another Soviet tactic is to befog and becloud the issue. In West Berlin, however, the issue seems as clear as the May sky.

Of all the millions of words spoken in the 6 months since Khrushchev first created the Berlin crisis last November 10, the simplest, clearest, and most comforting have come from Mr. Eisenhower. His speech of March 17 had a massive impact here, especially his statement that "we will not retreat 1 inch from our duty. We shall continue to exercise our right of peaceful passage to and from West Berlin."

Any result of the Geneva Conference, or of a subsequent summit conference, which contradicts that solemn pledge will open the door to disaster here. Perhaps that is not a valid judgment, but there is no doubt that that is the way West Berlin looks at it today.

Legislative Recommendations of the American Bar Association

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. COLLIER. Mr. Speaker, on May 12 and 13 the Illinois Federation of Republican Women will meet in Springfield, at which time they will discuss the legislative recommendations of the American Bar Association.

I believe it is significant enough to set forth in my remarks the 10-point program of the American Bar Association as adopted in its national meeting held in Chicago 2 months ago.

Never has there been a greater demand for the conscientious and careful consideration of these recommendations. Certainly they are sound and wholesome for the future and security of America and the preservation of our way of life. As one who is deeply concerned with un-American activities and the lethargy of many citizens in this field, I wholeheartedly endorse the 10-point program as one who has introduced legislation in this field consistent to the problems which have arisen as an outgrowth of various Supreme Court decisions.

The American Bar Association officially recommended that the U.S. Congres pass the following legislation:

First. Restore to the States the right to enforce their own antisubversive laws.

Second. Restore to congressional committees the same freedom to investigate Communists and pro-Communists that these committees have always had to investigate businessmen and labor leaders.

Third. Restore to the Smith Act the provision which makes it a crime to teach or advocate the violent overthrow of the Government.

Fourth. Restore to the Smith Act the meaning of "organize" which includes organizational work done after 1948, so that Communist organizers cannot hide behind the statute of limitations.

Fifth. Restore to the executive branch the right to determine and to dismiss security risks in both sensitive and nonsensitive positions of the Government.

Sixth. Restore to the States the right to set standards high enough to exclude from public employment and education those who refuse to testify about their Communist activities and associates.

Seventh. Restore to the executive branch the right to question aliens awaiting deportation about subversive associates and contacts, and the right to deport aliens who are Communists at any time after entering the United States.

Eighth. Restore to the executive branch the right to deny passports to those who refuse to sign a non-Communist affidavit.

Ninth. Restore to congressional committees the right to determine whether the questions asked of pro-Communist witnesses are pertinent.

Tenth. Restore to the Foreign Agents Registration Act the requirement that propaganda sent from the Soviet Union and disseminated within the United State be labeled for what it is.

Congratulations, President Truman

SPEECH

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. JONES of Missouri. Mr. Speaker, I am happy that we have this opportunity to express ourselves on the occasion of the 75th birthday of Missouri's most distinguished citizen, but even more pleased over the fact that President Truman can enjoy reading the tributes that are being paid to him. All too frequently such eulogies are delayed until an occasion when they can be only a comfort to a family in an hour of bereavement.

While I enjoy the reminiscence of this hour, the thing that gives me the greatest joy and the most satisfaction is the fact that President Truman is having that unique experience of enjoying during his lifetime the growing esteem and the increasing appreciation of the contribution which he made during his years of official service, and which he continues to make in the role of elder statesman. As he goes about the Nation speaking to university and college groups, impressing upon the minds of these young people their responsibilities in preserving the rights and liberties which we enjoy under our Constitution, he is continuing to perform a service of inestimable value.

I, along with my father, was among those who supported "Judge" Truman when he was first a candidate for the U.S. Senate. As individuals and through the newspaper which we operated at that time, we supported him in each of his campaigns, because we believed, as was later confirmed in all of his actions, that he was a man with a sincere desire to do the things that he believed were honest and right, and which would result in the greatest amount of good for the people whom he represented.

This did not mean that I always agreed with his judgment, and there were times when he was President that I did not agree with and did not support all of his policies. But, I also knew that he could appreciate my position in representing a constituency in southeast Missouri, with which he was most familiar since some of his most enthusiastic and effective support had come from that area during his elections to the Senate, and which, incidentally, has remained with him throughout his career.

However, Mr. Speaker, even when I could not agree 100 percent with President Truman, I always found that there were so many things in which we were in agreement, that it was never difficult for me to make a choice in his favor. Unfortunately, Mr. Speaker, all of the members of our great Democratic Party did not always make that choice, but it has been a great satisfaction to me to hear some of those who during his service as President were among his most severe critics, but who after he had left office and they had witnessed some of the changes that have taken place, were willing to admit, "Well, President Truman wasn't so bad, after all."

Yes; the man from Independence continues to grow in stature and influence, and today there is no question in my mind about the eminence of his place in history, or of the esteem in which he is held by a vast majority of the American people, who admire courage, frankness and fairness, to mention only a few of the many virtues for which we honor this champion of freedom and liberty on his 75th birthday.

Alcoa's Safety Award

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. LANKFORD. Mr. Speaker, the attainment of a high record of efficiency after keen competition is a matter of widespread interest, particularly when it

concerns such a question as safety, which is a main objective of the American people throughout our country.

For this reason, it is noteworthy that the Alcoa Steamship Co. has just been awarded first place in this year's safety contest conducted by the marine section of the National Safety Council. The enviable good record of Alcoa has been recognized generally, so that the basis on which this year's award is made confirms the beliefs of many individuals and companies who have enjoyed the benefits of Alcoa services.

It is noted that the officers and men sailing Alcoa's fleet of freighters maintained an accident rate of 2.94 in achieving this result through operations of both passenger and cargo ships.

William C. White, president of Alcoa, and a member of the board of directors of the American Merchant Marine Institute, deserves the commendation of the American people. His continuing high standard of achievements is worthy of recognition by public-spirited citizens.

The presentation of the safety council award was made by Carl F. Vander Clute, general manager of the Gulf Oil Corp. marine department and also general chairman of the marine section. Because of the importance of this eminently satisfactory showing, I desire to bring this matter to public attention by publication of these remarks in the CONGRESSIONAL RECORD.

Communism in America

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. SCHERER. Mr. Speaker, sometimes those of us who are members of the Committee on Un-American Activities feel that the revelations of the nature and objectives of the Communist apparatus resulting from our committee hearings, are not reaching the American people. Naturally, I was gratified when one of America's leading anti-Communists, Roger E. Sherwood, brought to my attention a thesis written by Paul Charron, a student at St. Xavier High School, Louisville, Ky. The title of this excellent work, "Communism In America—Its Early Years and its Present-day Plot to Destroy America," speaks for itself.

I include the essay:

COMMUNISM IN AMERICA

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fists." [1]

From the inception of communism in the revolutionary bloodbath of 1917, right up to the present day, the sole aim of the Communist movement has been to annihilate the capitalistic state at any cost. Contrary to the beliefs of those who, beguiled by Communist protestations of good-will and peaceful coexistence, feel that the Communist threat is lessening, the Communist movement is flourishing as never before; poisoning the minds of thousands upon thousands of gullible Americans who accept the endless barrage of communistic propaganda at its face value, failing to see through the cloak of good-will and false promises with which the Communists have disguised their movement. Indeed, anyone reasoning logically, can, in view of the shameful atrocities committed by the Communists in Hungary, Poland, and China, and in view of the recent trials of Soviet espionage agents, see that the Communists are most certainly not lessening their campaign against the American state. Rather, they are sharply accelerating their movement to overthrow the democratic Nation in which we live.

THE EARLY YEARS

The Socialist movement in the United States actually began in 1890 but did not really begin to gain support until the Bolshevik revolution of 1917 cast it into national prominence. The movement grew by leaps and bounds and in September of 1919, Socialist leaders convened in Chicago to draft a constitution for the new Communist Party of America.

Its propose was "the education and organization of the working class for the establishment of the dictatorship of the proletariat, the abolition of the capitalist system, and the establishment of the Communist Society." [2] It was also affiliated with the Communist International, which shall be mentioned further on in this article.

Also in September of 1919, the Communist Labor Party was formed. It was made up of delegates to the Socialist Party Convention of August 30, 1919, who had been excluded from the convention because of improper credentials. These delegates, after negotiating with the organizational committee of the Communist Party for the purpose of unity, finally decided that they would organize their own party and so the Communist Labor Party came into being. This party declared itself in complete accord with the principles of communism, as laid down in the Manifesto of the Third International formed at Moscow.[3]

On January 12, 1920, a communication from the president of the executive committee of the Communist International was addressed to the central committee of the Communist Party of America and the Communist Labor Party, on the necessity of immediate unification. Months of negotiations between the two groups resulted in a split within the ranks of the Communist Party of America. In May 1920, a convention was held in Bridgman, Mich., and resulted in the formation of the United Communist Party by merging the group splintered from the Communist Party of America with the Communist Labor Party.

In June of 1921, the Communist Party of America and the United Communist Party united under the common heading, the Communist Party of America. The constitution of the new party was much the same as the two previous ones and they added in their "purpose" the words "its (C.P.A.) purpose is to destroy the bourgeois state machinery." [4]

In the latter part of 1919, the Department of Justice submitted a great deal of evidence on the Communist Party of America to the Department of Labor. The result of this was the issuance of a great number of warrants for deportation hearings. These deportation cases were based on the theory that the Communist Party of America advocated the overthrow of the Government of the United States by force and violence and, therefore, its officials and members who were aliens were subject to deportation as being members of an organization proscribed by immigration laws.

The Communist Party of America was forced underground by the wholesale arrests and deportations. However, in June and July of 1921, The Third Congress of the Communist International authorized the Communist Party of America to form an open political party that could operate legally. The ultimate result of this communique was the formation of the Workers Party of America. Its new constitution was not phrased as strongly as the previous one but was, of course, blindly devoted to the Communist cause and purpose, namely, the overthrow of capitalism through the establishment of the Workers Republic. The Communist Party of America continued functioning as previously but now it functioned secretly.

In the summer of 1923, the C.P.A. (underground) found it necessary to hold a convention. The secret convention was held in a wood near Bridgman, Mich., during the latter part of August of that year and it attracted three representatives of the Commintern or Communist International as well as the leading Socialists of the United States. The convention came to a sudden and abrupt end when State and Federal authorities raided the convention and arrested the Communist leaders.

Faced with the prosecution and possible imprisonment of the top leaders of the American section, the Communist International, on December 3, 1922, decided that the Communist Party of America should function as an open legal party.[5] On April 7, 1923, the C.P.A. voted to dissolve and merge with the Workers Party of America. This merger, with the blessings of the Comintern, was swiftly executed.

This merger of the two Socialist Parties and the dissolution of the underground organization brought the continuing battles for leadership of the party into national focus. Although they accepted the right of the Russian Communists to boss them, the top American Communists did not cease their bickering and maneuvering for control of the party and so here began the split in the party which was not felt until 1957 and which shall be spoken of later in this paper.

The rising threat of Nazi aggression around 1935 prompted the Russians to change their tactics slightly. Previously the Communist Parties in America had received their instructions from the Comintern in the form of directives, letters, etc. In 1935 a new method of transmitting instructions was adopted. Pronouncements of spokesmen of the Comintern were circulated internationally in such Communist publications as War and the Working Class, New Times, and International Affairs, and in America by Daily Worker, Political Affairs, and The Masses and The Mainstream. The purpose of this change in operations was to lull other governments into believing that the Soviets were no longer interested in organizing the Communist conspiracy in other countries, so that the Communists could gain the support of the democracies against the Nazi threat. Here is the party's first attempt to disguise its role as the center of world revolution.[6]

Footnotes at end of speech.

During the war years the Communists worked amiably with the Allies to suppress the Nazi uprisings but immediately after the war resumed their vicious campaign to pervert the rest of the world and all freemen.

The gap in the ranks of the Communist Party of America, which was first opened in 1923 and which was widened by the struggle for power in the Soviet Union in 1955 through 1957 and the use of Soviet troops in Hungary and Poland in 1956, finally burst during the 16th convention of the Communist Party, USA at New York on February 9–12, 1957. A revisionist faction led by John Gates, then editor of the Daily Worker, clashed with a group led by William Z. Foster, the head of the party since 1945. Gates and his followers were dissatisfied with the party policies, resented the intervention of Soviet troops in Hungary, favored independence from Moscow, and wanted to change the name of the party to a political association. Foster and his followers favored looking to Moscow for guidance—in other words, blind submission to the wishes of the men behind the massive doors of the Kremlin. A middle of the road group led by Eugene Dennis finally threw their support to the Foster faction to defeat Gates. Gates and most of his followers resigned from the party in disgust, leaving it firmly controlled by Foster and his cohorts and unflinchingly obedient to the will of Moscow.

Having traced the lineage of the Communist Party in America from its inception in 1917, through the war years, up to the present time, and having been made acquainted with the basic why's and wherefore's of the Communist movement, we may now proceed into a discussion of the current attacks the Communists are using in their plot to destroy America.

THE PRESENT-DAY PLOT TO DESTROY AMERICA

A prominent method of subversion is through propaganda. Premier Khrushchev's frequent declarations to the world that he and his henchmen have no aggressive designs and the convivial handshakes and smiles of Soviet Ambassador Mikhail A. Menshikov are indeed hard to see through. But when you read of Russian diplomats being arrested as espionage agents and when you read of another bloody purge such as in Hungary in 1956, you can see that someone is lying and hard, cold facts cannot be disputed.

Also the American public is fed a steady diet of Red propaganda in the little, harmless looking pamphlets that mysteriously find their way to one's doorstep. These pamphlets present an unrealistic and falsified view of life in the Soviet Republic. The aims and the program of the Communist Party are shown out of text in a rephrased and attractive manner. These pamphlets have but one diabolical purpose—to tear the American from his heritage and change him into a pliable tool of the Kremlin.

The lies of the Communist papers of America, led by the Daily Worker, and the two-faced, insidious falsehoods of the Communist news agency, Tass, are well known and therefore will not be dwelled upon.

One other means by which the Communists seek to eradicate the American Nation is by infiltration into influential positions. So far the most successful areas of infiltration for Communists have been (1) colleges and universities or in other words, among our students; (2) national and minority groups, particularly in creating strife between Negroes and whites; (3) in religious organizations, seeking to create bigotry and hatred among one another; (4) in the field of labor, seeking to pit the workingman against capital; and (5) among the poor, of which there are always so many.[7]

It is most certainly no coincidence that most causes of national tension are strife in the last few years have fallen in the above-mentioned categories.

Next we have perhaps the most ruthless of all the Communist subversion methods; namely, the espionage system where enemy agents attempt to penetrate into the brain of the democratic state, her government, and pluck from it the secrets which make the Nation a power of the world. The Reds seek to gain these secrets by fair means or foul—rather by foul means, for there is no fair way to attain this valuable information—and they will commit any crime—I repeat, any crime—to attain this data. Robbery, murder and sabotage are not at all uncommon to the Kremlin agents.

Early in 1956, a Kremlin offensive was launched which consisted for the most part of warm smiles, convivial gatherings, and declarations of peaceful coexistence. The belief that some Americans persist in retaining that the Russians are actually interested in peace or anything approaching peace would be quickly dispelled if they would glance at the facts concerning the Soviet espionage plot to undermine America. William F. Tompkins, then chief of the Internal Security division of the Justice Department stated before a congressional committee in 1956 that the FBI had referred 481 cases of espionage to the Department of Justice in the last year and a half. Before the same committee a year later, Tompkins testified that 160 cases of espionage had been presented to, or were pending in, the Department of Justice in the first 6 months of 1956.[8] And the story is the same the world over. Between March 1, 1956, and October 2, 1958, 15 big espionage cases were broken in 8 different countries, Finland, Greece, Japan, Austria, Iran, Germany, Denmark, and Sweden.

In the United States, Communist spy activity is at its peak. This is evidenced by the large number of arrests and convictions on spy charges in the last year and a half. A few of the more prominent are: October 8, 1957, Jack Soble was sentenced to 7 years in prison after pleading guilty in his trial to spying for the Soviet Union; July 8, 1957, Mr. and Mrs. George M. Zlatowski were indicted as members of a global Soviet spy ring run by Soble and were charged with 38 overt acts of espionage. At the time of the indictment Mr. and Mrs. Zlatowski were in Paris. Both denied the charges but refused to return to the United States for trial; November 15, 1957, Col. Rudolf Abel, an officer of the Soviet Intelligence, was sentenced to 30 years in prison and fined $3,000 for passing U.S. defense and atomic secrets to Moscow.

These organized spy rings are not the only espionage tactics carried on by the Russians here in America. There are cases too numerous to mention where Soviet agents have contacted naturalized American citizens or Americans who have relatives behind the Iron Curtain, with propositions to betray the United States. If these Americans refused to comply with Russian demands, they were faced with the threat of imprisonment or death to their relatives, not to insure that a wrong would be righted or a crime prevented, but in an effort to guarantee acts of betrayal.[9]

"Experience has revealed that foreign espionage agents seek the protection of legal cover. By that, I mean they seek admittance into the United States on diplomatic passports. They seek assignments to some official foreign agency and thus conceal themselves under the diplomatic cloak of immunity. To further avert suspicion, a high-ranking espionage agent may very well be employed as a clerk or in some minor capacity in a foreign establishment. However, when he speaks, those with higher-sounding titles follow his orders without question. Foreign espionage services maintain strict supervision over their activities in this country."[10]

These words of Mr. J. Edgar Hoover in testimony before the Senate Appropriations Committee in 1950 shed the light on another espionage tactic of the Russians, that of sending their agents to the United States to gather information under the diplomatic cloak of immunity. This statement is backed by the words of Mr. Victor A. Kravchenko, economic attaché of the U.S.S.R. Purchasing Commission in Washington during World II who asked for, and was granted political asylum in the United States in 1944. When he testified before the House Committee on Un-American Activities in 1947, Mr. Kravchenko made the following statements concerning the duties of Soviet diplomats and representatives in the United States:

"I must state in general that no person holding an important position in connection with the economic, political, or military organizations and arriving in the United States from the Soviet Union arrives without a special assignment as to the collection of secret information."

Question. "As to every person assigned to this county from the Soviet Union.

Mr. KRAVCHENKO. At least I may state that every responsible representative of the Soviet Union in the United States may be regarded as a possible economic, political, or military spy. I did not know of one department in the Soviet purchasing commission, whether it was aviation, metal, auto tractor, or other, which was not occupied in collecting secret information about its equivalent in American industry."[11]

There are dozens of other Soviet diplomats who have defected to freedom and who swear that the words of Kravchenko are true.

And this is not all. Since 1953 six Soviet "diplomats"—formerly attached to the Soviet Embassy in Washington have been expelled as spies and it is known that four others have engaged in espionage or have attempted same. Also, five Soviet representatives to the United Nations have been expelled from the United States since 1949 for similar reasons. Ten other agents, all personnel of the Communist satellite nations assigned to their embassies and consulates here, or to the United Nations, have been declared persona non grata and asked to leave the country. If further proof were needed to show the insincerity and deceit with which the Russians speak of friendship, Pamfil Riposanu, former first counseller of the Rumanian Legation in the United States who with two comrades quit the legation after the 1947 Communist purge in Rumania, supplies it. Before the Senate Judiciary Subcommittee in June 1949, Riposanu testified:

"In my opinion the Communist governments of all satellite countries use everyone—not only diplomats, every person, every chauffeur, every man who is sent here—for espionage and propaganda."[12]

We have now discussed some of the heinous tactics which the Communists are presently using in their attempt to corrupt all Americans in hopes of overthrowing the democratic system. We must remember that plotting, conspiracy, secrecy, and betrayal are all weapons of Leninism and likewise in the words of J. Edgar Hoover, that "communism is more than an economic, political, social, or philosophical doctrine. It is a way of life; a false, materialistic religion."[13] Just as we believe in God as the purveyor of all truth, so the rabid tools of the Kremlin believe that communism is the root of all good.

Prevailing upon the words of Pope Pius XI in his encyclical on atheistic communism, Divini Redemptoris, I would close this paper.

"Communism * * * strips man of his liberty, robs human personality of all the moral restraints that check the eruptions of blind impulse. There is no recognition of

Footnotes at end of speech.

any right of the individual in his relations to the collectivity; no natural right is accorded to human personality, which is a mere cogwheel in the Communist system." [14]

Rumanian Independence Day

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mrs. BOLTON. Mr. Speaker, Sunday, May 10, was Rumanian Independence Day, the day on which Rumania achieved national unity, freedom, and independence. Again this year the occasion was marked by public gatherings throughout the Nation, attended by the many friends of Rumania.

As part of their plan to extinguish freedom from Eastern Europe, the Communist rulers have forbidden public observance of this historic date in Rumania. Celebrations have been shifted from the 10th to the 9th of May, the anniversary of a Soviet victory, in an effort to alter the significance of Independence Day.

We may be certain, however, that this day was appropriately commemorated in the hearts and the minds of all the Rumanian people. Despite dark years of Communist repression their resolute courage and steadfast faith in freedom continues unbroken. They have known oppression many times before, but have always maintained their profound love of liberty in the face of harsh totalitarianism.

The city of Cleveland is proud to include many persons of Rumanian descent among its populace, and I am privileged to represent many of them in my constitueney. They have contributed substantially to the richness of our community life, and are among our most responsible citizens.

Let us renew the historic bonds of friendship with a liberty-loving people and pray to Almighty God that the day will soon return when they may again live in freedom and independence.

Civilian Health Records

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I wish to insert an abstract of a pamphlet published by J. Theron Hunter, M.D., of Solana Beach, Calif., in which he recommends the universal acceptance of individual health records for civilians. Dr. Hunter has been using this system for over 30 years, and recommends it to the medical profession because of his growing concern over the trend toward socialization of medicine, feeling that nothing should be ignored which could help reverse this trend:

CIVILIAN HEALTH RECORD

(By J. Theron Hunter, M.D.)

This is a recommendation for the universal acceptance of individual health records for civilians. They are in book form, individual personal records for men, women, and children. I am convinced that they are worthwhile after using them for over 30 years.

The proposal is submitted in an attempt to bring all types of medical and surgical practice into a closer alliance, with the sincere hope that the advantages will accrue to the benefit of patients, the medical profession, and medical schools, the last to derive financial aid from sale of the books through a nonprofit organization to print and distribute them.

The chief advantages are: The repetition of taking family and past histories is unnecessary; histories are more acurate and reliable; they save time of phoning, writing, or wiring doctors or hospitals for information; are adaptable to all types of practice because of two facing pockets at the back of each book for carbon copies of reports and data of important illnesses and operations; no longhand writing by physicians is necessary; a lifetime record of health is provided; they are especially useful in programs of periodic examinations; valuable for consultations or referrals; helpful when patients change doctors or locations; the maternity section for several pregnancies may alert a physician to extra precaution; an up-to-date record is as informative as a hospital chart; create good will to improve public relations; good records act as a deterrent to malpractice suits; entries by physicians may show a disability to prevent induction for military service resulting in subsequent medical discharge; they could be useful in prepay plans to lower premium rates with more coverage if authentic periodic examinations were made a part of the contract.

Cards and pamphlets are inadequate as health records because they are easily lost, and as they are presented to patients gratis, appreciation of their importance is as negligible as anything people receive for nothing.

The medical profession and the laity must demonstrate more interest in regular periodic examinations if any degree of success is to be realized in the fight against cancer and other fatal diseases. They are the only logical method for the early detection of serious conditions that require prompt and adequate treatment. Also, the medical profession and allied groups would be relieved from spending time caring for persons with chronic diseases which should have been discovered in a curable stage. The regular checkup, when more widely adopted, will make hospitals less crowded, and provide more pleasant, healthful, and economic living.

It seems absurd that better records are kept of the pedigrees of animals, and services on automobiles, than essential facts relative to the lives and health of human beings.

The Festival of Jeanne d'Arc

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. MULTER. Mr. Speaker, tomorrow, May 8, marks the anniversary of that glorious day in history when a young maiden, guided by noble visions, led 10,000 men of France to victory over experienced English troops at Orleans. The story of that young woman, Jeanne d'Arc, told and retold in literature, drama, poetry, and art, has been a source of inspiration to thousands ever since. The Festival of Jeanne d'Arc, celebrated tomorrow by the people of France, brings to mind the qualities of Jeanne d'Arc which have made her memory endure for more than five centuries, and the equally endurable bond between France and the United States.

Jeanne d'Arc was a humble but deeply religious shepherdess who loved France and was distressed by France's occupation by foreign troops, its economic crisis, and the prevailing indecision

about the right of uncrowned Charles VII to rule. Guided by visions which assured her of Charles' right to rule and commanded her to expel the enemy, Jeanne convinced the Prince of her divinely inspired mission. She was placed in command of 10,000 men and led them to the dramatic and impressive victory at Orleans, resulting in the liberation of large portions of French territory and the coronation of Charles as King. The strength and purity of purpose of the Maid of Orleans raised the spirits of the French troops from the depth of defeat to the height of victory.

The qualities which made Jeanne d'Arc an inspiring leader are ones which will always be needed in times of national crisis and which are essential in the free world today. One of these qualities is humility, the maintenance of a modest sense of one's own significance in relation to the rest of the world. Another is religious faith, belief that there is a divine will and a sincere attempt to follow this will. A third such quality is a sense of mission and wholehearted dedication to a cause which one believes is worthy. Courage, purity, and patriotism were other qualities which have made Jeanne d'Arc a heroine to peoples of all countries.

It is France and the people of French descent in this country who are especially remembered on this anniversary of the victory at Orleans. Many of the first settlers of this country came from France, and since 1820 more than 600,000 additional men and women have journeyed from France to make their home in the United States. Moreover some 270,000 French-speaking people who were born in Canada are now living in this country. In our neighbor to the north almost a third of the people are of French origin, and the flourishing French culture in some localities there is a source of delight to all American visitors. We are grateful for the great contributions in many spheres of life which have been made to our country by its citizens of French origin.

Ever since Lafayette came to the aid of the Continental Army led by George Washington, France has occupied a special place in the hearts of Americans. Gratitude for French assistance in time of need has been supplemented by a common devotion to liberty, democracy, and the rights of individuals. Today the alliance of France and the United States under the North Atlantic Treaty is essential to the maintenance of the ideals of liberty, justice, equality, and democracy which our two countries hold so dear. It is my hope that our bonds with France will not only be continued but that they will be expanded and strengthened in the years to come, and that NATO will be expanded from a military alliance into a means for increasing cultural, economic, and politicals ties as well. On this day celebrating the festival of Jeanne d'Arc, let us dedicate ourselves to strengthening these ties so that we can be sure that the great tradition of liberty shared by France and America will never be obliterated but will reach ever greater heights of realization.

U.S. Public Health Activities in Underdeveloped Areas

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mrs. BOLTON. Mr. Speaker, one of the major obstacles to progress in the underdeveloped areas of the world is the widespread prevalence of debilitating diseases. Each year such diseases take a staggering toll in human lives and wasted energy.

A malaria epidemic in Ethiopia alone last year is estimated to have caused 50,000 to 60,000 deaths in a 2½-month period. All areas of the country up to an elevation of 6,800 feet were affected, and millions of people involved.

Trypanosomiasis — African sleeping sickness—a disease which attacks both man and his domestic animals, has been described as the single most important bottleneck in the development of much of the African continent. Almost equally pervasive is schistosomiasis—bilharzia — the debilitating disease transmitted by snails that live in irrigation canals and estimated to affect more than 100 million people in the Near East, South America, Africa, and elsewhere.

Another common disease in many newly developing countries is tuberculosis, which annually kills hundreds of thousands. Most frequently found in young and middle-aged adults, its victim is often the family wage earner or the mother who cares for the children. Its effect on a country's economic productive capacity is enormous.

Diarrheal diseases in various forms account for one out of every four human deaths that occur each year. While some occur frequently in epidemic form, most represent a constant, day-to-day threat of illness and death. Simple cleanliness through good bodily hygiene is the key to prevention of these infections, but inadequate and impure water supplies in many of the less developed areas makes improvement difficult.

Mention should be made, too, of trachoma, an eye disease rarely found in the United States, but common in the Middle East and Africa. An estimated 3 million persons have been blinded by it and other infectious eye diseases in the Middle East alone.

These are some of the numerous diseases that the underdeveloped areas must cope with, invariably with inadequate doctors, nurses, hospital facilities, and medical equipment. In one such country, with a population over 8 million, there are less than 80 practicing physicians and only 600 hospital beds. In another, 70 percent of all babies are delivered by midwives who do not know or practice basic hygiene. In still another, one province with over 1 million inhabitants does not have a single physician.

The United States is actively engaged in extensive bilateral and multilateral programs of public health improvement with other governments. Since the first joint program of the present type was launched in Ecuador in March 1942, technical cooperation in this field has grown progressively.

Our bilateral health assistance programs center primarily on training of health personnel, organization of services and programs, and planning for better health. Supplies and equipment are significant contributions in special projects such as the worldwide malaria eradication campaign.

The response to these projects has been enthusiastic, with local sources contributing substantially more than is spent by the United States on joint programs. Host governments are being stimulated to increase the total health activities of their own countries, with a consequent improvement in the national health.

Some insight into our health programs in action overseas may be gained by an examination of representative programs in three countries—India, Ethiopia, and Puerto Rico.

In India, where malariologists have calculated nearly half the free world's total population exposed to malaria exists, real progress is being made. The eradication program is under direction of the Indian Ministry of Health, and the United States through ICA is supplying the foreign exchange needed for imported insecticides and other commodities. During fiscal year 1959, 260 million people will be protected and it is expected that this will be increased to 360 million in fiscal year 1960.

A study reported in the Indian Journal of Malariology estimates the return on malaria control measures to be about 50 to 1 in increased production, as compared to the cost of DDT spraying operations. Malaria control in the state of Uttar Pradsch has permitted the reclamation of hundreds of thousands of acres of land formerly idle, with the production of large quantities of vitally needed wheat. Estimates of the World Health Organization indicate that the national income of India could be augmented by $500 million annually through malaria eradication.

Ethiopia is currently in the communicable disease era. Statistics available from Government hospitals indicate that probably 70 percent of the population suffers from some form of intestinal parasites; 25 percent to 35 percent of the population is at risk from malaria; 30 percent of the population suffers from veneral disease; possible 3 percent have active pulmonary tuberculosis; some areas have a 6 percent to a 7 percent incidence of leprosy; trachoma and other eye infections may affect as many as 60 percent in selected regions; and typhus, relapsing fever, and pneumonia take a tremendous annual toll during the cold, raw, rainy season. Poor nutrition plays a significant role leading to deaths resulting from many infections which would otherwise not prove fatal.

There are currently only five Ethiopian nationals who are doctors of medicine. The bulk of professional medical attention falls on the shoulders of 160 foreigners of different nationalities. All of the Ethiopian physicians and half of the foreign physicians are concentrated in Addis Ababa, leaving but one doctor for each 400,000 persons in areas outside of Addis.

There are currently 4 schools of nursing in the Empire, but, since the graduation of the first class in 1953, only 90 to 100 nurses have completed their schooling and are practicing.

In 1953, a project agreement was signed by ICA with the Ethiopian Government in conjunction with the World Health Organization and the United Nations Children's Fund for establishment and operation of the Public Health College and Training Center at Gondar, Ethiopia. This institution was designed for and is training Ethiopians to staff local health departments. Health officers take a 3-year course, community nurses a 2-year course, and sanitarians, a 1-year course. On August 23, 1957, 20 health officers, 15 community nurses and 12 sanitarians were graduated as the first class from this institution. These graduates then served a year's internship in the province in which the college is located and under direct supervision of the project staff. After August 1958, these graduates were assigned to local health services in other parts of the empire. In August of 1958, a second class composed of 29 health officers, 13 community nurses, and 19 sanitarians was graduated. Thus by August 1958, this institution had educated 108 well-qualified health workers trained specifically to attack the major health problems of the country. A small corps of laboratory technicians is also being trained in this institution and 12 will finish their course in August of 1959.

In 1954 a contract was signed with the University of Puerto Rico, under which the university accepted people from Latin America for training in public health. All public health classes are held in Spanish. Training in spoken English is a part of the curriculum. Puerto Rico provides a golden opportunity to demonstrate American democracy and know-how operating within a Spanish culture. That this combination can be successful is readily evident to the visitor from Latin America to Puerto Rico.

The contract has been a real success. Each year since 1954, 25 to 30 ICA sponsored trainees have been given professional training. Equally important, many trainees each year have been trained for other agencies such as WHO and PASB at their expense, and the Ministries of Health of Latin America have used Puerto Rico for training sponsored and financed by their own resources.

Mr. Speaker, solution of major health problems in the underdeveloped areas is an important concern to the people of the United States. Our participation in public health assistance programs is a natural expression of the American tradition of extending a helping hand to our fellowman, and as such deserves our wholehearted support.

Surgery or a Mustard Plaster?

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. SCHERER. Mr. Speaker, the astute and capable Constantine Brown in Washington's Evening Star of last Friday clearly pinpoints the dilemma we face in dealing with the Communist cancer. It is my feeling that this penetrating analysis of the foremost issue of our day should receive the widest possible attention from all thinking Americans. I include the article:

Diplomacy with a capital D is being used by our policymakers in the executive and legislative branches on the American people to accustom them to the idea that talks between our Chief Executive and the big boss of the Kremlin might prove useful.

Judging from a number of nationwide polls, the bulk of Americans are unsympathetic to another summit meeting, at least until Premier Khrushchev gives in advance some tangible evidence that he wishes to live in peace with the free world.

Insistence on tangible evidence of Moscow's peaceful aims was the theme song of the administration after the summit meeting 4 years ago proved such a lamentable flop. But there is not the slightest doubt that another summit meeting, regardless of how the Geneva foreign ministers meeting comes out, has become a certainty.

This decision for a summit meeting, taken at the highest levels in Washington and London, is being spoon-fed to the American people. They must be accustomed to the idea slowly, by means of public relations devices.

All Americans, except a handful of Communists or dedicated fellow travelers, are bitterly opposed to communism and regimentation under the rule of men and not of law. In the years since the end of the last war we have seen the spread of the Communist cancer all over the world. Nations on Russia's borders were taken over by force. In other areas there were, and continue to be, incessant attempts to establish the Red flag by subversions.

We all, including the advocates of coexistence, recognize the Soviet cancer. Yet by their attitude many with heavy responsibilities toward the people of this country act strangely. They appear to be afraid to remove the Red cancer either by surgery or by heavy X-ray treatment. Instead, they hope that by using antiquated remedies, which have proved ineffective, we might at least arrest the disease.

Cultural exchanges, adulation of Communist visitors and artists and an exaggerated estimate of the real Communist military and economic might are the palliatives which our leadership provides to arrest and cure the dread political disease which in the long run will destroy the tissues of freedom which make this country the best in the world. There have been attempts by people in the last stages of this political disease to handle it by heroic means. The German and Polish outbreaks against the Communist tyranny in 1953 and 1956 showed that these subjugated people reached the conclusion that only drastic surgery could cure the cancer from which they were suffering.

The Hungarian rebellion in 1956 and the more recent revolution in Tibet, a long distance from each other, should have opened the eyes of those who believe that we can coexist with the Communists. They did not. The powerful free world which relies on the power of its ideals more than its formidable military strength watched the sacrifices of these little peoples with cheers and noble words of encouragement, but with arms folded. It was too proud to fight or even intervene diplomatically to put an end to the slaughter of these people whose crime was that they wanted to be free.

There is an increasing appreciation by politicos in the hub of the free world that cancer can be arrested only by drastic means, otherwise its cells get into the bloodstream and spread all over the body. Political as well as physical cancer can be cured by heroic methods. When the patient is too scared to submit to such treatments his demise is inevitable.

Teamsters Local Aided Hospital Move

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BRAY. Mr. Speaker, in my brief remarks I do not intend to discuss in any way the merits of the legislation presently before committees of Congress regarding labor reform. The teamsters unions have been severely criticized but I do want to give credit where credit is due and mention an incident that took place last winter in the city in which I live.

Morgan County had just completed building a new modern hospital of which we are very proud. We had limited funds and in addition to obtaining money under the Hill-Burton program and a general bond issue, individuals and organizations throughout the county had contributed generously to this worthwhile endeavor. The very capable hospital board had been very frugal in the planning and building of this hospital, but practically had depleted their finances by the time they were ready to move into the new building.

Teamsters Local No. 193 of Indianapolis, in cooperation with the owners of the trucks, donated their services and equipment, came to Martinsville and moved the patients and all furniture and equipment to the new hospital in a very capable and orderly manner without cost to the taxpayers.

There was no publicity or fanfare about this act. It was just a bunch of good fellows, in cooperation with management, that performed a very necessary and valuable service to our community for which all were most grateful.

Water Resource Development

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. EVINS. Mr. Speaker, in connection with the consideration of the appropriations for the Federal Power Commission some mention was made of the relative progress of our development of hydroelectric resources in comparison of that of Soviet Russia. In this connection, Maj. Gen. E. C. Itschner, Chief of the Corps of Engineers has given to the Congress a report on Russian activities in water resource developments. This report is a most authoritative statement of the accelerated Russian progress in this field. We can justly take pride in our own accomplishments in the water resource developments. However, General Itschner's report makes clear that we have no justification to be complacent and certainly we should not underestimate the achievements of the Russians. In view of the interest expressed on this point, and under unanimous consent, I insert excerpts from General Itschner's report in the Appendix of the RECORD.

The Chief of Engineers report follows:

STATEMENT BY MAJ. GEN. E. C. ITSCHNER, CHIEF OF ENGINEERS, U.S. ARMY, BEFORE SENATE COMMITTEES ON INTERIOR AND INSULAR AFFAIRS AND PUBLIC WORKS, FEBRUARY 18, 1958

Mr. Chairman, the U.S. Army Corps of Engineers is concerned with Soviet water resource development as part of our overall military engineer intelligence mission, and also because we are interested in how the water resource development and flood control mission, which is one of our principal missions in the United States, is performed in other lands.

Much of our information is obtained from Soviet sources. The Soviets are proud of their accomplishments in this field and publicize them widely. Sometimes the task of coordinating and interpreting the facts and statistics is difficult and confusing, and we do not always have all the detail we would like. For example, it is all but impossibe to measure their efforts in monetary terms. Nevertheless, I believe we have enough information to give this committee an evaluation of Soviet accomplishments, progress, and programs in the water resource field.

SUMMARY OF SOVIET STATUS

The Soviet water resource effort is demonstrating to the world what can be done in this field by well-considered, long range planning and a willingness to make sacrifices in present standards of living in order to achieve the goal of a great future industrial development. Indeed, the Soviets have given water resource development a priority second only to the development of heavy industry designed to support military programs. This fact must be viewed in the light of Secretary Khrushchev's statement: "We declare war on the United States in peaceful production. * * * We will win over the United States." Thus they have openly challenged us to a competition for world economic dominance. Obviously, in view of the priority given it, they regard their race against us in water resource development as a key contest in this competition for world supremacy.

I would like to summarize for you how the race stands today.

In hydroelectric power development, the Soviets already approach us in total installed capacity and have individual projects under construction that far exceed any American project in capacity.

In inland waterway navigation, they have projects that rival ours, and plans that probably surpass ours, though the amount of navigation on their waterways is less than that on American waterways.

In irrigation, the types of development are considerably different, but the Soviet effort is roughly comparable to ours in scope. They have bigger projects than ours, and they probably are irrigating new acres at least as fast as we are.

In other aspects of water resource development, such as flood control, water supply, and recreation, they do not have projects equal to ours but appear not to need them at this time.

Their engineering, vessels, and construction, allowing for their different circumstances, appear to be equal to ours.

Their power equipment and engineering, in items like generators and transmission lines, are excellent, and they are superior to ours in a few characteristics.

The most remarkable fact about the Soviet water resource effort is its rate of growth At the end of World War II much of the European portion of the Soviet Union was devastated. Their major programs have been accomplished largely within 10 years—the bulk of them, in fact, within the past 5 years. The economic and strategic import of the Soviet water resource effort is most significant. The Soviets are basing the creation of new economic provinces, including new industrial and agricultural complexes, squarely upon multiple purpose river development plans. And they are using water resource development as a means of dispersing industrial and othe strategic installations throughout their vast domain—an area three times as big as the United States.

SOVIET ENGINEERING CAPABILITY

I shall try to summarize the Soviet achievement in each of the principal fields of water resource development; but first, by way of background, I should like to describe certain general characteristics of their work, to indicate the caliber of capability they apply to the solution of their problems, and, by way of illustration, to describe briefly some of their engineering programs.

Most Soviet water resource projects are multiple purpose. The hydroelectric function receives emphasis and priority, but generally the gigantic Soviet power developments are associated with equally huge navigation or irrigation projects.

The Soviet Union does not have concentrations of population like we do along our eastern seaboard. Further, the short warm-weather season in some of the most populated areas relegates water recreation to a relatively minor position. Where needed, as in the Moscow area, water resource projects embrace both water supply and recreation.

Soviet demands for building materials, including concrete, are great. Consequently they lean toward building very large earth and rock fill dams, using concrete only for critical portions such as locks, spillways, and powerplants.

Most major Soviet rivers flow through generally flat terrain. Gradients are gentle and there are few gorge-like dam sites. Consequently, long, high dams are often required to provide the necessary heads. Seasonal variations in flow are great, and this also requires large reservoirs. Many project sites, particularly in the European part of the Soviet Union, consist of a high bluff on one riverbank and a wide flat flood plain on the opposite bank. This has required the Soviets to develop engineering techniques for the construction of earth dams several miles in length, in addition to reinforced concrete powerplants, spillways, and navigation structures. Their engineers also have had considerable difficulty with poor foundation conditions. According to their own accounts they have never had a failure; but we know of at least one project that encountered serious difficulties because of improper allowance for or handling of ice jams.

The wintry climate of the U.S.S.R. creates considerable construction difficulty during most of the year, but the Soviets have shown marked ingenuity in dealing with this handicap. In particular, they have employed advanced techniques for minimizing delays in the placing of concrete in cold weather.

Soviet technology has proven itself to be completely adequate to meet technical problems in the water resource field. In the earliest phases of the effort, before World War II, their progress depended on technological advice and equipment from Western nations, and some projects were built only by harsh exploitation of forced labor. Today, however, large projects are planned, engineered, and equipped entirely from within the Soviet Union. They are staffed by workers receiving premium pay rates, and there is very little, if any, use of forced labor.

Because of Soviet accounting, allocation, funding, and monetary procedures, it is meaningless to evaluate the Soviet effort in monetary terms. Ostensibly the program is financed through the sale of bonds to the public. Some 6 years ago the government launched its seventh bond drive since World War II. The goal of that one drive was to raise the equivalent of $7 billion for water resource work. The program has grown since then. However, money ostensibly made available for water resource development is often diverted to other purposes.

They do not have to face some costs that we must face—notably the cost of land acquisition. Ownership is vested in the government and all land disposition is under its sole control. Villages and towns in an area to be inundated can be arbitrarily moved to higher land or eliminated. For instance, before filling the Kuybyshev Reservoir on the Volga River, the entire city of Stavropol', with a population of 25,000, was moved to a new site, and several river ports, notably the one at Kazan', had to be completely rebuilt.

Flood control as we know it is a minor problem in the Soviet Union. The spring floods are regular and high, so there has been very little settlement in the flood plains of rivers. The large reservoirs built for river flow regulation in connection with other functions also inherently serve to a certain extent a flood control function.

When a reservoir impignes on a developed urban area, dikes are erected, and some of these dikes are several miles long and incorporate new river port installations. Otherwise, few levees have been built on river banks, and throughout the country most of the rivers are in their natural state over most of their courses. There is little use of training works to improve channels or stabilize banks, and little or no use of cutoffs, to shorten transit distances on meandering rivers.

As to the quality of Russian engineering, a British technical delegation recently inspected some of their projects and reported: "Russian engineers are not lacking in engineering ability when dealing with the varied problems met in river control and development works. * * * They have been most successful with the projects they have attempted and they are obviously backed with sufficient technical know-how and experience to enable them to deal with any difficulties or troubles which may arise." The quotation is from a series of articles which appeared last September in the British technical publication Engineering.

Soviet construction has now reached levels of technique and scope nearly equal to those of the United States, and it must be expected to accelerate during the next 10 to 15 years.

To illustrate the kind of work they are doing, I will mention a few representative Soviet projects.

The Kuybyshev project on the Volga River has a plant with 2,100,000 kilowatts installed capacity, generated by 20 vertical Kaplan turbines with turbine rotors 30½ feet in diameter operating under a normal head of 63 feet. By comparison, the 18 turbines at America's largest power plant, Grand Coule, have a combined rated capacity of 1,944,000 kilowatts. Thus the rated capacity of the Soviet generators is 108,000 kilowatts, the same capacity as those at Grand Coulee Dam. Actually the American generators have been operated for long periods of time considerably above their rating, so it is quite possible that the two generators have about the same real capacity. The turbines at Grand Coulee, which has a 340 foot head, are of the Frances type and therefore are much smaller than the Russian turbines. The largest Kaplan type of turbines in the United States are those at the Dalles Dam on the Columbia River, which are 23½ feet in diameter. They drive generators which are rated at 78,000 kilowatts under an 81-foot head.

This dam is composed of earth dam sections located between powerplant and spillway, and between spillway and a by-pass canal. These dams total 9,184 feet in length and have a maximum height of 164 feet. By comparison, Fort Peck Dam, the largest in the United States, is 21,026 feet long and 250 feet high. The concrete spillway at Kuybyshev Dam is 3,280 feet long and has 38 65-by-33 foot vertical lift sluice gates handled by three 250-ton traveling cranes. It is designed to pass a flow of 1,412,000 cubic feet per second of water. By comparison, the Fort Peck spillway has a capacity of 250,000 cubic feet per second, regulated by four diversion tunnels and 16 40-by-25-foot gates. The bypass canal at Kuybyshev Dam consists of two pairs of locks and an intermediate basin, plus appurtenant canals and basins upstream and downstream. The locks are 100 by 1,000 feet which compares with the 110-by-1,200 foot size of the largest American barge locks. I cite these statistics to indicate that the Soviets are building works comparable to ours in all aspects.

Some other interesting Soviet projects include four dams notable for their length—Dneprodzerzhinsk Dam, on the Dnieper River, over 12 miles long; Tsimlyanskaya Dam, on the Don River, 8.7 miles long; Gorki Dam, 8.7 miles long, on the Volga River, and Kremenchug Dam, about 7 miles long, on the Dnieper River. These are all completed or under construction.

Two super power dams, both well underway, are Krasnoyarsk Dam on the Yenisey River and Bratsk Dam on the Angara River. Krasnoyarsk Dam will be a concrete structure 2,300 feet long blocking a V-shaped mountain valley. It will have 4,004,000 kilowatts installed capacity—double the biggest American plant—and will include a vertical ship elevator which will lift vessels 370 feet upward to a metal trough. This trough will cross over a railroad line and open into the reservoirs. Each of the generators at this dam will generate 286,000 kilowatts as compared to 108,000 kilowatts for the biggest American generators.

The Bratsk Dam is a 3-mile earth dam ending in a massive concrete spillway and powerplant in a deep rock gorge. The plant will have 3,840,000 kilowatts capacity, derived from eighteen 213,333-kilowatt generators.

One of the better known Soviet projects is the Volga-Don Canal, which connects the Black and Caspian Sea Basins, and permits the Soviets to build submarines in large inland shipbuilding yards along the Volga River. This waterway was built between 1949 to 1952. From the Volga, a canal extends 63 miles westward to the upper end of a 160-mile-long reservoir on the Don River impounded by an earth dam nearly 9 miles long and about 150 feet high. Power from the 160,000-kilowatt powerplant is used to pump water from the reservoir to the summit reach of the canal for operation of the locks. There are 13 locks, all modern and highly ornamented. The reservoir and powerplant also furnish water for the irrigation of nearly 5 million acres of semiarid land to the south.

Another noteworthy project is the 75-mile Moscow-Volga Canal, built during the 1930's. This canal has very large locks, 100 by 1,000 feet and 18 feet deep over the sills. In other words, they are almost as big as the locks now under construction on the Ohio River, but are deeper than our newest Ohio River locks which have 15 feet of water over the sills. The Moscow-Volga project also includes a 3-mile-long earth dam and a 30,000-kilowatt powerplant. Pumping stations raise water from the reservoir to the summit reach of the canal, which also serves as a reservoir for the Moscow city water supply. The project plan provides for pumped storage to help meet peak load conditions in the Moscow power grid, which is served mainly by thermal plants. Several of the project reservoirs have been developed for boating and bathing.

These examples will suffice to show the caliber of ingenuity and engineering which are being applied to Soviet water resource development. I have two tables here which I would like to submit for incorporation into the record, with your permission, Mr. Chairman. Table I shows the magnitude of construction work in two Soviet dams and one American dam. Table II compares certain major Soviet and American dams and powerplants.

Now I should like to summarize the Soviet accomplishments in certain specific fields of water resource development, beginning with hydroelectric power.

HYDROELECTRIC POWER

The total known capacity of Soviet hydroelectric plans over 10,000 kilowatts capacity, complete or under construction, is 25,883,188 kilowatts. This figure does not include 44 plants for which the capacities are not available to us. In addition, the Soviet Union has hundreds of small plants, built mainly to serve rural and agricultural needs.

By comparison, the total U.S. hydro capacity at the end of 1957 was 27,676,000 kilowatts, with approximately 10 million kilowatts more under construction. Thus right now Soviet hydroelectric development appears to be roughly equal to ours in amount. However, their rate of increase is greater than ours.

The United States has no plants completed which reach the 2 million kilowatt mark, although John Day Dam on the Columbia River, on which construction will start this year, will ultimately have 2 million kilowatts if sufficient upstream storage is developed to make this amount of capacity economically justified. It will have initially 1,200,000 or 1,400,000 kilowatts. Grand Coulee Dam, also on the Columbia River, has 1,944,000 kilowatts of installed capacity in two powerhouses, plus 30,000 kilowatts by house units. Considerable study has been given to the construction of a third powerhouse which would increase the capacity to close to 3 million kilowatts. The combined Canadian-United States Barnhart Island powerplant on the St. Lawrence River, rapidly nearing the power-on-the-line date, will have 1,880,000 kilowatts of installed capacity, half of which goes to each country. The new Niagara powerplant of the New York Power Authority, on which construction will commence this year, will have 2,190,000 kilowatts of installed capacity and thus will be, for some time at least, the largest U.S. hydroelectric plant.

But the U.S.S.R. has 10 plants ranging from 2 million to 6 million kilowatts, of which 1 is almost complete, 3 are under construction, and 6 are in planning or preparatory stages. One single plant, the Yenesey plant on the river of the same name, will have a capacity of about 6 million kilowatts, greater than the total capacity of all the powerplants at all the dams ever constructed by the Corps of Engineers, which now is 5,250,000 kilowatts. Just five Siberian plants will have a combined capacity half again as great as the total hydro capacity of all Federal projects in the United States, taking the Corps of Engineers, the Bureau of Reclamation, and TVA together.

For detailed reference, I would like to submit for the record two more tables. Table III is a list of all known Soviet hydroplants of more than 10,000 kilowatts, and table IV is a list of all U.S. hydroplants over a quarter of a million kilowatts capacity.

These Soviet achievements have been accomplished during a relatively short span of time, during which the construction program appears to have gathered a momentum which has not yet reached a peak. For instance, in 1956, hydroelectric power capacity was increased by 2 million kilowatts, three times the amount placed in operation in 1955. By 1960, a 170 percent increase is planned over the total available in 1955. The memorandum of the chairman to members of the Senate Committee on Interior and Insular Affairs, dated December 20, 1957, has further material on this point.

A major feature of Soviet power development is the construction of a national transmission grid which will bring electricity, generated sometimes at remote hydro sites, to industrial centers of the U.S.S.R. The beginnings of this plan have already been accomplished in the recent completion of the 2-circuit, 400-kilovolt, 3-phase alternating current transmission line between the Kuybyshev powerplant and the Moscow industrial area. One circuit is 506 miles long, the other, 559 miles. So far U.S. power operators have had no need to build lines of this length and voltage. One noteworthy Soviet line now under construction will bring Stalingrad power to the Donbas industrial area, 300 miles to the west. This line will carry 800 kilovolt direct current to an inverter substantion. Building this equipment required Soviet engineers to solve unprecedented electromechanical problems.

About 70 percent of all Soviet power is used for industry. Most plants of 10,000 kilowatts or more are already on the growing national grid, and consequently it is difficut to determine just what industrial development is associated with any given hydroelectric development. For example, more than half of Kuybyshev's power is being fed into the Moscow local network which serves the Soviet Union's greatest concentration of industry. The remainder is transmitted to Kuybyshev, Saratov, and the Urals to supplement the output of other powerplants in serving the oil, steel, and other industries. The new plant at Irkutsk, though only partly complete, is already serving a growing aluminum industry in central Siberia and is also providing power for electrified sections of the Trans-Siberian Railroad.

The Soviet achievement in hydroelectric power is of great economic and political value to the Soviet Union and the cause of world communism. Soviet coal deposits are generally of poor quality and often must be hauled great distances by overburdened rail lines. Many of their thermal plants burn peat fuel. Consequently, Soviet fuel costs are higher, and the hydro powerplants are of even greater relative value to the economy than in the United States. Since the same situation is also true in many other parts of the world, the Soviet achievements are of great interest in such areas. These achievements are receiving great stress both in

Soviet technical literature and in propaganda aimed at Asian and Middle Eastern countries. The engineering features are described in detail, and installations have been proudly shown to teams of visiting engineers from countries all over the world including some from the United States.

Address by Hon. Thomas S. Gates, Jr., Secretary of the Navy

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Secretary of the Navy, the Honorable Thomas S. Gates, Jr., Navy League Convention, Philadelphia, Pa.

I am here, in Philadelphia, to keep a promised rendezvous with my friends of Philadelphia and of the Navy League of the United States.

As I do so, my active duty in the Navy is coming to an end.

Out of the past comes a treasured Navy experience. It began early in 1942 at Quonset Point, survived the years of World War II, was marked by a hiatus as a Reserve officer on inactive duty, and finally carried into the official responsibilities of these almost 6 years in Washington.

With about 10 years of active duty and a high percentage of grown-up life involved, it is tempting to look backwards. With the years the stories always grow better, the risks of battle greater, the memories less sharp, and it is emotion that speaks for what has been. With it all, the shared experiences make deep friendships deeper.

Out of tradition, experience, frustrations, and sometimes success could come an attitude of pride, satisfaction, and a tendency to live well with what has happened.

Unfortunately, greater knowledge and the troubled difficulties of today breed restlessness, a seeking for something better—even perfection.

When you have been exposed to a lot, sit inside the family, see the flaws, the weaknesses, and then overstate them to yourself, you expect too much and you cannot look behind.

The work undone, the better answers, the greater service, the possibilities, and the stakes you play for—all scream out and say "Look ahead." Emerson said, "Hitch your wagon to a star." We are reminded to beware of false prophets—not to believe the crystal ball, and everyone knows there are risks that go with pure idealism.

Tonight, I am going to let the chips fall. I do so in hope that I can be helpful. I do so as I reach the beachhead of so personal a D-day.

It is not to banish hope, but to achieve realism that we seek to penetrate the clouds that hang low over our country. Peace we hope for and believe in, but it will be an uneasy peace. The basic concepts of cummunism will not change quickly—if at all. The United States has no thought of varying from the ideals of freedom on which this Nation was founded. No true partnership can be built between these directly conflicting philosophies. Temporary arrangements might be made, from time to time, in mutual self-interest, but a partnership requires more substance.

The struggle between two great power bolcs and two great religions of the spirit will stay about as it is for years. The intense effort of trying to convince and win the respect of the uncommitted rising people of many lands will go on and on in extra innings. This we must accept and learn to live with.

The U.S.S.R. will continue to probe and test our determination and our will.

As an essential part of this forecast, we will see an indefinite requirement for strong military services, large defense spending, alert and combat-ready forces in being, with which to back up our foreign policy.

The need will continue and grow for more enlightened American leadership, foreign help to those less fortunate—a need to travel, to see, to talk the languages, to invest, experiment, to gamble, and to sell.

In such a world environment what is the blueprint for the blue uniform of the Navy and for the blue water it sails?

Can we write the music for this blueprint in blue today and have it strong, fresh, bold, and imaginative for tomorrow?

I believe we can write it and it is worth writing. It will come from sources old and loved.

Perhaps it will sound harsh and too modern, but the discords will mellow with time. They may even fit the tastes of tomorrow.

The blueprint and the music will not be exact. They will change as others contribute, but we need a modern version.

This we do know: Future power and military strength will include inevitably a U.S. Navy.

By itself, the momentum of history will recognize this. We must add to the traditionally proven value of free oceans the new power of nuclear propulsion, the new requirements for sea-based offensive hitting power, the new accent on free world treaties and friendships, the new studies of the oceans with the research required not only for the military uses, but for the benefit of mankind. Therefore, it can and will be a very different Navy.

What it turns out to be is largely—almost entirely—in the hearts and hands of the Navy itself. The Navy must determine its own destiny. It must accept and exploit the great changes around us.

The structure for this exploitation exists and is very fine. So are the people. There is inherent greatness within the Navy and it has been proven and tested many times, in many places.

However, if in our preparation for the future, we are influenced by self interests; if we tend to divide internally into traditional blocs of interest; if we continue to jealously watch the other services and to resist change, it is not going to be a very good destiny. Such a navy will not command public confidence and respect or gain the great support it will need to do its job. This job can succeed, remain undone, or fail. If it fails, the loser is the United States, and with it the free world. The great battle in which we and our children are engaged will be over. The failure will be in the American system of which the Navy is a product. We are a proud and prime example of its success. Thus it is conceivable that we can cause its collapse. The Navy has a free choice—will it lead or will it drift?

If the Navy chooses the way it must, there is much to be done.

The future will demand more than ever that the strength of decision and unity of purpose must lead objectively in military policy, and must survive all of the peacetime pressures toward an isolated America. The Navy must not stand in concrete—neither must it drift—it must forge ahead.

Decisions of our Government are difficult and complex. They can be made only by those with a knowledge of economic, financial, political, and military factors. Military decisions must include all of these factors. Thus the Navy must, within itself, contain such knowledge so that it can govern its future actions accordingly.

This will require even greater moral leadership and courage, solid unity, self-discipline, and dedicaton to purpose, out of which can come a better national defense. If these require change, then change must be accepted and the Navy must contribute, or better still, lead. This can occur, can be accomplished and we can still maintain the identity and integrity of the naval service. The Navy has within itself the capacity to do these things if emotion is directed toward national objectives and if attitudes of strong men become compatible and the work they do is oriented to reflect a new and shared spirit.

Some of the tools required to accomplish such unity of spirit and action will differ as we go down the road, and in general, they will involve some changes in pattern from today.

For example, we should not focus on differences with the other services, but rather learn from them, help them, and work with them. We might buy some of their strong convictions.

The horror and destruction of a major nuclear war between the U.S.S.R. and the United States, together with the mutual suicide it would produce, makes such a war unthinkable. But if deterrence fails and both sides strike, how could either side last very long?—and what will be the aftermath throughout the surviving world after the major power centers have been demolished? Therefore, for the detailed planning work we do, I can only agree in the theory that supports the concept of immediate and total destruction of the homelands of both adversaries. But some can rationalize forever that such a concept is not valid. I vote we agree on it as commonsense.

By the same token, we should drive home to the other services and the public, the real possibilities of limited war, and of the inevitable continuance of the cold war. People in all places should be made aware of the unchanged Communist objectives for world domination, of their plans to create chaos and disorder, of their attacks against weak spots, especially against rising new and uncommitted nations.

The deployed fleets of the Navy, together with their embarked and ready Marine landing forces, are the Nation's most evident and effective response to these tactics.

The Navy and Marine Corps, in particular, must retain their capacity to handle these limited wars. They must have the equipment and men in being, on the spot and physically and mentally combat ready.

The cold and limited war problem is not simple, but it is vital to understand. In a limited war situation, the Navy must maintain a capability to use either nuclear or conventional weapons to the controlled degree necessary to achieve the objective. More funds are required for this purpose. More accent on its importance is needed. This support will have to come from the elimination of certain of the very expensive mass-destruction, single-purpose weapons systems which have a priority of claims against our national resources. The Joint Chiefs of Staff continue to struggle with divided opinions as to the emphasis to be placed on various systems; and the Secretary of Defense continues to struggle handicapped by traditionally divided service opinions. The kind of constructive, objective teamwork that enabled us to win wars would help him. Again, good sense argues for understanding and agreement. Intelligent answers can be found within the informed minds of the best of our military and civilian officials.

I believe the Navy should put its contribution to the Nation's general war deterrent/retaliatory capability, primarily into missiles, based underseas. This, except for warning and reconnaissance, would place the carrier

forces in the business of limited war where they excel and, in fact, are the best and often the only practical way to handle a limited war situation—and also in ASW, where naval air will long remain an indispensable member of the team.

Once this was decided, ship characteristics, equipment, and weapons should be adjusted for the mission.

We should ask scientists and industry to help us with fresh thinking on our long-range objectives and on our weapons systems.

We should establish a long-range planning group that will possess a clear identity and independence. Its composition should include scientists and persons from industry and academic life, along with naval officers with recent operational experience. This group must enjoy a close and continuous relationship with American universities and industry. It should possess its own funds with authority to contract for studies by outside organizations. Furthermore, it must be able to recruit the best qualified persons both from within and outside the Navy for short-term work on special projects.

The conclusions of this long-range planning group should not be diluted by the opinions of others, but should flow directly to the Secretary of the Navy and the Chief of Naval Operations and the Commandant of the Marine Corps, who can later consult with anyone they respectively may choose.

We have learned from past experiences that whenever a group of such men is brought together, there are temptations to divert them to currently urgent tasks. Such a group should remain free to pursue long-range thinking and planning and not to be drawn into the mill of everyday work. Today, we can pause and well use some intelligent reflective thinking in the midst of the tumult of so vast a transition. Thinking of this sort will mix intelligence, international relations, and foreign policy into planning, and will enable us to establish balanced building blocks for our future. From there we can obtain guides for the design of our systems. Perhaps then we could design the best surface ship for offensive operations and the best possible series of systems to face up to the great challenge of Soviet submarines and Soviet sea-based missiles.

A long-range plan so produced can do more if it is objective and is based, as it must be, on a sound understanding of the needs of national defense. It can make a major contribution to the advice so urgently needed by the Secretary of Defense. With such a plan in hand, the Secretary of the Navy and the Chief of Naval Operations could have considerable constructive influence, and thus the Secretary of Defense and our total defense effort would be better served.

The Navy is going to have to become more single-mission minded in its ships and weapons. New designs must place an accent on a single job. The jack-of-all-trades no longer makes sense, nor can we afford him. The world has changed with present and future weapons, and the old multimission purpose is outmoded.

The difficulties and doctrines of ASW, attack, air defense, electronic war, or amphibious operations, all demand their special purpose systems. We are moving in this direction now and we will move faster.

The demand for more nuclear powered ships, more specific weapons systems, and more emphasis on research will continue to cause great changes.

Much of what will be done will involve our people—civilian and military.

There will continue to be significant changes in our shore establishment. Older, less useful installations must be closed. There will be many consolidations, as demands for different skills make themselves more apparent.

The management of the shore establishment will require precise, careful planning, and expert handling, and all actions, within it, must be accomplished with reason and in complete fairness.

Our military people should develop stronger leadership and educational programs as the emphasis on quality grows. The new Navy will require that most officers receive some measure of post-graduate training. With this will come more specialization and more continuity for line officers within a speciality.

Career patterns should be reviewed and changed to include more stability in work. Concepts for promotion must change to reflect this so that longer assignments, and assignments back and forth from sea to specialty, more related to individual ability, carry with them equal chances of promotion.

Selection boards must be instructed to recognize these factors.

Our officers must now compete and contribute to the work of many staffs. There is the Joint Staff of the Joint Chiefs of Staff, the staffs of unified commands, and staffs vital to the business of defense and of our international relationships.

Other officers must work with the design and operation of the advanced technical aspects of new systems.

As we explore space, delve under the ice and the oceans, live with the startling advances of science, and share the work of command and foreign policy, our officers must become scientists, economists, ambassadors, as well as sailors.

This can never be accomplished with the short tours of duty or the constant rotation systems we have followed in the past.

More education, stability, and expertness, is a certain requirement for the future Navy, and equality of career opportunity must accompany it.

Our enlisted men need better stability also. Our deployments keep them away from home long months. These deployments should be reviewed and better standardized, if possible.

However, when they return home for their time of shore duty, we can definitely improve their stability of assignment.

If we need to abandon one of the echelons of commands now considered so essential to our readiness to do this, then it would be worth exploring.

Longer deployments than those planned seem inevitable under continued conditions of tension, but men properly led will accept this for the good of their country. We can help them on shore duty by letting them stay in one place and leaving them literally ashore and in one place longer.

The other services can learn some things from the Marine Corps in this respect. Their pride of service is the best of us all.

The Marine Corps can improve, become better integrated within themselves, the Navy, and Defense. Their single-mindedness is good and bad. The Navy and the Marines must share their respective faults and virtues and move together into the future, as I am sure most sailors and marines want to do.

I trust you who are close friends and a part of the Navy family, share with me the certain belief that our Navy today is strong and competent. It is sound and true and sails the seas with confidence and pride. It has absorbed enormous changes and still has some growing pains.

The technical advances have been profound and have come upon us quickly. They will continue and we will ride well with them.

Over the years, I have made many speeches that have outlined our missions within the framework of our national defense. I have always praised the great dedication and purpose of the Navy and Marine Corps. These speeches told the truth, and I stand behind them today just as I did when I made them.

Tonight, there is no difference. In the serious ventures of national defense we seek to do more and to do it better. All of my associates share this view. All are aware of the possibilities to improve as I have outlined them. All are working for these goals.

No one could ask for better associates both military and civilian. The teamwork and friendships of these relationships will be a treasured experience always. Such support can come to only a few in one lifetime. I can only humbly thank all hands of the Navy for such confidence. Included must be the men who have worked with me, briefed me, driven me in cars, transported me in boats, planes, and helicopters, and patiently shown me what they were doing in naval offices, installations, and ships all over the world. I want to thank General Pate and Admiral Burke in particular for a most unique working relationship and devoted partnership. General Pate has reached the age when he must retire, and unfortunately he leaves us in January. Nothing could be better for us all as a nation than to know that Admiral Burke will continue to serve as Chief of Naval Operations and remain on the Joint Chiefs of Staff.

No one will ever come into the Office of the Secretary of the Navy better qualified than Secretary Franke. His long experience, painstaking work, keen knowledge and deep devotion to public service will lead the Navy on into a wiser and better future.

To him and to my other civilian partners I owe everything, and they are the truest friends I will ever possess.

I have deep friendships also in the Navy League. Constantly during my time in Washington you have helped me. I am grateful to you one and all. The Navy League has now grown up, and a Forrestal dream has come true. It has been my privilege to watch this happen. Your future is assured and I wish you well as you continue to give us and our fellow citizens the benefit of your informed, independent advice and wisdom in the best interests of a strong Navy and a strong defense.

It has been said that service in the Navy is based largely on emotion. I think this is so. It is the deep love of the sea and of service on it that makes its role both unique and difficult to understand. Unless you have done it, you can never share this emotion. It is more important than organization, than staff work, than shuffling the papers of a big department wisely.

But emotion cannot be subdivided.

The Navy must be a cross-section of American life, but it need not be a mirror of that life.

Always it must strive higher—in keeping with its great obligation and the trust which it holds in its hands for our future.

Threatened Veto of TVA Self-Financing Program

EXTENSION OF REMARKS

OF

HON. LAWRENCE BROCK

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. BROCK. Mr. Speaker, last week the majority of the membership of this House voted for a legislative program that would permit the TVA to operate on a sound financial basis and institute a self-liquiding plan, while retiring the original investment. TVA would also pay interest on the outstanding balances. This legislative action should have

warmed the heart of the most ardent conservatives but to me it meant at last putting the TVA on a sound business basis. On this subject, I can readily speak with a voice of experience in the operation of public power systems.

Before coming to Washington, I served for a year as president of my own Nebraska public power district. I also served for some years as vice president of the Nebraska REA. This classifies me as a stalwart in defense of sound public power investment and operations. I feel that we passed a substantial piece of legislation last week. It certainly was a workable bill and should ultimately benefit the taxpayers of the Nation.

Under permission to extend my remarks, I place in the RECORD an editorial published in the Sunday issue of the Washington Post. This editorial is very timely and echoes the sentiment expressed by the majority of this House when passing the TVA bill last week:

HOBBLES FOR TVA?

The repeated administration warnings that the President would veto the Tennessee Valley Authority self-financing bill if it came to him in the form just approved by the House can mean only that Mr. Eisenhower is supporting those foes of public power who want to throttle TVA. The restrictive amendments which the President wants and the House denied him would give the Treasury, the Budget Bureau, and TVA foes in Congress the authority virtually to nullify the usefulness of the self-financing features of the bill. Would a Budget Bureau which has consistently refused to approve new direct appropriations for needed expansion of TVA power plants be any more likely to approve bond issues for the same purpose? It seems unlikely.

If, on the other hand, the administration is concerned only with putting TVA on a business-like basis, capable of standing on its own feet and meeting its own capital requirements, the House bill amply provides for it. For the first time, TVA would be obliged to pay interest on the outstanding Federal investment in its power facilities as well as to continue to retire that investment. For the first time, TVA would be legally restricted to the area it now serves, which does not even include all of the Tennessee Valley. The Authority's bond issues would be subject to a congressional veto and the Treasury would be able to delay the issues as much as 90 days to fit them in with its own financing program if this seemed desirable.

What more could the most conservative friend of the TVA ask? The inference can only be that those who are asking for more hobbles are not TVA's friends.

Missouri River Basin Projects

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a letter received from Gov. Orville L. Freeman, Governor of Minnesota, and a resolution adopted April 15, 1959, by the Missouri States Governors regarding the necessity for going ahead on projects already planned and programed for the Missouri River Basin:

ST. PAUL, MINN., *May 7, 1959.*

The Honorable ROY W. WIER,
Congress of the United States
House of Representatives,
Washington, D.C.

DEAR ROY: I am enclosing for your consideration a copy of the resolution adopted by the Missouri States Governors at their April 15 meeting, regarding new starts on projects in the Missouri River Basin.

If we are to have proper and expeditious development of the natural resources of the Missouri Basin, we can ill afford to postpone projects already planned and programed. I hope, therefore, that you will give your support at this session of the Congress to this bipartisan effort.

Sincerely,

ORVILLE L. FREEMAN,
Governor.

RESOLUTION ADOPTED APRIL 15, 1959, BY MISSOURI RIVER STATES COMMITTEE AT COUNCIL BLUFFS, IOWA

We the Missouri River States Committee, consisting of the Governors of the States of Iowa, Colorado, Kansas, Montana, North Dakota, South Dakota, Minnesota, Missouri, Nebraska, and Wyoming, comprising one-sixth of the area of the United States of America, in meeting assembled, do hereby adopt the following resolution:

"Whereas the Missouri River States Committee, created in December of 1941, was organized for the express purpose of securing flood control, irrigation, navigation, power development, and related improvements of the entire Missouri River Basin; and

"Whereas through the efforts of the Missouri River States Committee and other groups, the Missouri Basin project was authorized by Congress in the year 1944, and

"Whereas during the 15 years since that time substantial progress has been made in meeting the objectives of flood control, navigation, water supply, and power development and, to a lesser degree, irrigation and other improvements, and

"Whereas the orderly development of natural and human resources of the Missouri River Basin is impeded and severely handicapped by the 'no new starts' policy, and

"Whereas said 'no new starts' policy impairs the economic strength of the entire country by preventing the development of natural resources in the basin as an investment in the future welfare and security of the United States as a whole, and

"Whereas the construction of planned projects would strengthen the economic base of this region and of our whole country at a time when full development and use of our national resources are urgently needed in the struggle between the free world and the areas of the earth dominated by Communists: Now, therefore, be it

"*Resolved*, That this committee urge the Congress of the United States to implement its authorizations of reclamation and flood control and other projects by appropriating the necessary money for the initiation of said projects; and be it further

"*Resolved*, That this resolution be forwarded by the chairman of the Missouri River States Committee to the Honorable CLARENCE CANNON, chairman of the Appropriations Committee of the House of Representatives of the United States, and the Honorable CARL HAYDEN, chairman of Appropriations Committee of the Senate of the United States."

The Case for Productivity

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. HIESTAND. Mr. Speaker, a very able editorial by Engene P. Conser appeared in the Realtor's Headlines for March 16. I believe it might well be considered by all Members and, under unanimous consent, I include it in the RECORD:

THE CASE FOR PRODUCTIVITY

(By Eugene P. Conser)

Realtors as a group are progresaive in their thinking and in their actions. They are developers, expansionists, optimists. They don't believe in standing still. There must be growth, activity, transfers of property if they are to prosper. To them, therefore, restrictions on business are anathema. It is difficult to sympathize with any governmental act which tends to impose restraints on business. This is why realtors find it difficult to be sympathetic to restraints upon inflation. We like the effects of a little inflation. We don't like the higher cost of money that is an effective major tool to curb inflation.

As a result of this very natural response to the restraints which counter-inflationary measures impose, there is considerable economic thinking now reflected in Congress that the Government should act to further increase productivity, growth and expansion in the economic world. This reaction would be most acceptable if it were not for the fact that proposals are for increased Government participation, increased Government spending, increased Government control, and increase Government subsidy in the process—and in the name—of creating greater productivity. Unfortunately, the result can only be further restraints upon business, competition with business, higher costs, more spending, increased taxes, and—undoubtedly—more inflation.

Many a realtor has watched families create substantial estates; they also have watched families foolishly spend themselves into bankruptcy. If there is one difference between the family and Government, it is only in the fact that Government has unlimited capacity to incur debt. With the family, creditors eventually catch up with it.

We could suggest to the Congress methods by which it might help create greater productivity, encourage expansion, and add to the growth of business. For example:

1. Demonstrate by performance that you no longer will play Santa Clause to every facet of American life that seeks a financial subsidy from the Federal Treasury.

2. Insist that any authorization for spending—whether by grants or loans—from the Federal Treasury, clear through a single source. How else can you create fiscal responsibility?

3. While subsidies—through grants or loans—now are being given, adopt a policy of gradual reduction of such subsidies. Pledge the good faith of the Government to such a program—just as previous Congresses have so pledged the payment of subsidies for years into the future.

4. While Government is engaged in the lending of money, require that loans be made at self-sustaining rates. Any agency using Government capital should be fully repaid by the borrowers within a reasonable term of years.

5. Avoid extending Federal supervision (and subsidy) into areas of local incentive and local competition.

6. Base foreign aid upon insistence that credit machinery be created which will bring local currencies out of hiding and make the local economy self-sustaining rather than dependent indefinitely upon U.S. capital.

7. Break the power of racketeers who force either management or employees into exerting involuntarly economic restraints contrary to the public interest.

8. Establish a formula for annual payments on the public debt and pledge the good faith of the Government to raise the taxes necessary to adhere to such payments.

9. Adopt a formula for gradual long-term withdrawal of restraints upon international trade, serving notice upon business, industry, and agriculture that in this rapidly shrinking world neither the United States nor any other country can long maintain arbitrary restraints or subsidy among nations any more than similar restraints between our States would have been practicable a century ago.

These are not easy decisions to make. But they are the decisions that must be made if this country is to continue expanding productivity and avoid deterioration in the value of its currency.

Remarks of Catherine Curtis at Annual Meeting of the Texas Co.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mrs. ST. GEORGE. Mr. Speaker, Miss Catherine Curtis, president of Women Investors Research Institute, Inc., recently attended the annual meeting of the Texas Co. in New York City.

Her remarks on this occasion were brief, but certainly to the point. I believe they can be read, pondered and inwardly digested with considerable profit by many persons, both in and out of Congress:

Mr. Chairman, Mr. Foley, and the official Texas Co. family, I come to you each year, as you know, from Washington, and I enjoy the meeting each year a little bit more than I did the year before. I would like to congratulate you on this meeting, on your comments, on your report.

But as I sit here and listen to the stockholders, I just wish some of them could go to Washington and sit in on the committee hearings and sense the feeling, the attitude of some Members of the Congress regarding stockholders and industry generally.

Of course, we know in countries where socialism was in the ascendancy, that the attacks were always made upon business, upon big business, and that is what is happening in this country today. There is a group in Congress which wants to make the oil industry a public utility. There is another group that wants to divest you of your pipelines. There are other groups that want to push you into higher tax brackets—control your prices and your production.

So it makes little difference how excellent our company's management is, how capable, how courageous, if our representatives in Washington have the power to tax away our property, to control our industry, and, in every way possible, to prevent it from natural, normal functioning.

You hear the most amazing plans put forth. There is one idea being promoted on the Senate side right now that the price of products is too high, because the dividends paid to stockholders are too high.

They cleam we should have smaller reserves or none at all. In other words, they recommend that prices be cut, dividends be cut to a reasonable amount and if a company needs money for expansion or replacements it should be forced to go into the marketplace and borrow—or should sell more stock. I don't have to tell you what a program like that would mean to our big corporations and to our stockholders.

You know, we hire a maid or employee, and we keep track of her. We watch what she is doing. We don't let her steal our food, if it is a maid, but we pay no attention to our Congressman in Washington. I think the time is long past due when we have got to keep just as much track of our representatives in Congress as we keep of our household servants, and that means writing them, calling them on the phone, writing letters to newspapers, to let them know that we know what they are up to, and let them also know that stockholders are not so-called bloated bondholders, but are voters.

They are not big business. They are little people who own anywhere from 5, 10, to possibly a hundred share of stock on average. These holdings are often in the hands of people, in older years, to whom the income and the security of capital means a great, great deal.

I don't want to talk too long, but if we, as stockholders, would just augment the efforts management has made to protect the interests and assets of our company, I think we would be doing a great service not only for our company, but for our country. Thank you so much. [Applause.]

Maj. Gen. A. J. Drexel Biddle, Adjutant General of Pennsylvania, Calls for a Stronger Army

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by Major General Biddle at a meeting of the Baltimore chapter of the Association of the U.S. Army at Fort Meade, Md., on April 24, 1959:

ADDRESS BY MAJ. GEN. A. J. DREXEL BIDDLE AT MEETING OF BALTIMORE CHAPTER, AUSA, FORT MEADE, MD., APRIL 24, 1959

It is both a privilege and an honor to join this fine turnout.

I believe in the Association of the U.S. Army. I believe in its objectives. I believe in its membership's including officers, noncommissioned officers, enlisted men, and civilians.

And, I believe in the necessity for an organization to remind all of us that the Army is indeed the keystone of national defense.

I regard active membership in this vigorous and forward-looking association as an opportunity to serve not only the association—not only the Army, but our country.

In this period of our national life, it is perhaps risky to begin a sentence with "what's good for," but I am willing to take that chance, by emphasizing the fact that what's good for the Army is good for national defense. I am confident the association is good for the Army. This indeed is an organization that we can all support without reservation.

And, just as the association is good for the Army, so it is good for the members of the association.

I know you'll all agree that our people are entitled to enlightenment on our country's position, in relation to the rest of the world.

Well, the association of the U.S. Army believes in the importance of informing the people of the facts—and, you may be sure, the members of the association may count upon being kept posted on significant developments.

The need for the association becomes more evident each day.

It is the firm belief of many military students that the Army has been cut too drastically, too quickly. And the association has done much, through its local chapters, and nationally, to apprise Congress of this condition. Both Houses, as you know, have held out for 900,000 instead of a proposed 870,000.

National headquarters of the association is greatly interested in the Baltimore chapter—and you may be sure that we shall be ready to cooperate in every way possible toward helping you grow.

It would be appropriate at this point, I think, if I were to touch on a subject that's close to all our hearts—one that requires the greatest degree of perseverance and patence, and, at the same time, the exercise of sustained vigilance—namely, our search for peace.

Our consideration of the matter, I think you'll agree, calls, at once, for a restatement that a search for peace is, indeed, a solemn purpose, prayerfully shared by all Americans—and that what we seek, is an enduring, honorable, and just one, consonant with our indestructible faith in freedom, under the guidance of God.

But, under the conditions of our times, the price of peace is vigilance. And, inextricably linked with vigilance is a military posture second to none. Anything less would not be good enough. For, in war, there's no such thing as second best. Only if we planned and prepared for the worst, could we afford to be optimistic.

Whether we like it or not, we are now committed to a race for survival.

What we are striving for is tranquility of mind. We hold that people should not be compelled to live in fear. Rather, that they should be allowed to live in peacefulness, and to devote their talents, their time, and their efforts to satisfying the needs of mankind, and to getting on with the furtherance of our Nation's progress.

Certainly, it is our devout wish to bring about these conditions, and it is our desire that there not be overlooked any opportunity for discussions, which might conceivably lead to an honorable accommodation of differences between ourselves and our allies, on the one hand, and the Soviets on the other.

Yet, each time we have offered to engage in talks which, at the outset, might have seemed to open the way toward this end, the leaders of militant communism have deliberately placed some stumbling block in the way. The record shows that the Soviets have reneged openly on every important agreement reached at the 1955 summit conference in Geneva.

A disturbing feature of Moscow's unceasing diplomatic offensive is its overbearing nature. In its arrogance are a total indifference to the rights of others, and a confidence in subversion, deceit, and blackmail. This insolence finds expression in such phrases as "We will surpass you," "We will outproduce you," "We need no God." And now it's "Get

out of Berlin." This has been followed by Khrushchev's contemptuous offer of terms which add up to "heads, Moscow wins; tails, you lose."

We've seen where the conciliatory and generous approach of the past landed us. The Berlin crisis is an outgrowth of the West's misplaced faith during World War II in the productiveness of postwar cooperation with the Soviets. Unfortunately, it was this attitude that led to agreements which set the pattern for the occupation of Germany, and for much of the subsequent developments.

We've found that the masters of the Kremlin will not negotiate on an honorable basis of seeking to eradicate differences and reaching an understanding. What they seek is surrender on the installment plan. To them negotiation is a tactical technique to insure unceasing conflict. From their standpoint a global settlement, prior to attaining their objective of world preeminence, would be inconceivable. There are no signs that the Communists are prepared to relinquish their territorial or ideological imperialism.

The prospect of fruitful results from the pending Foreign Ministers' Conference and proposed summit discussions is far from bright. But as long as the proposed discussions might bear some promise of useful results, the exercise of our best efforts would seem to be indicated.

While it would be in keeping with our nature to be hopeful of useful conclusions, it would only be good sense to insulate our hopes with a generous degree of cautiousness.

So, whether we may expect to achieve peace in our time the kind of peace we insist upon is a matter of conjecture.

But, in the meantime we are faced with the serious business of furthering the development of our country—and we must be allowed to get on with this job. But to be able to do so, we urgently need time, and a psychological climate conducive of the greatest possible degree of confidence and tranquility of mind.

I strongly believe such a climate is an absolutely attainable objective, but to attain it, we need a sustained military posture of such strength, as to deter the Soviets from further meddling in free world affairs.

We've been recently assured about our current capability of defeating the Soviets in a war. We've been told that our deterrent power is massive and adequate.

As we all know, it has been through the moneys appropriated in the past several years, that this formidable position has been attained.

But what now concerns many is whether the appropriations of the present will be sufficient to enable our deterrent to continue effective in the next several years to come.

This concern stems from statements indicating the possibility of our accepting a position of inferiority in the missiles field, within the next several years. For, it is believed that the increasing arrogance of the Soviets would be apt to find considerable stimulus from any evidence here of a willingness to concede them a lead. They might be more than apt to interpret this, not only as a sign of complacency and weakness, but even as an invitation to attack.

It is, moreover, felt that if conditions, 6 or 8 months ago, were such as to render this policy practical, it is rapidly being overtaken by developments. One has only to follow the trend of pronouncements from Soviet sources to appreciate their increasing exploitation of their ICBM capability, as an instrument of blackmail.

The transition from bombers to missile-readiness is admittedly an expensive ordeal. For, maintenance of an indisputable posture that is essential during this critical period necessitates not only readying our required long-range missile capability, but, at the same time, providing what it takes to keep up the great striking force of SAC. But I believe that, if our people were fully informed of the vital importance to our national security of these two factors, and of keeping abreast of the Soviets in the missiles field, they would be willing to foot the bill—even if it required extra taxes.

The new look, you may recall, was designed to acquire a greater bang for the buck. This implied, of course, a greater dependence upon nuclear weapons. But it also implied that, as the cutbacks in manpower and materiel of the Armed Forces took place, they would be compensated by the placing of an adequate number of medium and long-range missiles in the hands of troops trained for their use.

Yet, the questions that arose in the recent congressional debates, and in subsequent press releases, would seem to reflect considerable doubt on this score—yes; widespread doubts as to whether adequate operational nuclear potential had been actually achieved to compensate for the cutbacks already effected, as well as for those presently under consideration.

And, there appears to be considerable apprehension lest these cutbacks in our modernized conventional warfare potential might prove too heavy to allow for the desirable degree of balance between nuclear and modernized conventional potential. And, what is troubling a lot of people, is that in the very services that go to make up our mixed retaliatory capability, some are reportedly suffering from deficiencies; others from obsolescence.

One had only to follow the recent congressional debates to perceive how they reflect the concern of a people not kept fully informed, and consequently rendered uneasy by such reports. This, among other reasons, is why it was so important that steps were taken very recently to assure our people, our allies, and potential enemies, of our present military invincibility—and why it was so necessary that our military authorities took occasion to publicly underline this fact.

As matters had stood up to the point of these recent publicly voiced assurances by our governmental and military authorities, we had already received Moscow's answer as to what value it erroneously placed on the strength of our defense posture in relation to its own. That answer had come in the form of Moscow's insolent ultimatum concerning Berlin.

Maybe the Soviets are trying to play a pair of deuces like a royal flush, but I'm sure many of us learned from unpleasant experience, as we grew up, that a bully does not threaten unless he is confident he can get away with it. Nor, when he gets set to go places, does he wait around for his opponent to get himself into shape.

You see, it's not just a case of our knowing we have what it takes to break the back of the potential enemy, but of our having enough to convince him that he's flirting with massive burial, when he threatens us.

It seems to me that Krushchev's fresh wave of arrogance reflects not only his confidence in communism's own military prowess, but even a potentially dangerous miscalculation of our military capability, and our will to trigger it, if necessary.

Indeed, for him to assume he could get away with an attack, or with his demands for surrender on any given issue, would be just about as dangerous as if he possessed the actual capability.

Miscalculation has triggered other wars. And, here we are dealing with a headstrong, fanatical master of a totalitarian state, whose agents, as in the case of Hitler's agents, would go far to avoid crossing up the wishthinking of their boss.

In the early thirties, when Hitler was rattling his tanks and his bombers, and helping himself to one country after another, much confused, naive, and in some cases, timid thinking found expression in the view that "you could do business with Hitler."

Just as today, while Khrushchev is rattling his missiles, there is an audible refrain that "you can negotiate with Khrushchev." The idea is, of course, that such a price should be paid Khrushchev; as to persuade him to abstain from starting a shooting war over Berlin. Yet, strangely enough, there seems to be no evidence of insistence that he grant anything in return. Far from being a give-and-take policy, this would be all give, and no take.

There's been this same kind of fuzzy, timid thinking that's given voice to criticism of our military authorities, for having publicly emphasized our capability of defeating the Soviets in war. It would seem that these critics, prior to sounding off, might the more usefully have considered the circumstances against the overall picture. For, published discussions, and things that have been brought to light in the recent congressional debates on military matters, had given rise to such doubts, both at home and abroad, concerning our military posture, that it was high time we heard from our competent, professional military minds.

This was necessary to boost the confidence of our own people and of our allies, and to keep the respect of our potential enemies.

I hardly need point out that two highly important factors in an effective intelligent foreign policy is prestige, the reputation for unchallengeable power, and the ability to so advertise this power position as to make the desired impression abroad. Prestige attains its ends, when the nation enjoying the reputation both for power and for keeping the use of it within bounds, can forward its foreign policy without having to resort to the use of that power.

There were times in our history when our prestige was permitted to sink to such a low point that the ground was cut from under our foreign policy, and our vital interests were placed in danger—even to the point of leading to miscalculation on the part of the enemy.

I have in mind two examples, one, prior to our entry into World War I, when the military power of the United States was held in contempt by the German Government, and two, prior to our entry into World War II, when the Japanese attack at Pearl Harbor implied contempt for our military strength—and when further scorn was manifested by declaration of war on the United States by Nazi Germany and Fascist Italy.

History and experience serve to emphasize that there's but one way to insure against such miscalculations, and that is a continuing posture of such strength as to enable us to impress upon our potential enemies that an attack would result in unacceptable consequences.

As I see the picture, in Berlin, we are looking down the muzzle of a gun—and with Moscow playing for keeps. What is more, Khrushchev seems to have gotten himself out on a limb concerning this issue, but without provision of a ladder, upon which to step down, if necessary. It's a situation very similar to that created in April 1939, by Hitler, concerning the Polish Corridor and Danzig. You may recall that, when Hitler designated Nazi-German control over the Corridor a must, he failed to provide a ladder of escape.

Then, too, the Middle East is again figuring increasingly as a target of Soviet aims. And this means, of course, that while we are dealing with the problem of Berlin, Moscow is exploiting nationalism on the one hand, division, on the other, throughout that critical area.

Perhaps it would be well to refresh our perspective. So—let's run over Moscow's and its Allies' objectives.

As I read the current picture, in its full meaning, the Berlin ultimatum, the deliberate incitement of trouble in the Middle East, the Communists' seizure of Tibet and the forces build-up on the Communist mainland opposite Formosa, and now the Communist machinations in the Caribbean, are all related, and form a multipronged threat as part of the global strategy of the Moscow-Peiping Axis to gain world domination.

Their long range aims are to gain control over the land masses of Europe and Asia, that contain the greater part of the world's population, and a large share of its resources; this, with a view to isolating and preparing for an eventual showdown with the United States.

At this stage of the game, Moscow seeks to stabilize and gain Western recognition of its control over the captive countries in Eastern Europe, which comprise its World War II booty. At the same time, Moscow seeks such an agreement on Berlin as to enable it to seal off the prayerful hopes of these captive peoples.

For this reason, and because Moscow desires to firm up and quiet the Soviets' Western front while Soviet political, subversive, and possibly military forces go to work on the Middle East, Moscow seeks a withdrawal or reduction of the weight of Western political influence and military forces along the Iron Curtain—and this would significantly include the elimination of West Germany as a military component of the North Atlantic Alliance.

Meanwhile, Moscow aims to gain control over at least the bulk of Mideast oil, and thus gain a throttle-hold over Western Europe with its largely oil based economy. It would thereupon attempt to exploit this advantage toward forcing Soviet terms on Western Europe, which would importantly include the liquidation of NATO, and any of our overseas bases in which Western Europe is concerned.

So if it were only the Berlin situation we had to contend with, it would be bad enough. But, there are many signs that presage further crises during the coming months—and these may include renewed harassment in the Far East.

When I previously emphasized the continuing importance of the role of the Army, I meant, of course, ground forces, armed with tactical nuclear weapons, capable of waging modernized conventional warfare.

It is my belief that, until such moment as the potential enemy might venture—either prior to, or during hostilities—to risk suicide by a restort to massive strategic nuclear attack, the most effective means of defending free world positions—and this also applies to intervention in conflicts of potentially limited scope—rests in well-integrated forces, which importantly include the Army.

If, in Berlin, the potential enemy were to advance with forces far outnumbering our own garrison and those of our allies, a resort might very well be made to massive strategic nuclear warfare.

In at least the early stages of massive strategic attack, and counterattack, the exchanges would be taking place at great distances apart, and over the heads of the armies in the field.

It would, then, mean that the allied armies, equipped with tactical nuclear weapons, and acting in coordination with the air and naval forces, would have to bear the brunt of preventing the enemy's hordes from marching to the Atlantic seaboard. Then, too, there would be clashes in other areas outside the main theater of operations—and here again the ground forces, integrated with air and naval forces, would have to stem the tide.

Besides, our action in Lebanon demonstrated that military intervention in a conflict of potentially limited scope, does not necessarily entail the danger of general war.

After all, what renders this, as well as defending free world positions by well-integrated forces feasible, and what restricts the potential enemy's selection of battle methods, is the capability of our massive strategic retaliation. And, it is recognition of this vital fact that points up the necessity of a sustained unchallengeable missile deterrent—and, until this is attained, SAC kept fully up to scratch.

We may never use it, but we must have it in the wings, and this, meanwhile, applies equally to the maintenance of our Strategic Air Command at its maximum capability.

In order to convince the enemy, it may take more than we know to be enough to defeat him. Yet, it would be better to possess this convincing capability and not have to use it, than to possess any less, and perhaps have to use it.

Now a word about Khrushchev's economic challenge. Were the Soviets sincere about this, and if it were for honest profit that would contribute to the individual well-being of the Soviet people, it might conceivably be a case of peaceful, economic competition between the two sides.

But, unfortunately, it would boil down to the conduct of business for political action, aimed at disruption of free world economy. It would mean that whenever Moscow felt it could undermine the free world markets, it would dump its slave-produced goods—even if needed for domestic consumption.

Labor represents about 75 percent of the cost of the manufactured goods we sell overseas. But, because of Moscow's control of slave labor, it does not have to take into consideration this labor cost.

A further sinister device, to which they resort, is to purchase and dump goods, produced elsewhere. Through their dumping last year, the Soviets disrupted the tin market, and among others, the market for Egyptian cotton in West Germany, and the market for aluminum, notwithstanding their domestic shortage of that metal.

Moreover, it would be hard to believe that the Berlin ultimatum, dated as it is for late May, was not calculated, among other things, to work a hardship on ours and free Europe's economy, by damaging the European tourist trade, and American business concerns servicing this trade.

As economic war heats up in intensity, questions are apt to arise concerning the prudence of buying goods produced largely on the backs of slave labor—and of permitting our opponents to cash in their mainly slave-produced gold at $35 per ounce, only to have those same American dollars used to support economic warfare against us.

It is significant I think that, while preparing his 7-year plan, Khrushchev has been boosting his nuclear potential and modernizing his conventional warfare potential. In a recent interview with a distinguished representative of the American press, Khrushchev implied his concern lest an economic conflict might lead to a shooting war. And he may well be right. Who is capable of making a water-tight prediction, one way or another, on this score? Just as the Western allies eventually found it in the interests of their survival to stop Hitler, so the day may come when the free world will have to take positive action to halt the cold war.

Meanwhile, in the conduct of world affairs, it is essential that we remain steadfast to moral principles, and firmness in our position—and, that we beware lest, among those who advocate flexibility, might be some, whose purpose is the false bargaining of appeasement.

Hence, a continuing preeminent military capability, and the will to trigger it, if need be, are basic to the effective forwarding of our foreign policy.

These are the elements that enable the kind of long-range planning that obviate resort either to an ad hoc procedure in the realm of foreign policy, or to the crash job in the military domain.

These are the elements that must be standing at the alert behind the chairs of our diplomatic negotiators. This is the only language the Soviets understand.

A Veto of the TVA Bond Bill Will Question Ike's Sincerity

EXTENSION OF REMARKS
OF
HON. FRANK A. STUBBLEFIELD
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. STUBBLEFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following most penetrating analysis of the threatened veto of the TVA self-financing bill, which appeared in the Louisville Courier-Journal on Sunday May 10, 1959:

A VETO OF THE TVA BOND BILL WILL QUESTION IKE'S SINCERITY

House passage of the TVA self-financing bill constitutes a hard Democratic challenge to the President on the issue of public power, and it is not a challenge the President can regard lightly. The bill is by any standards a moderate one, watered down to meet the objections of TVA's private-utility foes. And if the President vetoes it because it does not give the Treasury and the Budget Bureau control over TVA bond issues, as GOP congressmen are now warning that he will do, he will call into question the sincerity of his own prior statements concerning TVA and its welfare.

This is not an ideal bill, for TVA or for the States that benefit from its operation. The punitive, vague, troublesome and pointless provision in the bill restricting TVA to its present service area, does deep injustice to Kentucky and many of its towns. Forbidding TVA to use bond finances to serve customers outside its present territory does not hurt TVA, which can use all the power it can get within its present area. But it is a grievous blow to several Kentucky towns and counties which have fought for years to make themselves eligible to receive TVA power.

Great quantities of electricity generated at Barkley Dam will flow southward to be used by TVA. But under this bill, none of this power can be used by people past whose farms and towns it flows. The small city of Monticello has worked for years to get TVA low-cost power but will now be unable to do so, though TVA powerlines from Wolf Creek Dam run within 2 miles of Monticello's city limits. Part of Fulton will be eligible to receive TVA power; the rest of the city will not.

Despite this bad provision, however, this is a good bill, and its passage and approval will be welcomed by the TVA and the cities, farms, and industries that depend on the valley agency for electricity. It ends a 5-year deadlock in Congress over the expansion of TVA power production, for under present law, new plants can be built only with money voted by Congress, and Congress has consistently refused, since the advent of the Eisenhower administration with its pro-private power bias, to vote such funds. But power demands in the valley have been in-

creasing at the rate of 12 percent a year, not counting the increased demands by atomic energy plants and other Federal agencies in TVA territory. Obviously, something must be done or these people will not have enough electricity to go around.

This bill would solve the problem by giving TVA authority to issue revenue bonds, to be retired by its own power revenues, with which new powerplants might be constructed. It limits TVA to issuance of $750 million of such bonds, and requires it to come back to Congress for further authority in 5 years. It also requires TVA to notify Congress and the President in advance of power construction financed by bond funds, and to consult with the Treasury on terms, conditions, and timing of bond issues. Congress will have 90 days in which to reject each proposal, and the Secretary of the Treasury can delay each bond issue 90 days if he wishes.

DID HE MEAN IT?

The failure of President Eisenhower to approve this mild bill will seriously discredit his statements, made during the campaigns of 1952 and 1956, that he favors the welfare of TVA. The President has already raised the question of the sincerity of his remarks by appointing to the TVA Board of Directors men who were openly hostile to the ideas on which TVA is based. And if he now vetoes this bill because it does not give the Treasury and Budget Bureau control over TVA bond issues, as some fear he may do, he will only substantiate the charges of TVA supporters that he is trying to destroy TVA for the benefit of private power companies while posing as its friend.

Giving Treasury and Budget power of life and death over TVA finances would be the equivalent of appointing Russia to guard West Berlin. Both are dominated by investment bankers openly biased in favor of private power companies and openly hostile to TVA. It was in Treasury and Budget that the infamous Dixon-Yates contract was written. Neither has approved a TVA power appropriation since 1953, despite the growing need in the valley.

The cynical surrender of TVA and its people to foes such as these will ill become the leader the the great crusade. And it will only afford the Democrats another issue in the coming campaign.

Four Decades of Service

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of May 5, 1959:

FOUR DECADES OF SERVICE

The community will join with the Evangelical United Lutheran Churches of West Nanticoke and Slocum in extending best wishes to the Reverend A. Ward Campbell on the occasion of his retirement after devoting 44 years to the ministry. He and his wife will reside at Slocum Corners.

Nanticoke and Plymouth Township are indebted to him for service beyond the call of pastoral duty. He played a leading role in such organizations as the American Red Cross, the Council of Civil Defense, and Mental Health Committee, establishing himself as a good citizen and neighbor as well as a spiritual leader.

As president of the Nanticoke Ministerial Association for two terms, chaplain of Ransom Convalescent Home and a prominent figure in Pennsylvania Masonry, he further exemplified the ideals of a life dedicated to God and humanity.

That his extracurricular activities were appreciated was demonstrated when personal friends and appreciative fellow townsmen reciprocated by contributing generously when his church was destroyed by fire and a new edifice was erected.

As a son of the late Reverend W. J. Campbell, former conference superintendent, he came by his zeal and talents naturally.

Recommendation of Cooley Committee for More Effective Spectrum Management

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. HARRIS. Mr. Speaker, on March 27, 1959, there was transmitted to the Congress a report and recommendations of the Special Advisory Committee on Telecommunication, commonly known as the Cooley Committee after its Chairman, Victor E. Cooley. In addition to Chairman Cooley, the Committee consisted of the following individuals: W. Preston Corderman, major general, U.S. Army, retired; Frank G. Kear; Irvin Stewart; William G. Thompson.

The Cooley Committee submitted its report and recommendations on December 29, 1958, and its recommendations included a draft bill calling for the establishment in the Executive Office of the President, of a three member National Telecommunications Board to assist the President in the discharge of his responsibilities with regard to telecommunications and radio spectrum management.

Mr. Speaker, I introduced today the draft bill recommended by the Cooley Committee so that that bill may be considered by our committee together with other proposals previously introduced relating to spectrum studies and spectrum management.

Mr. Speaker, in order to permit all interested persons and Members of Congress to study the recommendations of the Cooley Committee, I would like to insert at this point the report of that Committee:

REPORT OF SPECIAL ADVISORY COMMITTEE ON TELECOMMUNICATION DECEMBER 29, 1958

LETTER OF TRANSMITTAL

DECEMBER 29, 1958.

Hon. LEO A. HOEGH,
Director,
Office of Civil and Defense Mobilization,
Washington, D.C.

DEAR MR. HOEGH: We have the honor of sending to you for transmittal to the President the report and recommendations of the Special Advisory Committee on Telecommunication as called for by your letter of November 4, 1958, creating the Committee and setting forth its mission.

Since the initial meeting of the Committee which you convened on November 18, we have reviewed the administrative organization and procedures currently in force dealing with day-to-day matters relating to telecommunications management within the executive branch and the growing demands for frequency assignments by both government and nongovernment applicants. We have also considered the broad overall methods of allocation of the radio spectrum and the assignment of radio frequencies as well as the availability of desired frequencies. The results of our considerations are embodied in our report which you requested be completed and in your hands prior to January 1, 1959.

The Committee is unanimous to recommending to you the conclusions reached in its report.

Respectfully submitted.

W. PRESTON CORDERMAN,
Major General, U.S. Army (Retired).
FRANK G. KEAR.
IRVIN STEWART.
WILLIAM G. THOMPSON.
VICTOR E. COOLEY.
Chairman.

INTRODUCTION

The telecommunication systems of the United States are essential to the national security, to the safety of life and property, to international relations, and to the business, social, educational, and political life of the country. As such they are one of the Nation's most valuable assets in peace and provide vital and essential support in the prosecution of war.

The President in recognizing the importance of telecommunications declared in his letter to Speaker RAYBURN dated July 28, 1958, that "changing technology along with changing needs in Government and nongovernment areas present problems in the telecommunication field which require searching examination. The situation is becoming no less complicated by prospective developments in satellites and space vehicles as well as defense weapons systems. Thus it has seemed to me that a fresh examination of the role of the Federal Government in this field would be desirable."

The concern felt by the 85th Congres was indicated by the Senate's adoption of Senate Joint Resolution 106 establishing a Commission to investigate the utilization of the radio and television frequencies. This resolution was approved with amendments by the House Committee on Interstate and Foreign Commerce but did not come to a vote in the House.

Industry's concern was evidenced more than a year ago and reaffirmed this year through the adoption of a resolution by the Electronic Industries Association calling for a study of the spectrum. Nongovernment users of the spectrum, for example the broadcasters, have indicated a need for additional channels in certain frequency ranges not now available.

While landline and submarine cable facilities are capable of expansion almost without limit, such is not the case with the radio spectrum. There is only one such spectrum, the usable band of which extends in the present state of the art to about 30,000 megacycles—a frequency of about 30 billion cycles per second. This figure may give the impression of an inexhaustible supply, but unfortunately all parts of the spectrum are not equally usable. Different parts have different characteristics, many being very useful while others have little or no current application. In consequence, requests for frequencies having the most favorable characteristics are of sufficient volume often to cause an excess of demand over supply.

The importance of efficient use of the spectrum is emphasized from a national security standpoint by the expanding need of

radio channels in the Department of Defense. Not only have all branches of the military become increasingly dependent upon spectrum use for communications, but the engineering design of space vehicles and many of our most modern weapons makes the use of radio channels essential to their operation and direction. Also urgent is the increased need of frequencies for modern airplane operation, and other important services are equally demanding.

The demand for radio frequencies has been growing steadily since the early 1900's. At the time of the Berlin Radio Conference in 1906 the usable radio spectrum comprised about 500 kilocycles of space. Currently nearly 40 million kilocycles of space, or about 80,000 times as much, is allocated in the United States, of which about 15 million kilocycles is used so intensively that it has become difficult to satisfy new requirements. The increase since the beginning of World War II is about two-hundred-fold and since the Korean action began is about fourfold. Thus it is vital to the welfare and security of the country that the radio spectrum be efficiently and effectively used.

With the foregoing in mind, and being aware of his responsibilities in this field, the Director of the Office of Civil and Defense Mobilization, on behalf of the President, created the Special Advisory Committee on Telecommunication to review the role of the Federal Government in the management of telecommunications. The text of the Director's letter is attached as appendix A.

In view of the study given the subject in recent years, the results of which are available, the committee felt it was not necessary to hold hearings to determine the existence, nature, and scope of the problem assigned to it. A review of past studies in light of the current situation was undertaken. The discussion and recommendations which follow are based on this review.

OUR CURRENT MECHANISM

The Government of the United States has from time to time established agencies to deal on a continuing basis with various aspects of telecommunication management which includes radio, landline, and submarine cables. As the use of telecommunications has grown, with the Government itself a major user, existing Government mechanisms have required and will continue to require adjustment and strengthening.

The Communications Act of 1934, as amended, gives to the President the responsibility for assigning radio frequencies to the Federal Government agencies, and to the Federal Communications Commission the responsibility for assigning frequencies to commercial and private users, including State and local governments. Thus the law establishes a dual control over a single national resource. Additionally, the act vests in the President wartime authority over all telecommunications.

The necessity for a mechanism to supervise and administer the Government's needs and uses of telecommunications was stressed by the report of the President's Communications Policy Board in 1951.[1]

The mechanism which was subsequently established on a minimal basis consisted of a Telecommunications Advisor to the President and a small professional staff. Later reorganization resulted in a downgrading of the office. This important work is now assigned to a numerically inadequate staff—about 12 people—under the direction of the Deputy Assistant Director for Telecommunications who reports to the Director of the Office of Civil and Defense Mobilization through the Assistant Director for Resources and Production. Thus it has no established source of high-level direction from executives knowledgeable in telecommunications.

Assisting the Deputy Assistant Director for Telecommunications is the Interdepartment Radio Advisory Committee (IRAC), a committee of Federal agency experts which affords technical guidance in the assignment of radio frequencies to Government agencies. This committee reports to the Director of OCDM through the Deputy Assistant Director for Telecommunications. The IRAC is primarily a group of coequal users and as such is not an appropriate group to act, nor does it act, as a policymaking or authoritative body.

The Federal Communications Commission which succeeded the Federal Radio Commission in 1934 regulates non-Government telecommunications, including the assignment of radio frequencies, with a staff of about 1,000 people. Administering the work of the Commission are seven Commissioners which give it a continuing source of high-level direction.

These various segments form our national regulatory and control mechanism of telecommunications.

CONSIDERATIONS LEADING TO A CONCLUSION

As inferred in the introductory paragraph of this report, the basic problem giving rise to the appointment of this committee is the fact that in certain parts of the radio spectrum the demand for frequencies has become greater than the supply, and the further fact that the trend in volume of applications, both government and nongovernment, for frequencies in specific bands indicates that the situation will grow progressively worse.

Although it has been possible to date through piecemeal compromise on the allocations and assignments of radio frequencies to satisfy most requests in a workable manner, it is plainly of great importance to our national security and welfare that the mechanism of allotting and assigning frequencies, particularly in the government field, be reviewed and strengthened to the end of assuring the most effective use of a scarce but essential national resource.

A consideration disquieting to many is the fact, as mentioned earlier, that the law establishes a dual control over the radio frequency spectrum, the President having responsibility for government use and the Federal Communications Commission for nongovernment use. Thus there is no individual, agency, or board invested with the responsibility for the effective use of the radio spectrum as a whole.

In reviewing the structure as it has evolved the committee was continuously struck by the absence of adequate provision for high-level consideration on the Government side of a variety of matters of vital national importance in the area of telecommunications. The Federal Communications Commission provides a vehicle for adequate consideration in the non-government area. In sharp contrast, as indicated earlier, decisions in the area of government use or of conflict between government and nongovernment use, are often made by compromises at the operational level by staff members, who though competent in their fields, do not necessarily have the total picture of national interest. There is also an unfortunate absence at present of anyone in the executive branch with adequate knowledge, experience, and stature to act for the President in these matters and there is not available therein an organization adequate to accumulate the information and experience upon which to base sound action.

CONCLUSION

In the opinion of the committee any sweeping change in the regulation and control of telecommunications by the Government, and in the legislation therefor, should be considered only after extensive study and the development of a well-thought-out course of action. The committee does feel, however, that in advance of such a study, certain immediate steps can and should be taken to strengthen the executive branch side of telecommunications management.

It has been suggested that additional powers in this area might be given to the Federal Communications Commission. To give such powers to the FCC would present a number of difficulties. That body is fully occupied with its regulatory and assignment functions in the nongovernment field. The duties needing attention, including the allocation of frequencies to Government agencies, call for a different type of operation than is required in an agency concerned with the regulatory problems of nongovernmental users. It would also seem inappropriate to give the FCC the power to act in matters affecting the executive agencies or responsibilities relating closely to national defense or foreign affairs. These are areas of decision which belong to the President and should be his prerogative to delegate. Because of these considerations the committee believes that these broad discretionary functions can best be discharged and the strengthening best be accomplished through creation of a board within the executive office of the President to act for and be answerable to the President in the carrying out of his responsibilities under the Communications Act.

The type of responsibility which is contemplated should, we feel, be vested in a board of three rather than in a single individual. A wisely constituted board can bring a variety of experience and points of view to the problems with which the United States is confronted in the area of telecommunications, and we believe that the desirable diversity of viewpoints can be achieved with three properly selected individuals.

The new Board would necessarily be privy to the plans of all agencies it serves, for both present and future use, under an assurance of complete security for all information which it receives. Its decisions would have a bearing upon war plans and upon the production of vast quantities of civilian and military equipment. It would introduce a positive planning factor into decisions which are now being made on the basis of insufficient information as to present plans and probable future developments, scientific and otherwise.

The Board should undertake studies of the kind and intensity of use of currently assigned frequencies; acquaint itself with the present state of both military and civilian operations and research which may have a bearing upon the future demand for frequencies; prepare itself to suggest areas in which additional research might be undertaken in the light of probable future requirements, both civilian and military; review the international telecommunications situation with a view to strengthening our international posture; and keep continually under examination the entire field of telecommunications in order to advise the President of any actions which it thinks he should take to advance the public interest.

The type of organization we have in mind would have the following characteristics:

1. It would be established by Congress at the request of the President.

2. It would be established in the Executive Office of the President at a level to give it direct access to the President and to the heads of Government agencies using telecommunications.

3. It would have its own staff to the extent necessary to assure both the objectivity of the information upon which it acts and the unbiased character of recommendations based upon that information.

4. It would have the authority to require any Government agency to produce any information within its field of interest and

[1] Telecommunications—A Program for Progress.

to provide any assistance which it believes necessary to a proper decision.

5. It would have continuity to facilitate the development of long-range policies.

6. It would be an agency with no responsibility for the operation of any telecommunications.

7. It would not disturb the present functions of the Federal Communications Commission, including that of determining which applicants shall receive assignments within bands set aside for nongovernmental use.

MEASURES RECOMMENDED

Recommendation in summary

It is recommended that a Board be established through legislation requested by the President in order to provide the President with the means of discharging his responsibilities in connection with national telecommunication resources, including the Government's use of the radio frequency spectrum.

A draft bill designed to accomplish the foregoing recommendation by establishing a National Telecommunications Board is attached as Appendix B.

A draft Executive order designed to establish mobilization planning responsibilities for the Board is also attached as Appendix C.

ESTABLISHMENT OF A NATIONAL TELECOMMUNICATIONS BOARD

There should be established in the Executive Office of the President a National Telecommunications Board which reports directly to the President. The Board should consist of three members to be appointed by the President, by and with the advice and consent of the Senate. The Chairman should be designated by the President. Board members should receive compensation in accordance with prevailing scales in comparable Government bodies. The Interdepartment Radio Advisory Committee (IRAC) should report to and assist the Board in the performance of the Board's functions as the Board may direct.

Functions of the Board

The Board should assist and advise the President in the discharge of his responsibilities as President of the United States in connection with U.S. telecommunication resources to meet the changing demands of national security and welfare, and should act for him in the discharge of his responsibilities arising from the Communications Act of 1934, as amended, for management of the Federal Government's use of the radio frequency spectrum in such a way as to provide the optimum accommodation of present and foreseen future needs of national security, safety of life and property, international relations, and the economic, social, educational, and political life of the Nation and the general welfare of its people.

The Board should formulate telecommunication policies, plans, programs, and standards designed to assure efficient telecommunication management within the executive branch of the Government with due regard for the maintenance of sound and healthy commercial telecommunication services both domestic and overseas. The Board should coordinate the formulation of U.S. policies and positions within the executive branch of the Government for international negotiation and should assist and advise the Secretary of State in the projection internationally of U.S. telecommunication policies and positions. The Board should provide policy guidance for and direct the implementation of U.S. international telecommunication treaty obligations by the several agencies in the executive branch of the Government.

The Board should carry out such policy making, planning, and executive functions as are required for the discharge of the President's responsibilities arising from section 305 of the Communications Act of 1934, as amended, for the assignment of radio frequencies to Government stations or classes of stations. The Board should formulate policies, criteria, engineering standards, and procedures for the allocation and assignment of radio frequencies to the several agencies of the executive branch of the Government and for the use thereof. The Board should maintain or cause to be maintained suitable records of assignment of frequencies to Government users and the publication of lists of Government frequency assignments as appropriate.

The Board should, as a special duty, review the national table of radio frequency allocations being employed by Federal Government and non-Federal Government users. This review should be undertaken in consultation with the Federal Communications Commission to the end that a determination be made as to whether the current division of radio spectrum serves the National interest to an appropriate degree. The Board should make a report of findings to the President for transmission to Congress. The report should contain, in addition to the findings resulting from the review and the comments of the FCC thereon, such recommendations as may be considered desirable and applicable. The report should be made at the earliest date consistent with the task to be performed but no later than 2 years from the appointment and qualification of the Board members.

The Board should maintain continuing review of the national table of radio frequency allocations, coordinating with the Federal Communications Commission, for the purpose of ensuring an appropriate division of spectrum space between the Federal Government and non-Federal Government users. The Board should formulate, and coordinate with the FCC, the development of long-range plans for future use of the radio spectrum resource. The Board should encourage the operational application of new techniques, improved equipment and methods to promote a more effective use of the radio spectrum and to conserve radio frequencies.

The Board should, as a further special duty (1) study the role of the Federal Government in the management of U.S. telecommunications; (2) study the administrative organizations for discharging the Government's responsibilities with particular reference to the division of responsibility under the Communications Act of 1934, as amended, and the terms of the proposed bill; and (3) not later than 2 years of the appointment and qualification of the Board members, report to the President for transmission to the Congress the Board's recommendations on what changes, if any, should be made in the existing administrative organization.

The Board should carry out such other duties and responsibilities as may be directed by the President from time to time.

The Board should establish and maintain liaison as required with departments and agencies of the Federal Government and the telecommunication industry, including but not limited to the broadcasting, electronic, and communication services, with particular reference to research and development and new manufacturing techniques and capabilities, for the purpose of improving telecommunication services, the conservation of the spectrum, and for increasing productivity of the total resource. The Board should encourage research and studies in those areas where the need exists.

The Board should, in the formulation and promulgation of policies, plans, programs, criteria, standards, and procedures of national import, consult as appropriate with the Federal Government agencies.

Mobilization planning responsibility

The Board should also:

1. Formulate national telecommunication policies, plans, and programs designed to assure maximum security to the United States in time of national emergency with a minimum interference to continuing nongovernmental requirements;

2. Formulate plans for the adaptation of nondefense telecommunication services and facilities to the requirements of defense in a national emergency or war;

3. Direct and coordinate the development by the several agencies of the executive branch of agency plans, programs, and actions designed to carry out approved national plans, programs, and actions in an emergency;

4. Formulate plans and directives to provide for the control of telecommunications in a national emergency;

5. Formulate plans for the conversion of defense telecommunication services and facilities no longer required for defense purposes after an emergency to the purposes of reconstruction, rehabilitation and peace.

In order to avoid duplication within legislation concerning the mobilization planning function which is already a legislated responsibility of the Office of Civil and Defense Mobilization, it appears preferable to exclude this function from the draft bill and provide, in the form of an Executive order, for Presidential delegation of this planning responsibility.

APPENDIX A

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF CIVIL AND
DEFENSE MOBILIZATION,
Washington, D.C., November 4, 1958.

Mr. Victor E. Cooley; Maj. Gen. W. Preston Corderman, U.S. Army, retired; Dr. Frank G. Kear; Dr. Irvin Stewart; Mr. William G. Thompson:

On behalf of President Eisenhower, I write to invite you to serve as members of a temporary Special Advisory Committee on Telecommunication to the President and me. This committee is created to review the role of the Federal Government in the management of telecommunication and, based on such review, to make recommendations to me which I may submit to the President, on actions essential to improve the allocation, management, and control of radio and television frequencies for Government and non-Government use. It is thought the Administration should be in a position to recommend to the Congress that a Commission be appointed to advance specific recommendations in this vital field. Other persons invited today to be members of the committee are as listed on the attachment to this letter.

Our economy and national defense today are highly dependent upon the smooth functioning of our national telecommunication services. The rapidly changing technology and changing needs in Government and non-Government areas are presenting increasingly difficult problems in telecommunication management. The situation is becoming no less complicated by developments in satellites and space vehicles as well as defense weapons systems.

It would be genuinely appreciated if you will accept this invitation and attend the initial meeting of the committee on November 18 and 19, 1958, at 10 a.m. on November 18, in my office, room 100, Executive Office Building, 17th and Pennsylvania Avenue NW., Washington, D.C. It is my opinion this assignment will not be too arduous or require you to be away from your normal responsibilities an undue amount of time.

Because early action in the field is needed, it is my hope the committee will be able to complete its assignment and have its recommendations in my hands prior to January 1, 1959.

In the execution of your mission, you will receive the full cooperation and assistance of the Office of Civil and Defense Mobilization and other agencies of the Federal Government concerned.

You will be compensated for services rendered as a member of this committee as indicated on the attached transmittal sheet.

Your willingness to give us the benefit of your knowledge and experience by accepting this important assignment will be of great assistance in our effort to solve the many important problems in our communication services which is so vital to our Nation.

Sincerely yours,

LEO A. HOEGH.

APPENDIX B

H.R. 7057

A bill to provide the President with the means to discharge satisfactorily his responsibilities in connection with national telecommunication resources including the Government's use of the radio frequency spectrum

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Telecommunications Act of 1959".

NATIONAL TELECOMMUNICATIONS BOARD

SEC. 1. There is hereby established in the Executive Office of the President the National Telecommunications Board, hereinafter referred to as the "Board", which shall report directly to the President. The Board shall consist of three members to be appointed by the President, by and with the advice and consent of the Senate. The Chairman shall be designated by the President and shall receive compensation at the rate of $20,500 per annum. The other two Board members shall receive compensation at the rate of $20,000 per annum. All actions of the Board except those relating to internal administrative matters shall be by affirmative vote of a majority of its members. The Chairman shall be responsible for the internal administrative direction of the Board and its staff.

FUNCTIONS OF THE BOARD

SEC. 2. (a) The Board shall assist and advise the President in the discharge of his responsibilities as President of the United States in connection with United States telecommunication resources to meet the changing demands of national security and welfare and shall act for him in the discharge of his responsibilities arising from the Communications Act of 1934, as amended, for management of the Federal Government's use of the radio frequency spectrum in such a way as to provide the optimum accommodation of present and foreseen future needs of national security, safety of life and property, international relations, and the economic, social, educational, and political life of the Nation and the general welfare of its people.

(b) The Board shall formulate telecommunication policies, plans, programs, and standards designed to assure efficient telecommunication management within the executive branch of the Government with due regard for the maintenance of sound and healthy commercial telecommunication services both domestic and foreign. The Board shall coordinate the formulation of United States policies and positions within the executive branch of the Government for international negotiation and shall assist and advise the Secretary of State in the projection internationally of United States telecommunication policies and positions. The Board shall provide policy guidance for and direct the implementation of United States international telecommunication treaty obligations by the several agencies in the executive branch of the Government.

(c) The Board shall carry out such policymaking, planning, and executive functions as are required for the discharge of the President's responsibilities arising from section 305 of the Communications Act of 1934, as amended, for the assignment of radio frequencies to Government stations or classes of stations. The Board shall formulate policies, criteria, engineering standards, and procedures for the allocation and assignment of radio frequencies to the several agencies of the executive branch of the Government and for the use thereof. The Board shall maintain or cause to be maintained suitable records of assignment of frequencies to Government users and the publication of lists of Government frequency assignments as appropriate.

(d) The Board shall, as a special duty, review the national table of radio frequency allocations being employed by Federal Government and non-Federal Government users. This review shall be done in consultation with the Federal Communications Commission to the end that a determination be made as to whether the current division of radio spectrum serves the national interest to an appropriate degree. The Board shall make a report of findings to the President for transmission to Congress. The report shall contain, in addition to the findings resulting from the review and the comments of the Federal Communications Commission thereon, such recommendations as may be considered desirable and applicable. The report is to be made at the earliest date consistent with the task to be performed but no later than 2 years from the appointment and qualification of the Board members.

(e) The Board shall maintain continuing review of the national table of radio frequency allocations, coordinating with the Federal Communications Commission, for the purpose of ensuring an appropriate division of spectrum space between the Federal Government and non-Federal Government users. The Board shall formulate, and coordinate with the Federal Communications Commission, the development of long-range plans for future use of the radio spectrum resource. The Board shall encourage the operational application of new techniques, improved equipment, and methods to promote a more effective use of the radio spectrum and to conserve radio frequencies.

(f) The Board shall, as a further special duty, (1) study the role of the Federal Government in the management of United States telecommunications; (2) study the administrative organizations for discharging the Government's responsibilities with particular reference to the division of responsibility under the Communications Act of 1934, as amended, and the terms of this Act; and (3) not later than two years of the appointment and qualification of the Board members, report to the President for transmission to the Congress the Board's recommendations on what changes, if any, should be made in the existing administrative organization.

(g) The Board shall carry out such other duties and responsibilities as may be directed by the President from time to time.

(h) The Board shall establish and maintain liaison as required with departments and agencies of the Federal Government and the telecommunications industry, including but not limited to the broadcasting, electronic, and communication services, with particular reference to research and development and new manufacturing techniques and capabilities, for the purpose of improving telecommunication services, the conservation of the spectrum, and for increasing productivity of the total resource. The Board shall encourage research and studies in those areas where the need exists.

(i) The Board shall, in the formulation and promulgation of policies, plans, programs, criteria, standards, and procedures of national import, consult as appropriate with the Federal Government agencies.

(j) The Board is also authorized: (1) subject to the civil service and classification laws, to select, employ, appoint, and fix the compensation of such officers, employees, attorneys, and agents as shall be necessary to carry out the provisions of this Act, and to define their authority and duties; (2) to appoint such advisory committees as shall be appropriate for the purpose of consultation and advice to the Board in performance of its functions hereunder and to obtain services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55(a)), at rates not to exceed $100 per diem for individuals; and (3) to place in grades 16, 17, and 18 of the General Schedule established by the Classification Act of 1949, as amended, not to exceed ten positions which shall be additional to the number authorized by section 505 of that Act.

ORGANIZATION OF NATIONAL TELECOMMUNICATIONS BOARD

SEC. 3. The term of office of each member of the Board shall be six years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; and (2) the terms of office of the members first taking office after the date of enactment of this Act shall expire, as designated by the President at the time of appointment, one at the end of two years, one at the end of four years, and one at the end of six years. Two members shall constitute a quorum of the Board. Each member of the Board shall be a citizen of the United States.

ANNUAL REPORT

SEC. 4. The Board shall make an annual report to the President for transmission on or before the 15th of March of each year to the Congress, summarizing the activities of the Board for the previous calendar year and making such recommendations as it may deem appropriate.

TRANSFER OF RECORDS, PROPERTY, PERSONNEL, AND FUNDS

SEC. 5. The records, property, personnel and funds used, held, employed, available, or to be made available, in connection with the functions vested in the Director of the Office of Civil and Defense Mobilization by Executive Order 10460 of June 16, 1953, and Executive Order 10705 of April 17, 1957, shall be transferred, consonant with law to the Board.

APPROPRIATIONS

SEC. 6. There are hereby authorized to be appropriated such sums as may be necessary and appropriate for the carrying out of the provisions and purposes of this Act.

APPENDIX C

EXECUTIVE ORDER CONFERRING UPON THE NATIONAL TELECOMMUNICATIONS BOARD THE RESPONSIBILITY FOR MOBILIZATION PLANNING TO CONTROL AND REGULATE NATIONAL TELECOMMUNICATIONS IN AN EMERGENCY

By virtue of the authority vested in me by the Constitution and laws of the United States, including the Defense Production Act of 1950, as amended, (50 U.S.C. App. 2061, et. seq.), and as President of the United States and Commander in Chief of the Armed Forces of the United States, it is hereby ordered as follows:

SECTION 1. The National Telecommunications Board which is responsible for assisting and advising me pursuant to my responsibilities for the management of U.S. telecommunications, shall assume the additional responsibilities for mobilization planning to control and regulate national telecommunications in an emergency. These responsibilities shall include but not necessarily be limited to the following tasks:

(a) The Board shall formulate national telecommunication policies, plans, and programs designed to assure maximum security to the United States in time of national emergency with a minimum of interference to continuing nongovernmental requirements.

(b) The Board shall formulate plans for the adaption of nondefense telecommunication services and facilities to the requirements of defense in a national emergency or war.

(c) The Board shall direct and coordinate the development by the several agencies of the Executive Branch of agency plans, programs, and actions designed to carry out approved national plans, programs, and actions in an emergency.

(d) The Board shall formulate plans and directives for an emergency telecommunications agency to direct the control and priority of use of U.S. telecommunications in a national emergency.

(e) The Board shall formulate plans for the conversion of defense telecommunication services and facilities no longer required for defense purposes to the purposes of reconstruction, rehabilitation, and peace.

SEC. 2. The Board, in the process of carrying out the foregoing responsibilities, will consult with the various Government agencies and commercial enterprises as necessary to produce effective planning at the national level in order that individual agency plans may become integral parts of the whole. It will form such committees and boards as are necessary to assist and advise it in discharging these additional responsibilities.

SEC. 3. The mobilization plans developed by the Board shall be consistent with the policy direction and program guidance established by the Director of the Office of Civil and Defense Mobilization.

DWIGHT D. EISENHOWER.

APPENDIX D

STATE OF THE UNION MESSAGE

Changing technology, along with changing needs in government and non-government areas, presents serious problems that require searching examination in the field of telecommunications, particularly as respects administration and use of the radio spectrum. These problems affect both the national security and the industrial and social welfare of the country. The present government mechanism is not adequate to meet these problems. To correct this situation I will send to the Congress a bill requesting that a National Telecommunications Board consisting of three members be established in the Executive Office of the President whose primary mission will be to carry out the responsibilities imposed on the President by the Communications Act of 1934 in connection with national telecommunications resources, including management of the Government's use of the radio frequency spectrum, and of all telecommunications in time of emergency.

Harry Truman's 75th Anniversary

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two news articles and the text of Dean Acheson's remarks on the occasion of former President Truman's 75th birthday anniversary, which was observed on Friday, May 8, at dinners throughout the country. News articles and text appeared in the New York Times, Saturday, May 9, 1959:

TRUMAN IS TOASTED AT 75 AT DINNERS COAST TO COAST

(By Robert Alden)

Birthday candles burned brightly across the Nation last night as Democrats honored Harry S. Truman on his 75th birthday. At 66 parties in cities from coast to coast, the former President was hailed as a great leader of his party and a distinguished President.

Sixteen of the cities were linked by a closed-circuit two-hour telecast that enabled them to see a 2-hour program in tribute to Mr. Truman, who attended the dinner here at the Waldorf-Astoria.

The most dramatic part of the birthday program came when Mrs. Franklin D. Roosevelt described the moment on April 12, 1945, when she told Mr. Truman, "Harry, the President is dead." Mrs. Roosevelt said last night:

"The character of my friend was proved on that terrible day. He was frightened—as he should have been. For no man had ever been placed so abruptly in such a seat of responsibility.

"And yet there was never in him the slightest hint that he would try to evade what fate had thrust upon him. I knew then he was a good man. Later I thrilled to watch him grow to greatness.

"With every decision he grew, until to the entire world he was a towering figure. The decisions he made then shaped the very world we live in today."

WHEN THE GOING WAS ROUGH

Mr. Truman, at the $100-a-plate dinner in his honor at the Waldorf, heard Melvyn Douglas, the master of ceremonies in New York, ask former Secretary of State Dean Acheson in Washington:

"What was President Truman like to work for when the going was rough?"

Mr. Acheson replied:

"The answer to your question begins in a recent experience of one of my friends and colleagues in the last administration. He was revisiting the White House and seeing a well-known and genial Washingtonian heading for the President's office, cocked an inquiring eyebrow.

"'Oh', he was told, 'he's going in to cheer up the President.'

"'That's funny,' said my friend, 'in our day the President used to cheer us up.'"

Mr. Acheson said he believed that history would rank Mr. Truman high.

Mr. Truman also saw and heard Senator LYNDON B. JOHNSON of Texas, the majority leader, say at the dinner in Boston that "to no man living is so much owed by so many."

"Today—around this world—millions of men and women live in freedom who would not have that freedom except for the courage and forthrightness brought to the leadership of the West by one man—Harry Truman," Senator JOHNSON said.

He called Mr. Truman "the greatest of living Democrats—one of the great Democrats and greatest Americans of the ages."

ADVICE FROM MARK TWAIN

There were homely, but no less revealing touches at last night's birthday parties. In a pickup from Independence, Mo., Miss Mary Jane Truman, the former President's sister, said that her brother always had this quotation from Mark Twain on his desk:

"Always do right. This will gratify some of the people and astonish the rest."

Miss Truman also recalled that their mother had exercised a tremendous influence on Mr. Truman.

"She influenced Harry to study music," Miss Truman said, "and then she'd say to him, 'Remember, always play in the key of Be Natural and you'll get along in life.' And Harry's like that, you know—he's always so natural."

Miss Truman added: "Harry used to take me everywhere. Maybe that's why I never married. I just never met anybody as nice as Harry."

In another tribute from Independence, Msgr. Curtis L. Tiernan, chaplain for Mr. Truman's artillery company in France during World War I, spoke. He recalled that on one occasion the company was caught in a crossfire between the Germans and the French and started to panic.

FEW WELL-CHOSEN WORDS

"Captain Truman stood up and delivered a few well-chosen words and stopped the rout," Monsignor Tiernan said.

"What were those well-chosen words?" the chaplain was asked.

"Well, I don't know whether I should repeat it on the air," Monsignor Tiernan replied.

He was assured that the television circuit was a closed one.

"Well, I still don't think I should repeat it," he said. "It was good plain Missouri talk. It took the skin off the ears of those boys and turned them right around."

Monsignor Tiernan was asked if he had felt obliged to rebuke Mr. Truman for his "good plain Missouri talk."

"Oh, hell no—sorry. He was a soldier and he knew his job," the former chaplain replied. "He took his battery through the bloodiest battles of the war, and he only lost two men. He never asked any of them to do anything he wouldn't do himself, and they loved him for it. He brought them home safe and sound."

In another tribute, SAM RAYBURN, Speaker of the House, who was on the flower-bedecked dais here with Mr. Truman, looked at the former President and said:

"Harry, history is going to be kind to you. They are going to forget the few times that you have not taken dead aim, but have shot from the hip. They are going to remember you for the great things you have done."

DIARY GIVEN AS GIFT

On behalf of the Truman Diamond Jubilee Committee, Mr. RAYBURN presented a birthday gift—a handwritten diary in five volumes of a Civil War soldier, Harrison Whittimore, Company K, First Massachusetts Infantry. The volumes include a series of letters describing the conflict written to the soldier's father and aunt.

Paul M. Butler, chairman of the Democratic National Committee, speaking from Washington, said:

"I just hope that whoever will be our standard-bearer in 1960—whoever will be the victorious Democratic candidate in 1960—has been studying the record [of Mr. Truman]."

Mr. Butler also said he believed that Mr. Truman would have been happy to return to the Senate after he had left the White House.

"But he had a respect for the continuing Office of the Presidency and he would not stoop to use the power of that great office to win for himself what, by comparison, was a more minor political post," Mr. Butler added. "He would not campaign for himself. But the remarkable thing about Harry Truman is that he did not hesitate to campaign for others."

Also recalled at last night's birthday parties on film was Mr. Truman's impersonation of H. V. Kaltenborn, the radio commentator, predicting Mr. Truman's defeat in 1948. Speaking from Boston last night Mr. Kaltenborn said:

"While I continued to wonder whether the imitation really with the most since form of flattery, President Truman kept busy. He led the free world in the fight against com-

munism, launched the point 4 economic aid program, and helped Greece and Turkey defeat the Communist menace. Best of all he took the bold step of using force to defeat Communist aggression in Korea."

"Tonight we can all join in congratulations and good wishes to a man who makes the age of 75 seem like a halfway station in a lusty life," Mr. Kaltenborn said.

WAGNER PRAISES TRUMAN

Mayor Wagner said of Mr. Truman at the Waldorf dinner:

"The calendar tells us that this man, this great American, is 75 years of age. We, all of us, know better. He is eternally young, and as long as we have in America men with the spirit and the vision of Harry Truman, the Nation itself can never age."

Former Governor W. Averell Harriman said, "No President made decisions in peacetime of such far-reaching consequence, influencing the course of history."

Entertainers participating in last night's telecast included Jack Benny, Danny Kaye, Mort Sahl, Jimmy Durante, and Leonard Bernstein. A special film on Mr. Truman's tenure in office was produced for the occasion under the direction of Dore Schary.

Accompanying Mr. Truman to his birthday celebration in New York last night were his wife Bess, his daughter Margaret, and his son-in-law, Clifton Daniel.

The cities that were linked by closed-circuit television were New York, San Francisco, Denver, Washington, Chicago, Gary, Ind.; New Orleans, Boston, Detroit, Kansas City, Oklahoma City, Houston, Chattanooga, Dallas, Dayton, and Cleveland.

The national chairman for the birthday celebrations was Roger L. Stevens and the chairman for the New York dinner was Samuel I. Rosenman.

Mr. Truman plans to leave for his home in Independence later today.

TRUMAN STRIDES INTO 76TH YEAR—GETS CAKE AND A SERENADE FROM NEWSMEN, THEN SETS BRISK BIRTHDAY PACE

(By Philip Benjamin)

At 7:20 o'clock yesterday morning, former President Harry S. Truman blew out 25 candles on a store-bought birthday cake.

The cake had been presented by reporters and photographers assigned to accompany Mr. Truman on his customary morning walk. It was Mr. Truman 75th birthday.

Besides the cake the newsmen offered, in the lobby of the Carlyle Hotel, at 76th Street and Madison Avenue, a "low-fi" vocal arrangement of "Happy Birthday to You."

Mr. Truman appeared surprised and pleased. "I didn't expect this," he said, grinning. "I expect it'll take about three blows." Actually, it took only two to put the candles out.

Then the former President, never looking better set out on his walk—up Park Avenue, over to 5th on 82d Street, down 5th. He carried a walking stick, which he waved at well-wishing passersby. A department of sanitation truckdriver saluted him with a "shave and a haircut two bits" beeping of his horn.

He had two birthday wishes, Mr. Truman said, as he strode along, 110 steps to the minute.

"I wish for peace and happiness for all the people of the United States," he said. He wished also for "another boy in Margaret's family," referring to his daughter, Mrs. Clifton Daniel, who is expecting another child.

Looking back, he said, he made plenty of mistakes. "I'd be sprouting wings if I hadn't." Mr. Truman remarked.

His greatest decision was to go into Korea, he declared, "because the whole United Nations was involved."

Though he disagrees politically with President Eisenhower, he said, any reports that he is feuding with the President are "damned lies."

Mr. Truman, nearing the Carlyle Hotel again, said he expected to live at least 10 or 12 years more, and "I may fool people, as I did lots of other times."

At the hotel entrance, he bade goodby to the newsmen and went upstairs to show the birthday cake to Mrs. Truman.

TEXT OF ACHESON'S TRIBUTE TO TRUMAN

The answer to your question (by Melvyn Douglas) begins in a recent experience of one of my friends and colleagues in the last administration. He was revisiting the White House and, seeing a well-known and genial Washingtonian heading for the President's office, cocked an inquiring eyebrow.

"Oh," he was told, "he's going to cheer up the President."

"That's funny," said my friend, "in our day the President used to cheer us up."

Shakespeare put it this way, describing a night visit of Henry V to his troops before Agincourt:

"Every wretch, pining and pale before,
Beholding him, plucks comfort from his looks.
His liberal eye doth give to every one,
A little touch of Harry in the night."

That "little touch of Harry" which all of us got all the time, came from an inexhaustible supply. It came from his boundless energy and vitality.

He could, and did, outwork us all. A few hours of sleep would recharge him to the point where he had to walk some of it off early in the morning.

From this reservoir came the energy needed to get to the bottom of the toughest problem. He had no need for papers predigested into one-page pellets of pablum.

When things went wrong, he took the blame. When things went right, he gave one of his lieutenants the credit. One thing we never doubted: That among all the hazards and dangers of public life, the boss stood like a rock to support us. He expected—and received—the same loyalty that he gave.

DEVELOPMENT OF A PRESIDENT

Today no one can come to the office of President of the United States really qualified for it. But he can do his best to become so. Those of us who went the course with President Truman were privileged to see, at first hand, the development of a President whom, I believe, history will rank high. One could see this development in the quality of his judgment. At the outset it was inclined to be hasty as though driven by the press of work to be done.

But no one ever learned faster, and it was not long before his first question was, "How long have we got to work this out?" He would take what time was available for study; and then decide.

President Truman's capacity for decision always seemed to me his greatest attribute. General (of the Army George C.) Marshall has called this capacity the rarest gift given to man. And he would insist that President Truman had it to a high degree.

No one can decide and act who is beset by second thoughts, self-doubt and that most enfeebling of emotions, regret.

ON TO ANOTHER DECISION

With the President a decision made was made, and he went on to another. He learned from mistakes (though he seldom admitted it), and did not waste time regretting and bemoaning them. That is, he learned from all mistakes but one—the fast answer in that nightmare of Presidents, the press conference. We kept on hand, as a sort of first aid kit, a boxful of clarifications for these events.

One last word, in which I am sure my colleagues of past years would agree. No men were less alike than two men, both named Harry S. Truman.

One was the public figure—peppery, sometimes belligerent, often didactic, the "give-'em-hell" Harry. The other was the patient, modest, considerate and appreciative boss, helpful and understanding in all official matters, affectionate and sympathetic in any private worry or sorrow.

This is the "Mr. President" we knew, and know, best.

Position of American Legion on Pension Bill H.R. 6432

EXTENSION OF REMARKS

OF

HON. CLEMENT W. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. CLEMENT W. MILLER. Mr. Speaker, I am pleased to submit for the RECORD, the position of the American Legion on the pension bill, H.R. 6432. This is the statement of policy by the national executive committee of the American Legion, adopted April 30, 1959. This statement is submitted at the request of Col. Thomas W. Miller, who was a member of this House from 1914–16. Colonel Miller is a founder of the American Legion, and vice chairman of the Paris caucus. For years he has fought the battles of the Legion, as national commiteeman and as chairman of its legislative committee.

Following is the statement:

The American Legion has recognized the following factors as being an essential element in its consideration of Federal programs to provide disability pensions for war veterans. The term disability pension as used here is generally applicable to the provision of death pensions for the widows and dependent children of deceased war veterans of World War I, of World War II, and of the Korean conflict:

1. The right to pension is grounded in the fact that the receipent served his country with honor during a period of war.

2. The criteria for entitlement place the emphasis on a cause of need, that is a permanent disabiling condition sufficient to preclude or to seriously interfere with employment.

3. The procedural requirements are not such as would cause the claimant embarrassment either in his relationships with representatives of his Government or with members of his community.

4. The receipt of pension is not considered to be synoymous with being a pauper or a failure.

The national executive committee of the American Legion, meeting in Indianapolis, Ind., April 29, 30 and May 1, 1959, believes that the plan submitted to the Congress by the Administrator of Veterans' Affairs, designed to revise existing disability pension laws and regulations, does not meet the stated criteria. The Administrator's plan is incorporated in H.R. 6432, 86th Congress, introduced by request by Congressman OLIN E. TEAGUE, April 15, 1959.

H.R. 6432 is not acceptable to the American Legion.

Therefore, authority is vested in the national commander to seek disability pension legislation which (a) recognizes the need to grant the long-sought increase in rates

for those eligible to disability pension awards; (b) adheres to the basic purposes of disability and need in such legislation; (c) gives proper consideration to correction of inequities as they are reported to exist and at the same time prevents the creation of more numerous inequities such as those now proposed in H.R. 6432; (d) grants equality of eligibility for death pension for widows and dependents of deceased veterans of World Wars I and II and the Korean conflict; (e) increases the awards to recipients in the lower income brackets and accomplishes this purpose without doing violence to those awards going to recipients whose outside income is at or near the upper limit of income permitted; (f) provides for measures which will improve existing disability pension laws within the framework of our mandates.

A New Approach to Labor-Management Problems

EXTENSION OF REMARKS

OF

HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. GRIFFIN. Mr. Speaker, recently the distinguished ranking minority member of the Committee on Education and Labor, the Honorable CARROLL D. KEARNS, of Pennsylvania, delivered an important and timely address before the Invest in America Committee in Philadelphia. As the House proceeds toward consideration of needed labor reform legislation, the views of Congressman KEARNS on this subject are particularly meaningful. His excellent address follows:

A NEW APPROACH TO LABOR-MANAGEMENT PROBLEMS

(An address delivered by Hon. CARROLL D. KEARNS)

The labor reform legislation which has become such an important issue this year is an old problem. Congress has been working on it for years. When we look back to the middle thirties we recognize today's proposed legislation as the third step in a continuing process.

First was the Wagner Act, passed in 1935. There Congress stated the labor policy of our country. Briefly, it is to encourage collective bargaining and to protect American workmen in their exercise of full freedom of association. When the Wagner Act was passed, Congress decided the only labor reform needed was to protect employees from antiunion conduct by employers.

Twelve years later, the enactment of the Labor-Management Relation Act of 1947, commonly called the Taft-Hartley Act, recognized the necessity to protect workmen from union conduct also. This was the second step in labor reform. At that time the Congress wisely felt it was necessary to state specifically, as a part of the labor policy of our country, the fundamental right of workmen not to associate or deal collectively.

Today, in the third phase, labor reform continues to be concerned with protecting the rights of individual workmen. Our policy has not changed. But now it has been clearly shown that these rights need to be protected from abuses in the internal affairs of unions. Also, some activities of employers and unions in their relationships with each other continue to be detrimental to American workmen. The task before us is to strengthen and add to the present safeguards.

You may well ask wether new laws are needed. The corrupt activities exposed by the McClellan committee are, for the most part, violations of existing criminal statutes. Lack of democracy within unions is often contrary to existing State law. Other infringements on the rights of workmen are violations of the National Labor Relations Act.

But performance under existing laws is sadly lacking. Performance must be improved.

Individuals subject to these laws must cooperate in carrying out the intent of the law. Emotional appeals, such as the union condemnation of Taft-Hartley as the "slave labor" act, should be forgotten.

Government officials likewise need to improve their performance. More emphasis should be placed by Government law enforcement officials on the necessity of protecting the rights of individual workmen. Courts should avoid strained and legalistic interpretations.

But, we in Congress also have a responsibility to improve performance. We can be most effective, in my opinion, by recognizing that we must provide laws which are easily enforced. Experience demonstrates present laws do not meet this test. Therefore, we do need new legislation. Its language must be simple and clear to all concerned. It must not be subject to misinterpretation by enforcement officials. This is a big order but I am confident we can show substantial improvement.

The Congress will be deluding itself and the public if new laws rely on criminal enforcement. As I said a moment ago, this has proven to be one of the weakest aspects of performance under existing law. Most of the corruption brought to light by the McClellan committee has been a violation of one or more existing criminal statutes. But how many of the criminals have been convicted? Only a handful.

Here is the basic weakness of Senator KENNEDY's approach to the third step in labor reform. His bill, which the Senate passed, is a criminal statute. He would require a tremendous number of reports of activities of unions, union officials, employers, labor consultants—just about anyone coming into contact with the labor movement. For enforcement, he relies primarily on criminal penalties. What reason do we have to believe that performance under these criminal laws will be any greater than under existing law?

In Senator KENNEDY's "Massive reports" theory reasonable, regardless of how enforced? Most of the activities to be reported are perfectly legitimate. Honest union officers and employers will file reports. But are corrupt and dishonest persons going to file reports of their dishonesty? If so, a whole new concept of law enforcement is opened to us. Perhaps we should require all persons who exceed a speed limit to file a report of the traffic violation and thus solve the speeding problem.

There are some good features in the Senate bill. For example, the principle of a "Bill of Rights" for union members is truly gratifying. Protection of union members from unfair treatment by their own leaders is the heart of the third step in labor reform. A bill of rights is essential but the Senate provisions must be strengthened.

Here again, the bill of rights must be a part of a law which will secure performance. It too, must be easily enforceable. I have already expressed my doubts as to criminal penalties to secure enforcement of labor reform laws. The burden of proof in criminals cases is too great.

Union members should be able to enforce their own rights in State courts. I understand the Senate bill includes such a provision. But working men and women should also have some simple means of securing the help of the Government. Lawsuits are expensive. The unions will have plenty of money to defend their position in the suits but many rank and file members will not have the funds to prosecute them. We must give the members additional, effective means of enforcement of their rights.

It was also encouraging to have the Senate at least recognize the principle that additional restraints on organizational picketing and secondary boycottts are needed. These two weapons have been used by labor racketeers again and again to interfere with the rights of decent, law-abiding Americans. Unfortunately, the improvements made by the other body in this area are woefully inadequate.

Another serious deficiency in the Senate bill is its failure to deal satisfactorily with the so-called no man's land of NLRB jurisdiction. At present, because of a ruling of the Supreme Court, there is no forum where cases may be heard and no remedy available to small employers who do not come within the NLRB jurisdictional standards. The Senate would permit State agencies, but not State courts, to handle such cases if the State would apply the Federal law. It is highly questionable whether the few States which have suitable agencies will accept this kind of dictation. And, in those States where there are no little NLRB's, small employers and their employees will continue to be without a remedy.

I am confident that we can write a bill in the House which will be a big step forward in protecting the individual American workman in exercising his fundamental rights. To do so, the bill must provide:

1. TRUE DEMOCRACY WITHIN UNIONS

It must give each member a bill of rights governing his relationship with his union. He should be able to speak freely for or against the policies of his leaders. He must be able to vote secretly on issues vital to him. He must have equal rights with his fellow members. In short, a union must belong to its members—not to its officials.

2. HONESTY WITHIN UNIONS

Each member must receive full and accurate reports of activities of his union and its officials. The union member is the best watchman over the finances of his own organizations. But he needs the help of the Government in investigating mishandling of union funds and in correcting any wrongdoing.

3. PROTECTION FOR INNOCENT WORKMEN AND SMALL EMPLOYERS FROM COERCIVE PICKETING AND SECONDARY BOYCOTTS

Not all picket lines and boycotts are coercive. But some, which are permitted under existing law, clearly injure American workmen in the exercise of their freedom of association and the exercise of their free choice as to dealing collectively. Reasonable compromises can be worked out. The line may not be perfect, but we can show major improvement.

4. ELIMINATION OF CRIMINAL ELEMENTS FROM THE UNION MOVEMENT

This will be accomplished only if we provide simple practical means of enforcement. The right of union members to the courts should not be curtailed, but the working people of this country and small employers deserve quicker and less expensive methods of securing justice, using the framework of proven means of law enforcement.

5. A FORUM FOR EVERY DISPUTE

The no man's land must be eliminated and, through either State or Federal courts or agencies, there must be a place where labor reform cases can be heard. The same forum need not be used for all cases, but no one subject to the law of the United States should be without a remedy if his fundamental rights have been impaired.

As ranking member of the minority on the House Committee on Education and Labor, I

will do everything in my power to see that our committee reports out a bill which will assure the working men and women of this country the fullest protection of their individual freedom. It is not an easy job but one which must—and can—be done.

Montana Governor Vetoes Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a veto message by Gov. J. Hugo Aronson of Montana on the subject of Federal Aid to Education. This message is very timely in that the bill which the message refers to is now under consideration by the House Committee on Education and Labor:

MONTANA GOVERNOR VETOES FEDERAL AID TO EDUCATION

(During the 36th Montana Legislative Session, a Senate Joint Resolution to the President and Congress of the United States favoring Federal Aid to Education was vetoed by Montana's Gov. J. Hugo Aronson. The text of the veto message follows:)

SIRS: I am herewith returning Senate Joint Resolution No. 4 without my approval for the following reasons.

A sound comprehensive education, with the accent on learning to think rather than to merely "parrot," is essential to the United States of America as we know it. Our schools rank along with home and church as a bulwark against the forces that are forever seeking to destroy our Republic and its free enterprise economy.

In view of the extreme importance of education to our Nation, it is obvious that those at the State and local levels are most aware of the quality of education being given our youth. This is particularly true at the local level, since parents and others who deal with them every day know our youngsters best.

Federal aid to education will only result in taking more and more control away from the State and local levels. There are those who will say that certain pieces of legislation guarantee that control remains at home. This is a fallacy, since the Federal Government always sets up certain standards for States to meet. This is the right of the Federal Government if we allow our tax dollars to be taken to that level and then returned, minus a substantial tithe. Each standard, no matter how innocent it sounds, is another delegation of power to the Federal Government, at the expense of the State and local governments.

Much has been said about standards of education. This must be of greatest concern at the State and local level. The same applies to teachers' salaries. If both standards and salaries are low, then the State and/or community will slip behind its neighbors in many respects. No State or community can afford to let this happen for very long. Therefore, the best remedy for either low standards or salaries lies at the local and State levels.

Federal aid may sound like a "get rich quick" panacea for all educational problems. However, one must remember that Federal aid dollars still come from the same taxpayers as other tax dollars. There is no hidden mother lode. In the long run, it is far cheaper for all concerned to pay taxes at home to operate a sound educational system than it is to send them elsewhere, only to find out later that you have lost control of your educational system and your tax dollars have had a tariff extracted from them.

There is an added objection to the endorsement of this specific Federal aid to education measure, which is now before Congress. At a time when a balanced budget is certainly needed, this particular piece of legislation endorsed by this resolution is one of the most costly before Congress. If approved, it could easily prove to be a champion budget-buster. The estimated cost is $11.4 billion over four years.

If the money is available for Federal aid, then it is available at the local and/or State levels for education. Let us take care of this major function ourselves. The only Federal aid needed is for its proponents to support a return of some tax sources to the State and/or local levels.

For these reasons I am returning Senate Joint Resolution 4 without my approval.

Very truly yours,
J. HUGO ARONSON,
Governor.

Geographical Center of the United States

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BERRY. Mr. Speaker, I would like to call the attention of my colleagues to a bill I am introducing today which would authorize the establishment of the Central National Monument at the geographic center of the United States, which is located near the Black Hills in my district in South Dakota.

With the admission of Hawaii to the Union, the location of the geographic center is now permanent. Tourists from across the Nation are interested in seeing the spot of the geographic center. It is a point of national interest and the national interest will be increased by the designation of a 10-acre spot as a national monument.

The national interest will be increased by the fact that those living in South Dakota, and particularly western South Dakota and eastern Wyoming, are planning a drive to finance the construction of an appropriate marker to be located in the center of this 10-acre plot. The marker will be donated by residents over a plan prepared by the National Park Service. The owner of the land upon which the geographic center of the Nation is located has agreed to donate the necessary acreage for this purpose. The monument itself will be without expense to the taxpayers of the Nation other than the small expense of maintenance of such a national monument.

Since the geographic center of the Nation is of universal interest, since such geographic center should be properly designated, since this national monument can be accomplished without cost to the taxpayers of the Nation, I ask that Congress take the necessary steps to designate this geographic center as a national monument in the interest of the people of the Nation and those in years to come.

Enactment of Flood-Douglas Area Redevelopment Bill Urged

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum from Mr. Bernie Blier, executive director of the Northeastern Pennsylvania Industrial Development Commission, as well as a letter from Mr. Vic Diehm, chairman of the Pennsylvania State Chamber of Commerce community development committee, to Mr. Arnold Edmonds, executive director, Pennsylvania State Chamber of Commerce:

MAY 5, 1959.

To: Pennsylvania House delegation.
From: Bernie Blier, NPIDC executive director.
Subject: Diehm observations on area redevelopment legislation.

In response to an inquiry from the State chamber of commerce, Vic Diehm expressed his vigorous support of an adequate area redevelopment program. As a longtime chairman of the State chamber of commerce's community development committee, active in Hazleton and northwestern Pennsylvania industrial development, and a member of the Pennsylvania Industrial Development Authority, his observations represent a keen awareness of the vital need for Federal legislation to support and complement existing local and State efforts.

I thought that you might like to know of NPIDC's feelings, particularly in the absence of strong support by local chambers of commerce who should be on the firing line in support of area redevelopment legislation, but obviously hesitant because of a full understanding of its local coordinated possibilities.

NORTHEAST PENNSYLVANIA INDUSTRIAL DEVELOPMENT COMMISSION.

NORTHEAST PENNSYLVANIA
INDUSTRIAL DEVELOPMENT COMMISSION,
April 11, 1959.

Mr. ARNOLD EDMONDS,
Executive Director, Pennsylvania State Chamber of Commerce, State Chamber Building, Harrisburg, Pa.

DEAR ARN: As you will notice, I am writing this with my NPIDC hat cocked on my head. For the time being, I have removed my hat indicating chairmanship of the Pennsylvania State Chamber of Commerce community development committee and also my hat indicating I am a member of the PIDA.

About 6 or 7 years ago, the State Chamber of Commerce of Pennsylvania helped to father the NPIDC. It was designed as an experiment, to see how the areas could work together in the field of industrial development. Some slight assist was given by the Department of Commerce, but the greater part of the job fell to community development committee of the State chamber, with the usual fine assist of Walter Schenck.

In a short time, this commission became nationally known, despite the fact that it had no funds, no paid members, and no paid publicity agents. To this extent, we were invited by President Eisenhower to discuss industrial development plans at the White House on May 11, 1954.

After hearing us, the President assigned the situation to the U.S. Department of Commerce, and particularly to Dr. Gabriel Hauge. One of the bright boys of the Department of Commerce shook us up when he recommended that people out of work should move to someplace where there was work. As off the side, I might point out that people in Pennsylvania did just that to Bucks County and now there are so many people out of work in Bucks County that it qualifies for assistance.

One of the things that we recommended to the President was the establishment of some national agency to aid depressed areas, such as northeast Pennsylvania. The President, said in part, that he would take what we had given to him to heart, inasmuch as northeast Pennsylvania was way far out in front of the rest of the country for pulling themselves up by their bootstraps. As is well known to you, Scranton, Wilkes-Barre, Hazleton, Pottsville, Shamokin, and intermediate points had been doing this job without either State or Federal aid for years.

I inserted that to show that we of northeast Pennsylvania—are real veterans in industrial development, and we realized in 1954 that the time was coming when we would need Federal aid.

In the fall of 1956, upon the recommendation of the U.S. Department of Commerce, I was asked to be a member of the policy committee of the National Planning Association to look at the question of depressed areas: a national problem. In addition to myself from Pennsylvania, Charles E. Oakes, chairman of the board of the P. P. and L. was named. Mr. Oakes did not serve, but he delegated Frank Mueller, vice president of the central diivsion (P. P. and L.'s largest), and located in the heart of northeast Pennsylvania. Others on the committee included the vice president of Sears, Roebuck; the president of Todd-A-O; William L. Batt, Jr., new secretary of labor for the Commonwealth of Pennsylvania and then serving as director of Toledo's Development Commission in Ohio; and others. Of these people, I think you can see that we were not a group of men too far away from the center of the course.

Part of our recommendation was that the Federal Government should assume the responsibility for a vigorous program to remove chronic local unemployment, in collaboration with local and private programs. This special committee made special mention of the fact that it seemed incongruous that billions should be sent abroad for foreign aid and many depressed area spots appear throughout the United States.

At the time this committee was making its study, the number of areas with substantial unemployment was 88, consisting of 23 major areas, and 65 smaller labor market areas. At the end of January 1959, this figure had grown to 259, consisting of 76 major areas and 183 smaller labor markets.

Now, why should we in northeast Pennsylvania reform a national aid bill, when we have demonstrated over the years that we can help ourselves? Simply because we realize that we are taking the pitcher to the well just too often. In 1946, in a short 3-week drive which I had the privilege to lead—we raised $660,000 in spot cash—no pledges, no bonds, just cash on hand at the end of 3 weeks.

In 1955, Dr. Ed Dessen had a group of younger boys and they put together a $700,000 fund-raising campaign, which was about one-third cash and two-thirds bonds. They are now a little past the middle on their $500,000 drive. Cash is not nearly as plentiful, and the going is much tougher. They have reached about $338,000 of their goal and should make it. However, I think this time they are going to have to run a little bit longer.

None of the bills that have been submitted, either administration or from the Democratic side of the House, had been 100-percent perfect. I do think that the Douglas bill is about the best that has been offered. True, there are packages in there that should be amended and changed.

There are several misstatements in the "Federal Spending Facts" survey. I heard Senator DOUGLAS myself discuss the antipirating provision. From what Senator DOUGLAS said, I am sure that legislative history is quite clear so that the bill could not be used to finance relocation.

I don't believe that the cost indicating average investment per job went far enough to show all that it included. The testimony stated that only were land, buildings, and equipment included, but also working capital and inventory. According to section 6 of the bill, these items are specifically excluded. I am sure that the testimony will show that investment for jobs in Pennsylvania was only about $2,000 rather than $15,000.

This letter has grown too long already. I apologize for it with your very busy day. However, I did have a flyer from Walter asking for opinions before the board of directors got together on the 14th. For that reason, I have made this as full of facts and reasoning as I possibly could.

Subject to some revisions and the possible tightening of others, I am convinced that the Douglas bill is the best presented thus far. I hope that it will pass so that we can get into action. It always reminds me of the old saying of we industrial people here in northeast Pennsylvania, "We go to Washington for help, and we get a prescription. However, before the medicine gets to us, the patient is dead."

With kindest personal regards, I am,

Sincerely yours,

VIC,
VICTOR C. DIEHM.

Statement of the Honorable Walter S. Robertson, Assistant Secretary of State for Far Eastern Affairs, Before the House Foreign Affairs Committee in Support of the Mutual Security Program for Fiscal Year 1960

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. FULTON. Mr. Speaker, Walter Robertson had a very distinguished career in shaping our U.S. Far Eastern policy. He will go down in history as one of the top level diplomats in our time. It is a pleasure to include his excellent statement in the RECORD for my colleagues in Congress as well as the American people:

Mr. Chairman and members of the committee, I welcome the occasion to appear before you at this time in support of the mutual security program.

In discussing the pertinent aspects of our foreign policy in the Fast East, I shall give special attention to the Communist Chinese aim to drive the Chinese Government from Taiwan, bring about a reduction of U.S. power and influence in the Western Pacific, and to bring Asia under Communist domination. As this committee is among the best informed in the Congress on the political importance of the Far East, I shall confine myself in this statement to the salient features of the situation as it stands today, with some indication of what it portends. I shall draw your attention once again to the incalculable value of the mutual security program as a material support to the application of U.S. foreign policy, and to free world security, in the Far East. I am convinced that authority for continuation of that program on an adequate scale is indispensable to the success of U.S. diplomacy in the Far East in the present world conjuncture.

The specific aid program will be discussed by Capt. T. F. Howe, U.S.N., of the Far East region, Department of Defense, and by Dr. Raymond T. Moyer, ICA Regional Director for the Far East.

The Far East comprises the land and sea area formed by Japan, Korea, China, the Philippines, Vietnam, Cambodia, Laos, Thailand, Burma, Malaya, Indonesia, Australia, and New Zealand. More than a third of the earth's population live there in widely contrasting circumstances—freedom and slavery, abundance and poverty, industrialized urban areas, and stone-age tribal communities. It is a farflung, diverse, unstable area where a great struggle is going on, the outcome of which may well determine whether freedom or communism shall prevail in the world.

Communist China poses a threat which commands our first attention. It controls one-quarter of all humanity and disposes of great military manpower. It threatens everywhere and concedes nowhere. In close alliance with the Soviet Union, it is making every effort to expand by subverting the free countries of the Far East through military threats and pressures, economic warfare tactics, diplomatic and political intrigue, infiltration, propaganda, and all the other standard penetration devices of international communism. The subversive capabilities of Communist China are enhanced in the Far East by such basic factors as:

(a) The central dominant geographic position of Red China with its huge regimented population in contrast to the much smaller countries scattered about its rim.

(b) The presence in southeast Asia of over 12 million overseas Chinese.

(c) The inadequate regional unity and cooperation existing among the free nations of Asia.

(d) The inexperience in government and management in the free Far East, it being recalled that 8 of the 11 Asian countries named above gained independence since 1945.

(e) The surge of nationalism and anticolonialism which is often reflected in suspicion of western countries.

(f) The sudden transformation of the USSR in 40 years from a relatively backward country to a modern industrial-scientific giant. Communist China is now striving to make a similar great leap forward but in a greatly compressed period of time. Provided they overlook the disastrous price paid in human values, this Communist formula for quick material results can appeal to the impatient temper of Asian peoples grasping for the first rung of the ladder leading out of age-old poverty and oppression.

All these factors are fully exploited by the Communists in their relentless drive for domination of the Far East. In pursuing their ambitious material goals, the Chinese Communist leaders have calculated that their program would be unattainable without transforming the Chinese people into

complete and unthinking tools of the state. To this end they have organized with particular intensity over the past year virtually all of mainland China's peasantry into communes. Under this appalling system, which is liquidating family life and destroying all human values, the people are turned into mere robots serviceable to the state for whatever tasks it assigns. What is even more ominous is the militaristic character of the commune system. Using the pretext of American aggression and to the accompaniment of a strident anti-American campaign, the Peiping regime has drafted the entire adult population both inside and outside the communes into a people's militia, organized on regular military lines. This peoples militia supplements the regular Chinese Communist armed forces totaling 2.5 million men and a million-strong public security apparatus.

Meanwhile, there is an increasing arrogance in Peiping's outlook on the world. It appears to care less and less about the opinions of outside countries. It is developing a dangerous overconfidence. It does indeed feel that the East wind will prevail over the West and that communism is the irristible wave of the future.

All this was evidenced in their foreign policy actions over the past year.

The first sign in 1958 of Peiping's harsher line appeared in April when it launched a campaign of all-out economic warfare against Japan. It severed economic and cultural relations with Japan just before the Japanese elections. It seized Japanese fishing vessels off the China coast. It suspended repatriation of Japanese nationals. It called openly for the defeat of Japan's Liberal Democratic Party in the May elections. All this failed of its immediate purpose. Peiping then carried its campaign against Japan a step further. It urged overseas Chinese merchant communities, which are highly influential in the commercial life of southeast Asia, to boycott Japanese goods. At the same time it flooded southeast Asian markets with Red Chinese products at cut-rate prices. This was done to gain foreign exchange, of course, but also it was done to drive Japan and other countries out of southeast Asian markets and to penetrate the countries of the area politically with economic weapons.

In mid-July Peiping launched a new drive to seize Taiwan. The massive shelling of the Quemoy Islands which opened on August 23 and all subsequent events are too fresh in our minds to bear repeating, but I do wish to underline some of the lessons of that recent crisis.

The Chinese Communists are out to get Taiwan, not the offshore islands. They have clearly demonstrated by word and deed that they will oppose any solution to the offshore islands problem which does not serve the Communist objective of acquiring Taiwan and eliminating free China whose existence is a major obstacle on communism's path of expansion. The Communists are embarked on an intensive campaign against the Republic of China, involving military, political, and psychological pressures which can be applied in varying combinations as may be most tactically expedient.

It is absolutely certain, I believe, that if the United States were to fall back in the face of such threats as those contained in Peiping's artillery assault against Quemoy or in Khrushchev's crude, insulting letter to the President (which the President rejected), that would merely confirm the rulers of the bloc in their suppositions regarding the efficacy of force and threats. Not only would this induce further Communist probings in the Far East but it would also magnify the risks of war. That is why, during the height of the Quemoy crisis, our friends in the Far East were so anxious that we stand firm and why, if we do not stand firm, they may feel compelled to reevaluate their positions accordingly. I think we can say with all realistic modestry that our friends in the Far East look to us as the main counterpoise to Communist expansionism. As the London Economist stated last autumn about the attacks on Quemoy: "It is the complete disappearance of the American presence from the scene that the Communists are after. And whether anti-Western feeling and neutralism are weak or strong in these Asian countries, and whatever their public postures, they know well enough that if the eagle once takes flight, the dragon—and perhaps the bear, too—will have to be propitiated."

The shocking suppression of freedom in Tibet by Communist China gives dramatic point to this mounting arrogance. Peiping has overthrown the established Government of Tibet and taken up arms against the Tibetan people. Communist China in this bloody and unprincipled action has shown its true face to its Asian neighbors.

The foregoing developments and opinions attest to the fact that the threat of Red China has never been so broad and ominous as it is today. It emphasizes anew the challenge posed to our way of life.

Since the Communist regime in China is unlikely to be replaced in the foreseeable future and is most unlikely to be alienated from the U.S.S.R., our principal means for dealing with the threat it poses will continue to be (a) by maintaining an adequately strong U.S. military posture to deter and, if necessary, to counteract Communist aggression; (b) by continuing to help build up the military, political, and economic strength of the free Far East as rapidly as feasible; (c) by exerting such means (i.e., nonrecognition of Red China and opposing its seating in the U.N.) as are available to us to check the growth of Chinese power and influence.

The free countries of Asia face vastly complex problems in the development of their political processes and in attaining economic growth. They are desperately seeking to maintain and consolidate their independence. They look to the United States for assistance, not only because of our great military and economic power but also and more importantly because they know that we share their objectives of promoting independence, human values and improved conditions of life. They know, and we know, that our security and progress are related to theirs.

All the countries of the Far East have come in recent years to have a far keener understanding of the nature of the Communist menace and with our help, which they urgently need, they are year by year placing themselves in a better position to meet the threats and difficulties that beset them. Grave problems remain and there are no grounds for complacency. However, the situation today in the Far East is a marked improvement over that prevailing several years ago when the area was wracked by wars and widespread insurgency, accompanied by the loss to communism of Tibet and north Vietnam.

Since 1954 no free territory has fallen under Communist domination in the Far East. The countries of Free Asia have since then enjoyed a degree of security that enables them to concentrate some of their energies on the task of economic growth and development. This has released the positive and constructive energies of the peoples of Asia. But for U.S. foreign policy and its indispensable support, the mutual security program, it is certain that a number of Far Eastern countries would now be part of the Communist empire. This main result of our policy, the existing freedom of the non-Communist countries of the Far East, is well worth all that it has cost. The effort and the price of foreign aid should be measured in terms of the value of the main result. Mistakes and shortcomings in the administration of the mutual security program must not be allowed to obscure the enormous contribution it has made in helping achieve the major objectives of our foreign policy.

The role of American aid in the Far East varies according to the special situation in each recipient country. It is determined by need, by the state of our relations with the country, by the nature of its foreign policy, and by our foreign policy objectives respecting it. Aid is essential to help friendly countries in the Far East grow in strength and retain their national freedom.

We assist the embattled divided countries—Korea, Vietnam, China—with all forms of aid to the extent of their essential need so far as our resources permit. These three countries, each a frontline defense against the forces of international communism, receive the bulk of defense support aid to the Far East and extensive military and other forms of assistance.

We assist other countries in the Far East with which we have security arrangements, except Australia and New Zealand, with military and economic aid to lend strength to their defense posture in all its aspects—political, military, economic. These countries include Japan, the Philippines, and Thailand.

We extend assitance of one kind or another also to countries which have a foreign policy of neutrality, because each of them is friendly and wishes to remain nationally independent. Their continued independence is important to the security of the free world. Our aid to each such country is extended within a carefully considered framework of recognized common interest, all factors considered, including the existence of any Communist bloc aid or credits to the same country.

So far, only three Far Eastern countries—Burma, Indonesia, and Cambodia—have accepted Communist bloc aid. U.S. aid to these three countries helps them to avoid becoming unduly dependent upon bloc aid.

The adoption by the bloc of aid techniques substantively similar to ours reflects the Communist estimate of the effectiveness of our aid programs as an instrument of our foreign policy. It must be said too that the Communist ability to intrude their politically-fashioned aid programs into the free world portends internal trouble for any recipient country unable to restrain organized Communist subversion within its boundaries. Every one of the neutral countries has cause for alarm over the organized Communist activities which may now give momentary support to the existing government but have the ultimate purpose of supplanting it with a Communist government under alien control.

I wish to dwell for a moment on the importance of the economic development front in the struggle with international communism. In the Far East a number of countries are newly sovereign, inexperienced in the arts of national government, and confronted with an urgent popular demand for rapid economic growth and development. Economic development does not of itself produce political and social stability. Stability presumes confidence in government and a sense of national unity. It is rather a dynamic and can be a disturbing process, displacing much that is sold in outlook and custom to make way for the new. However, in the present world scene, a respectable rate of economic development is a political issue in every underdeveloped country with the Communist alternative promising get-rich-quick schemes held before the people by Communist propaganda. Economic development, with an attendant upward trend in living standards, has therefore become indispensable to popular confidence in non-Communist government. It is therefore imperative that the Development Loan Fund be supplied with adequate

funds to play well its crucial part in resolving this issue in favor of the free world.

I am convinced that authorization and appropriation of the amount proposed for the fiscal year 1960 is of vital importance to our national interest. I should like to reemphasize that the mutual security program is essential to the attainment of our foreign policy objectives. Its effectiveness would be reduced by truncation of the carefully developed program underlying the request for the coming year. We already have achieved much in the Far East with the help of this program.

Survival of the free world in the face of Communist imperialism will depend upon continuity of our policy, adequacy of the means for its support, and perseverance in our chosen course of action.

Public Law 660 Helps Clean Up a River

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD a letter I received recently from Mr. Robert W. Balliger, of Durango, Colo. Mr. Balliger is chief of the sanitation section of the San Juan Basin Health Unit. His letter pertains to the efforts which several communities in southwestern Colorado have made, and are continuing to make, to solve the problem of stream pollution. Mr. Balliger's letter makes particular reference to the Animas River, since that stream was the subject of recent discussion in the RECORD regarding pollution of its waters by several communities, and by certain industrial firms. The people of the area have been working toward a solution of the problem for some time, and a great deal of progress has been made in the last few years. In this respect, I should like to call particular attention to Mr. Balliger's statement in regard to the part legislation such as Public Law 660 has played in helping small communities solve such problems. Mr. Balliger's letter follows:

SAN JUAN BASIN HEALTH UNIT,
Durango, Colo.

The Honorable WAYNE N. ASPINALL,
Member of Congress, House of Representatives, Washington, D.C.

SIR: This letter is being written at the request of Mr. Jack Holden, manager of the Durango Chamber of Commerce, in answer to the letter written him by you regarding the pollution problems of the Animas River.

The pollution problems of this stream are many and it is not intended that they be minimized. However, it is unfortunate that statements such as W. L. Bruce's which are partly true but are also exaggerated facts, half truths, and imaginary circumstances find their way into public record.

Something is being done to clean up the Animas River as well as other streams in the area. Durango is improving municipal sewage collection and installing adequate sewage-treatment facilities. Pagosa Springs, which has been without such facilities, is now installing sewage collection and treatment. Dove Creek, which had neither before, has completed additional sewers and adequate sewage treatment. Ignacio is completing studies for addition sewer lines and adequate treatment facilities for the municipality and Consolidated Ute Agency located near there.

I sincerely doubt if any of these projects could have been realized without aid of such legislation as Public Law 660. It is also necessary that such means be continued if more cities and towns are going to correct their pollution problems.

No one knows the extent of chemical and radioactive material pollution of the Animas River from the uranium-processing mill at Durango. Some results and recommendations should be forthcoming in the near future of studies partly completed on this problem by joint efforts of the Public Health Service, New Mexico State Health Department, San Juan County Health Department of New Mexico, Colorado State Health Department, and the San Juan Basin Health Unit of Colorado. Efforts to obtain necessary information are being conducted by Vanadium Corp. of America itself in order to understand the problems before solving them.

You are aware of the economic depression in Silverton. One of the main questions has been how to finance a project to correct pollution conditions such as untreated sewage being disposed of in the river. It is certainly hoped that new developments being brought about in Silverton will change economic conditions for the better and enable the people of Silverton to solve such conditions in the Animas River.

Very truly yours,
ROBERT W. BALLIGER,
Chief, Sanitation Section.

Approved:
ARTHUR L. WARNER, M.D.,
Medical Director.

Address by Hon. Fred Seaton, the Secretary of the Interior

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. WEAVER. Mr. Speaker, recently the Honorable Fred A. Seaton, the Secretary of the Interior, made a remarkable address to the student body of the University of Hawaii. I believe his remarks should be spread in the RECORD for the benefit of all Members of this House.

The address follows:

ADDRESS BY SECRETARY OF THE INTERIOR FRED A. SEATON BEFORE THE UNIVERSITY OF HAWAII, HONOLULU, HAWAII, MAY 7, 1959

This convocation of your own great University of Hawaii is for me a happy occasion. Among other reasons, it marks the second time within a year it has been my privilege to speak to a university in a Territory of the United States just before the achievement of long-sought statehood.

When the 50th star is finally affixed to the American flag, what a glorious day it will be for Hawaii, the Federal Union and the free world.

I am one of those who believe wholeheartedly in your eagerness and ability to shoulder your new responsibilities which necessarily accompany the blessings of statehood. I am confident you will use your new opportunities vigorously and wisely. Toward that end it behooves us all to abide by Woodrow Wilson's admonition "that we are not put into this world to sit still and know; we are put into it to act"—to act as best we can in the service of our community, our State, our Nation, and the entire family of man.

In order so to act, we must think and plan long years ahead. We must consider, for example, the decade 1965 to 1975—years when we may be confronting at least two major challenges.

For one thing, Russian Premier Nikita Khrushchev hopes to realize his boast that, at some point in those years, his country will sweep ahead of ours—and of all others—in economic production.

Personally, I believe that the Soviet Union will not be the world's foremost economic producer in 1970. Nonetheless, its output may well rise to 60 percent of ours, as against about 40 percent now. Unavoidably, of course, that rise in Soviet productivity will increase the Soviet Union's capacity, as it chooses, either to improve the meager living of its people or further to endanger the free world by way of aggression.

For a second thing, assuming the perpetuation of the Chinese Communist regime, it may well rule by the year 1975 over 894 million Chinese on the mainland, a number nearly equal to the then combined population of the Soviet Union and the United States, multiplied by two.

True, without an enormous industrial growth, Communist China will remain, as today, a truculent but relatively feeble monster. But as the regime there holds to its belligerent ways, every increase in its industrialization, though accomplished at terrible cost in human life and pain, increases its power to threaten other nations. As to that, I suspect that no matter what the men in the Kremlin say publicly, even now they ponder the fact "other nations" might well someday include the Soviet Union.

My own conviction is that the Reds will not have succeeded in industrializing China enough by 1975 to tempt them to risk the madness of a major war. Nevertheless, we do expect that they, along with the Soviets, will continue to thrust outward, using every subversive device imaginable to probe for weaknesses in the armor of the free world. The impact of these expansionist tactics will likely materially influence your adult lives and the lives of all citizens of the free world.

Faced with these tactics, it seems obvious we have but three alternatives. The first two are unthinkable: (1) declare war, (2) surrender. Only the third is possible for a Nation which is sane and brave and free: compete with vigor, be strong militarily, and always remain ready to negotiate wisely and sincerely for peace with honor.

Here at home and abroad, we must make certain the free world economy continues to swell its mighty torrent of production. That means many things. One is we have no realistic choice other than to maintain our worldwide policy of mutual security. Another is that we must ever strive toward removing all artificial obstacles to trade, except those which must remain because of a clear and overriding national interest.

The doing of these things not only helps counter the expansionism of the Soviet Union and Red China; even more importantly, it recognizes the revolution of rising expectations which is taking place in the less-developed countries of the world. We must continue our help to the people in these countries in their efforts to achieve better homes, better sanitation, better food, better education and—above all—liberty.

In this struggle of others for a better life, our own great Nation certainly has been the champion, both by precept and example. The United States of America has not been the represser, nor will it ever be.

In truth, by heritage and conviction, you and I believe profoundly in the right of any people freely to choose the economic system

by which they hope to better their standard of living. You and I also believe something else: any nation which still has a freedom of choice should mark well the fact that no matter what economic system it may choose, there can be no production statistics which would justify the surrender of its mind and will to Communist rule.

The specters of many once-free nations cry out from the grave of human rights. They are eloquent witnesses to the tragic truth that the greatest mistake of all is to follow the Communist pattern.

Too many have discovered too late that in the world of the Communist will, the false dawn of economic promise inevitably darkens into the black and terror-filled midnight of political captivity and degradation of humanity.

There is—and always there will be—an easy way to slavery. To the gaining or the keeping of liberty, there is no easy way.

The easy way to slavery may take various forms. It may be the way of outright military conquest and submission. It may be the way of beguilement and subversion. It may be the way of sloth, disinterest, or internal weakness, or it may be a mixture of all. Whatever the way, the end result is the same.

It is an ironical fact of history that just 1 day before the President of United States signed the Hawaiian statehood bill the Dalai Lama began his flight from Tibet to India. Here, in Hawaii, American citizens of Asian extraction in Hawaii were gaining new political rights through the peaceful processes of legislative action in a Republic. At the same time, the people of Tibet were being forcibly deprived of even the small measure of self-government which the Chinese Communists had previously guaranteed to them.

Contrasted with Hawaii's fulfillment of her dreams, the Tibetan nightmare of murder and torture should be a historic reminder to every free nation of these three things:

First, of Chinese Communist perfidy, specifically their breaking of a 1951 agreement that the Tibetans should have full autonomy and the right to pursue without interference their religion and customs;

Second, of the Communists' iron-fisted brutality toward all who stand in their way; and

Third, of the fact that, when freedom has such implacable foes, it must have even more unshakable friends if it is to continue alive in the world. Those who are free must band together, stay together and work together, with courage, understanding, and constancy—if they are to remain free.

In the Far East, as in the world, American policy is based on the recognition of these three facts.

You will recall that last fall the Chinese Communists were threatening to take Quemoy and Matsu and then Taiwan, and finally to force the United States out of the Western Pacific.

In the face of this threat, and it was a dire one, certain people looked only at the immediate problem and either neglected or refused to think ahead. Having fallen into that error, they then tried to repeddle an old idea in the guise of something new. "Retreat," they said, "Let the Communists have those little islands. How would Americans feel," they cried, "if Communist forces were in possession of our Staten Island, lying offshore from New York?"

Fortunately, the President of the United States, long experienced in the wiles of the Reds, stood firm, and the American people supported him in his wise decision. The result you know. The Communists did not take Quemoy and Matsu, to say nothing of Taiwan.

Another idea, abroad for a long time but currently redressed as something new, is the recognition of Red China. To do so would reverse the U.S. policy established in 1950 and supported ever since by the leaders of both political parties.

What would recognition of Red China mean? Among other things it would likely mean the free world's eventual loss of Taiwan, the extinction of 600,000 Chinese Nationalist troops, and the breaking of our island chain of defenses in the Western Pacific. In the eyes of the Chinese Communists, who publicly proclaim their hatred of the United States and respect only military might, such recognition would be a clear victory for them. In the eyes of the free countries throughout the Far East—countries looking to us for help in stopping any Communist crossing of their borders—such recognition would be considered both retreat and defeat for the free world.

Our refusal to recognize Red China serves both a moral and a practical purpose. Certainly, neither the Japanese, the Koreans, the Vietnamese, the Filipinos nor other free peoples could look with equanimity at the prospect of an Asia dominated by Red China and her ally, Soviet Russia.

All our valued friends have vividly implanted in their minds the current lessons of Tibet.

They remember Red China's confiscation of foreign property in 1949.

They remember its repeated violation of the armistice agreements in Korea and Indochina.

They remember its communes and forced labor.

They remember its liquidation of 18 million Chinese people in 9 years—a number equal to nearly 30 times the population of Hawaii.

Such memories help to explain why, as we steadfastly adhere to our China policy, America does not stand alone.

Such memories help to explain why, in 1954, a number of free nations in the Far East joined the Southeast Asia Treaty Organization—determined to draw the line on Communist aggression in their part of the world.

Basic to the immediate features of U.S. foreign policy is our fundamental belief in two convicitions so eloquently expressed by Thomas Jefferson: "Nothing is unchangeable but inherent and inalienable rights of man" and "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

We need constantly to remind not only ourselves but all other peoples as well that we of America stand proudly, today and forever, for the rights of man and the freedom of the mind.

We should make clear, for example, that it is the Red Chinese regime, not the U.S. Government, which has refused to allow American reporting out of the China mainland. Today there are 30 American correspondents representing 30 news-gathering organizations whose passports are valid for travel there. For nearly 2 years the Chinese Communists have refused to all them entry, just as they have refused to permit any Chinese newspaperman to visit this country.

Such intransigence on the part of the Communists is a bar to one people's knowledge and understanding of another.

A second hindrance is the Communists' clever and diabolical propaganda, endlessly distorting the truth.

And for ourselves, there are difficulties in the fact that we and the peoples of Asia perforce must span not only distance but also differences—differences of race, of religion, and of culture. Here, the new State of Hawaii can have its golden hour. That is so because you are particularly fitted to tutor your fellow Americans in understanding and solving the problems.

Already you have shown much evidence of your will and your capability in this respect. Hawaiian achievements in social research, in the instruction of Asian students coming to the United States and of American students going to the Far East, and in the introduction of philosophers from East and West—these are a splendid beginning.

It is my prediction you will expand such rewarding activities in the years ahead.

In that respect I should like to see the University of Hawaii become an ever more thriving laboratory with professors and students constantly seeking new ways to interpret our history, our culture, and our foreign policy into terms which Asian people plainly can understand.

Moreover, I should like to see—and I expect to see—the State of Hawaii, facing as it does toward Asia, become an ever more brilliant showcase of American freedoms and American economic growth. I suggest one way to do this would be to establish here a permanent international trade and culture center, designed to serve as a magnet and clearing house for buyers and sellers of American and Pacific area merchandise.

Perhaps it could be called Pacific House, both because of its location in your beautiful islands, and because of the meaning of the word "pacific"—"making or tending to make peace." Such a project, I submit, could well be one in which government and private enterprise could join.

Further, your great university and your State will always be a living demonstration of a key fact about the American people: That what we oppose, even beyond communism, is the forcing of communism—or any other system—on an unwilling population.

We can be pardonably proud of the incontrovertible fact of history that in this century the United States has neither sought nor acquired new territory, except for the peaceful purchase of the Virgin Islands from Denmark in 1917. Outside our traditional continental limits we have granted freedom to Cuba and the Philippines, self-government to the Commonwealth of Puerto Rico and statehood to Alaska and Hawaii.

I repeat that you of Hawaii, perhaps more effectively than your fellow Americans, can make this truth abundantly clear throughout all Asia.

All of us together, must before keep the peoples of the world the stark contrast between the Communists' international exhibit A—Hungary and Tibet—and ours—Alaska and Hawaii.

What America really wants for the world is a new age in international relations, an age in which the rule of force and fear will give way to the rule of law—that kind of universal law of which a kindly and brilliant Englishman, Richard Hooker, said more than three centuries ago: "Her voice [is] the harmony of the world: All things in heaven and earth do her homage, the very least as feeling her care, and the greatest as not exempted from her power."

Trusting in God, let us each, to the utmost of our ability, help usher in that new age. Let us each do our part in keeping America, as Abraham Lincoln hoped it always would be, never the terror but forever the example of the world.

Shall We Tolerate Practices Which Destroy Competition?

SPEECH

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. PATMAN. Mr. Speaker, many of us who are fighting to preserve our system of free and competitive enterprise are much disturbed about the position representatives of big business are taking regarding the use of monopolistic practices, including the practice of price dis-

crimination. It is becoming increasingly clear that they insist upon the law being left so that big business firms may continue to exercise their great economic power in using the practice of price discrimination to destroy small business firms, substantially lessen competition, and enhance the growth of monopolies.

For several years I and others who have struggled in the interests of small business and a free and competitive enterprise system have urged the enactment of legislation provided for by H.R. 11. In brief, such legislation would tend to restrict to use of the practice of price discrimination by big business firms where the effect would be to substantially lessen competition and tend to create monopolies, even though the large firms practicing price discrimination did so with good intentions and for some good purpose—in other words, acted in good faith with the economic result of destroying competition.

Our efforts to secure enactment of this legislation have been opposed by representatives of big business firms in many ways. They have included a great flood of propaganda against our proposals to strengthen our antitrust laws in that respect. Arguments in such propaganda are so devious that they appealed to the unsuspecting. Innocent and well-meaning people have been confused. Some have been led to believe that H.R. 11 would prevent competition. The propaganda has been so artful that it has been with difficulty that anyone could demonstrative its fallacy. However, recently an editorial appeared in the New York Journal of Commerce, entitled, "The Battle Over S. 11." S. 11 is the Senate companion bill of H.R. 11. That editorial in the Journal of Commerce took the position that "good faith" meeting of a competitor's price should continue to be an absolute defense to an action challenging destructive monopolistic discriminatory pricing practices. The editorial closed with the conclusion that Congress should reject once and for all the proposals which had been made to strengthen our antitrust laws against price discrimination destructive of competition.

From these circumstances it is clear that the naked issue of whether H.R. 11 and S. 11 should be enacted into law is, like the bills themselves, quite simple. It is this: "Shall we tolerate practices which destroy competition and create monopolies even when those practices are based on good intentions?" In an effort to sharpen and make clearer that issue, on April 22, 1959, I wrote Mr. H. E. Luedicke, editor of the Journal of Commerce, 80 Varick Street, New York, N. Y., and criticized the editorial policy of the Journal of Commerce for its support of practices which destroy competition and create monopolies. Also, I challenged the editor of that great newspaper to utilize its power and influence for the good of the public interest in the cause against practices promotive of monopoly. In that connection, I invited the Journal of Commerce to suggest language for inclusion in legislative proposals that would, if enacted, effectively bring a halt to price discrimination practices threatening our free competitive enterprise system.

On Tuesday, May 5, 1959, the Journal of Commerce, in accordance with my request, published, on its editorial page, most of the letter I had written to Mr. Luedicke, April 22, 1959. Also, at that time there appeared a new editorial on the same page, entitled, "Sorry, Mr. PATMAN, * * * but we cannot join you in your fight for what you call the public interest in price legislation."

This editorial, which appeared in the Journal of Commerce May 5, 1959, replied to my request for suggestions and legislative proposals which, if enacted, would effectively bring a halt to these price discriminatory practices threatening our free and competitive enterprise system. That reply appeared in the following words:

> You asked in your letter to us which is reprinted on this page: "What language would you suggest for inclusion in such proposals?" And you explain that you are interested in proposals 'that would, if enacted, effectively bring to a halt these practices which threaten our free competitive enterprise system."
>
> Such a direct question deserves a direct answer. We would simply delete three lines from your controversial bill. Using the committee print H.R. 11, we would cut the lines 16, 17, and 18 on page 2 which read "that unless the effect of the discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, in any section of the country."

When that proposal of the Journal of Commerce is read in the light of the full text of H.R. 11, it is better understood. Therefore, the entire text of the substances of H.R. 11 is quoted as follows:

> Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price or services or facilities furnished, the burden of reputting the prima facie case thus made by showing justification shall be upon the person charged with a violation of this section, and unless justification shall be affirmatively shown, the Commission is authorized to issue an order terminating the discrimination: *Provided, however,* That unless the effect of the discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, in any section of the country, it shall be a complete defense for a seller to show that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor, or the services of facilities furnished by a competitor.

It is easy for one to see that if H.R. 11 should be amended as proposed by the Journal of Commerce it would not strengthen the antitrust laws. Instead it would immeasurably weaken such laws further. That further weakening would be accomplished by writing into statutory law a provision that a firm may discriminate in price regardless of the fact that the effect of the discrimination would be to substantially lessen competition or tend to create a monopoly. In other words, the Journal of Commerce proposes the enactment of H.R. 11, but only with the qualification that it be amended so as to permit big business firms to continue the practice of price discrimination with the result of substantially lessening competition and tending to create monopoly.

Mr. Speaker, I ask that I be permitted to revise and extend my remarks by inserting at this point copies of the editorial entitled, "The Battle Over S. 11" as it appeared in the Journal of Commerce March 31, 1959, my letter April 22, 1959, to Mr. H. E. Luedicke, editor, Journal of Commerce, and the editorial entitled, "Sorry, Mr. PATMAN," which appeared in the Journal of Commerce, Tuesday, May 5, 1959.

The materials referred to are as follows:

THE BATTLE OVER S. 11

Everybody seems agreed that good faith meeting of a competitor's prices should continue to be an absolute defense to a charge of violation of the price discrimination provisions of the Robinson-Patman Act.

On the surface even S. 11 and H.R. 11—the two companion bills now before Congress which are designed to strengthen the Robinson-Patman Anti-Price Discrimination Act—seem quite reasonable in this respect. They only propose to restrict the good faith defense where the effect of a price discrimination may be substantially to lessen competition or tend to create monopoly.

This would hardly explain what all the shooting was about in the recent hearings on this bill before the Antitrust tnd Monopoly Subcommittee of the Senate Judiciary Committee and the House Commerce Committee over the past few weeks.

The rub is—and it explains the bitterness of the legislative struggle over S. 11 this year—that the phrase "may be substantially to lessen competition or tend to create a monopoly," if read fast, seems to require only that there be a "reasonable possibility" that the discrimination "may" lessen competition. Since such a finding could be made in practically any situation in which a case is brought, it logically follows that the proposed legislation would virtually eliminate the good faith defense.

If our economy is to be truly competitive, a businessman must have the right to meet, within the boundaries of the good faith defense, a competitor's lower price. Restricting this right, as proposed by S. 11, is contrary to our basic antitrust policy.

As Alex Akerman of the law firm of Shipley, Akerman, & Pickett of Washington, D.C., and Atlanta, Ga., said in testimony before the Antitrust and Monopoly Subcommittee of the Senate: Although S. 11 would severely restrict the sellers' freedom of competition, the bill would not necessarily eliminate competitive injury. And he also stressed that "the good faith meeting of competition-defense is not a loophole that permits subversion of the legitimate goals of the Robinson-Patman Act."

What makes this year's fight over S. 11 different from earlier episodes is that, for the first time, the buyers have been getting into the act. They are holding that S. 11 will have a tendency to place limitations on the opportunity to buy, and therefore will raise the prices of the commodities purchased by wholesalers or retailers and ultimately force higher costs on the consuming public.

Perhaps one of the least understood but most important functons of a good purchasing agent is to develop competition between qualified sources of supply. As George Renard, our own man for purchasing policies, says, par for this search and research is the best product from the best supplier at the best over-all cost through its useful life. It is the purchasing agent's responsibility to encourage suppliers to cooperate in that search for the best value

by bidding against each other and selling to his company at the lowest reasonable price.

The whole procedure of buying is anchored on discrimination. We must discriminate in what product to purchase, from whom to buy it, and in the price we are willing to pay. In doing so, we are bound to injure competitors, if failing to give them orders is considered to be an injury.

That kind of discrimination by buyers breeds competition between sellers, which is the objective of our antitrust laws. Legislation that would make such discrimination illegal should carefully avoid any unwarranted infringement on our freedom to buy and to develop competitive sources which will increase the mileage of the dollars we spend.

George Renard states flatly that Senate bill 11 would be "a staggering blow to the purchasing profession." It also would deprive the American public of the benefits which flow from a competitive business system.

S.11 would add nothing constructive to the operation of competition, but would impair these vital processes. The only types of price discrimination which are not desirable are already precluded by present law. Thus, S.11 is merely redundant. Where it changes the legal situation, it weakens competition.

Congress should reject it once and for all.

Mr. H. E. LUEDICKE,
Editor, Journal of Commerce,
New York, N.Y.

DEAR MR. LUEDICKE: Reference is made to your editorial appearing in the Journal of Commerce, March 31, 1959, entitled "The Battle Over S. 11."

There the editorial position is taken on what Congress should express as a public policy in the field of antitrust. This matter is so important and the policy you suggest would present such serious and grave questions that I believe it would be only fair to your readers that you permit them to read this response to your suggestions. Therefore, it is requested that you publish this letter on your editorial page as prominently as your editorial to which this is in answer.

Your editorial took the position that "good faith" meeting of a competitor's price should continue to be an absolute defense to an action challenging destructive monopolistic discriminatory pricing practices. The editorial closed with the conclusion that Congress should reject once and for all the proposals which have been made to strengthen our antitrust laws against price discrimination destructive of competition. However, you did admit that "on the surface" these proposals "seem quite reasonable" since "They only propose to restrict the good faith defense where the effect of a price discrimination may be substantially to lessen competition or tend to create monopoly."

That admission is a fair summary of what the bills H.R. 11 and S. 11 would do. In other words, they would help us protect competition and thereby tend to preserve our competitive enterprise system. That feature of these legislative proposals strongly appealed to the Committee on the Judiciary, House of Representatives of the United States. As you know, the members of that committee are conservative men. In the report recommending that the House of Representatives enact these legislative proposals (H. Rept. 2202, 84th Cong.), the Judiciary Committee stated:

"Price discriminations favoring preferred buyers present a danger to the competitive enterprise system which is inconsistent with the policy of the price discrimination statute. Firms can abuse their superior market position and engage in discriminatory practices that eliminate small suppliers and small retailers from the competitive scene. In practical effect the law as presently construed allows the private interests of a discriminator to outweigh the public interest in preserving competitive opportunity at all levels of business activity. H.R. 11 would reassert that the public interest in protecting the economy against discriminations which may substantially lessen competition or tend to create a monopoly must prevail over private interests served by discrimination."

Overwhelming evidence has been accumulated for several decades showing the appalling effects of price discrimination in destroying free competition and leading to monopoly. The practice of price discrimination was one of the primary instruments used by the old Standard Oil Trust in acquiring approximately 90 percent control of the oil industry. It was necessary to dissolve that monopoly but such result was accomplished only after protracted antitrust litigation.

Subsequently, Congress enacted legislation, including the Clayton Antitrust Act of 1914 and the Robinson-Patman Act of 1946, which was believed would somewhat reduce the problem in dealing with price discrimination destructive of competition. The idea behind that legislation was to prevent the creation of monopolies and thereby avoid a procedure of standing by and allowing those with great economic power to practice price discrimination in the building of monopolies and then act to dissolve such monopolies.

Efforts of the Federal Trade Commission to enforce these laws against price discrimination have turned out to be almost wholly ineffectual. The small amount of progress which was being realized in that regard came to a halt when the Supreme Court of the United States in 1951 and again in 1958, ruled that the powerful Standard Oil Co. of Indiana may practice price discrimination with impunity, regardless of the fact that the practice is shown to have resulted in the destruction of competition and the tendency to create a monopoly. Therefore, the naked issue over whether H.R. 11 and S. 11 should be enacted into law is like the bills themselves, quite simple. It is this: "Shall we tolerate practices which destroy competition and create monopolies even when those practices are based upon good intentions?"

It is believed it should not be difficult for one to resolve that issue, especially in the light of our nationnal antimonopoly public policy to protect competition, preserve our free competitive enterprise system, and prevent monopolies. Certainly no practice destructive of competition and creative of monopoly can be said to be consonant with our antimonopoly public policy, even though the architect of such practices had some good, though misguided, purposes in mind.

Now, where are we? We have a serious loophole in the law which operates against its use to stop effectively pricing practices destructive of competition and creative of monopoly.

At this time I and other Members of the Congress are besieged with appeals from small businessmen that something be done to stop destructive discriminatory pricing practices. I, personally, have presided at hearings before committees of the Congress where an abundance of evidence was presented showing beyond dispute that discriminatory pricing practices are being used in a number of industries to the destruction of competition. For example, during December 1958 I presided over hearings before the House Small Business Committee in Dallas, Tex., where much evidence was received showing that some large nationwide processors and distributors of dairy products were selling milk in Dallas, Tex., at prices below cost. In other cities, such as Waco and Houston, Tex., they were selling essentially the same products at much higher prices, thereby subsidizing the below-cost sales in Dallas. Small businessmen, attempting to compete in Dallas with the nationally advertised branded merchandise of the national distributors were being ruined and put out of business. The small local concerns were not selling at discriminatory prices. However, their less recognized branded merchandise could be sold only at a price less than the price of the nationally advertised brands. Therefore, they sought to give the public a low nondiscriminatory price on good but little advertised merchandise. It happened that these low prices were met by the larger concerns only through the use of the practice of price discrimination.

The price discriminatory practices which were used in Dallas, Tex., to the destruction of small business concerns are being repeated in other areas over the country. In some of those areas where small concerns have disappeared and the large concerns have gained a monopoly, the public is paying higher prices than before the small competitorrs were eliminated.

Those of us in the Congress who are struggling with this problem in our effort to preserve our free competitive enterprise system need help. We need suggestions on what language should be considered for inclusion in legislative proposals that would, if enacted, effectively bring to a halt these practices which threaten our free competitive enterprise system. What language would you suggest for inclusion in such proposals?

Your newspaper is a great force which could be utilized for the good of the public interest in this cause. Therefore, may I suggest with great humility that you consider joining us immediately in this fight for the public interest by acting to prevent price discriminations which are destructive of competition and creative of monopoly.

May we have your suggestions?

Sincerely yours,

WRIGHT PATMAN.

SORRY, MR. PATMAN

But we cannot join you in your fight for what you call "the public interest in price legislation."

We believe that your whole premise in this fight is wrong and that your bill would not help but rather destroy competition.

As we have said before, your proposals "on the surface" seem to be quite reasonable since "they only propose to restrict the good faith defense where the effect of a price discrimination may be 'substantially' to lesson competition or tend to create monopoly."

Maybe we did not spell out this remark sufficiently when we first used it, but the phrase "on the surface" was of course meant to indicate that such interpretation did not stand up under closer inspection. This statement we now repeat.

You ask in your letter to us which is reprinted on this page: "What language would you suggest for inclusion in such proposal?" And you explain that you are interested in proposals "that would, if enacted, effectively bring to a halt these practices which threaten our free competitive enterprise system."

Such a direct question deserves a direct answer. We would simply delete three lines from your controversial bill. Using the committee print H.R. 11 we would cut the lines 16, 17, and 18 on page 2 which read "that unless the effect of the discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, in any section of the country."

This, we believe, would make the good faith defense an absolute one. Maybe this would destroy the real purpose of the bill, as you envision it but, in our book, this is the only way in which the bill can be made to jibe with the free enterprise system.

The Robinson-Patman amendment to the Clayton Act apparently proposed to make differences in prices not based on differences in costs and illegal discrimination.

The Federal Trade Commission interpreted that to mean that differences in costs must be reflected in a difference in prices. That interpretation would make the good five-cent cigar or $30 ton of steel sell at a variety of prices in different markets.

The businessman said that this was not practical. He is obliged to meet competition in all markets; so, an exception was made to permit him to do so. If he is not permitted to do so, a local distributor or manufacturer has the opportunity to develop a monopoly. H.R. 11 (or S. 11) would remove the exception that was granted in the Robinson-Patman Act.

Where is the "public interest"—meaning that of the buyer and consumer—in this situation?

Mr. Patman says a nationwide processor and distributor of widely advertised dairy products, meeting the price of a small, local, less-known product can put him out of business. Should the local, small operator be granted price protection by barring that competition, so that he can create a monopoly?

It seems that the public is answering that question when it chooses the widely advertised product as the better value at the same price.

If we wish to prevent monopoly in any market, it would seem logical to encourage competition in every market. Of course, some competitors are bound to be injured by competition, because competition "is the effort to secure the business by the offer of the most favorable terms." Where there is competition, someone loses the business and, if that is an injury, it is the bounce of the ball.

The aim of the Government should be to protect freedom of opportunity for the public to buy in competitive markets. It is confusing to find the investigators of so-called administered prices supporting a policy of discrimination in prices that is inconsistent with the principles of practical competition.

Texas is an important industrial State and Lone Star products must be sold competitively in many markets outside of Texas.

As has been stated, on the editorial page of the Journal of Commerce of May 5, 1959, there was reprinted most of the letter I wrote the editor of the Journal of Commerce April 22, 1959. A part of the letter the Journal of Commerce did not reprint included a quotation from House Report No. 2202, 84th Congress, in which the Judiciary Committee of the House of Representatives made the finding that price discriminations present a danger to our competitive enterprise system.

I am more convinced than ever we should enact legislation to strengthen our antitrust laws against monopolistic price discrimination. Certainly, those who are to follow us will not be fooled by any excuses for our failure to so act. We should continue our efforts to secure this needed legislation. I am strengthened in that effort by the conviction that we are on the right side and in the belief that the little people we represent will know that we did not fail to carry the fight for them and for what is right.

A Candy Jar Is a Good Idea

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BENNETT of Florida. Mr. Speaker, recently I read in a Jacksonville newspaper an interesting account of Charles Wainwright, principal of Baldwin School, telling how he always keeps a candy jar on his desk to reward pupils who have reason to be rewarded. It seems to me there is a fundamental lesson in this for all of us. In the turmoil of making a living and fulfilling our responsibilities there is too often a tendency to fail to give the rewards to others that they deserve.

Principal Wainwright points out that this may have practical applications among adults as well as youngsters. He has founded an annual "free for nothin' " barbecue for the community of Baldwin and as a result I am sure is finding that the school which he heads has become a more important focal point in all of the living in that community. Certainly there are now many more people who understand the problems of the school and who contribute to its welfare in a more generous manner. I include herein a newspaper account from the Florida Times-Union of May 2:

ANNUAL BALDWIN EVENT—FREE BARBECUE DRAWS 1,000 HUNGRY PILGRIMS

(By Richard A. Martin)

Baldwin School was a mecca yesterday for about 1,000 hungry pilgrims who shared in the community's third annual "free-for-nothin" barbecue.

Everybody was invited, without charge, to the schoolhouse where outdoor serving tables groaned with the weight of barbecued pig and chicken, homemade cakes and salads, soft drinks and baked beans. Serving went on continuously from 5 to about 7 p.m. A body just picked up a plate and got into line and there seemed to be no end to the mouth-watering delicacies on hand.

The idea for the community barbecue began 3 years ago when Principal Charles O. Wainright heard of dissatisfaction about school costing so much—including admission prices to sports events and various fees.

Wainright got together with members of the community and told them if they were unhappy about the situation maybe it could be corrected—to a degree. The principal suggested several kinds of activities, all to be free to the children.

Then someone came up with the idea of a free barbecue for everyone. That first year between 400 and 500 people attended, but most were still skeptical. "They stood in line and asked, 'What's the catch?' " Wainright recalled. Finding there was none, they began looking forward to the event, which since has doubled in size.

To prepare for the barbecue, Wainright and about 20 high school boys started cooking 8 hogs and about 80 chickens Thursday evening.

"We were all going to stick with it 'till the job was done," Wainright said with a chuckle. "But about 1 a.m. I looked up and one boy was dozing, then another, and so on." By daylight yesterday the meat was ready but only three cooks remained: Wainright, Ivy Lucas, a filling station operator, and one hardy 9th grader, Clayton Hill.

Over 100 homemade layer cakes were baked by the women of the community, and others—businessmen included—prepared or contributed the rest of the trimmings.

The somewhat bleary-eyed principal, who reported for work as usual after freshening up a bit, was feeling the effects of his chores by the time the barbecue was underway yesterday evening.

Early in the afternoon there was a track meet, with all the school participating, one class against another, and a dance from 8 p.m. to midnight rounded out the affair.

Wainright, who was too busy joking with everyone and making them feel at home, said, "I'm going to stay for the first dance. After that it's anyone's ball and me for some sleep."

Urban Renewal and Slum Clearance Program

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. MACDONALD. Mr. Speaker, our urban renewal and slum clearance program is now at a crucial place in its progress. For the past 10 weeks it has been resting in the House Rules Committee pigeonhole.

This legislation is extremely important to our Nation's economy and every day's delay is harmful. It seems to me that the Rules Committee has had more than enough time to consider the housing and urban renewal bill. If the Rules Committee continues to bottle up this important and needed legislation I feel that the leadership of the House would be justified in taking the necessary steps to bring the bill to the floor of the House for consideration and a final vote.

Urban renewal is clearly a part of an important national problem to provide a decent home and suitable living environment for every American family. Urban renewal will play a large part in stemming the rise of juvenile delinquency. Federal urban renewal aids are investments in better families, better citizens, and better communities. These are investments which will return dividends in higher national income, and increased sources of revenue for local, State, and Federal governments. These investments which, if neglected, can result in economic and social retrogression in place of progress.

Mr. Speaker, a number of constituents in my Eighth Congressional District, as well as the mayor of Boston have taken the time and the effort to write me here in Washington requesting that the housing and urban renewal bill be brought to the House floor for immediate action. I appreciate receiving their views and agree with them that this legislation must be enacted into law at the earliest possible moment. We cannot stand by and watch our cities slowly disintegrate and wither away.

In order that my colleagues may know the thinking of the people in my area on urban renewal legislation I am setting forth a few of the letters I have recently

received. The letters speak for themselves:

CITY OF BOSTON, *April 21, 1959.*

Hon. TORBERT H. MACDONALD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: I appreciate your communication relative to the urban renewal legislation now pending in Congress.

Emphatically, I am in favor of this legislation which will make it possible for the urban renewal programs of our cities to move ahead on a 3-year authorization which, in my opinion, is the least limitation that should be in the bill. Increased relocation payments are also imperative for it is in this field that we encounter considerable difficulty and opposition when urban renewal projects are proposed. Additional planning grants are also most desirable for, as you know, planning is not only essential, but it is expensive.

Any attempt to amend the provisions of the bill to eliminate low-rent public housing for the elderly would be a hard blow to cities such as Boston which are now embarked on such a program.

In my opinion, the urban-renewal legislation which has been in effect has done more to directly help cities, such as Boston, than any other Federal activity. This kind of legislation must be continued if our large American cities, and especially the older cities, are going to be able to meet the need of rebuilding which must be done if our large cities are to be desirable places in which to live or do business.

The current demands on municipal governments are so great that none of our cities can tackle urban renewal without considerable help from the National Government. The State governments, in almost every case, are unable to help cities in this field and, as you well know, the legislators from nonurban districts do not look kindly upon financial participation by the State government when cities are the beneficiaries.

Urban renewal, and its counterpart housing, are the two weapons by which a city can be rehabilitated and by which our people can be adequately and decently housed. Any amendments to the present bill which would decrease the contribution by the Federal Government or restrict it to a very brief period of years would have a debilitating effect on municipal programs now in the infancy stage.

I sincerely hope that the present bill will be adopted without material change. I know you will exert your full influence in this matter because I know you understand this problem and you have witnessed in our own area the fruits that can be done through urban renewal and public housing.

Best wishes.

Respectfully,

JOHN B. HYNES, *Mayor.*

SOMERVILLE, MASS., *April 23, 1959.*

Hon. TORBERT H. MACDONALD,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR SIR: I respectfully solicit your continued support of the 1959 housing and urban renewal bill.

Our city has benefited through the passage of the 1954 bill to the extent that we have what is considered by all our citizenry an ideal housing facility for aged people. However, at the present time we can only accomodate 64 families.

Approximately 12 percent of our entire population of nearly 100,000 is made up of people who have reached or passed the age of 60 years. There is a great need for more elderly housing to provide adequate shelter for them and it seems that the only method of acquiring it is through governmental action.

You are quite aware also that Somerville is an old city, approximately 4 square miles in area. In fact, we are known to be the most densely populated city of our size in the Nation. We can not expand because of the lack of land. Our only salvation to cope with the modern day standards of housing is a program of urban renewal for which we have previously qualified through the functioning of our workable program.

It will be a tragedy for our people if this program is curtailed in any manner. Over 65 percent of the houses in Somerville are owner occupied. The investment of these people must be protected. We are not in a financial position to independently carry on a full scale program for the renewal of our city facilities, to eliminate substandard housing, or the several other steps necessary to protect the city against blight.

You will render another great service to our community by your strong support of this bill.

Respectfully yours,

WILLIAM P. DONOVAN,
Mayor.

MEDFORD REDEVELOPMENT AUTHORITY,
Medford, Mass., April 22, 1959.

Hon. TORBERT H. MACDONALD,
Assistant Majority Leader,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MACDONALD: It is most gratifying to learn of your support and interest in urban renewal. I am also thankful of the opportunity you have provided for airing my opinions on this important legislation.

The 1959 housing and urban renewal bill will have a tremendous influence on the national economy. Over half of the Nation's wealth is invested in our cities, and it is the responsibility of the Federal Government not only to protect this huge investment, but also to generate conditions conducive to continue urban expansion. Urban renewal is the best method yet devised to protect our cities through the prevention of blight and decay. If the decay of our cities was to go unchecked, the resulting economic situation caused by the gradual decay of such a large portion of the national wealth, would have a cyclical effect rivaling that of the great depression of the thirties.

It is an appalling fact that in this, the wealthiest nation in the world, over half of the population lives in substandard housing. Slum clearance alone cannot generate enough new units to replace all of the substandard housing. There is a great need for more private construction, especially in the middle- and low-income brackets. It is the responsibility of the Federal Government to stimulate this private construction. A new approach to this task must be mapped out as the old methods have failed to produce the necessary supply of homes within the price range of this vast segment of our population.

With regards to the present ligislation, I have the following recommendations:

1. An increase in the capital grant expenditures from $500 million to $1 billion annually. The present sum does not anticipate the great expansion that is forthcoming in this field.

2. An accelerated and improved program of public housing for the aged. It has been our experience that a high percentage of the slum population is comprised of elderly couples who cannot afford decent rentals.

3. An increase in the budget of the Housing and Home Finance Agency, which would enable this Agency to increase its staff in order to handle the ever-increasing administrative functions of urban renewal.

4. The elimination of some of the ponderous redtape thereby cutting down the dead time between the initial stages of application and the actual undertaking of a project. This period now can extend anywhere from 2 to 5 years and results in hardships to the families living in the area and increases the ultimate cost of the project.

Socially and economically there is a crying need for an urban renaissance in our country. The stakes are so high that we just cannot afford false economy. An expenditure of $2.1 billion for urban renewal, when compared to the task that must be accomplished and to other appropriations, especially to those for farm subsidy, seems like a relatively small amount.

Sincerely yours,

NATHANIEL GRAUEL,
Chairman.

MEDFORD REDEVELOPMENT AUTHORITY,
Medford, Mass., April 22, 1959.

Hon. TORBERT H. MACDONALD,
Assistant Majority Leader, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN MACDONALD: Your support of an expanded urban renewal program is highly commendable; more particularly so, when contrasted with the lethargy toward this program of self-preservation shown by so many of the Metropolitan Boston communities.

If we in truth accept the fact that the magnitude of the problem of obsolescence besetting our older cities is reflected in the national economy to the extent that effort must be expended to reverse the trend, then we had better face up to the task far more realistically and vigorously than heretofore.

Recognizing that we are an urbanized nation—with two-thirds of our people, three-quarters of our industrial jobs, and over half of our real wealth to be found in urban concentrations—would seem to indicate indisputably that these vital centers require and should have at least an equal proportion of tax money returned to help stabilize urban economy as that proportion now spent on farm subsidies. One wonders what forces have led to our present per capita allocation of resources in the magnitude of $3,000 per farm family and $84 per urban slum family at a time when we have 1 million more slum dwellers than farm dwellers.

Certainly in the light of the above, I most wholeheartedly urge the passage of a bill providing realistic and adequate capital grant authority which must of necessity be greater than any amount yet contemplated. In addition, I recognize the need and urge that the Bureau of the Budget provide far more adequate sums for staffing the Housing and Home Finance Agency and its regional offices with sufficient trained career personnel to process applications, contracts, and financial requests so that the present costly months of delay can be eliminated.

Though a volume could be written about specific amendments to the Housing Act which are needed, the following are a few that I consider most important:

1. More funds available for development of commercial and industrial use of land without present restrictions requiring residential use at beginning or end.

2. More imaginative and workable methods of financing to stimulate an increased housing supply for the low and moderately low income family.

3. Recognition of the need for more rental housing to serve the above groups who are, by and large, neither able nor capable of buying and maintaining sound housing—no matter how worthy the goal of home ownership. To aid such a program the requirement for private nonprofit sponsorship of 221 rental housing should be eliminated and private enterprise should be urged to build with the allowance of reasonable profit. (It is time we stopped bending over backward because of the 608 scandals.)

4. Reduction of housing construction cost through some method of providing building materials at reasonable and not excessive profits.

5. Stimulation of research and use of new materials toward the same goal of structural soundness at decreased cost.

6. Enforceable demands in the Federal Highway Act and the Housing Act to insure coordination of these two programs to eliminate the waste and delay now encountered. Emphasis is desperately needed to insure that State highway departments use criteria relating to the economic impact of highways on cities in the choice of alinements in addition to the usual engineering cost and traffic count criteria. Today only a minimal amount of lip service is being given with the result that time and money are wasted and the future of our cities is not being well served.

7. In the area of public housing it has long since been apparent that four walls and a roof do not provide all that is necessary for the rehabilitation of slum families. Congress should recognize the need for the expenditure of funds for trained personnel for management-tenant relations. Hard core social problems do not evaporate with changed environment; and help is needed if public housing is not to become the repository of only the adjusted families, closing its doors to slum families now being pushed from slum to slum, prey to further degeneration and increasing the cost of police and social services.

8. Perhaps all of this means that we are striving only to be technicians and not yet scientists—dedicated to serve the total requirements, physical, cultural, and economic, of areas which have become, for one reason or another, the living spaces embracing the aspirations of great concentrations of people. The provision of funds for fundamental research to point the way to the kinds of cities we really need and should be striving for seems implicit even as we continue to struggle and learn through our present limited project-by-project approach.

To return to the implication of the second half of my first sentence, Congressman MACDONALD, all the Housing Acts that can be conceived will not serve our total economy unless some method is found to stimulate local interest and action. Medford after all these years still seems to look upon the redevelopment authority, an agency of its own creation notwithstanding, as an imposter and the requirements for city planning, code enforcement, and capital budgeting as heinous Federal dictation which the city consistantly refuses to begin to meet even though committed by virtue of a loan and grant contract executed last summer.

This appears to me as a tragedy since Medford is in the unique position of needing urban renewal largely oriented to conservation and rehabilitation but threatened with the eminent need for slum clearance by virtue of the fast growing, obsolescence of public facilities and residential structures hastened by the population change as more families are displaced from the core cities.

I, therefore, end my lengthy letter with a sincere request for your advice and help in awakening the community to the dangers that threaten its proud heritage and the opportunity available to its elected officials and civic leaders to reverse the downhill economic slide and to replace it with increased investments, proper land use, and growing fiscal capacity to meet its needs.

Sincerely yours,

CAROLYN B. WEAVER,
Executive Director.

MEDFORD, MASS., *April 20, 1959.*

Hon. TORBERT H. MACDONALD,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR TORBY: I am pleased to acknowledge your communication of the 14th, concerning your support of an expanded urban renewal program.

As you may know I was a member of the first urban renewal commission here in Medford prior to my election to the city council, consequently this subject is of much interest to me. I am in favor of the Housing and Urban Renewal bill and I am please to see that you are convinced that it should be enacted into law. As you say, aside from the benefits gained by the cities and towns it would provide a great source of employment. We in Medford have an urban renewal project known as the Union Swan development underway at the present time.

Concerning the special housing program for the needs of our elderly people, I feel that our council would favor such a program especially the apartment type located convenient to stores, churches, and transportation. Unfortunately, our local housing authority wanted to locate separate houses near Victory Park and later on property set aside for recreation purposes adjoining Wright's Pond. Neither of these, in my opinion, are suitable being located far from the conveniences above mentioned as ideal for the elderly. Our council is on record in this respect.

Please be assured that I will be glad to give you any further views concerning the subject that you may desire. I further assure you of my support in behalf of this legislation. It should benefit not only Medford, Malden, and Sommerville but the whole Eighth District.

Sincerely,

BOB DRENNAN.

BOSTON, MASS., *April 23, 1959.*

Hon. TORBERT H. MACDONALD,
Member of Congress,
Boston, Mass.

DEAR CONGRESSMAN MACDONALD: I very much appreciate your letter of April 14, 1959, relative to the provisions of the 1959 housing and urban renewal bill.

I strongly favor the passage of said bill, because of the essential assistance which it will give to many of our municipalities where blight areas and slums have developed and expanded over the years.

As a lifelong resident of Malden, Mass., and a local taxpayer, I fully realize the serious deterioration which several sections of our city have experienced and the critical need for halting its continued growth. The high tax rate in Malden, and legal obstacles, have hindered any major step toward correcting said serious deficiencies. It now appears that pending Federal legislation with regard to housing and urban renewal can offer to qualifying municipalities the essential financial and legal aid which they need.

I believe Malden is approaching its important urban renewal problem in a sound and effective manner, thanks to the conscientious and energetic efforts of our mayor, Walter J. Kelliher. The mayor secured a preliminary planning study through the city's planning board; this study was followed by the appointment of an Urban Redevelopment Authority, which has a keen appreciation for the need for correcting the city's blighted areas; certain taxpayers have voluntarily donated a substantial sum to finance activities pertinent to the problem; and a competent urban renewal consultant has been employed for the professional services needed to advance the project.

Malden's Redevelopment Authority is about to request Federal funds for carrying out its first project; however, it is understood that no funds are available at present. Without Federal funds, there is grave doubt that the city can provide the full project cost. Furthermore, the specific project area is found by our consultant to have "10 percent nonresidential exception," meaning the urban renewal area is less than 55 percent residential and, consequently, it is desirable that provisions regarding said "10 percent nonresidential exception" should be kept as favorable as possible for Malden's specific needs. It appears that Malden's capital grant request would be of the magnitude of $700,000.

The city's initial urban renewal project will remove a severely blighted area and provide in its stead an area well suited for industrial development. Such a development is very essential at the locality of the project if the city is to retain one of its most important industries, this industry being a major employer of local labor. The said industry contemplates a sizable modern plant.

It is anticipated that new taxable property, about 10 times the present taxable value of the site, will result from the completed development of the urban renewal area. Certainly, this would be a substantial contributing measure in improving the city's municipal economy.

I am pleased indeed to learn that you plan to favor the pending legislation herein referred to.

Very truly yours,

RALPH W. HORNE,
Member of Malden Urban Redevelopment Authority.

THE FIRST NATIONAL
BANK OF MALDEN,
Malden Mass., April 30, 1959.

Hon. TORBERT H. MACDONALD,
Congressman From Massachusetts,
House Office Building,
Washington, D.C.

DEAR TORBERT: On return to my home after 10 days' vacation, I found your letter of April 14, in which you so adequately outline your position with respect to the urban renewal program.

As you know, Mayor Kelliher prevailed on me to accept the chairmanship of the Malden Redevelopment Authority last October, and in spite of a busy schedule, I accepted because I sincerely believe that this program is of vital importance to the city in which I live and work. We have a project application now ready for filing. This application needs only the formal vote of the Malden Redevelopment Authority, which I expect will be completed this evening; and a favorable vote of the Malden City Council. The matter is to be taken up at their meeting on May 5, so you can see I am vitally interested that funds be made available so that we can at least make a start in this direction in Malden. The project which we have in mind would eliminate 60-odd substandard homes, and would make land available to industry in an area where such expansion is sorely needed. This particular project is one which lends itself to early approval as there is immediate need for this land by industry, and I visualize substantial additions to real estate valuation in this project, if we are to carry it to completion. This we cannot do without Federal funds.

Mr. Horne, a member of our authority, has very graciously given to me a copy of the letter which he wrote to you recently, and I concur with all of his statements. Your interest in this matter is deeply appreciated by all of us who are trying to make Malden a better place in which to live and work.

Sincerely yours,

SIDNEY M. PRICE,
President.

READING, MASS., *April 20, 1959.*

Hon. TORBERT H. MACDONALD,
Congress of the U.S. House of Representatives, Washington, D.C.

DEAR MR. MACDONALD: We are writing in answer to your letter with regard to your proposed bill for urban development. Although Reading is not at this moment in need of such development, we are certainly in sympathy with the need of this type of housing in communities surrounding Reading, the areas through which our citizens must pass, work, shop, and visit. We are aware of the program that was instituted in Somerville, and we feel that this program is an excellent program and one which is greatly needed to assist our community and the communities throughout the Nation.

The growing need for this type of housing is certainly pressing, and may we extend to you our continued support and best wishes for its successful enactment.

Sincerely yours,

LAWRENCE DREW,
RUDOLF SUSSMANN,
JAMES E. CALVIN,
Board of Selectmen.

MALDEN, MASS., *April 30, 1959.*

Hon. TORBERT H. MACDONALD,
House of Representatives,
Washington, D.C.

DEAR SIR: I have lived in Malden my entire life—was born here, attended the local schools, married, and settled here. So you see I find myself in an excellent position of having literally watched the deterioration of our hometown. I am certain that we all realize that cities change over a long period of years (particularly old ones like Malden) but if we do not guide them in the right direction, they will certainly change for the worse.

The full realization for the need for this program came to me about 3 years ago when I was appointed chairman of an urban renewal committee for the League of Women Voters. I had a large committee study this program for 2 years and we brought back to our membership all the vital facts concerning it—the background, including detailed information about the "workable program," the financial aspects both from the Government and local points of view, the human values which foster disease, crime, and delinquency, and a pretty sad picture of what our local scene looked like but more important—what it would look like if we continued in our lethargic ways.

Not only is the league behind this program 100 percent, but church groups, parent-teacher groups, Community Chest, and many other civic groups all realize the extreme need for the passage of this bill in order that Malden may once again become a desirable community in which to live.

I feel that it is the right of every citizen to have at least the hope of some adequate return for an all-time high tax rate and thus be able to maintain our rightful position as a modern, progressive business and residential center. I feel that this program should have the highest priority for the benefit of all.

Sincerely yours,

(Mrs. Sol S.) BEATRICE RICHMOND.

The Forand Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on the Forand bill, which appeared in the official publication of the Office Employees International Union entitled "White Collar":

THE FORAND BILL

Representative AIME J. FORAND of Rhode Island, has introduced a bill known as H.R. 4700 which provides for certain medical and hospital benefits for social security beneficiaries.

Representative FORAND deserves much praise for this proposal to alleviate important difficulties facing the aged. Three-fifths of all people 65 years and over had incomes of less than $1,000 a year in 1956 and 1957.

It is apparent, therefore, that these people cannot turn to private insurance in accordance with the contention of the medical societies. In most instances, their only recourse at the present time is public assistance or other forms of public welfare, only after their savings are exhausted. This alternative destroys the dignity of many men and women in their later years.

In effect, the provisions of the Forand bill will provide for a type of prepaid insurance under the social security system.

Secretary of Health, Education, and Welfare Fleming made public a comprehensive report which supports labor's claims that retired workers cannot afford the rising costs of medical care.

George Meany, AFL–CIO president, states: "Our members want high quality medical services, both before and after retirement, and are willing to pay for them on a budgeted prepayment basis during their years of employment."

It is our feeling that the Forand bill should be judged on the basis of need and it should not, under any circumstances, become a matter for political partisanship.

Negro Ex-Councilman of Jacksonville Shows Kindness and Understanding Which Make Him a Leader

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BENNETT of Florida. Mr. Speaker, the Florida Times Union of Jacksonville, Fla., recently published an interesting account of an interview with Ex-Councilman George E. Ross, who today demonstrates kindness, understanding, objectivity and a type of fine American spirit which we should all seek to achieve. I am glad to have included in the CONGRESSIONAL RECORD this thoughtful newspaper article:

HITS BLOC VOTE—NEGRO EX-COUNCILMAN OPPOSED TO INTEGRATION

A 91-year-old Negro is Jacksonville's oldest former city councilman, and the only living member of his race to have held a public office in this city.

He is George E. Ross, of 1406 Davis Street. His age, his experiences and his background have clothed him in the dignity, the self-possession, and the pride of achievement which tub-thumping integrationists claim every member of the Negro race is destined to achieve—but Ross is not an integrationist.

Ross has a ready and articulate answer to a question as to the racial strife which has been brewed throughout the Nation in recent years.

NOT FOR INTEGRATION

"I am not for integration," he declares emphatically. "I, and most members of my race, have no desire to leave our own group, our own people, and mingle with white people in every level of their society. We do want one thing. We want an equality of opportunity for education."

And he quickly adds, "We have that opportunity in Jacksonville, in fact in all of Florida. Our Negro schools are excellent. I see no reason why Negroes should ever try to integrate the public schools in this city and I certainly hope it never happens here."

Ross is a native of Gainesville, spent his childhood there, in Cedar Key and Key West, and learned the cigar-making trade. He came to Jacksonville before the turn of the century, to go to work for the Gonzales and Sanchez Cigar Co. and lay the foundation for the rich life which has followed.

Ross bought the property where he now makes his home, and which has been converted into a two-unit apartment building. His four children, all living, were born there, and it was his residence in 1901 when he successfully ran for the city council from the old sixth ward, on the Republican ticket.

TWO NEGRO MEMBERS

At that time, the council consisted of two representatives from each of the city's nine wards. Ross and another Negro, J. Douglas Wetmore, were elected to the sixth ward posts at the same time, and were the only two Negroes in the council.

Wetmore served only one 2-year term, but Ross was reelected for a second term, to become the city's last Negro councilman. During his first term, when Pleasant A. Holt, one of Jacksonville's outstanding political figures of the early 1900's, was council president, Ross was named a member of council's committee on relief and charged with aiding in the rehabilitation of Jacksonville and its people after the great fire of May 3, 1901.

It is a thumbnail delineation of his character to hear him mark, without hesitation, that period of service as his outstanding contribution to his city.

"It's true," Ross recalled, "that my own people were hardest hit by the fire. When their homes burned, all their possessions went with them; they had no other resources. They needed such essentials as food and clothing, they had no money, and our council relief committee was the only salvation for them. With the help of city funds and donations, we were able to do the job."

Ross smiled at one recollection of the committee's work. "No bill I ever submitted for clothing or supplies was ever questioned," he said. "And every one was found to be proper and in order by the auditors."

The former councilman considered the job of rehabilitating Jacksonville after the fire the biggest problem during his tenure. "But our council was very active, and it was very harmonious. Harmonious not only racially, but politically. During my terms, there was never the slightest friction between me and the other councilmen, because of my race," he said.

"No," Ross shook his head, "I'm not active politically any more. I vote—I've never missed an election—but that is all. And I don't think the Negroes here are helping their own cause by this so-called bloc voting.

"The bloc vote is a sacrifice of independence and it can be misled," Ross continued. "But I do think the large Negro population of Jacksonville deserves representation on its governmental bodies.

"Anything else means taxation without representation, and our country was founded on opposition to that.

"I think a Negro member of city council now would be a good thing for our entire city and I don't believe it would cause any more friction on that body than it did when I served there."

ACTIVE IN COMMUNITY

In addition to his political service, Ross has been active in all phases of Negro life in this community. He has served twice as grand master of Prince Hall Lodge, Free and Accepted Masons, for many years was superintendent of the Sunday school of St. Stephen's Methodist Church and a member of its board of trustees.

"But I'm not as young now as I used to be, and I've just about retired completely from all public affairs. I don't even have any advice or suggestions to offer the politicians of today, or any Negro who might be elected to public office. I feel that to give advice would be most presumptuous on my part."

Ross smiled again. "I do feel flattered when some of our leaders come to talk with me about their problems. And I never fail to point out that Jacksonville has been a good place for both Negroes and white people to live, that we have lived in harmony, that we have seen none of the strife that has beset other cities. But politics? No, I'm out of that," he declared.

Small Business Administration Invades Construction Field

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. WEAVER. Mr. Speaker, on the 23d of April of this year John B. Quinn, executive vice chairman of the National Resources Development Association, in an address to the Associated General Contractors called attention to a new threat to the construction industry—the invasion of that industry by the Small Business Administration.

I have personally been genuinely interested in small business, but I also have at heart the need for saving tax dollars, and the need for free enterprise and the protection of our freedoms. For these reasons I am taking the liberty of inserting the entire address by Mr. Quinn in the RECORD for my colleagues to see.

The address follows:

SPEECH BY JOHN B. QUINN OF LINCOLN, NEBR., EXECUTIVE VICE CHAIRMAN OF THE NATIONAL RESOURCES DEVELOPMENT ASSOCIATION, BEFORE THE (11-STATE) WESTERN AGC CHAPTERS CONFERENCE, MONTEREY, CALIF.

Mr. Chairman and members of the conference, on behalf of the National Resources Development Association I am appreciative of the opportunity to speak with you relative to issues and interests of a common nature.

Over a period in excess of 15 years my work has brought me in constant contact with leaders of the construction industry. Especially have I coordinated with those who are workhorses—the pivot wheels—the managers of the various State chapters of the Associated General Contractors.

The great fight in the Missouri Basin—that covers 10 States and one-sixth of the land area of the Nation—to keep Government control—and in fact to actually keep Government itself out of the construction industry through another TVA was my introduction to AGC State managers and to that stout warrier for the cause of free enterprise and the low-bid construction formula, H. E. "Doc" Foreman, who guided the national AGC during my early years in this work.

My activities include participation in (1) the contest in Congress and in the States to keep gas tax revenue for roads and highways; (2) the increase of the gas tax in several States where needed; (3) the discouragement of "day labor" on construction projects sponsored by the Federal and State governmental agencies; (4) the great crusade for the St. Lawrence Seaway; (5) coordination with friends of the Interstate Highway System; (6) encouragement of Government's investigation and advance study of land and water projects of economic value; (7) resistance to the constant pressure to stop the start of new projects authorized by Congress; (8) initiation of regional planning conferences on all types of future construction needs; and (9) joining with others at this time in spearheading an activity designed to retard the progress of the Federal Government from further encroachment upon a tradition that is as old as the free enterprise system itself. I refer to the Small Business Administration's entry into the construction industry as authorized by the Congress whereby some can bid and some cannot bid on selected construction contracts let by the Federal Government.

As you can readily see all the activities mentioned deal directly with the political, but nonpartisan, area of thinking. This is true simply because decisions that count are either fostered or resisted by those in Government. Some are elected and some are appointed but they all—in their own way—make a mighty contribution, good or bad, to the rules, the regulations, the laws and the interpretation of the laws that so vitally affect the livelihood of our people and touch every phase of this Nation's economic life.

There is a lot of room for disagreement among those who are governed. No thinking person gives unanimous support to all laws and regulations. Therefore the contest on the selling job for approval or disapproval by the people of an idea or a philosophy is a continuous activity that is accepted as one of the factors in our American way of life.

Fortunately in America no one has ever been able to control or direct the thinking of all the people all of the time.

In our concept of what is right and what is wrong we are guided by the rule that everyone can get into the act in an endeavorment to sell an idea—to oppose, to support—to build, to destroy—to stand pat or to change.

It is reasonable to propose that progress is not marked by opposing all that is old or accepting all that is new. Progress comes about in the settlement of problems through a degree and gradual mixture of change that works to the benefit of all; not just a few.

Sometimes a big and sudden change for an industry is in the making without benefit of a full realization of the many ramifications involved or the degree and extent of change contemplated by present and future administrators of a law through regulations.

A good example of this is the congressional act of 1958 that directs the Small Business Administration to insure that a fair proportion of the Government's contracts goes to small businesses. The activity of SBA in the construction industry has been described as "progressing from the creeping to the galloping state."

In a relatively short time, the SBA has progressed from (a) no activity in the construction industry to (b) a set-aside program in the Corps of Engineers, with a $50,000 limitation as to each contract; then to (c) entry into all branches of the Department of Defense, simultaneously with which it (d) caused to be eliminated any reference to dollar limitation as to each contract; then to (e) a proposed plan whereby on a 1,000-unit Capehart housing project—500 units would be set aside for small business thereby creating a probable situation where the large contractor would be a union operator and any number of the small business contractors would be nonunion; then to (f) activity with the Bureau of Public Roads to encourage and develop the utilization of small business concerns in the construction of Federal aid and Interstate Highway Systems.

Just 3 months ago, almost to the day, Donald A. Hipkins, SBA Deputy Administrator, in a speech delivered in Miami stated that SBA's program in construction had heretofore been able to make only a token progress in setting aside construction contracts for small firms and that the program had not reached its full potential. Mr. Hipkins certainly told the truth. Some of the convention attendants must have consumed a liberal dose of tranquilizers because the delayed reaction to the actual SBA intent and effect of regulations has taken about 3 months to comprehend.

In representing the National Resources Development Association I wish to make it crystal clear that we do not oppose small business organizations—nor do we oppose the so-called large business organizations.

We have spent the larger amount of our efforts to pinpoint the need of future planing in construction at the municipal, State and Federal levels. The great bulk of the proposed projects considered will be built by small business firms. Our theory is that in the mutual interest of the taxpayer, and of those in the construction industry, that advance planning of economically justified projects—to be let on the low-bid basis—is a sound program of benefit to all concerned.

In an effort to survive—all contractors—large and small joined hands to oppose the TVA expansion of Government in the construction business in other basins of the Nation. All oppose the use of day labor—by the municipal, county, State, or National Government. Construction firms favored the contract method and they let the world know about their position. They were united.

Again and again—contractors, labor forces and others, who believe in the American free enterprise system, have presented a solid wall against unnecessary governmental encroachment upon a system that presented an opportunity to all to advance in business without Government aid and in accordance with ability, skill, and resourcefulness.

I believe that SBA's entry into the construction industry, whereby large efficient contractors are forbidden and barred from bidding on some projects is not in the interest of maintaining or mobilizing the Nation's full productive capacity or in the interest of war or national defense programs.

I believe this because the protected projects for some theory is bound to cost the taxpayer more money. America's number one defense need is her economic ability to maintain a costly program of peace in this cold war. Any program that is designed to cost more than is absolutely necessary contributes to the weakening of our defense program.

I believe that if the Federal Government can have an SBA protective clause in the law that the same theory but in many different forms can and will be extended into State, county, and municipal laws or ordinances. Where such practices would stop—who would be eliminated or excluded in the musical chair game—nobody knows. Not even the economic theorists that would change a proven and established procedure could outguess the future for construction firms. Perhaps we would end up with three

classifications—large, small, and tiny contractors.

This situation creates an issue that requires sober and intelligent analysis on the part of those who seek unification of position between small and large contractors. It will be a painful decision especially for those who could temporarily profit in the first quarter of the game. Discussion and education of the present and future advantages and disadvantages are essential.

N.R.D.A. stands for and will work for repeal of the law that permits differentiating between small and large contractors. We do this in the interest of defense and economy.

Hon. Harry S. Truman

SPEECH
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. BENNETT of Florida. Mr. Speaker, I am glad on this 75th birthday of President Harry S. Truman to pay tribute to his many fine accomplishments and to say a few words of personal regard. I remember the feeling of sympathy I felt for him when the news came of the death of President Roosevelt, sympathy because I knew it would be difficult to follow a world figure of the stature of his predecessor. This news came to me when I was in guerrilla fighting in the Philippine Islands near the end of World War II. President Truman, in the months and years which followed, proved time after time that he was capable of making well the big decisions which history would place upon him.

I remember a few years later at a banquet in Washington when I was a freshman Congressman in a wheel chair at a banquet in a Washington hotel, President Truman and our fine majority leader, JOHN MCCORMACK, perceived that there would be real trouble in placing the chair at the table assigned to me and they both insisted that I join them at their more adjustable table. This I did. The thoughtfulness of President Truman and Mr. MCCORMACK was certainly deeply appreciated by me. The outstanding remark that I can remember the President making in the conversation that evening was that if he had to make the decision again to drop the atomic bomb, he would have made the decision just as he did when history called upon him for that decision. His major decisions in the field of foreign affairs were of tremendous significance and will affect the world for centuries to come. I do not know of a single one of them that history so far has indicated as faulty.

No two people see everything exactly alike, and I can remember one occasion when President Truman wrote me what I considered to be a rather strong letter of disapproval of my position on a particular matter. He shortly thereafter wrote me a very kind letter which indicated that he realized that his first letter had been a little fiery in language. In referring to the earlier letter he said: "Sometimes we get ruffled for no good cause." Certainly this is another indication of the bigness of his character, and at the same time his persistent courage in standing for what he thinks is right. I believe the American people can be very, very grateful that a man of his fine qualities led them in the particular years of peril when he had these tremendous responsibilities upon his shoulders. I consider that I am a very lucky person to have known a man of his character and to have served in Congress when he was President.

That he is still very active in many things for the benefit of our country is well known to everyone. An illustration from my own mail was a recent letter from him encouraging me in my efforts to bring about the construction of the cross-Florida barge canal. He wrote:

> I hope that someday cross-Florida barge canal can be completed. In my opinion it is necessary for the welfare of the whole country.

As I close my remarks, I would like to say that one of the things that will last with me the longest about President Truman, and to which I have often referred in speeches, is a little incident illustrative of his strong personal loyalties. It was when the President was being criticized by some publicity seekers for being away from Washington when his mother was very ill in Missouri. His remark at that time was to the point when he said:

> She sat up with me many times when I needed her and I want to reciprocate when she needs me. Whenever she wakes up, she wants to talk to me. I want to be there.

I am glad that his loyalties to persons are accompanied by equally strong loyalties to his country and to God.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Ukrainian Congress Committee of American, Jersey City branch:

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA,
JERSEY CITY BRANCH,
Jersey City, N.J., May 1, 1959.

Hon. CORNELIUS E. GALLAGHER,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN GALLAGHER: The Ukrainian Congress Committee, Jersey City branch, supports wholeheartedly House Joint Resolution 334, introduced in the House of Representatives on April 8, 1959, by Hon. WALTER H. JUDD, of Minnesota.

This resolution, which was referred to the House Committee on the Judiciary, authorizes and requests the President of the United States to issue a proclamation designating January 22 of each year as Ukrainian Independence Day.

We, Ukrainians of Jersey City, believe that such resolution inviting the people of the United States to observe the anniversary of the proclamation which declared Ukraine to be a free and independent republic, deserves unanimous endorsement. We, therefore, request you, as our Representative in Congress, to give your kind attention and support to House Joint Resolution 334.

Best wishes extended to you by Marcel Wagner.

Respectfully yours,
ANTHONY SHARAN,
President.

People Are Urged To Do Something About Inflation

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the House one of the most impressive editorials to appear in recent weeks in any American newspaper. The editorial from the Omaha World-Herald is impressive for two reasons, one being the good commonsense conveyed by the writer and the other being the way in which the people are urged to take action against inflation.

As my own voting record shows, I have long fought against the useless and wasteful spending programs so often proposed in the Congress. I have said that only by action of the people can this waste be cut. I am pleased that the World-Herald has taken this method of arousing the people to the dangers they face, and that the newspaper has been able to direct the energy it has so ably stirred up.

The editorial follows:

THIS IS THE GREAT PROBLEM: YOU CAN HELP TO SOLVE IT

The greatest issue in America this year is inflation.

President Eisenhower says that Secretary of the Treasury Anderson agrees. So do a host of other thoughtful Americans.

This is not a far-away issue involving only politicians and economists. It is a local issue, an individual issue. It affects the well-being, present and future of every one who lives in the United States.

What is inflation?

It is the process of destroying the value of the dollar, so that it will buy less this year than it did a year ago.

And what is the basic cause of inflation?

It is the constant increase in the supply of money. This is brought about chiefly by too much spending by the Government in Washington out of an empty Treasury.

Secretary Anderson recently explained the problem in these simple words:

"Now suppose I wanted to write checks of $100 million starting tomorrow, but the Treasury was out of money. If I called up a bank and said, 'Will you loan me $100 million at 3½ percent for 6 months if I send you over a note to that effect?' the banker would probably say yes.

"Where would he get the $100 million?

"He would merely create that much money, subject to reserve requirements, by crediting our account in that sum and accepting the

Government's note as an asset. When I had finished writing checks for $100 million, the operation would have added that sum to the money supply."

This process, the Secretary went on, is about the same as if the Treasury had issued $100 million worth of greenbacks.

And how does constant, continuing inflation harm the American people?

It takes away from them what they gain in wage increases and profits. It robs them of a substantial share of their pensions. It makes the future uncertain and perilous for everybody.

This is not a new problem. The outcome of uncontrolled inflation should be known to all.

Germany has been through it. There the inflationary smash led to Hitler, defeat in World War II, and partition.

Hungary has been through it, and Hungary today is a Communist satellite.

China has been through it, with results that need not be detailed here.

Everywhere, in all ages, uncontrolled inflation has led to unlimited disaster.

But perhaps you say that if the President and the Secretary of the Treasury are aware of this danger, what is there to worry about?

The President and the Secretary do not make the appropriations. Congress does that. A great many Senators and Representatives seem utterly ignorant of the peril and have set out to wreck the President's budget. If they are successful, they will cause more inflation in the way that Secretary Anderson described. They may cause the inflationary spiral to spin so fast that no one will be able to stop it.

That is where the issue is today—in Congress.

That is where good Americans can and should use their influence.

If our readers agree that this is the most urgent problem of the times, we suggest that they write at once to their Senators and Representatives, urging them to stop foolish spending, to stay within the President's budget, and to make sure that there will be no deficit in the next fiscal year.

To aid those who wish to take part in this campaign, we are publishing on page 9 today a map of the area in which the World-Herald circulates. It shows the congressional districts, gives the name of the Representative of each, and gives also the names of each of the Senators.

This is not a partisan matter. No matter whether your Representatives in Washington are Democrats or Republicans, no matter whether they have already taken a stand on this issue, we think it will be wholesome for them to learn directly from you how you feel about it.

If you agree, please send a postcard or letter or telegram to your Representative and your two Senators, expressing your views as plainly as you can, in your own words.

And for the good of the country do it today.

Address by Vice Adm. Robert B. Pirie at Loyalty Day Program Held at Nanticoke, Pa., on Saturday, May 2, 1959

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Vice Adm. R. B. Pirie, U.S. Navy, at Nanticoke, Pa., U.S. Loyalty Day, May 2, 1959:

Mr. Ruck, ladies and gentlemen, I am very much honored to have had the opportunity to participate in Nanticoke's impressive Loyalty Day parade. I am most happy for this added opportunity to talk to the citizens of Nanticoke.

When President Eisenhower signed into law last summer the bill establishing the first day of May each year as Loyalty Day in the United States, the occasion marked the successful climax of 10 years of effort by the Veterans of Foreign Wars to gain national recognition of a theme worthy of the attention of every American.

The results of this great work are now being observed all over the United States by millions of American citizens.

Your VFW post has gained a single honor among its many here in Nanticoke recently—the result of the successful fight led by its citizen's committee for your new Mill Memorial Library.

I congratulate the Nanticoke Post of the VFW in having been in the forefront so often.

Today is a day when every loyal American should pause to reflect on the various kinds of defenses his country is building against the inroads of international communism. This is because the welfare of every one of us, and that of our children following us, is at stake. Only by an active interest in these vital matters can we be sure that we understand all the factors.

The Armed Forces of the United States make up a team that forms a major instrument of our national policy as it deals with the forces of international communism led by Russia.

Your Navy is an important partner in this team, and I would like to tell you today a little about how we fit into the picture.

First of all, however, I'd like to give you a little background. We Americans want to maintain freedom of thought and of action for the individual. We believe in our way of life. We don't want to take anything away from anyone, but, on the other hand, we don't want anythnig taken from us.

We are peace loving, but willing to fight for a principle when we know we have right on our side. We believe in fair play and want to be treated in a similar manner. We tend to feel that other governments surely must be motivated in the same way.

We cannot imagine that any group of people could be dedicated to any set of principles other than our own lofty ones.

It is this naive view of things that threatens to blind us to many important events that have occurred repeatedly in the past under the leadership of Russia and which should give us a clue.

Actually, what can be expect from a system of government that teaches that there is no God and that the individual exists only for the good of the State? We certainly cannot expect an application of the Golden Rule.

We should thoroughly understand that communism is like the mythical Medusa. Out of its head there springs a crown of writhing snakes. And each one of these has a deadly sting. In fact, the military strength of Russia and her satellites is only one of these snakes, and while we're watching that one, we must keep an eye on all the others.

The Communists have demonstrated over and over again that military force is only one method they will use in their efforts to achieve their announced goal of world domination.

The fact is that we are faced with a treacherous adversary who will employ any means available to achieve his goal. He will strike in many different ways, always exploiting our weaknesses.

How do we know this? Recent history teaches us the lesson.

In World War II, fought at great expense to keep the world free, Russia, under the guise of a voice of freedom, was supported in its war effort by vast quantities of goods from the United States. We even kept Russia alive by sometimes diverting vital war materials from our other stanch allies.

Yet, while this river of goods was flowing in freedom's name, Russian leaders were laying plans for the treacherous absorption of many small countries along her borders and the destruction of their liberty. And we know what happened to Poland, Czechoslovakia, Latvia, Estonia, Hungary, Rumania, and Lithuania.

After the war ended in Europe, and with the United States concentrating its energies on defeating Japan, Russia moved in and placed the harsh yoke of its power on many of the free countries of Europe from which so many of your forebears came. The bright light of freedom in Europe, once again, was only a dream.

After Russia consolidated its European position by ruthless pressure on the satellite nations, the West was further alarmed, and finally galvanized into action, by Russian activities which threatened the freedom of Greece and Turkey.

Then there was obstructive opposition to the Marshall plan and the Austrian treaty. The Russians blockaded Berlin, and now threaten that city for a second time. Then there was Korea and Indochina and, lately, the crises connected with the Sucz Canal, Lebanon, and the Taiwan Straits. All inspired by the deceitful forces of communism.

It is startling to reflect that international communism is not very old. It had its start only about 40 years ago. Yet, it now embraces two-fifth of the earth's surface and a large portion of its population; and had the free world not united through such alliances as NATO and SEATO, much more territory and peoples of the world would now be under its control.

Much of the early acquisition of territory and peoples came about by military action and physical force. But in other instances it was accomplished by combinations of four types of operations at which the Russians are very expert.

First, there were political operations. The so-called fifth column appeared in many countries. Active Communist parties were established in some instances.

In others, Communist-inspired movements were submerged in other political parties without their members realizing it until almost too late.

There were treacherous forces at work to weaken the ranks of democracy.

And the fact is that this type of effort continues in a wide variety of places today. The free world must be ever alert to it.

The second type of warfare used by Communists is psychological. Sometimes this is called fourth dimensional warfare. This method exploits fear, either in the individual or in a whole nation collectively. It is an assault on the mind. It makes tensions more severe and alters the emotional behavior of a nation. It, too, is going on today.

Psychological warfare includes the use of propaganda. It often makes use of the trick employed by trial attorneys and college debaters. You form a proposition which has no basis in fact for debate and by boldly pretending you are right, force your opponent to refute it. It is the technique of the "big lie."

As an example, we bit hard on the charge of germ warfare in Korea. We wasted a lot of time and energy refuting that one instead of taking the offensive. We could have, for example, brought up the mass

murder of the populations of Latvia, Estonia, and Lithuania.

Psychological warfare combines propaganda with subversion, economic blackmail, threats of assassination, political pressure and, as a last resort, even military force.

Then there is a third area of Soviet operations which could strike at our way of life like no other. It is economic warfare.

Russian industry is becoming very strong and comes close to satisfying her military needs. But other consumer goods being produced aren't necessarily going to the Russian people. These materials are going out of Russia to support economic penetration in many countries which are clamoring for help in modernizing their agriculture and industry. Russia is going ahead fast in making this help available, because she intends to ensnare the unwary nations by this means.

The Russian people, who are already accustomed to sacrifice, do not have to give up anything more to support this program.

Finally, the fourth way the Communists are making their bid for world domination is through cultural warfare.

Thousands of Russian students are in training, studying in detail the countries where they will be sent as trade or diplomatic representatives. Their job is to weave the Communist line into the local culture.

Russia is having quite a bit of success in this subtle field. Many countries, which were formerly colonial possessions of our Allies, are tasting new-found liberty. Most, however, are having great cultural and economic difficulty because of their new-born status. That is where the Soviets will try to take maximum advantage of weakness and then move in. There, new liberty could be short-lived.

There you have the picture. We are faced with an offensive over a wide front. What must we do about it?

Our national security and the collective security of our Allies is, to use a sea-going phrase, "an all-hands evolution." What this really means is that the United States can get this security only by every citizen working hard for it.

We can remain free, and we can help our Allies to do the same. To accomplish this, we must develop a combination of political, spiritual, psychological, and military strengths—this includes being ready and willing to apply military force whenever and wherever it is needed.

When we talk about military strength as a very necessary part of this picture, we are talking about something that costs a lot. And what's more, the cost will probably get higher. The plain fact is, however, that we must make the sacrifices necessary to increase our strength. There is no acceptable alternation.

But, if we should spend our money for military things we don't need, we could soon wreck our national economy. That would be playing right into the Communists' hands. On the other hand, things would be even worse if we don't get the things we do need.

You all should realize that we in the military are not the ones who will make the final decisions regarding what our military strength will be. That is in the hands of the civilian part of the Government; in other words, the Congress and the Executive Branch. The Nation's military leaders can only make their professional judgment and recommendations clear to their civilian superiors.

This means that the decision rests ultimately with yourselves, and you must make these decisions on the basis of a thorough understanding of the many factors involved.

What we as a Nation have to do, along with the free world, is contain communism without resorting to general war.

The consequences of an all-out nuclear war are too terrible to comprehend. It would literally be the end of the world.

Nevertheless, in order to keep the Soviets in their place, we must maintain a nuclear deterrent force that they know can knock them out of the box if they should attempt a nuclear strike against us. This means that we must have powerful enough forces to keep the Soviets from starting an all-out war.

Now, deterrence is actually a state of mind. A person, or nation, doesn't do certain things because he knows that there will be inevitable and unacceptable penalties against him, if he does. This is deterrence.

Immediately after World War II, it was the atom bomb which we alone had, and Soviet knowledge that we had it, which undoubtedly deterred them from advancing into other parts of the world, particularly those nations in Western Europe.

In the intervening period, this advantage that we enjoyed has disappeared because we have now reached the point where Russia also has nuclear weapons. You might say we are getting to a point of nuclear deterrent stalemate, because each side has great nuclear power which neither one wishes to use because of the inevitable consequences.

In addition to all this, the delivery systems for this nuclear capability have been changing in recent years. Intercontinental ballistic missiles, intermediate range ballistic missiles, or fleet ballistic missiles are becoming practical as a means for hurling nuclear bombs through the air.

The Russians have been developing a similar capability.

Since it is essential that we develop and maintain a national nuclear deterrent, we in the Navy believe that one of the best delivery systems the Nation will have is the Polaris fleet ballistic missile system with the Polaris missiles in submarines.

This system has the great advantages of mobility and ready concealment in ocean expanses. It cannot be zeroed in by an enemy ballistic missile, because a ballistic missile must be fired at a fixed target to be effective.

Therefore, it is an ideal form of nuclear deterrent. We hope that this is going to be a major contribution to the nuclear deterrent forces of the United States.

A big bonus advantage of the Polaris system, besides concealment and mobility, is that it is away from your homeland, and, in war, civilians at home are not going to be zeroed in by an enemy missile because of it.

We have a phrase we use a lot in regard to the Polaris missile system. It is "Move deterrence out to sea, where the real estate is free, and where it's far away from me."

Between the various U.S. forces, then, we have a capability for destroying the war-making capacity of Russia with nuclear weapons if she attacks us. Since she is thought to have the same, a nuclear deterrent stalemate does, indeed, exist.

What other things, then, do we need to defend ourselves and the free world against the inroads of communism? And why is an all-out war capability not enough?

The answer is that because of the awful consequences to both sides in all-out war, the chances of such a conflict are becoming more and more remote. This does not mean, however, that Russia will not continue to try to achieve world domination by inspiring military actions short of all-out war. In other words, through wars limited in a geographical sense as well as limited in the kind of weapons employed. Korea is a good example of what I mean.

Our answer to this centers around an ability to move quickly to any area with sufficient forces to handle with precise and discriminating force, brushfire incidents or limited wars. These may occur as a result of the Communists' trying to take advantage of small countries that cannot handle such situations themselves. This sort of piecemeal absorption would ultimately destroy the free world and us with it. We cannot allow it to happen.

Let us not forget that over 70 percent of the earth's surface is covered by water and the great majority of critical, or potentially critical, spots in the world border on the seas.

We can't forget, either, that despite the vast and rich resources of the United States, we are essentially a maritime nation dependent upon our sea lines of communications with other free nations for economic growth.

Thus, we must be able to insure the day-to-day freedom of the seas and to control the sea routes to any area of localized aggression. We must be able to strike in that area with precision and discrimination, using appropriate weapons. And we must be able to put our amphibious Marine forces ashore, if required. In other words, we need strong seapower.

This is where your Navy becomes of paramount importance. Our naval forces are powerfully constituted to discourage and deter such aggression, and yet they have the inherent precision and flexibility to operate in such a manner as to avoid triggering off an unlimited war. Thus, the problem of how much and what kind of deterrent capability takes on another dimension.

If our naval forces were not modern enough and large enough, we would be forced to rely totally on our all-out nuclear weapons. This would involve unacceptable risks to our country.

With our present and planned naval forces which include our Marines, we can use, if we wish, conventional weapons where they will suffice, and so avoid the risk of all-out conflict. We also have a powerful nuclear capability in our attack carrier striking forces to back up our intent to control the seas and the sources of Russian seapower in any kind of war. This is a national advantage which is of immeasurable value.

The best instrument, in our opinion, to handle these limited war situations is the attack carrier task force deployed and ready in potential trouble spots of the world and backed up by our Marines and amphibious ships.

We have the 6th Fleet deployed continuously in the Mediterranean and the 7th Fleet in the Far East for just these purposes. Our national interests will require us to continue these efforts for a long time to come.

These task forces can move to any place in their threater on short notice where they may be required to stamp out brushfires.

In the recent case of Lebanon, for example, it was less than 24 hours from the time the President of Lebanon asked for help that we actually had Marines ashore under cover of our attack carriers in the 6th Fleet. These positive and precise actions prevented that crisis from growing into a holocaust. Your Navy, with its attack carrier striking forces, played a similar role in the Quemoy crisis around Formosa last fall. We must keep our Navy strong and modern by providing it with new ships as our old ones wear out.

Perhaps some of us think that no one local area is worth fighting for. But remember, one little area after another equals the world, and Russia has been nibbling away for years now.

If we want to remain free, tomorrow may be too late to do something about it. The problem and the responsibility does not belong just to those of us in uniform. It belongs to every loyal citizen of this country.

Now, what can you do to help?

First of all, encourage serious discussion of international affairs in your community and how our alliances with other maritime nations can be preserved. Understand that the Nation's future is dependent upon keep-

ing our seapower strong, modern, and flexible. Remember, any inroads that the Soviets make in foreign trade areas cut into our vital economic ties with our friends overseas.

When enough talking about these matters is done, its influence is bound to be felt back in Washington. Your distinguished Congressman, Mr. FLOOD, has his finger on your collective pulse. When he knows he has your support, his job is made infinitely easier in helping to provide adequately for national defense.

Important, also, is the weight of your voices in influencing our youth. You have direct control of your school systems through your boards of education and influence through parent-teacher associations. I firmly believe that we have begun a trend back toward some of our oldtime principles of loyalty and service to the country. We must continue this trend. Let us do it through youth activities such as the Boy Scouts, YMCA, and YWCA.

These organizations need our help in inculcating high standards of morality, in teaching the qualities of leadership, and in demonstrating the value of hard work.

I am reminded of the American soldier who defected to Red China after service in Korea. When asked why he returned, he stated that he came back because of the easy living here. It had been necessary for him to work hard in China. He still believed in communism but didn't like the hard work.

We must neutralize the philosophy of the fast buck.

Moreover, we must emphasize the need for greater concentration in courses of study that lead to careers in science and technology. The disciplines of these courses produce better citizens.

Foreign languages, too, help in our international relations. We have a crying need for improving our ability to talk with other peoples in their own language.

In brief summary, I would like to leave you with these thoughts. We are faced with a threat from communism in many forms: militarily, politically, psychologically, economically, and culturally. We are close to a nuclear stalemate with the Russians.

Despite our nuclear deterrent capability, the Communists have taken over a large portion of the world. What will stop these tactics? It is highly mobile naval forces that can be rapidly moved to wherever Communist-inspired trouble develops. We must have the ability to apply pressure with discrimination to protect our friends and do damage to the enemy.

We must be able to insure the freedom of the seas and control them if necessary. The attack carrier striking forces and our Marine amphibious forces are the Navy's major contribution.

The mobile air base, the attack aircraft carrier, is the heart of these task forces. It provides planes to fight over a beachhead or to strike at the sources of enemy seapower when required. These planes must be able to meet the best Soviet-built planes that we might encounter. This means that we must continue to provide our Navy with high-performance airplanes. These, in turn, will require aircraft carrier decks about the size of our U.S.S. *Forrestal* from which to operate.

So far, we have been getting along with a number of modified World War II carriers, but they are rapidly becoming obsolete and wearing out. Soon they will be over 20 years old.

They can handle modern naval aircraft only marginally when compared to our newer carriers. A continuing new construction program is mandatory. That is why we are asking for another *Forrestal* carrier in our budget for fiscal year 1960, and we need your support in this program.

Again I wish to say that the fine citizens of Nanticoke and post No. 290 of the Veterans of Foreign Wars are to be congratulated on the outstanding job you have done in promoting the observance of Loyalty Day.

I know that this first celebration of Loyalty Day is only the beginning of a ground swell of patriotic action that will make itself felt throughout the world.

I thank you.

Aid To Latin America

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. WOLF. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial appearing in the Des Moines Register entitled "Aid to Latin America."

We are all aware of our tenuous relations with the countries of Latin America. Because of our ineffective communication with the people of that area of the world, and our undue interest and support of dictatorships in Latin America we have betrayed our own heritage and the aspirations of the Latin American people. In the present review of our mutual security program I sincerely hope that it will be possible to aid the peoples of Latin America in a more rational and effective manner.

Clearly we are thinking in this direction. The Subcommittee on Inter-American Affairs headed by our distinguished colleague, ARMISTEAD SELDEN, has just issued a report on U.S. relations with Latin America. I commend it to the attention of my colleagues. The Selden subcommittee calls for: first, a modified approach to Latin American dictators; second, increased reliance on the Organization of American States; third, revised military aid program with gradual reduction of military aid; fourth, encouragement of more nongovernmental people-to-people activities; fifth, expansion of binational center programs; and sixth, better and more sustained news coverage of Latin America through the mass media. I hope that steps will be undertaken by the Congress and the President to make the Selden committee recommendations the policy of the United States in Latin America.

[From the Des Moines Register, May 5, 1959]

AID TO LATIN AMERICA

Fidel Castro last week called for greatly increased American aid to Latin American countries in a speech at Buenos Aires, Argentina.

His speech was welcomed by many Latin American countries represented at the meeting of the Inter-American Committee of 21. They take the same view as Cuba's Prime Minister but haven't spoken out so bluntly.

The speech also brought a quick reaction from U.S. delegates to this meeting. They pointed out that the United States is making major contributions in aid to Latin American countries. They stressed that some Latin American countries are not doing enough to help themselves.

A new look at the question of aid to Latin America will be valuable. Castro's talk may bring this about.

Secrecy about the spending of foreign aid money makes it difficult to appraise U.S. policies. The Government regards the breakdown on what aid goes to individual countries as a military secret. Another reason for avoiding breakdowns on where aid goes is that this increases pressure from one country to get as much or more aid as another country.

The proposed mutual security program for the fiscal year 1960 calls for spending a total of $169 million in Latin America. This would be divided as follows: Military assistance, $96.4 million; special assistance, $27.6 million; technical cooperation, $45.2 million.

Castro argues that money used to supply arms to Latin American countries would be better spent for capital investment. We agree that a shift in the entire aid program from less spending for military aid to more emphasis on economic development programs is advisable.

But reexamination of spending for economic aid also is needed. Castro wants more money for capital investment by the Government of Cuba. The U.S. position is that Cuba's greatest need is to adopt policies which would encourage greater investment by private capital.

The United States is attempting to cooperate with Latin American countries in supplying governmental money for investment. It does this through the Inter-American Developmental Bank, the Export-Import Bank, the International Monetary Fund, and the Development Loan Fund.

Private investment in Latin America is heavy, too. Such investments in Latin America increased from $3 billion in 1946 to $8.8 billion by 1958. This investment represents 80 percent of the total foreign investment in Latin America and is the biggest concentration of U.S. private investment in any area of the world.

Some new proposals on foreign aid have been advanced recently which deserve consideration in considering the problem of helping Latin American countries.

Representative CHESTER BOWLES, Democrat, of Connecticut, believes foreign aid should be determined by a country's ability to make effective use of this aid, not by the extent of the Communist menace in the country. He doesn't think sizable economic aid should be granted unless the country has a sound economic program and is making a real effort on its own to solve its financial and economic problems. He would give technical assistance to countries that don't qualify for aid so that they can get in position to qualify for help.

The Wall Street Journal also calls for a new concept of foreign aid. It calls for "abandoning the idea that the U.S. Treasury is a cornucopia for any country just because it is undeveloped, or backward or in financial troubles or could use some U.S. dollars."

It says the United States should use some "precision in what kind of aid we give." The aid shouldn't be granted, it says, without a showing that it can be used profitably and that the country is willing to do its part. The result of such standards would be to turn from grants to loans and to approve specific projects rather than general programs.

The Wall Street Journal's position is interesting because it has in the past been generally hostile to the foreign aid program. Now it takes a more moderate position: it thinks it would be sheer nonsense to abandon all foreign aid but it calls for drastic reorganization of the present program.

We question if the way to do this is as the paper suggests: abolish the International Cooperation Administration and start from the beginning again. It thinks that is ad-

visable because it believes the ICA is top-heavy with bureaucracy and too much concerned about justifying its existence. The paper thinks policy decisions should be made by the State Department and Defense Department, rather than the ICA.

We do agree, however, that some reappraisal of the role of foreign aid is needed. And a good place to start is in the problem of what kind of aid to give to Latin American countries and what standards to apply in determining where this aid goes.

Resolutions Adopted by the Textile Workers Union of America, AFL–CIO

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the resolutions adopted by the international executive council of the Textile Workers Union of America, AFL–CIO, expressing their views on matters of interest to the labor movement and citizens of America:

RESOLUTION ON FEDERAL STANDARDS FOR UNEMPLOYMENT COMPENSATION

Textile workers have borne the brunt of the suffering caused by the decline of the textile industry in the United States. Hundreds of mills have been liquidated, displacing more than 200,000 workers since the war and leaving a train of misery and joblessness in their wake. It would be fitting that special provision be made to help meet the needs of these distressed workers. Instead, the present system of State-determined unemployment benefits actually discriminate against textile workers.

Unemployment benefits in textile States are generally lower than in nontextile States and the maximum durations of benefits are inadequate to tide textile workers over until they can find work. The textile States have demonstrated their inability or unwillingness to establish decent standards for unemployment compensation. It is time the Federal Government set such standards and put an end to the inequitable practice of providing the most niggardly unemployment benefits to those most in need.

The average weekly benefit paid for weeks of total unemployment was $26.70 in textile States in December 1958 compared to $30.41 in all States. In most textile States the average weekly benefit was less than $24. These pittances do not provide for even the basic necessities of life. They force the families of unemployed textile workers to resort to public or private charity for their means of survival.

The limited duration of benefits permitted by State laws has resulted in the exhaustion of benefit rights by some 2 million persons during the past year. In textile States the rate of benefit exhaustions is exceedingly high. During the first 8 months of 1958, more than 40 percent of the claimants exhausted their rights in Alabama, Virginia, and Tennessee. In Roanoke, Va., where a rayon plant employing 2,100 workers was closed last August, three-quarters of the displaced workers are still unemployed today and more than half had exhausted their unemployment compensation by late March.

The uneven impact of unemployment among the various States has drained the unemployment compensation reserves of the badly hit States. A Federal system of reinsurance is needed to pool the risks of unemployment throughout the Nation.

The Karsten-Machrowicz bill (H.R. 3547) would establish Federal standards which are imperative if the State unemployment compensation laws are to accomplish the purpose of a genuine unemployment insurance system. The maximum benefit in each State would be half the individual worker's weekly wage, up to two-thirds of the State average weekly wage. A uniform maximum duration of 39 weeks would be provided by all States. Federal funds would be used to reinsure reserves of States whose funds have been depleted by high rates of unemployment.

The action of the House Ways and Means Committee in rejecting the Karsten-Machrowicz bill in favor of an increase in the unemployment insurance tax rate with no increase in benefits is a betrayal of the committee's responsibility. This action must be reversed by the Congress: Therefore be it

Resolved by the executive council of the Textile Workers Union of America, ALF–CIO, That we call upon the Congress to enact the Karsten-Macrowicz bill to provide an American standard of unemployment compensation benefits. Only Federal standards can preserve the dignity and self-respect of American workers during periods of unemployment.

Adopted April 29, 1959.

RESOLUTION ON AMENDMENTS TO FLSA

While productivity is constantly on the rise, our economy has been slowed down in one major respect by Federal minimum wage standards which are woefully inadequate.

The current $1-an-hour Federal minimum wage was too low even when it was first adopted in 1956. Events since that time have rendered that section of the Fair Labor Standards Act completely obsolete.

There has been a steady rise in the cost of living, on one hand, and a significant rise in the national wage level, on the other. Underlining the trend toward higher pay is the fact that a $1.25 minimum has now been generally established in the textile industry, north and south alike. This development is another compelling reason for the adoption of a new Federal minimum wage of $1.25 an hour.

There is still many islands of substandard pay in our Nation. In Gaston County, N.C., for example, some 25,000 textile yarn workers still receive an average wage of only a penny or two above the $1 legal minimum. In northwest Georgia's chenille industry, few workers receive more than the $1 minimum and there are grounds for suspicion that even that standard is being violated in many plants.

These workers and many others in similar situations are desperately in need of the guarantee of a $1.25 hourly Federal minimum. Moreover, there are still some 20 million wage earners who are unprotected by the law and do not even enjoy the guarantee of the present $1 minimum.

Despite the crying need of millions of American workers for a $1.25 minimum and extended coverage under the Fair Labor Standards Act, the House Committee on Education and Labor—even at this late date—has failed to fix hearings on legislation to remedy this situation. The only ray of hope evident so far is the fact that a Senate Labor and Public Welfare subcommittee has agreed to hold hearings on FLSA improvements May 5.

This situation clearly calls for renewed efforts to stir action on such legislation: Therefore be it

Resolved by the executive council of the Textile Workers Union of America, AFL–CIO, That—

1. We condemn the failure of the House Committee on Education and Labor to fix hearings on FLSA improvements and call upon all liberals in the House of Representatives to press for quick action in this field.

2. We call upon all local unions, joint boards and rank-and-file members of TWUA to intensify their efforts in behalf of these FLSA improvements which are so essential to the elimination of grinding poverty among textile workers and to the stabilization of the textile industry.

3. We commend the joint AFL–CIO minimum wage committee and the citizens committee on the Fair Labor Standards Act for the outstanding work they are performing in educating the public on this subject.

Adopted April 30, 1959.

RESOLUTION ON THE KENNEDY-ERVIN BILL

The executive council of the Textile Workers Union of America, AFL–CIO, reemphasizes the fact that, despite the disclosures of corruption in a handful of trade unions, not a single finger of suspicion has been leveled at our union or at the overwhelming majority of American labor organizations. Nevertheless we, too, were sickened by these revelations of misconduct.

Like the AFL–CIO, we adopted a code of ethics to insure the continuance of honest practices and the maintenance of democracy in our organization, notwithstanding the fact that this problem did not exist in our ranks.

Moreover, we joined with the AFL–CIO in supporting some legislation over and above the requirements of our code. And although the Senate Labor and Public Welfare Committee reported out a bill which went beyond the mere issue of cleansing unions of corruption and entered the arena of weakening trade unions in collective bargaining, we were prepared to support such legislation even though we considered some portions unwarranted.

However, a host of amendments to the original bill by antilabor Senators and by the Republican administration, has radically changed the character of that legislation and poses a sinister threat to the existence of the labor movement. These amendments serve to restrict further labor's rights to organize the unorganized and to obtain economic improvements in behalf of American workers.

Although more reasonable Senators have succeeded in modifying some of these proposals, this does not overcome in any way the fact that the Kennedy-Ervin bill in its present form seriously curtails labor's basic rights. We are shocked by this development and we must conclude that the McClellan exposures are being used only for the purpose of weakening and destroying organized labor in America.

For example, the restrictions and limitations on the activity of local union officials, and the requirements for detailed and multitudinous reports on pain of jail or fine, will discourage rank-and-file workers from accepting local union offices, most of which involve no compensation. As a result, they will destroy the availability of local leadership, without which the labor movement cannot continue to function.

Although we are aware that the bill contains some long-overdue amendments to the Taft-Hartley Act which call for prehearing elections and restore the right of economic strikers to vote in representation elections, these are merely sweeteners for the bitter pill which the remainder of this legislation contains.

Because, as a whole, it is detrimental and injurious to organized labor and foreign to

the problem of trade-union corruption, we condemn the present version of the Kennedy-Ervin bill and urge the House of Representatives delete these objectionable amendments from the legislation it is about to consider.

Adopted, April 29, 1959.

The Omaha Alcohol Plant

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BROCK. Mr. Speaker, on January 7, this year, I introduced in this House my bill, H.R. 2970, which would provide for the increased use of agricultural products for industrial uses. The opportunity has now come to implement such proposal into legislative action and ultimate material gain, by reducing the accumulated agricultural surpluses in certain commodities with some of the means we have at hand. I refer you to the Omaha alcohol plant, which has been listed for sale by the General Services Administration. The Nebraska Legislature has recognized the value of this plant, as an immediate existing facility to carry out the aims of H.R. 2970. Accordingly, the Nebraska Legislature has memorialized the Congress, and the General Services Administration, in protest against this proposed sale, or the sale of any other existing Government facility, until such time as the Congress has the opportunity to consider and enact legislation to utilize such facilities to implement the provisions of H.R. 2970, or similar legislation.

Mr. Speaker, I sincerely believe that such action will be in the prime interest of economy and will do much toward reduction in our fiscal year budgets and the national debt, by elimination of a substantial portion of expenditures for purchase and storage of agricultural surpluses.

May I further extend my remarks and include the resolution of the Nebraska Legislature in today's proceedings of the daily CONGRESSIONAL RECORD:

LEGISLATIVE RESOLUTION 31, LEGISLATURE OF NEBRASKA, 69TH SESSION

"Whereas agriculture is the basic industry in Nebraska; and

"Whereas one of the major problems facing agriculture, the State, and the Nation is the practical and economic disposal of the abundant production brought about by increased efficiency and technological advance of farm and ranch operations; and

"Whereas there are various proposals now pending in the Congress of the United States to promote a greater usage of farm products in industry; and

"Whereas these proposals call for greatly expanded programs of research in this field with experimental operation of pilot plants and facilities; and

"Whereas such legislative proposals have broad bipartisan support and hold a promise of a solution for disposal of farm surpluses and improvement of farm income; and

"Whereas these proposals also call for lease to private individuals or corporations of present Government-owned facilities which might be used in such programs of research and utilization; and

"Whereas one such plant is located in Omaha, Nebr., close to ample supplies of surplus grain with excellent transportation facilities, water supply, and labor resources: Now, therefore, be it

"Resolved by the members of the Nebraska Legislature in 69th session assembled.—

"1. We memorialize the General Services Administration of the United States that we protest any sale or disposal of the Omaha alcohol plant or any such similar plant prior to possible usage development for such plant under legislation now pending or being considered by the Congress of the United States or which might be introduced which legislation has for its purpose an expanded program of industrial usage for agricultural products.

"2. That a copy of this resolution suitably engrossed be sent to the General Services Administration and to each Member from Nebraska in the Senate and House of Representatives of the United States.

"DWIGHT W. BURNEY,
"President of the Legislature."

I, Hugo F. Srb, hereby certify that the foregoing is a true and correct copy of Legislative Resolution 31, which was passed by the Legislature of Nebraska in 69th regular session on the 4th day of May 1959.

HUGO F. SRB,
Clerk of the Legislature.

Poison in Your Water—No. 74

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Aurora (Ill.) Beacon-News of June 27, 1958, entitled "Testimony Reveals Fox River Pollution":

TESTIMONY REVEALS FOX RIVER POLLUTION—FORDON PARK DEVELOPER ASKS COURT RULING AGAINST SANITARY DISTRICT

Pollution of the Fox River became an issue Thursday in testimony taken by Circuit Judge Charles G. Seidel in a suit brought by Fordon Park Developer William H. Ruth against the Aurora Sanitary District.

Ruth hopes to force the sanitary district to serve his 435-acre subdivision. The district, on the other hand, has refused to add the sewage to already overcrowded sewer lines on the west side. It seeks instruction from the court, particularly in view of the $3,800,000 bond issue for new lines defeated by Aurora voters last December.

The question of how much the sewage treatment system pollutes the river was injected by Richard S. Nelle, chief sanitary engineer of the State sanitary and water board, who testified.

The hearing will continue Tuesday at 1:30 p.m., at Geneva.

Nelle said the Aurora plant frequently bypasses millions of gallons of highly dilute, but untreated sewage into the Fox River.

"There's no question but that this pollutes the Fox River," he said. He added that this is a real danger to public health.

Nelle's testimony was buttressed by that of Supt. Walter A. Sperry, Sr., of the treatment plant who conceded that on some days in each month from 10 to 40 million gallons of overflow goes directly into the Fox from sanitary district bypasses.

Nelle said this condition could be corrected by addition to the plant, and expansion of the sewer line system.

Ruth's suit asks for a declaratory judgment by the circuit court to force the sewer district to accept the Fordon flow. He charges the sanitary district refused to take it, since its lines on the west side already carry too much.

Ruth was the first to testify. He was interrogated by his attorney, Martin L. Overman of Glenn Ellyn. Ruth asserted he has paid taxes into the district's maintenance fund as a property owner. He said the Fordon Park development includes 1,195 building lots, as well as land for a shopping center and 3 churches.

It was further established that Ruth proposed to connect sanitary sewers from his project to an interceptor at Garfield Avenue and Westlawn Avenue but that this was not feasible because the facility was constructed by special assessment and such connection would be an encroachment on this special assessment.

Attorney Robert E. Dolph, counsel for the sanitary district pointed out that Ruth had been given the district's permission to connect some 65 homes to the interceptor at Illinois Avenue but other permits were denied because they were for homes that were on the west side, or backside of the Fox River Valley watershed. The permits granted were on the east, or fall side of the same watershed and could be handled by gravity.

Ruth testified that since December 30, 1957, when he became owner of the Fordon Park area, he has expended about $500,000. He said, too, that he had met with the sanitary board of trustees and understood, at a meeting held earlier this year, that an interceptor running from the sewage disposal plant south of Aurora to the Blackberry watershed, some 2,000 feet west of the Fordon Park area, thence running north to North Aurora and thence east along Butterfield Road to Marywood, was being contemplated.

Attorney Dolph pointed out to the court that on December 17, 1957, a bond issue of $3,800,000 for the purpose of enhancing and increasing the sanitary district facilities was turned down by the electorate and the system was already taxed almost to capacity and, at some seasons, beyond capacity.

Uniform Milk Sanitation Code Needed for Nation

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. REUSS. Mr. Speaker, it would be difficult, if not impossible, to conduct the business of the House of Representatives under one set of rules on Monday, a second code on Tuesday, and still a different procedure on Wednesday. Confusion and chaos would be the inevitable result, and it would not be long before every Member demanded the adoption of a single body of rules to cover every session.

Fortunately, we have but one set of rules. But the example illustrates the confusion that exists today in the American dairy industry. Although it

is quite feasible for a dairy to ship milk anywhere in the country, such commerce is hampered by the myriad of conflicting State and city milk sanitation codes that have developed through the years.

It is not unheard of, for instance, for the manager of a Wisconsin dairy to have to be under 10 different sanitation codes. Far from seeking to improve health standards, many local sanitation codes exist to restrict competition from outside daries. Such codes are actually trade barriers in the disguise of sanitation standards—and nothing more.

So to the confusion and waste that result from the current pattern of multiple standards is added the curse of monopolistic trade practices and the higher consumer costs they create.

The remedy for these dairy industry ills is, quite obviously, a uniform national standard for milk sanitation. To accomplish this goal, my distinguished colleague from Wisconsin, LESTER JOHNSON, has developed and introduced H.R. 3840 which would establish the U.S. Milk Ordnance and Code as the single standard for fluid milk and fluid milk products shipped in interstate commerce. I am proud to have cosponsored this measure.

In addition, H.R. 3840 will topple the restrictive trade barriers that have grown up as the result of the multiplicity of State and local codes and thus allow all the milk-consuming public to purchase first quality milk at reasonable prices. Adoption of a uniform national standard will simplify sanitation code enforcement and compliance, and that means savings to taxpayers, farmers, and consumers.

Mr. Speaker, both farmer and consumer stand to gain much by the passage of this bill to set a uniform, national standard for milk sanitation. I hope that the House will act on H.R. 3840 quickly and favorably.

"Fidel Castro: Rebel, Liberator or Dictator?"—The Critics Review Jules Dubois' New Book—3

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following book reviews which appeared in the Christian Science Monitor and the Saturday Review:

[From the Christian Science Monitor, Apr. 8, 1959]

FROM THE BOOKSHELF: CASTRO AND CUBA

(By Bertram B. Johansson)

"Fidel Castro: Rebel, Liberator or Dictator?" by Jules Dubois.

Even before publication, this volume on Cuba's revolutionary hero, Fidel Castro, now Prime Minister, had hung up several publishing records.

It was only hours after Fulgencio Batista's dictatorship fell on January 1 of this year and Major Castro marched triumphantly into Havana that Bobbs-Merrill began negotiating for a seasoned writer on the Cuban upheaval.

They contracted with Jules Dubois, veteran Latin American correspondent of the Chicago Tribune, to write the book.

With the help of a staff and a Bobbs-Merrill editor who flew to Cuba, Dubois produced the volume in 20 working days. In less than 3 months, the book was ready for the public.

Such a feat might wreck any literary piece of this length. It has not. In effect, Mr. Dubois has been writing this book for the last 12 years of his considerable experience in the Latin American field.

He has perhaps one of the most comprehensive files on Dr. Castro and the Caribbean area, knows the Premier intimately, and has ben granted access to many papers and secret court trials of the rebel leader which have never before been made public. Mr. Dubois helicoptered out to the Sierra Maestra area for the first news interview with the rebel leader after his victory over Batista.

Though there are some evidences of haste, the book nevertheless will perform the valuable function of placing before the public the first background material on the meaningful events of the last several years in Cuba.

Throughout the book, Mr. Dubois quotes Premier Castro at length, sometimes for pages. Though the ideals and thoughts expressed in these long proclamations, speeches, and letters do, in themselves, provide valuable material and insights for the reader, they slow down the pace of the narrative. It might have been better if the writer had extracted the quintessence of them and then included them in an appedix.

Aside from this drawback for the average reader (the student of Cuban affairs will find these long stretches extremely interesting) the book is rich with new material.

Because Cuba was held so rigidly under censorship during the Batista regime, insufficient information on the callous corruption, the incredible atrocities, and the extent of persecutions, had been provided for the American public.

As a result, North Americans have not been able to interpret with understanding the Cuban independence movement which had the wide support of all classes, from the lowest peasant to the richest plantation owners.

The Dubois book will bring about more needful understanding of the Cuban problem. It begins to place in perspective the atrocities permitted during the Batista regime. There are estimates now that as many as 20,000 Cubans were killed in that reign of terror.

Mr. Dubois' accounts of the last hours of the Batista government before it fell make fascinating reading. There are many details given here of the furtive preparations for the Batista flight that have never before been published.

Another rich section of the book is that which deals with the life of the Castro rebels in the Sierra Maestra region and the final military campaigns. Mr. Dubois took part on many occasions in that rought and ready outdoor living when he went up into the mountain fastnesses to live with the rebels and obtain his many interviews.

While the book is generally pro-Castro in its thrust, because it deals with his eminently successful military revolution against the Batista dictatorship, Mr. Dubois does not predict what might become the final judgment onthe Castro career.

The events of the next few months and years, and how Premier Castro and his cabinet approach Cuba's economic problems will more likely provide that judgment of history, though Premier Castro's reputation for strategic and tactical acumen is quite secure.

[From the Saturday Review, Apr. 4, 1959]

TOP COMMANDO OF THE CUBAN COUP

("Fidel Castro: Rebel, Liberator or Dictator?" by Jules Dubois, leaves unanswered the question posed in the subtitle of this biography of the new Latin American strong man, but it does throw light on a blistered situation. Reporter for CBS News, Blaine Littell covered the Cuban post-revolutionary period.)

(By Blaine Litell)

Jules Dubois has produced the first English language account of Fidel Castro's revolution in Cuba. As the Chicago Tribune's Latin American correspondent, Mr. Dubois is perhaps the only reporter who could have undertaken this lightning task. He first met Castro in 1947 and has covered the Cuban political scene extensively ever since. After the revolution had been won and Bastista had fled, North American correspondents had a difficult time trying to make sense of the electric, sleepless, and confusing days. However, of all the reporters about, Mr. Dubois was quickly identified and sought out as one of the few who really knew what was going on.

Thus, when Mr. Dubois set out to write this book he had his facts in hand. The book is full of them—names, dates, and faithful, unabridged translations of many of the letters, radio broadcasts, speeches, and manifestos that issued from the prolific pen of Fidel Castro. In the eyes of American reporters, Castro's marathon speeches and 5-hour news conferences needed editing. And so, for that matter, does Mr. Dubois. He has assembled his facts chronologically but he has not weeded out the ones that lead nowhere (and recent Cuban history is full of these); nor has he stitched the important and meaningful events together in such a way as to make clear why it finally became possible for Castro, who started with nothing, to triumph over Batista, who started with everything.

Perhaps it is too soon for anyone to answer the questions posed in the book's title. But there are clues to Cuba's future course, and Castro's own words and actions, as transcribed by Mr. Dubois, provide many of them.

The pattern of Castro's revolution was set in its early days. After invading Cuba by sea in December 1956, Castro and a small band of followers headed for the Sierra Maestra.

"When we arrived at the Sierra Maestra," Castro told the author, "we executed a ranch foreman who had accused tenant farmers and peasants of being pro-rebel, and who had increased the holdings of his landlord from 10 acres to 400 acres by taking the land of those he denounced. So we tried him and executed him and won the affection of the peasants."

This statement helps as much as any to illustrate Castro's capacity for sizing up a situation and taking direct, if harsh, action. It also demonstrates Castro's sense of public relations since to have shown leniency during a period of Batista-inspired terrorism would have been taken by the Cuban people as a sign of weakness. Castro, himself, seldom employed terror as a weapon. As a matter of fact, he was scrupulously fair in his treatment of those who, in his opinion, were fighting him honorably.

To most Americans, Castro was a distant, shadowy, and somewhat romantic figure until he won. Then, all too swiftly, he landed on the front pages as a fist-shaking anti-American calling for vengeance. If we concluded that he was a dangerous hothead, it is Mr. Dubois' contention that we were judging Castro out of context. Castro and what

he stands for were not conceived overnight but emerged slowly and logically. Mr. Dubois also makes clear that Castro's attitude toward the United States might have been entirely different if we had played another kind of diplomatic game in Cuba. But, instead, we gave Batista arms, which he used against the rebels, and our military missions trained his soldiers. Thus, both diplomatically and militarily, we were backing a dictator against a self-proclaimed democrat and this, quite naturally, angered and continues to anger Castro.

It is the author's conclusion that if Castro has failed to understand our behavior, it is not entirely his fault, and if we have failed to understand him, that, too, is not his fault.

Newspaper Boy Values

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. McCORMACK. Mr. Speaker, for the past 18 years the Boston Daily Record-American and Sunday Advertiser—Hearst newspaper—have sponsored a radio program known as the "Boston Daily Record-American and Sunday Advertiser Newspaper Boys Radio Show." This program is intended primarily to give youngsters who sell newspapers an opportunity to develop their talents and to focus the attention of the people on other activities of these boys, whose only contact with the public is as a newsboy on the corner or in the delivery of newspapers to the homes of their customers. Throughout the years men and women in business, finance, and politics, and other walks of human activity have been invited to make remarks appropriate to such a program, which program is now under the direction of C. Mungie, and assisted by Thomas Grahman, circulation director of the Boston Daily Record-American and Sunday Advertiser.

I was invited to participate in this program on April 27, 1959. It was a pleasure for me to participate in this program which is constructive in nature and productive in excellent results. In my extension I include the remarks that I made on the Newspaper Boys radio show on April 27, 1959:

[From the Boston Daily Record, Apr. 27, 1959]

NEWSPAPERBOY VALUES TOLD BY MCCORMACK

(By Tommy Shulman)

Congressman JOHN W. MCCORMACK, majority leader of the U.S. House of Representatives, praised newspaperboys on the Newspaperboys' Radio Show Sunday morning at 9:30 over NBC's WEZE. We are pleased to publish Congressman MCCORMACK's radio address:

"I am very happy to appear on the Boston Daily Record and American-Sunday Advertiser Newspaperboys Radio Show. Newspaperboys have always held a spot close to my heart. Busy boys who are devoting their spare time to learning and earning.

"Most gratifying to me is the knowledge that the only newspaperboys regular weekly program in the country originates in my congressional district. Many times have I heard the praises of your songs, fine instrumental music, educational and patriotic dramas.

"BECOME SUCCESSFUL MEN

"I assure you that well deserving is the nationwide recognition and the many citations and awards that have been bestowed upon this program.

"For every newspaperboy is a businessman. He is a builder—the size of his route—or the sale of his papers depends a great deal on his ability, his determination and his personality.

"I have never known a newspaperboy who has not been a success. We find the newspaperboys of my days now professional men, leading businessmen. We find them in the arts and the sciences, that is due to the fact that in their early years, they had the determination to go ahead, in a sense to be a Horatio Alger and with that determination, they built themselves, studied, educated themselves and took the journey of life into higher positions of responsibility, enjoying also a position of confidence and respect in the minds of their fellow men.

"WIDE RECOGNITION

"As I have said, I have never known a newspaperboy who was not a success. I have never known one who was not a leader in his community. I feel it would be fitting and proper that your fine Record, American and Sunday Advertiser newspaperboys program, be recognized as widely as possible and I intend to see that this is called to the attention of my colleagues in Congress.

"The newspaperboys of today, like those of yesterday, typify the real American boys with the interest of God, the interest for his Nation and his family at heart. Many of you boys, newspaperboys of today but leading citizens of tomorrow, will inherit the responsibility of guiding the destiny of our great country.

"I have never known a newspaperboy who did not love his mother and his father or who failed to make contributions to his family, turning in his earnings to his mother in order to enable her and his father to keep the family going. I have seen so many of them myself when I was a youngster and they all made good.

"With such boys as these destined to assume the responsibilities of the future, I have no misgivings for the welfare and the national interest of our country."

Remarks of Lt. Gov. Malcolm Wilson, of New York, at Franciscan Brothers Centennial Dinner

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from remarks of the distinguished Lt. Gov. Malcolm Wilson, of New York, at Franciscan Brothers centennial dinner at Hotel St. George, Brooklyn, N.Y., Tuesday, May 5, 1959, as follows:

Tonight we mark the end of one century since the third order regular of St. Francis accepted the invitation of Bishop John Loughlin to send some of its brothers from Ireland to help him establish a parish school system in the newly created Diocese of Brooklyn, for it was in May of 1858 that Brother John McMahon and Brother Vincent Hayes from Roundstone Monastery arrived in this city. Here, having courageously faced and overcome the inevitable difficulties of starting a new project, they, with the assistance of three lay teachers, opened St. Francis Academy at 300 Baltic Street—the first private Catholic secondary school in the Diocese of Brooklyn.

The Brooklyn Franciscan Brothers owe much to their Irish heritage. From the Irish congregation, steeped as they were in the traditions of the "Isle of Saints and Scholars"—traditions which they had helped in great measure to build—came not only the first founders of the Brooklyn order, but its leaders for many, many years.

Tonight is an occasion for rejoicing and for giving of sincere thanks on the part of the people of Brooklyn—yes, and of all the State, too—for what this hundred years since the advent of the Franciscan Brothers has meant to them; the young souls that have been trained in the Brothers' skillful hands, the hearts that have been turned to God, the minds that have been opened to the wonders of eternal truth.

Surely a century is a long span, but to find the inspiration which is still guiding these men, we must cast our minds back even 600 years further—and from a fevered modern life—from our age avidly thirsting for peace and serenity, we come as to a cooling draught to the simple little saint in whose footsteps these brothers follow, to the man who has made such a tremendous impact on the human heart.

Today, in a world torn apart with hatred, filled with the insufferable arrogance that is man without God, we turn with deep nostalgia to look at the humble, simple and—above all—happy St. Francis of Assisi. Through the corridors of time his voice reaches us tonight filled with laughter and with singing—always with singing—because his heart was so filled with love for his Creator and with love for every fellow creature that it had either to overflow in music—or to break.

In penetrating the heavy shadows of those centuries to the time when St. Francis founded his order, it must not be surprising to us that Pope Innocent III hesitated before he gave sanction to so novel an experiment as was Francis' idea of gathering a group around him to make the effort to live—quite literally—by the Sermon on the Mount. For the church even then was old, and had been sorely tried, and the Holy Father had no way of knowing that this little poor man of Assisi was initiating a movement that would rejuvenate Christianity to its marrow.

And how better could even Christianity have had a new birth than in a song of love? And the singing is what is inseparable from St. Francis. He even exhorted his followers: Yes, be modest, mild, humble, friendly—do the Lord's work in many fields. But above all, be cheerful—be glad in the Lord.

I am frank enough to admit that I would not have the courage to follow Francis today—but surely the need for him and everything for which he stood is deeply felt. As Paul Gallico said in his magnificent essay on St. Francis, "The higher the civilization, the more brash and insufferable the arrogances, the dearer the longing for the simplicity, peace and humility of which he was capable. For it is recorded that after he had stripped himself of everything he had—the last shred of clothing, the shoes from his feet, the staff from his hand, the food from his lips—when he had learned to sleep out in the chilling rain with a stone for a pillow, when he could sell even the book of Scriptures that nour-

ished him spiritually to provide bread for a woman in distress—then it was that this great creative artist of the world's most beautiful poem of living wrote the climax of his farewell to earthly pride, for he shed even the last remaining arrogance, the arrogance of poverty and humility. "Take no pride of your voluntary poverty" he counsels the Brothers, "for behold, there is a beggar even more ragged, miserable and theradbare than you, and you are in debt to him for everything you have."

Gradually in the century after the death of Francis, his followers came to Ireland, and by the 15th century had established 50 monasteries. During the Protestant revolt these monastery schools were destroyed and many of their inhabitants martyred. But even this did not stifle in the hearts of those who were left the burning desire to teach youth. Having no place else to turn, many of them became hedge-masters, so called because they secretly taught the Irish children, often behind hedges, in opposition to the English law. To these men belongs in great measure the credit for keeping aglow in the small white huts of Ireland, the light of culture—and for keeping alive in young hearts a thirst for knowledge which today these Brothers whom we salute here tonight continue to spend their lives in quenching.

With the passage of the Catholic Emancipation Act in 1829, circumstances were eased—and the Brothers continued the vital work of teaching youth and instructing young and old in their faith. At that time began the tradition among the Franciscan Brothers which has lasted to the present day—namely, an emphasis on teaching in parish schools and in Christian doctrine classes, today known as the Confraternity of Christian Doctrine.

It has been testified time and again by the clergy of Ireland that the Catholic faith was preserved in Galway by the efforts of the Franciscan Brothers. It was the great Archbishop McHale of sainted memory who praised their schools where, as he put it, "Children, besides receiving the rudiments of learning, are deeply embedded with the principles of faith and morality and are taught that which is most valuable in education—to become honest citizens."

It was from this great Irish order then that 100 years ago this month came two Franciscan Brothers to the Diocese of Brooklyn. From their Irish confreres they brought and have handed down through the years a devotion to the Franciscan approach to education, to humility, obscurity and a love for the education of the young. The Irish Brothers have imparted to their successors here an ideal of training young people who will serve well their faith, their country and themselves.

St. Francis Academy, the first school opened by the Franciscan Brothers of Brooklyn, has developed now into two noted educational institutions: St. Francis Preparatory School and St. Francis College, both of which have played an important part in the history and growth of Brooklyn—where, in addition to providing free or inexpensive higher education to many of the young men of the area, a substantial number of priests of the diocese have received their initial training.

Since their arrival from Ireland in 1858, these Franciscan Brothers have operated in the Diocese of Brooklyn 10 educational institutions of their own, one orphanage, and 25 parish schools. In additional, they have conducted 3 summer camps and many Confraternities of Christian Doctrine.

In the 20th century the Brothers have undertaken eight new parish schools in the Diocese of Brooklyn. In 1957, just prior to the centennial year, two new foundations were made at Notre Dame Parish in New Hyde Park and St. Aidan Parish in Williston Park. During the centenary, a new school and friary were also opened in Our Lady of the Angels.

Their century of labor in the elementary schools of the Catholic Church represents substantial donated service to the people of this community. Their contribution to the establishment of the system of Catholic schools in the diocese of Brooklyn is a monument to the resourcefulness and perseverence of the Franciscan Brothers. The words of his holiness, Pope Pius IX, in his encyclical on the Christian education of youth can be fittingly applied to the Franciscan Brothers of Brooklyn: "Perfect schools are the result not so much of good methods as of good teachers; teachers who are thoroughly prepared and are well grounded in the matter they have to teach, who possess the intellectual and moral qualifications required by their important office, who cherish pure and holy love for the youth confided to them."

In closing, we salute again these teaching troubadours of Christ. We are singularly fortunate that they generously answered Bishop Loughlin's plea for help those many years ago. For, as a man with a better flair for words than I has put it, "fools can make wars and lead the world to slaughter; scientific learning has catapulted us into space and elbowed its way through the firmament of a hundred billion light years closer to God's throne, but not one single, split second nearer to Him in spirit. Soldiers, statesmen, and conquerors catch the eye and the intellect, but the lovers of God capture our hearts."

For all the world loves a lover and the happy little Saint and his followers have had an irresistible appeal for all men, from the days when he walked in the way of the Lord until tonight when we felicitate his brothers gathered here. Yet let no one think that because there is a smile and a song on their lips there is not in their souls the tempered steel that makes the perfect soldiers of Christ. For when St. Francis cheerfully donned the uniform of Lady Poverty, as Chesterton said: "The servants of God that had been a besieged garrison became a marching army; the ways of the world were filled as with thunder with the trample of their feet; and far ahead of that ever swelling throng went a little man singing—as simply as he had sung that morning in the winter woods, when he walked alone."

From grateful hearts we say to these wonderful Franciscan Brothers—ad multos annos.

Benson's Record

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. GROSS. Mr. Speaker, under leave to extend my remarks, I offer for reprinting in the RECORD, an excellent editorial from the Reinbeck (Iowa) Courier whose publisher, Mr. LeRoy Moser, is one of the veteran weekly nswspapermen in our great agricultural State. The editorial follows:

The House Committee on Agriculture, after a series of hearings involving the Department of Agriculture, headed by Ezra Benson, has reduced the information to a few important, summarized sentences. They are quite an insight into the conduct of the Department of Agriculture by Mr. Benson, and refute just about every favorable thing that has been said about the Secretary. Neither the farmer, the consumer, nor the taxpayer can be very happy with the statistics.

Here are some of the most important:

The farmer's gross income was $15.3 billion in 1952; it was $13.1 billion in 1958.

In 1951 the Agriculture Department's annual budget was $1 billion; in 1960 the budget has been set at $6.7 billion.

Four million people have left the American farm in the past 6 years.

The purchasing power of farm prices is the lowest in 18 years.

The actual spending by the Department of Agriculture is now 56 percent of the total net income of American farmers.

In 1953 the Department of Agriculture had what Benson termed a "swoolen bureaucracy" of 67,406 employees; as of last November the Department now has 89,464 employees, an increase of 32 percent, and slated to be 98,487 by next June.

Benson's own office expenses were $2.1 million in 1953; they are budgeted at $2.8 million this coming year.

The above facts simply illustrate one basic fact. Benson has not reduced surplus, expenses, employees or food prices in any way. He has reduced the farmer's income.

He is still unable to understand that lower support prices are no key to a balanced agricultural economy. The plain fact is that the lower the price the more the farmer produces in a struggle to survive.

In January 1953, when Benson took office, crop surpluses held by the Government were inventoried at $1.1 billion. The estimate for next June 30 is $6.8 billion.

Benson still insists as he has from the beginning that the best and surest way to reduce farm surpluses is to lower the price. Farmers, he seems to believe, will quit raising so much corn, oats and beans if the price is made low enough to discourage heavy production. He has carried out that belief during the past 6 years with lower price supports and the result is a surplus six times as high as it was when Benson took over the Agricultural Department. And still Benson believes that he is right. And the strange part of it is that the President and many others, even some farm leaders, agree with him.

A Filipino Expresses His Gratitude

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of a letter addressed to my good friend Max Abelman of Brooklyn. This letter is from a doctor in the Philippines whom Mr. Abelman had helped get into the Jewish Hospital in Brooklyn where he served his internship. It is an expression of gratitude to an American for his humanitarian deeds. At the request of Mr. Abelman, I hereby insert this letter:

DAGUPAN COLLEGES.
Dagupan City, Philippines,
March 12, 1959.

MR. MAX ABELMAN,
Brooklyn, N.Y.

DEAR MAX: I have shown your letter to the members of the family and they have expressed their strong admiration and sincere

appreciation for all the kind thoughts you have extended not only to Bernice and myself but also to the dolos Santoses and the many Filipinos. Your spirit of humantarian service to all but particularly among the Filipinos have no equal and certainly has embedded deeply in our hearts. You have helped not only the Filipinos but also the Europeans and some Americans as well. Your bigheartedness has been expressed and manifested in leaps and bounds and without limit. You have done all these things at the sacrifice of your health, at times, including your dignity. There is no better way of expressing our sentiments than to say once again as your very good friend the Hon. Carlos P. Romulo has said, that "you are not only one of the typical Tom, Dick, and Harry who are the plain, simple and bighearted Americans but you are Max, Brooklyn's Ambassador of Goodwill." In addition, allow me to call you the "Philippine Ambassador of Brooklyn."

Dr. BLAS O. RAYOS, Jr.

Lausche, Feighan Act To Save Ellis Island

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. FEIGHAN. Mr. Speaker, I am gratified that my proposal to establish Ellis Island as a national shrine has received such spontaneous support from one of the Nation's outstanding newspapers, the Cleveland Plain Dealer.

Under leave granted, I am inserting in the Appendix of today's CONGRESSIONAL RECORD an excellent article which appeared in the Cleveland Plain Dealer, May 8, by Alvin Silverman, and an editorial which appeared in the Cleveland Plain Dealer Sunday, May 10, titled "To Save Ellis Island":

[From the Cleveland Plain Dealer, May 8, 1959]

LAUSCHE, FEIGHAN ACT TO SAVE ELLIS ISLAND

(By Alvin Silverman)

WASHINGTON, May 7.—U.S. Senator FRANK J. LAUSCHE, Democrat, of Ohio, and Congressman MICHAEL A. FEIGHAN, Democrat, of Cleveland, today launched an 11-hour move to stop the sale of Ellis Island to a private bidder.

Acting independently, the two were motivated by the same desire—to preserve as a public domain the historic shrine which so many thousands passed on their way from foreign shores to outstanding American citizenship.

Time was a critical factor. The General Services Administration is scheduled to act upon bids for disposal of the 27-acre former immigration center in New York Harbor by 5 p.m. Friday.

LAUSCHE, FEIGHAN and at least one organized group have different ideas about what should be done with the "front door to freedom." But all agreed that first the sale must be stopped.

PHONES GSA CHIEF

LAUSCHE telephoned and then wrote a letter to Franklin G. Floete, General Services administrator.

"I believe Mr. Floete will hold up action," the Senator said tonight.

FEIGHAN went right to the top. He sent a telegram to President Eisenhower. His message said:

"I respectfully urge you to exercise executive authority directing General Services Administrator Floete forthwith to postpone and cancel the sale of Ellis Island, which is due to be consummated May 8 at 5 p.m.

"Ellis Island was the port of entry of close to 2 million immigrants, whose descendants today number at least one-tenth of our present population.

"To these 20 million Americans, Ellis Island is their Plymouth Rock.

"On Monday, May 11, I plan to introduce legislation in the House of Representatives proposing the establishment of Ellis Island as a national shrine administered by the Smithsonian Institution.

"It would contain exhibits of early immigrant life—complete microfilm records of all immigrants.

"My legislation also will propose that the Statue of Liberty ferry from the New York City Battery be rerouted to include a stop at Ellis Island.

"Establishment of Ellis Island as a national shrine will forever complement the Statue of Liberty. Both epitomize freedom and individual liberty to the world.

"I am inviting Members of the Senate and House Subcommittees on Immigration and Naturalization to join with me in cosponsoring this bill."

GROUP SEEKS ISLAND FOR TRAINING CENTER

As LAUSCHE and FEIGHAN swung into action, a group of businessmen and scholars had joined in an effort to turn Ellis Island into an international training center for Americans assigned abroad.

Several American corporations have indicated their interest in the cultural institute plan which is championed by William M. Brennan, New York management consultant and Dr. Frederick Burkhardt, president of the American Council of Learned Societies.

Senator LAUSCHE wrote Administrator Floete, following their telephone conversation.

"My attention has been called to the fact that you are now considering bids for the sale of historic Ellis Island and that by 5 p.m. Friday, May 8, you will have to act upon the bids.

"I learn that Mr. William M. Brennan of New York is advocating that the island be acquired by a nonprofit international institute for use in training of American employees and their families prior to leaving for foreign service assignments.

"The particular land for which the highest bidder, the Atlas-Buffalo, Inc., of Yonkers, N.Y., has offered $671,000 consists of 27 acres and, with its buildings, is appraised at more than $6 million.

"Ellis Island is known to millions throughout the world as the 'front door to freedom.' It is the symbol of liberty and the sanctuary which received them when they came from foreign lands to the United States. It would be a travesty to sell this historic shrine and site to private promoters for future use for commercial development.

"I feel rather certain that there is some method of preserving this historic site as a public domain.

"If the plan proposed by Mr. Brennan cannot be worked out," LAUSCHE's letter continued, "exploration should be made about the willingness of our people, primarily those who came to our shores through Ellis Island, by public subscription to save the site.

LAUSCHE LISTS HIS REASONS FOR ACTION

"I urge that you reject the bid because:

"1. The island because of its historic significance, should not be allowed to pass from public control into private hands.

"2. The bid made by Atlas-Buffalo, Inc. is wholly inadequate in the face of the more than $6 million evaluation that has been placed on Ellis Island by responsible appraisers.

"3. The several proposals made about means and methods of saving the island should be fully explored.

"4. Additional time is needed to properly air in public discussion and the U.S. Senate the wisdom of allowing this shrine to pass into private hands."

Administrator Floete, who seemed more than willing to cooperate, must have been baffled by the sudden interest in Ellis Island, which was closed more than 4 years ago.

General Services Administration was handed the job of selling it after no other department of the Federal Government indicated any interest in its use. Several years ago, there was talk of establishing a narcotics hospital on the site but a survey found the location impractical.

Even the proposal to turn it into an international training institute has been before Secretary of Health, Education, and Welfare Arthur S. Flemming for some time but no recommendation from him has been made.

GSA first took bids on the disposal of Ellis Island about 16 months ago. Twenty-one bidders responded and the highest in the neighborhood of $201,000, came from Sol G. Atlas, head of the Atlas-Buffalo, Inc. His announced plans are to construct a resort area on the island, including an auditorium and marina.

GSA rejected all these bids as too low and, about 3 months ago, still with no one showing any special interest, asked for new bids. Again Atlas was the top bidder but this time his bid was $671,000.

Administrator Floete has until 3 p.m. tomorrow to accept this bid, reject them all, or call for a 60-day negotiation period.

(General Services Administrator Floete rejected all bids.)

[From the Cleveland Plain Dealer, May 10, 1959]

TO SAVE ELLIS ISLAND

Between 1890 and 1954 millions of immigrants came into the United States through Ellis Island. Thousands of Greater Clevelanders were among the 20 million or so; many, many more thousands are descendents of those who came, penniless or otherwise, in search of a fuller life.

The Federal Government invested more than $6 million in the New York Harbor island before it was closed, and since then it has maintained the facilities. Bids from private investors were sought twice and the highest received on the first call was just above $201,000. This was rejected as too low; a second round of bids recently brought a high offer of $671,000 from the same company which earlier thought $201,000 was enough. It wants to turn the place into a resort.

It had been expected in Washington that this bid would be accepted. But fortunately two Clevelanders, Senator FRANK J. LAUSCHE and Representative MICHAEL A. FEIGHAN, have spoken up to keep Uncle Sam in possession.

The new bids have been rejected, too, due to their intervention.

The Senator and Congressman favor turning the island into a national shrine; there have been other ideas promoted, such as using its buildings as schools for training private individuals assigned abroad about how best to represent their land.

It is fitting that the leaders in objecting to the sale of the island should be Clevelanders. For here, as much as anywhere in the Nation, have newcomers from every continent been welcomed, and Cleveland, we like to think, represents the best combination of neighborhoods which have kept elements of old world cultures and of neighborhoods which are thoroughly mingled.

The LAUSCHE-FEIGHAN shrine idea is a laudable one, providing that it be given the proper financial and popular support needed to develop the island, and providing arrangements for reaching it are adequate later. Once sold, the hope of making Ellis a memorial would have been gone forever.

What will happen, as far as making it a memorial, likely will depend on reaction of leaders among nationality groups here and elsewhere. Some in Cleveland already have promised support. Now is the time to back Senator LAUSCHE and Representative FEIGHAN with ideas and pledges of contributions, for a final decision on what to do cannot be put off much longer.

Small Business Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. CRAMER. Mr. Speaker, I have today introduced a small business tax reform bill which is identical to the small business bill introduced by the Republican members of the House Small Business Committee.

We must face up to the responsibility of providing the means by which our small business institutions may grow and expand on a sound constructive basis. The bill would provide addition reform and revisions of certain sections of the Internal Revenue Code to assist small businesses, and overcome the difficulties encountered in their efforts to grow, expand, and modernize. Small business represents the broadest base of our entire economy and we must recognize the importance of small and new businesses and enact a tax policy which encourages freedom of entry into business. The tax system should be designed to stimulate incentive and provide growth but not penalize either large or small firms. This is necessary to our free enterprise system.

Unless we provide for the growth of small and medium sized businesses we shall inevitably be confronted with a greater merger and business failure problem than we have now.

In brief the purposes of the bill are to provide for expansion, growth, and modernization, to permit individuals and partnerships filing income tax returns for small and independent businesses engaged in trade or commerce to have election to be taxed as a corporation, to provide a normal tax rate of 20 percent for taxable years after June 30, 1959, to provide family-sized farmers and others engaged in agricultural pursuits an exemption for the improvement, modernization, and renewal of buildings, and to provide small and independent business an exemption for goodwill in the determination of the value of the estate.

I think that this legislation is absolutely necessary to the Nation and should be enacted into law without delay.

Role for Businessmen

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. THORNBERRY. Mr. Speaker, the Taylor Daily Press, of Taylor, Tex., in its issue of April 28, 1959, contains an excellent editorial on the role the businessman should play in the affairs of his Government.

As the Taylor Daily Press points out the business and professional men of Taylor have taken a leading role in the city and school affairs and with the same unselfish public spirit can make a splendid contribution to their Federal Government.

Because I think that the Members of Congress will appreciate this splendid editorial I place it in the Appendix of the RECORD. The editorial is as follows:

ROLE FOR BUSINESSMEN

Businessmen have been urged by the president of the U.S. Chamber of Commerce to take a greater interest in politics. In urging participation, William A. McDonnell said we must quit thinking of politics as a dirty word.

Both of these suggestions are good ones. If we think of politics as a dirty business it is quite likely to be just that. If practical, sound-thinking people take an active interest in their Government, it can be run on a businesslike, clean basis.

Businessmen are often criticized when they take a public office for protecting their own interests. There are no doubt instances where this is true. There is a long record of businessmen serving well and their constituents benefitting from faithful, unbiased performances.

In Taylor, merchants and professional men have traditionally taken a leading role in city and school affairs. This has resulted in good government, sound economy, and intelligent planning. Taylor is a fortunate community.

Businessmen are accustomed to making decisions, handle funds often the property of others and doing so with a sense of integrity that goes with responsibility.

This becomes increasingly important as government becomes bigger and bigger and spiraling inflation takes its bite of every dollar collected in taxes and spent in civic improvement and service.

This is not to say that a wage earner cannot accept these same responsibilities. We do believe that the type of experience gained in business serves as training to effect the economies necessary to combat inflation and handle the problems of growing Government.

We are in a new phase of the cold war with the Communist world. This is developing into a fierce competition on a trade level. The great western democracies with their higher standards of living and costs of production could lose this battle unless sound thinking and efficiencies are effected.

These principles must be put into practice locally and then carried through State and national levels. Inflation and higher taxes cannot go on forever or the United States could isolate itself from the rest of the world to a far greater extent than it did in the thirties and early forties.

No battle is ever lost until it is over. However, we are doing a good job of pricing ourselves out of the great east-west struggle for world markets. Now is the time to make the right decisions to throw the economic balance in our favor.

Well Done, Secretary Herter

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BOLAND. Mr. Speaker, the Springfield Sunday Republican yesterday editorially complimented Secretary of State Christian A. Herter for his calm, dignified, but impressively frank, address to the Nation last Thursday night on the Berlin crisis.

Under leave to extend my remarks, I ask that the editorial about Secretary Herter, who was Governor of the Commonwealth of Massachusetts for 4 years, be printed in the RECORD:

WELL DONE, SECRETARY HERTER

The speech delivered over the air Thursday night by Secretary of State Christian A. Herter was made memorable by both its quality and by the circumstances which surrounded it. In essence it was a moving appeal to the Nation for understanding, an understanding of world conditions, and for support of firmness in meeting them—all this as a better alternative to an ultimate call to arms.

Those of us to whom Massachusetts is home may justifiably feel an added thrill of pride in Mr. Herter's demonstration of high abilities. He was calm, dignified but impressively frank. Reporting on the conference of allied foreign ministers which he had just attended in Paris in anticipation of the conference with the Russian representatives beginning in Geneva tomorrow (for which he has already recrossed the Atlantic) he held out no exaggerated hopes and warned against expecting miracles. His caution that it is perhaps an American failing to look for too quick results, and for that reason to be less well conditioned for slow and difficult negotiations, should add to the public confidence inspired by his own finely expressed confidence that, in our determination to stand fast in Berlin, we are following the one course from which stability and lasting peace may ultimately come.

Not often does a new statesman step from the wings to the center of the stage with the limelight of threatening events so focused upon him as Mr. Herter has now done. The events which have threatened before have seldom if ever been of such magnitude as those which threaten today. For reasons which Eisenhower recently expressed at his press conference, it may be true that the only real decision which can be reached will be reached, if reached at all, at a summit conference with himself and Khrushchev both in attendance late in the year. But it is already apparent that Secretary Herter may become the chief agent in shaping that decision and in paving the way for it. He has made a conspicuously good beginning.

Appendix

The Tibetan People's Struggle for Freedom

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. KEATING. Mr. President, the entire free world has watched with admiration the struggle of the people of Tibet against the Communist overlords of China. We have also witnessed with horror the retaliatory tactics engaged in by the Red leaders.

Recently, the Committee of One Million Against the Admission of Communist China to the United Nations, sent me a letter and memorandum concerning developments in Tibet. In them, the need for firmness against communism and for aid to the Tibetans was underscored. As a member of the committee, I read with great interest their comments on this situation. Because of the need for more information in this country on Communist China and Tibet, I ask unanimous consent to have the letter and communique printed in the Appendix of the RECORD.

There being no objection, the letter and communique were ordered to be printed in the RECORD, as follows:

THE COMMITTEE OF ONE MILLION AGAINST THE ADMISSION OF COMMUNIST CHINA TO THE UNITED NATIONS,
New York, N.Y., April 21, 1959.

DEAR FRIEND: Enclosed is a communique containing excerpts from various reports we have recently received from the Far East telling of the continuous struggle carried on by the people of China against the Communist regime. Although reports of fighting between the Chinese and units of Red China's Army have filtered through the Bamboo Curtain for some time, it has taken the anti-Communist struggle now going on in Tibet to break through the almost total news blackout.

The Tibetan people's struggle for freedom, which has captured the imagination of freemen throughout the world, is but one part of the unceasing fight of the Chinese people against the regime which has enslaved them. As with the Hungarian struggle for freedom, the free world is again presented with a challenge and an opportunity. The free world did not meet this challenge during the Hungarian revolution and thus the great sacrifice of the Hungarian people produced only another monument to man's insatiable thirst for freedom. In Tibet and China today, the free world is faced with an even greater dilemma. Geographical and physical conditions make it practically impossible to extend any concrete help to the Tibetan and Chinese freedom fighters who carry on daily guerrilla and sabotage activity against the Peiping regime.

There is one thing, however, that freemen can and must do. They must keep alive the morale and hope of those who struggle against Communist slavery by refusing to do anything which would build the power and the prestige of the Communist regime. In spite of the Tibetan fight, and the reports of other battles being waged in the heart of Communist China, there are still those in our country who advocate the admission of the Peiping regime to the U.N., its recognition by our Government, and even trade and cultural relations with Red China. Any of these actions would be a betrayal of those brave men and women who are carrying out an active battle against our common enemy.

The Committee of One Million is the one group in the United States dedicated to mobilizing and consolidating public opposition to any such moves. By standing firm against any action which would appease Red China, we will be keeping faith with those who have taken up arms against this regime.

This is not only the fight of the Chinese people. Those who are fighting today in Tibet and in mainland China are, in effect, the frontline troops of all freemen. We must back them up every way we can.

Sincerely yours,

MARVIN LIEBMAN,
Secretary.

COMMUNIQUE TO THE AMERICAN PEOPLE

Subject: The continuous anti-Communist struggle in China.

The fight which the people of Tibet are now waging against the Communist regime in their country has electrified the world. Reports leaking out of Tibet, in spite of a total Communist blackout of news, have shown that the Tibetan people are carrying on in the same tradition as the gallant people of Hungary did a short time ago—standing fast against savage Communist fire in defense of their liberty and national heritage. It is important to know that the current fight in Tibet is not a revolution but rather the latest battle in a 9-year war against communism.

The fighting in Tibet is only a part of the continuous and active struggle against communism which is being carried out in all parts of China. Stringent Red censorship makes it difficult for the Western World to know the full extent of the Chinese people's constant battle against the Communist regime. The Communist propaganda line is to deny the existence of any active revolutionary and anti-Communist forces in China. In their official releases, the Peiping regime blandly underrates the extent of the rebellion and labels those forces which actively engage Red army troops as "bandits" or "reactionary elements."

These "bandits" and "reactionary elements" number into the hundreds of thousands throughout China. They are dedicated to the fight for freedom and carry out daily guerrilla and sabotage action against the Communists. Voluminous information has been gathered here in Hong Kong of such fighting, of which Tibet is the latest example. Unfortunately, some in the Western World still choose to believe Communist propaganda rather than the facts.

In Tibet today, an estimated 100,000 warriors are fighting Red Chinese army contingents. The Khamba rebels of Tibet have been joined by fierce Amdowa and Golak tribesmen. The fighting has spilled over from Tibet into the Chinese Provinces of Szechwan and Tsinghai. Reports have been received of hundreds of young Chinese soldiers deserting the Communists to join the rebels.

In Sinkiang Province, Chinese Moslems have taken the field against the armies of the Peiping regime time and again, and have engaged in pitched battles which involve hundreds, and many times thousands, of troops. Peiping recently captured one of the leaders of the Chinese Moslem community, Ma Chen-wu. He was accused by Peiping of organizing a "counterrevolutionary armed revolt" of such strength that large areas were under his complete control. Ma's Moslem freedom fighters operated along the area bordered by Outer Mongolia, a colony of the Soviet Union. Reports reaching Hong Kong through refugees and other sources indicate that the flames of this Moslem revolt spread into the borders of the Soviet Union itself.

Each day brings in fresh reports of armed fighting in the communes of Red China. Just 2 months ago, the free world was able to physically and personally observe one such uprising from Macao, the Portuguese colony. Residents of Macao were awakened one night by the sound of gunfire just across the water on mainland China. They rushed to their rooftops and watched as the people of a fishing commune rose up and attacked Communist Party headquarters. The light of flaming buildings brightened the night sky and the crack of gunfire continued until the early morning hours. A handful of refugees who escaped informed Macao authorities that members of the newly organized fishermen's commune, driven to desperation by hunger and the oppressive acts of their local commissars, openly revolted—a revolt which was put down in bloodshed.

Reading between the lines of official Peiping pronouncements, it can be seen that there is a continuous struggle against Communist enslavement. Lo Jui-ching, Chief of the Red Security Services, was quoted recently as saying: "More than 370,000 counterrevolutionaries and other criminals in society throughout the country have surrendered voluntarily to the authorities." These figures are just an indication of the massive opposition that exists against Communist rule in China.

We have information of rebel forces actively fighting Chinese Communist rule in every province of China. The Communists will do everything possible to keep these facts quiet. It is their propaganda line to assure the world that they are in complete control of the Chinese mainland. This is not so.

It is important that the Western World recognize the existence of this growing opposition to Communist rule on the part of the Chinese people. Although the West can do little at this time to assist the anti-Communist revolutionary forces in China, it must certainly not take any action which would strengthen the regime against which so many Chinese are giving up their lives. The people of China, as free people throughout the world, despise Communist rule. Sooner or later they will overthrow the regime which keeps them enslaved. These brave people have confidence in the friendship of other free peoples throughout the world. The West must do nothing to betray this confidence.

Citation Presented to James Joseph Lynch

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. ROONEY. Mr. Speaker, on Sunday morning last, in Brooklyn, I was happy to be present on the occasion of the presentation of a beautifully inscribed citation to an outstanding citizen of the congressional district I have the honor to represent. This citation was presented at the annual father and son communion mass and breakfast of the Holy Name Society of St. Paul's Roman Catholic Church. I have known Jim Lynch as a neighbor and friend for over 40 years and well know how well he deserved the tribute.

Under the permission heretofore granted me by unanimous consent of the House, I include the program of the occasion including the language of the citation presented to Mr. Lynch:

HOLY NAME SOCIETY, ST. PAUL'S ROMAN CATHOLIC CHURCH, BROOKLYN, N.Y., 1872–1959—ANNUAL FATHER AND SON COMMUNION MASS AND BREAKFAST, MOTHER'S DAY, MAY 10, 1959

Mass at 8 a.m., St. Paul's Church, celebrated by Rev. Joseph A. Mullen, moderator.

Breakfast at 9 a.m., Torello's Restaurant.

PROGRAM

Invocation: Rev. Joseph A. Mullen.

Greetings from chairman: Patrick Finnerty.

President's remarks: Albert J. Casazza.

Moderator's remarks: Rev. Joseph A. Mullen.

Citation to James Joseph Lynch, presentation of inscription: Rev. Joseph A. Mullen.

Address: Very Rev. Msgr. William M. Casey, director, St. Vincent's Home for Boys.

Benediction: Rev. George C. Magee.

Communion breakfast committee: Chairman, Patrick Finnerty; cochairman, Frank Ramos.

Officers: President, Albert J. Casazza; vice president, John Bush; secretary, John W. Sullivan; treasurer, Martin Donahue; marshal, James Fagan; corresponding secretary, Thomas Busby; diocesan union delegate, James Lynch.

Color bearers and guards: St. Paul's Troop 902, Boy Scouts of America.

CITATION: JAMES JOSEPH LYNCH

Born in Brooklyn in 1897, a member of St. Paul's Parish since 1916, he has represented with distinction the Holy Name Society as delegate to the Diocesar Union of Holy Name Societies of the diocese of Brooklyn for a period of more than 20 years; his record of outstanding service gives good example to the members of the society. Over these years he has diligently attended and participated in the monthly meetings of the diocesan union, frequently at great personal sacrifice, and thereafter faithfully reported the proceedings to the assembled membership of the society. His indefatigable endeavors in the activities of the society, and his perspicacity and sound judgment in its councils and meetings have played an incalculable part in advancing the objectives of the society.

An ardent Catholic, he has been active in many other societies of the parish and has given unstintingly of himself so that he might help others. Modest and humble, he is a person instilled with a fervent desire to assist in the work of God and the church. By his faithful observance of the law of God and of man, and by his work in God's vineyard, he exemplifies those distinguished members of the laity who, under the direction of the hierarchy and in obedience to them, strive to extend the kingdom of Christ and the peace of Christ by prayer, word, work, and example.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 9, 1959:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, 5TH DISTRICT TEXAS)

MAY 9, 1959.

The Trinity River survey appropriation was the subject of the Appropriation Committe's hearing at which a large Dallas group appeared. Congressmen of the Trinity River area joined the delegation of Texans in a united front requesting the survey by the Corps of Engineers. I was happy to join in support of this interstate matter. It is both legitimately a Federal-State proposition and within justifiable cost limits of flood control and navigation projects by the usual tests of priority. The big "if" is whether boondoggle and wasteful projects will also receive attention now, thus squeezing out legitimate projects in the exceeding of the budget.

President Eisenhower warmly greeted Bill Junker of Dallas, the Goodwill Industry's Man of the Year, along with Bill's mother and Goodwill officials. The President's attention was a further honor to Bill who was elected by his 35,000 nationwide handicapped fellow workers. Along with personally commending Bill Junker, the President described animatedly the paintings and art objects in his beautiful oval office. He is looking very fit. I had the opportunity to commend the President for his efforts to maintain a balanced budget. When I exhorted him to stand firm, he laughed and said it wouldn't be he who weakened. It was up to Congress.

H.R. 3460, a bill to amend the Tennessee Valley Authority Act of 1933 (TVA), to permit self-financing by the TVA issuing its own bonds up to $750 million, was the subject of long, controversial, but generally good-natured debate. The TVA is wholly owned and operated by the Federal Government. Electricity developed serves 5 million people in 1,250,000 families in 80,000 square miles in parts of 7 States—Georgia, Virginia, North Carolina, Alabama, Mississippi,, Tennessee, and Kentucky. Originally, the TVA was intended for navigation and flood control. A small amount of hydroelectric power development was included. Since then the electricity production has mushroomed to include many steam-generated powerplants. Power output and area served has grown terrifically. This bill would permit the TVA's three-man Board of Directors to issue bonds for new powerplant and facilities construction on terms and conditions of their choosing.

Arguments for include: (1) Twelve percent yearly growth requires $180 million yearly in plant expansion; (2) 50 percent of power produced is used by Government installations; (3) besides paying 3 percent interest yearly ($36 million) on TVA Federal indebtedness of $1,200 million, this amount will be reduced from TVA revenues by $10 million per year; (4) Congress has 90 days to veto new TVA construction. Arguments against include: (1) Though wholly federally owned, the Federal Government would have no control—neither the Treasury Department over the bonds, the Budget Bureau over expenditures, since this would be outside the budget, nor Congress, since usual appropriations procedures would be sidestepped; (2) the opposition of the Treasury, Budget Bureau, and Comptroller General were not printed in the hearings or report, so Congressmen were denied this usual information; (3) TVA bonds would compete with U.S. bonds without Treasury control; (4) bonds, though alleged to be secured solely by TVA revenues, would in fact be U.S. obligations since TVA is federally owned.

For myself, the more fundamental objection was not stressed, as almost everyone accepts this 27-year-old experiment in socializing power production, and that is that Government should not be in business operation in competition with its citizens in their private enterprise. Further, subsidy for a few at the expense of all is not a Federal right, even though the Federal Government has done so. These basic objections should be met head on and solved. My suggestion? That the TVA be sold by the Federal Government to the people of the area served by the TVA, a simple and sensible solution to disposing of public power facilities here and elsewhere. Amendments sponsored by Republicans to improve the bill by reestablishing congressional control over this financing were defeated by the Democrats in almost a solid partyline vote. Obviously, this will be a political campaign issue by both parties with some exceptions, namely, the switching of Republicans in the TVA area and a few Democrats outside TVA. The closeness of amendment votes indicated that a Presidential veto cannot be overridden by the House. Interesting, indeed, was the "Buy American" amendment sponsored by a Democrat labor leader in which the Republicans with only a handful of Democrats supported U.S. industry. This amendment would have forbidden TVA to buy foreign equipment with its lower cost because of lower wage rates.

The $64 question now is: Will the House Democrat leadership bypass the Rules Committee to force out the huge, costly housing bill? At present, a Rules deadlock has it bottled up. Will the spending deluge of this and other pet programs yet engulf us? Right now, it's a stalemate. The people hold the key to the balanced budget and deficit financing. They should write their Representatives and Senators.

The Late Ralph H. Moyer

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. MARSHALL. Mr. Speaker, the recent death of Ralph H. Moyer marks the passing of a real pioneer in several of the farm programs which have been so important to the development of American agriculture. He was associated with the Department of Agriculture for almost 26 years and at the time of his death was Deputy Director, Performance Division, Commodity Stabilization Service.

It was my privilege to become acquainted with Ralph Moyer in the early days of the Agricultural Adjustment Administration. He was a leader in the development of the corn-hog program and a dedicated public servant who virtually lived for his work. Later he became just as dedicated to the advance of aerial photography in measuring farm acreages. His pioneering efforts in this field resulted in a considerable saving in time and money with the development of photographic measurement rather than manual measurement in the field.

When he began his work in the experimental stages of aerial photography, it was in use in relatively few counties. It has now become established as an accurate and economical method of measurement and about 95 percent of all cropland in this country has been photographed.

The clerk of our Subcommittee on Departments of Labor and Health, Education, and Welfare Appropriations, Mr. Robert Moyer, is a worthy son of this distinguished public servant. To him, and to his mother and sisters, we extend our deepest sympathy in their great loss.

TVA Affects All Taxpayers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Lawrence, Mass., Evening Tribune on April 28, 1959:

TVA AFFECTS ALL TAXPAYERS

The Congressional Action Committee of the Greater Lawrence Chamber of Commerce recently wrote to five U.S. Representatives and Senators from Massachusetts, expressing concern about proposals to expand the Tennessee Valley Authority and to establish still another gigantic Federal valley authority.

In brief, it used several arguments which contained sound contentions: Competition with communities in the area receiving power from TVA at low rates, made possible by taxpayers' dollars from this area, is completely unfair, and to increase such competition seems foolish. The scheme proposed for financing the expansion of TVA facilities, to give comparatively few people slightly cheaper electricity at the expense of taxpayers, is the issuance of Federal revenue bonds, a dangerous procedure of bypassing Congress and its control over budgetary spending through annual appropriations.

Under its original program, production of water power at TVA was supposed to be only a byproduct of such activities as flood control, reclamation, conservation, and recreation.

Just how far, then, has it wandered from its original intent? While its role as a producer of hydroelectric power was to be secondary, today coal produces three-quarters of the electric output of TVA, which sells power cheaper than private producers.

This is not due to efficiency. It is because TVA pays no Federal taxes or interest on Federal funds. These can be readily classified as special and costly privileges, enjoyed only by residents and industries in the Tennessee Valley. This is what the local Congressional Action Committee means when it says that expansion of the Valley Authority will benefit a few people at the expense of, and to te detriment of others, including Massachusetts residents.

Each time that lobbyists for Federal public power push a Government electricity project through Washington, everybody is taxed to pay the bill.

The TVA measure could become an economic Armageddon. If TVA is permitted to sprawl across the countryside in a manner permitted by proposed legislation in Washington, other Federal projects could be expected to engage in the same activity under future exemption from Congressional or budgetary control. Federal competition on such a scale, enjoying the benefits of cheaper rates of interest for their bond issues and lower taxes, could eventually drive private companies out of business.

For the fifth consecutive year, Congress has been requested to allow the TVA to overlook the financial policy of looking to Congress for appropriations. It wants to issue and sell $750 million in bonds to assist in financing the power program. If approved, these bonds would not be a Federal obligation.

If such an activity is permitted to escape Congressional control it would only be a short time before the Federal budget and and the Federal debt would come close to the meaningless stage. In effect, the cash of the taxpayers would be used with less supervision by their elected representatives in Washington.

TVA already has strayed too far from its original intent. The taxpayers of areas other than those who live in the TVA area—and we are especially interested in those which the Congressional Action Committee here speaks for—have been shelling out more than their fair share of taxes, while those in the 105,000 square miles served by TVA are paying less than their fair share of taxes.

How can the Government repudiate the debts of an agency completely owned by the Government itself? The answer is that Congress should tell the TVA to abandon the idea of being removed from Federal controls.

Americans already have been taxed over $5 billion to pay for Federal public power. If Federal public power lobbyists have their way, however, that's just the beginning. They want billions more.

Program for National Forests

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. METCALF. Mr. Speaker, many of our colleagues know of my interest in natural resources. In recent years, I have become gravely concerned as to what can happen to these resources under the accelerated impact of intensified use. I refer specifically to the 181 million acres of national forests in 39 States and Puerto Rico.

In any vast enterprise of this kind, long-range planning to meet both current and future resource needs is vital. Such plans are of little use if a strong action program fails to materialize. First, however, we must have the basic plans before the Congress can intelligently move into an effective action program.

Notwithstanding the efficient manner in which the Forest Service has managed the national forests over the past 50 years, the next 50 years will be characterized by multiple problems in meeting the needs and demands of millions of people for the resources the forests provide.

It is gratifying, therefore, that the Department of Agriculture has moved to make the next 50 years of Forest Service management of the national forests more complete and comprehensive. They have recently submitted to the Congress a report which provides the needed measures to meet both current demands on the forests and the resource development needs to the year 2000. This report is now in the hands of the House Agiculture Committee. The gentleman from Alabama [Mr. GRANT], chairman of the subcommittee on forestry, has announced hearings on this forest program for May 14 and 15. It is a program that should have the full support of the Members from every State.

The second largest area of national forest land in the Nation is in my congressional district. These 13 million acres are exceeded only by the 15½ million acres of my colleague from the first district of Idaho, Mrs. PFOST. This vast storehouse of natural resources, water, timber, game, fish, forage, and recreation, is dedicated to the use of not only Montana's citizens but also to citizens everywhere in America.

The tourist industry is booming everywhere, people naturally go to the forests for recreation and respite from the tensions arising in crowded urban areas. Our forests in Montana attract thousands of these outdoor enthusiasts. We have beautiful scenery, fine streams, and good places to camp. However, we need additional sanitation and other campground facilities to relieve overcrowding in the presently developed areas in western Montana.

This "program for the national forests" now before the Congress includes the projects necessary to meet the recreational needs of an expected 130 million annual visitors by 1969. For example, it is estimated that 10,000 new camp and picnic areas should be constructed and maintained during the next 10 years. It will be necessary to maintain and expand 5,000 existing improved recreation areas. Also many of the existing areas need improved sanitation, cleanup, and public safety facilities to make them adequate to handle the some 70 million visitors now coming to the national forests.

The annual harvest of timber is expected to increase from 7 to 11 billion board feet of timber within the next 10 to 15 years under this program. Salvage and sale of stagnant timber stands will be increased, up-to-date timber inventories will be made and timber management plans will be completed for all the national forests. Last year the billion dollar mark in forest receipts was reached. Under this program for full development of the national forests, the

second billion dollars in forest income should be realized within the next 10 years. Not only the Federal Treasury, but also every county with national forest land benefits from the increased sale of timber and other forest resources. Twenty-five percent of the gross receipts is refunded to the counties within the forest for schools and roads. Local employment is benefitted in cutting and harvesting the timber crop. Local industries are kept active and the general economy of an area within or adjacent to the forests is enhanced.

Under this program the building or rebuilding of about 90,000 miles of forest development roads and 8,000 miles of trails is planned. Also 149,700 miles of existing roads will be maintained to full standards. In Montana's national forests such roads are necessary if the full cut of timber is to be harvested and if the forests are to be protected and managed in an effective and businesslike manner.

There are many other facets in this complete program for the national forests. It is an essential program which can return benefits many times over the projected costs. An important secondary benefit would be a 60 percent increase in the number of workers harvesting, processing and marketing the nation-forest timber crop and other forest products.

This will mean jobs for some 620,000 more people. Local trade channels alone could be enriched by nearly a billion dollars which the public would spend for hunting and fishing equipment, licenses, lodging, transportation, and other items furnished by communities in or near our forests.

Mr. Speaker, this is a program which will not only improve forest land and its resources but also provide substantial direct financial returns both locally and nationally. The intangible benefits also will be great.

This report would have been complete had it included tentative estimates of costs, schedules, and priorities for placing various phases of the plan into operation and estimates of total benefits as related to the cost of developing these benefits.

We, in the Montana congressional delegation, have had some experience with attempting to secure just such information. Last July, we asked our regional Forester to lay out a program to fully develop Montana's forest resources. Regional Forester Charles Tebbe did an excellent job, which has been printed as Senate Document No. 9, "Full Use and Development of Montana's Timber Resources." However, the Regional Forester did not furnish the cost estimates and priorities we requested, presumably because he was ordered not to.

On January 14, the senior Senator from Montana, Senator MURRAY, the junior Senator from Montana, Senator MANSFIELD, my colleague [Mr. ANDERSON] and I wrote the Secretary of Agriculture. We asked his cooperation in having Mr. Tebbe provide by April 1 the balance of the information we had requested. To date, we have heard nothing further from that request. If we can't get the costs and priorities for a long-range forest resource development program for a single State in 5 months' time, I wonder how long it will take the Congress to get some figures on a program for the whole Nation.

We must remember, too, that even long-range development programs, such as Mission 66 and Operation Outdoors, which were submitted with costs and priorities, are now way behind schedule because requested funds were insufficient to carry them forward at the well-publicized rate.

I hope that, during the hearings, the committee will be able to get some cost figures on this proposal, so the Congress can relate them to the benefits.

Old World Quality Retained in Famed St. Vincent Bread

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. DENT. Mr. Speaker, it gives me a great deal of personal pleasure to present to the House a short, but illuminating sketch on one of the real landmarks in my district.

Well over 100 years ago the Bavarian German Benedictine Fathers built St. Vincent's Archabbey at Latrobe, Pa.

In this beautiful setting, in the lush foothills of the Alleghenies, these intrepid Fathers built a lasting monument to service to Almighty God from nothing but willpower, self-sacrifice and the rich soil of Westmoreland County.

One of their first projects was a bakery shop. It is this bakery still in existence, and with the original equipment still in place, that I want to bring to the attention of the House today.

Mr. Speaker, I present the following account by Margie Carlin for insertion in the RECORD:

OLD WORLD QUALITY RETAINED IN FAMED ST. VINCENT BREAD—ORIGINAL EQUIPMENT THAT MISSIONARIES SHIPPED ACROSS MOUNTAINS IN 1854 STILL IS BEING USED AT BUSY MILL IN LATROBE

(By Margie Carlin)

Two massive stones, weighing more than a ton each, have been grinding flour at St. Vincent's Mill, Latrobe, for more than a century.

Most of it goes into the well-known St. Vincent bread, the same mealy, crusty, heavy Old World bread that fed the first monks to cross the Allegheny Mountains as missionaries more than 100 years ago.

The missionaries were German Benedictines and they built St. Vincent's Archabbey and College literally from scratch.

They had to be self-sustaining, so one of their first projects was a large mill, built from timbers cut from the surrounding forests.

All the machinery of the mill remains today as it was when it was built in 1854. There are sturdy wooden bins, huge millstones, massive beams and wheels. The only newcomers are the electric motors, installed 5 years ago.

Brother Joseph Weigl, who's in charge of the mill, has been at St. Vincent's 56 years. He was born in Bavaria 71 years ago and came to Latrobe in 1903.

He took over the operation of the mill 5 years ago and is immensely proud of the fine flour he produces. It is ground from wheat grown on the monastery farm. He says:

"Only the bran is removed. Our bread is the way bread was meant to be. Nothing is added or taken out. Our baker just mixes our flour with salt, water and yeast."

Most of this tasty bread is consumed by the priests, brothers, and students at the college.

Brother Joseph supplies the baker with about 11,000 pounds of flour a month and some 700 pounds of this is used for pies. About 100 loaves of bread are baked every day. Each loaf weighs about 8 pounds.

Almost every guest leaves with a loaf tucked under his arm. The bread used to be sent all over the country until the bookkeeping got to be too much of a problem.

The baker is Frank Zareczny, who has been making the bread for 46 years. He keeps the giant brick oven banked all year around.

When the one day's batch of bread is finished, he stokes the oven up to 800 degrees. By the fololwing morning, the heat stands at 350°, just right for the bread.

The loaves are laid on the bricks and baked for 70 minutes. The result is bread with a distinctive taste.

The college public relations head, the Reverend Edmund Cuneo, gives the bread a different flavor once in a while. Before he attends a wedding, he usually has a loaf baked with a rolling pin inside.

Besides the fine flour it produces, the mill is interesting from a historical point of view. Brother Joseph believes it's the only mill in Westmoreland County that still has the original wooden equipment and thinks it's one of few in the country still intact.

One of the interesting things Brother Joseph likes to show visitors is the old-time account books, which date back to 1861.

Written in precise German script, they tell the story of Civil War hardships, the bad and good years of the farms around St. Vincent's and grain prices over the years.

Long ago, the mill produced about seven sacks of flour a week. Now Brother Joseph mills about seven sacks in 1 day.

Quite a difference, but, happily, no difference in the bread.

I expect to bring some of this wonderful bread to Washington in order that it may be served in the House restaurant as a treat from my district.

Retirement Rules Unfair

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BOLAND. Mr. Speaker, Dr. Theodore G. Klumpp, one of the outstanding members of the medical profession in this country, addressed the American Medical Association's Council on Rural Health at the University of Massachusetts, Amherst, Mass., on April 23, on the very interesting and thought

provoking subject of "Compulsory Retirement."

THIRTY MILLION PERSONS OVER AGE 65 BY 1980 IS ANTICIPATED

This meeting was sponsored by the New England States Medical Societies and was attended by many prominent medical men. Dr. Klumpp pointed out that there are now 15 million persons over age 65 in this country, and by 1980 it is anticipated that this number will grow to approximately 30 million persons over 65 years of age.

ROLAND SAYS THESE FACTS POSE THOUGHT-PROVOKING QUESTIONS

These facts give rise to important questions. Will the American society of the future force all of these persons over 65 to retire? Will it mean years of idleness, loneliness, and a feeling of uselessness for these people? Can the talents of many of the elderly, just attaining their zenith at age 65, still be retained on a part-time basis? How will the American society, and yes, perhaps Congress, face up to this problem and try to close the gap between idleness and loneliness on the one side, and useful productivity, and recreation on the other hand, so that these aging citizens may enjoy the twilight years of their lives? These questions we must answer.

DR. KLUMPP HAS A BRILLIANT BACKGROUND IN MEDICINE

The subject is treated with candor and knowledge and Dr. Klumpp is to be commended for his address on the subject. He graduated from Harvard Medical School in 1928 and in his long and interesting career was assistant clinical professor at Yale University Medical School. He was chief of the Drug Division of the Food and Drug Administration in Washington from 1936 to 1941, and at present is president of Winthrop-Stearns, Inc., pharmaceutical company. Dr. Klumpp has been chairman of the Task Force on the Handicapped in the Office of Defense Mobilization. He has received many awards and is the author of many articles on therapeutics, foods, drugs, and illness.

Mr. Speaker, under leave to extend my remarks, I ask that the news story from the Springfield (Mass.) Daily News of April 23, 1959, relating to Dr. Klumpp's address at the University of Massachusetts, be printed with my remarks in the RECORD.

RETIREMENT RULES UNFAIR—DR. KLUMPP SAYS MORE CARE NEEDED IN DECISIONS

AMHERST.—A more realistic approach to compulsory retirement was called for today by a New York physician.

Dr. Theodore G. Klumpp pointed out that society has been illogical and inconsistent in its attitude toward compulsory retirement. "Whenever society adopts a rule that eliminates the fit with the unfit, destroys the good with the bad, or punishes the innocent with the wicked, it is not a good rule. Civilization progresses by changing rules of this kind," he said.

Dr. Klumpp addressed the afternoon session of the fourth annual New England Rural Health Conference at the University of Massachusetts. He is president of Winthrop Laboratories, a New York pharmaceutical company, and a member of the American Medical Association's Committee on Aging.

The doctor suggested that the same care exercised in selecting a person for employment should be used in retiring that individual. "Certainly a man isn't fit one day and unfit the next because one page of the calendar has turned." He pointed out that an entirely new set of social, economic, and political problems are being created as by-products of the technological advances of medical science.

The greatest threat within an absolute welfare state, according to Dr. Klumpp, revolves around the aging population trend. The population is increasing and at the same time people are living longer. He said, "Since the turn of the century, our population has doubled, but the number of persons over 65 has quadrupled. In 1900 among an average group of 1,000 persons you could count on 17 dying that year. Today, only nine out of that same number will depart from this world. There are currently 15 million persons over 65 years of age and by 1980 it is anticipated that we will have approximately twice that number of this country."

Dr. Klumpp emphasized that the problem of aging must be approached from the human side—the needs and wants of the older people as well as from the economic side of the problem. The real thing to sustain us in this life is the work we have been accustomed to doing for the past 40 to 50 years of our life.

The 1-day meeting was sponsored by the New England State medical societies and AMA's Council on Rural Health.

Panama Canal: Lifeline of U.S. Defense

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. THOMPSON of Texas. Mr. Speaker, under leave to extend my remarks, I include a review of the latest book on the Panama Canal, "The Untold Story of Panama," by Earl Harding, published on April 27, 1959 by the Athene Press of New York and distributed by the Bookmailer, also of that city. The review was by Dr. Ruth Alexander in her well-known column "Our America" on the Spotlight Page of the May 10, 1959, issue of the New York Mirror.

The review follows:

PANAMA CANAL: LIFELINE OF U.S. DEFENSE

(By Dr. Ruth Alexander)

With publication of his long-awaited book, "The Untold Story of Panama", Earl Harding has become the man of the hour.

He has been recognized as an authority on Panama since 1908, when, as a staff member of Joseph Pulitzer's Morning World, he was sent to investigate the 'Hidden Revolution' of 1903, which almost cost us the canal rights.

The timing of this book is portentous. It is the drama of living history. Roberto Arias, the leader of the recent anti-U.S. invasion, is descended from the clan that bred Thomas Arias, leader of the 1903 revolution against us.

President Theodore Roosevelt ranked our acquisition of canal rights in Panama and the building of the canal, not only as the greatest achievement of his administration, but of equal importance to the stature of the United States as the Louisiana Purchase of 1803.

Interference with our status in Panama by Nationalists, by Liberal—subversives in the United States or by Communists, is comparable to conceivable interference with our status by French Nationalists, our own Liberals subversives and Communists, in the territory encompassed by the Louisiana purchase.

The United States and the Republic of Panama were notably good neighbors, until the time bomb planted in 1946 by Alger Hiss, then Secretary General of the United Nations, branding the Canal Zone as occupied territory.

This has since served both Panamanian and North and South Americans of opportunist and subversive character with an authoritative weapon of agitation against us, designed to nationalize, or transwer control of the canal to the United Nations.

As Harding emphasizes, with punctilious documentation, the Panama Canal is a vital not only to hemispheric communication, but it is "the lifeline of our national defense and the backbone of our ocean borne commerce."

Its loss by either of the above methods, would mean our end as a world power.

Conservation, Not Conservatism

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. PORTER. Mr. Speaker, Senator HUBERT HUMPHREY'S forceful speech, "Conservation—America's Frontier," delivered in my hometown, Eugene, Oreg., on April 21, 1959, was warmly received. I want to make the text available as widely as possible, so, under a previous consent, I am including it following these remarks.

Mr. HUMPRREY has many friends in Oregon, as indeed he does in each of the 50 States of this Union. I have received many letters about his recent trip there. People are enthusiastic about him and many urge that he be the Democratic standard bearer in 1960.

Oregon has an early primary. This means that Presidential possibilities like HUBERT HUMPHREY have an opportunity to find out where they stand at the ballot box early in the year. It is my belief that Senator HUMPHREY'S recent trip to Oregon gave him many new and enthusiastic friends.

CONSERVATION: AMERICA'S FRONTIER

(Remarks of Senator HUBERT H. HUMPHREY at Democratic dinner meeting, Eugene, Oreg., April 21)

Anyone who travels over the great West, and sees the massive timber stands, the powerful rivers, the vast grazing lands, realizes that the West is the storehouse of America's great natural wealth.

Now, there is sometimes a tendency to believe that the West is the only part of the country that is deeply concerned about preserving and developing those resources.

Well, that might have been partly true a few years ago, when our conservation programs were moving steadily forward. Then many people were probably inclined to take these resources for granted.

But in the last few years, everyone in America has had an education on the value of their natural resources and, believe me,

the cost of tuition has been mighty high. For this administration has not only failed to develop our resources—it has launched a program of giving them away.

I don't need to recite the full record for you people here in Oregon, for this is home territory for the big giveaway—the Al Sarena land grab, for example, and the fiasco about the Klamath Indian Reservation.

I am sure you know about the granting of special oil leases on wildlife refuges to favorites of the Eisenhower administration, and the threat to the national forests by a small group seeking special privileges.

And there would have been more, had it not been for Democratic Senators and Congressmen, such as those from Oregon. They have sounded the alarm. They have focused a spotlight on the big giveaway.

Yes, the American people have been getting quite an education on the value of conserving natural resources. I suppose you might call it a liberal education.

But the evils of the past are not as important as the needs of the future.

Now when I talk about the resource needs of America I am not just thinking of the material resources—the food and fiber, the minerals and chemicals it takes to supply a growing population. I am thinking of other human needs that must also be met—nonmaterial needs.

I am thinking of the need for recreation, for example. America is abundantly supplied with bigger, better, and more powerful cars to take the family off on a vacation, but America is not so well off in places for them to go to enjoy themselves. Our national parks are overcrowded; many of our streams and rivers are polluted—hardly the ideal site for a family vacation.

America has a big job to do in assuring resources for the future.

Today there are 172 million people in the United States. By 1975, just about when today's babies will be getting out of school, the Census Bureau tells us there will be some 215 million people. By the year 2000, some say we will have 300 million people—but estimates run as high as 360 million—twice the population we now have.

To supply this exploding population will require twice the agricultural output, more than again as much water as we are now using, 50 percent more timber growth, and double the output of minerals.

How are we going to get these?

Well, one thing is certain. We are not going to achieve these goals unless we plan ahead. I don't need to tell you people here in Oregon that a tree doesn't grow in a year—either in Brooklyn or in Oregon—nor is a dam built or a grazing range revegetated in a matter of months.

In the field of resources, this country has been living on the heritage of two Roosevelts: Teddy Roosevelt, the first great conservationist President this country ever had, and another Roosevelt, who had the good sense and the imagination to put young men, as well as rivers, to work in rebuilding and conserving America's natural wealth. I mean, of course, the Democratic Roosevelt—Franklin Delano Roosevelt.

Harry Truman kept up the Roosevelt tradition. He knew the value of resource development. He too cared deeply for America's future.

But in the last 7 years, we have been coasting along, living on the past, ignoring the pressing needs of the future.

Other nations through history have followed a similar course, and they have paid dearly for it. The price they paid is written in the seared, overgrazed and deforested Middle East. Where once stood the magnificent Cedars of Lebanon, there is barren desert; and the ingenious irrigation works of ancient Babylon are silted up from the floods that swept the overgrazed watersheds of the Tigris and the Euphrates.

America today is not the Middle East; far from it. But the price of a do-nothing policy on resources is dear indeed.

What is the job to be done in protecting and building America's natural wealth?

One of the first jobs is to get an up-to-date accounting of just what resources America has. We are now a 49-State Union, and before the year is out there will be 50 States. I am told that two-thirds of the new State of Alaska has never even been subjected to an accurate geological survey. Who knows what wealth may lie in the unexplored areas of Alaska? Perhaps Hawaii has hidden natural treasures as well—I'm sure it has.

But there are pressing jobs to be done in developing the resources we have within our traditional borders.

For example, to meet the needs of our growing population, we will have to expand the output of our forests by 50 percent in the next 50 years. This means the reforestation of some 28 million acres of currently bare land.

It means timber stand improvement measures on 140 million acres of poorly stocked land.

It means an intensified effort to protect our forests against insects, disease, and fire.

These programs must begin soon, for a forest does not spring up overnight.

Next, our growing population demands urgent attention to the problem of water—that precious substance we so often take for granted. How are we to supply a growing nation with an adequate supply of water—clean, usable water? Today, there are thousands of miles of rivers and streams which are too polluted for municipal or recreational use without expensive treatment.

One of the urgent priorities for Government action is the construction of the water treatment plants needed to serve not only the domestic needs but the growing industrial needs of America.

As one step toward meeting this problem, I have joined with Congressman BLATNIK of my State in introducing legislation to rapidly expand our construction of pollution treatment facilities with Federal assistance to States, municipalities, and industries.

As could be expected, this Republican administration opposes that measure. It wants to pile the burden of pollution control onto the already overburdened States.

But rivers flow across State boundaries, and they affect all our people. The responsibility here is clearly a Federal one. Even the Old Guard Republicans ought to recognize that.

Now, instead of devoting its energies to opposing a sound antipollution program, this Republican administration ought to be throwing its full energies behind pressing forward at top sped toward a breakthrough in the desalting of sea water. For here lies the brightest hope, not only in America, but in water-starved countries the world over.

Fresh water cheaply available in the United States would bring prosperity to domestic areas that have too long suffered in drought.

Fresh water cheaply available in the Middle East, North Africa, and the arid parts of western South America, would bring a spectacular rise in the standard of living to some of the poorest areas of the world.

This is the kind of a struggle we should be seeking with the Russians—a struggle to see who can break through first in research programs for the desalting of sea water.

But instead of doing everything in our power to accomplish this, the Eisenhower administration is making this vital research program a repository of defeated politicians. Speaking for myself, I am not enchanted by the thought of the water problems of America running off a lame duck's back.

But water is not only a blessing; it can also be a curse when it sweeps uncontrolled over our plains and spills over the banks of our rivers.

Whether water be blessing or curse depends in large measure on what we do with our watersheds—whether we permit them to lie bare or whether we cover them to stop or control the flow of water.

Nearly 300 million acres of watershed land need terracing, stripcropping, grass cover, or other water-arresting measures.

This, too, is an urgent job for America, if we are to control our water, and prevent our best soil from being washed offi the lands and into the rivers.

On the rangelands, such as those here in eastern Oregon and throughout the intermountain area, overgrazing has taken its toll. Revegetation by newly developed methods of brush busting and reseeding to crested wheat grasses can greatly improve these lands and offers the hope of doubling the cattle-carrying capacity of much of this land.

Here again we have a choice: fertile, productive grazing lands, or intermittent dust bowls which permit much of our natural wealth to be scattered to the four winds.

There are other jobs to be done in the resource field: as productivity and leisure increase, so will the need for recretation areas. At the direction of a Democratic Congress, the Government has just begun a review of our outdoor recreation resources, but already some private estimates indicate a need for acquiring and devoting some 3 million additional acres to recreational needs.

These are some, but by no means all, of the jobs that need doing if our country is to protect and develop her natural wealth.

No doubt, those of us who advocate these programs, will be labeled spenders—that worst of GOP epithets.

But we are not spenders—but prudent investors—investors in the future of America—the soundest investment on any market.

It is the Republicans who are extravagant; they are wasters—they are the exploiters.

Every pound of our soil that is washed from our farms by flood that could be saved by watershed cover is a waste.

Every drop of water that flows in our rivers that could be harnessed to produce energy and power, but it is allowed to run free to the sea is a waste.

Every acre of timberland that is allowed to stand unimproved, every acre of grazing land that needs reseeding but lies bare, is a waste.

The Democrats who believe in conserving and building resources are not the spenders.

It's the Republicans who pursue a do-nothing policy and a giveaway policy on resources who are the real spenders—spenders of our national wealth.

The way this administration seems to size up things is this:

We can afford 4½ million people out of work, but we can't afford to do the things needed to build our country's future.

To me, this just doesn't make sense. If there is one thing we can't afford, it's to have people without jobs. That's the biggest waste I can think of—not just economic waste, but, more important, human waste.

One of the reasons I have recommended the establishment of a Youth Conservation Corps—patterned after the CCC of Franklin Roosevelt—is to put our young people to work conserving and building our resources. There is plenty of work to be done—some estimate that it would take 150,000 men working for 10 years to do the minimum conservation work that I have just described.

Isn't it tragic to allow this work to go undone while we permit millions of men to remain idle, unable to find work—an inexcusable waste of men and resources.

The Republicans have never understood the West.

They cannot understand the West, for the West is new; the West is frontier, while the

Republican Party is addicted to the past and the status quo.

The Republican Party cannot understand the West because it is a party based in the financial houses of the East.

It seeks to feed on the West, not to develop it.

What better proof of that could there be than the fact that since the Republicans took over in Washington 6 years ago, there has not been one single new start on a multi-purpose dam.

Harry Truman stood at Hungry Horse Dam in Montana when it was inaugurated in 1952 and said, "Take a good look at this—it's the last you'll see for a long time."

And he was right. It was the last dam we've seen—and the last we will see until the Democratic Party regains the White House.

And regain it we will.

In the long, hard cold war with the Communists, our resources could well become the decisive factor.

Make no mistake, this will be a long struggle. In part, it is a battle between men and systems of government and patterns of social order.

But it is also a contest of materials and resources.

The great Northwest, so rich in natural resources, represents the Nation's stockpile and its reserves in the waging of the cold war.

The judgment of posterity will depend on how we, today, care for and develop those precious resources.

Increasing the Foreign Demand for Farm Products

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 12, 1959

Mr. HART. Mr. President, Prof. Lawrence Witt, of the agricultural economics department of Michigan State University, read a most interesting paper at a meeting held at the Agricultural Adjustment Center, Iowa State College, April 6, 1959. The subject of Mr. Witt's remarks was "Increasing the Foreign Demand for Farm Products." It was such an informative document concerning one of our most pressing problems, that of how to turn our farm surpluses from a "cross that we must bear" into an effective instrument for world peace, that I ask unanimous consent that it be printed in the Appendix of the RECORD. It is my hope, as a cosponsor of the Food for Peace program which was introduced recently by the senior Senator from Minnesota [Mr. HUMPHREY], that the Committee on Foreign Relations will move in the very near future to hold hearings on this needed and most constructive project.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

INCREASING THE FOREIGN DEMAND FOR FARM PRODUCTS

(By Lawrence Witt, Michigan State University)

Surplus production has grown to some 8 percent of total agricultural production, and threatens to increase still more. While the surplus has been growing, we have turned in desperation from one device to another in an effort to match production and consumption at acceptable prices. After the efforts of the twenties in strengthening the competitive process of reaching an equilibrium had failed, more direct methods were used. Efforts were made to control supply, then to expand domestic demand, each with a variety of techniques. Even as these programs floundered, the war and postwar experience demonstrated that a strong export market (even though dependent on dollar gifts and loans), would strengthen agricultural prices and reduce stockpiles. Hence it was both logical and with a sense of frustration that a massive export program came into being in 1954.

This program puts substantial emphasis on sales for local currency, but also includes barter, loans and gift provisions. The export program combines two values close to hearts of most farmers (and many agricultural economists). These are that the farmer's product should be used usefully, not destroyed, and that there should be no hungry people in the world while there is surplus food available. The program is made more appealing by its buoyant influence upon farm prices and its success in reducing stockpiles below what they might have been. The ignorance of the foreign exchange mechanism, of the real worth of foreign currency to the United States (especially when deposited in the other country's central bank), and the nebulous link with economic development all help to confuse the issue. The impression is left that the large quantities of wheat, cotton, tobacco, etc., shipped abroad must somehow do some good.

As we discuss this topic, I should like to have you think of it in a broader context—as a part of a broad international challenge appropriate to agricultural economists and social scientists at Iowa State and other agricultural colleges and universities. Despite 5 years of a program costing the economy over $1 billion per year, there is no solid research dealing with this program. Is this because it is a foreign rather than a domestic program? Have we failed to see the full importance of this program to the national economy?

Moreover, with regard to the mass of world problems which involve farm people—tenure problems, development problems, instabilities of world commodity prices, and a variety of other agricultural and economic problems—agricultural economists have had little to say. A few have been drawn into action programs overseas; still they have not written much about the problems spread out before them and of which they are so much a part. Clearly we have been seriously ethnocentric in our United States—based research and other activities, leaving to others the formulation of the proper interrelations of domestic and foreign policy.

Furthermore, we tend to reject involvement in value formation—in partially specifying important values for society or at least strongly arguing for a set of values. No one should know better than we the amount of subsidy which has been involved in our education and training. Why should not our trained minds contribute more fully in posing and resolving the value conflicts of the society which has made these investments? To continue to ignore value issues, particularly in the international field where the vast majority of the people are unable to even articulate the relevant values, is morally irresponsible and a complete dereliction of duty—as well as physically suicidal. Look over the bulletins and articles of any experiment station and the articles in the Journal based upon real research. How much has been contributed to an understanding of the interrelations between foreign and domestic policy? Multiply this by 50 and the result is still unsatisfactory.

THE GENERAL SITUATION

All this is really an introduction to an apology for the inability to provide precise answers to the problem posed by the title. Almost the only reports that can be drawn upon are either a generalized policy statement based upon the values implicitly assumed in classical economics, or a description of what has been done in carrying out the congressional mandate. On the one hand, the tensions created by deviating from traditional trading patterns lead some economists and political scientists to a thorough damnation of the program. On the other hand, the easing of the surplus burden, and its consequent presumed effect on the price and income position of American farmers is lauded as a material accomplishment. My view is that the truth lies somewhere in between. I should like to make a tentative approach, largely by showing the complications of the program and possible differential impact.

First, what is the general export situation? During the past 4½ years we have shipped or contracted to ship about $7 billion worth of farm products under special programs. Current farm export levels are close to $4 billion per year. Some 30 to 40 percent of this total represents directly subsidized exports, with an additional amount, perhaps 20 to 30 percent being sold for dollars at special prices. The remainder are commercial exports for dollars. Most of the special exports have been under Public Law 480—The Agricultural Trade Development and Assistance Act—but additional quantities have gone under section 402 of the ICA program, under the International Wheat Agreement, special dollar loans, and under legally reduced prices of the CCC program. Not all of the Public Law 480 are sales for local currency; significant amounts have gone as grants and donations, or have been bartered for strategic materials. Wheat, cotton, and fats and oils (soybean oil), are major commodities. Tables 1 and 2 provide some total figures.

In the aggregate, aside from military equipment, this program has become the largest transfer of wealth between the United States and other countries since the Marshall plan—and the program is far from over. In fact its very place in your program suggests that it is being considered as a more or less permanent alternative to efforts to stuff more food down the throats of domestic consumers. Why do we have this program? What is it intended to accomplish? Two serious questions immediately arise. Who decides where, how much, and for how long such an export program is desirable? Secondly, suppose foreign countries were to say, "We want no more wheat, cotton, or soybeans, but we will accept great quantities of tobacco, feed grains, and dairy products under these special provisions." Would and should agriculture adjust its commodity mix to these needs, or are we so concerned with preserving traditional patterns, values, and institutions that such measures cannot be considered?

TABLE 1.—*Exports of U.S. farm products under Public Law 480 with comparisons*

[Millions of dollars]

Program	1956–57	1957–58	Total, 1954–58
Public Law 480:			
Foreign currency sales	902	650	2,065
Grants and donations	250	267	1,001
Barter	401	99	924
Other exports	3,171	2,984	11,371
Total exports	4,724	4,000	15,361

TABLE 2.—*Commodity composition of all Public Law 480 agreements signed through June 30, 1958*

[In millions of dollars]

Commodity	Export market value	Estimated CCC cost
Wheat and wheat flour (bushels)	1,028.0	1,732.1
Feed grains (bushels)	192.8	335.6
Rice (hundredweight)	181.8	288.8
Cotton (bales)	509.9	681.4
Cotton linters (bales)	.3	.3
Meat products (pounds)	39.2	39.2
Tobacco (pounds)	142.3	142.3
Dairy products (pounds)	43.8	74.2
Fats and oils (pounds)	384.7	391.0
Poultry (pounds)	1.7	1.7
Dry edible beans (hundredweight)	.4	.4
Fruits and vegetables (pounds)	15.2	15.2
Seeds (hundredweight)	.4	.4
Total	2,540.5	3,702.6
Ocean transportation	301.8	301.8
Total, including ocean transportation	2,842.3	4,004.4

GOALS OF THE PROGRAM

It is necessary to inquire more specifically into the goals of the program, and the extent to which they have been accomplished. To do either of these is far from a simple task. Values are not given; they must be untangled, related, reviewed and compromised. Moreover, this must be done not only relative to U.S. values, but also interrelated with the values of each of the other countries affected. It is accurate and all too easy to say "We know not what we do". We do not have a clear statement of the national purposes of the program, less so than when it began. Certainly we do not know the impacts upon other countries, except in a superficial and fragmentary fashion. Perhaps it will be mutually beneficial to think together this afternoon about these programs. Take first the U.S. objectives.

The early and clear objective is the disposal of supplies of farm products overseas—supplies which have accumulated or are likely to accumulate at prevailing prices and production levels. To some this is the sole objective of the program, and all other considerations are incidental. It appears, however, that a somewhat contrary view should be held and that several other objectives are becoming more significant.

Time and again the values of the American society have shone forth clearly in an organized effort of giving—the relief program under Herbert Hoover after the First World War, help for the Japanese earthquake victims, UNRRA, the Marshall plan, UNICEF, the CARE packages and similar programs. The legislation for Public Law 480 (and sec. 402 of ICA) clearly provides that food may be given under emergency conditions, without waiting for special legislation (as was necessary earlier in providing a gift of wheat to India). Beyond this there is an element of humanitarianism in the sale of local currency which justifies such special export programs as an effort to match "underfed people" with excess supplies. If there had been no Public Law 480 program, there still would have been donations, possibly more than in this category now.

A third objective has come into greater prominence as the program began to operate. It is partly implied by the title "Trade Development and Assistance Act," and is more than a rationalization. This is the desire to use the surplus farm products as an instrument of economic development. As efforts to develop new large markets for farm products got underway, it was logical to look carefully at the low income, high population areas of the world. In today's international arena, development is a key symbol for these areas; hence the USDA must be concerned with development. Moreover, the competition and politico-economic relations with other exporting areas are such that the program is more defensible if many of the products are channeled into new, noncommercial markets.

There are a number of other possible accomplishments which appear to be congruous with the American value system. These will become clearer by looking at individual programs. Among these goals are political stability, greater internal competition, and support of anticommunist efforts through strengthening the military forces.

THE INDIVIDUAL PROGRAMS

In turning now to individual countries, it should be stressed that these suggestions are little more than tentative hypotheses—hypotheses which suggest the complexity of the effects and the necessity for more careful studies of the program impacts.

Pakistan: The program in Pakistan comes close to being built in as an integral part of the nation's resources. A number of observers question whether it would be possible to stop the program. (About $186 million at market value was shippepd or programed through June 1958.) The rupee cost of the imported wheat is higher than the price paid local producers. Since the price charged to consumers is intermediate, losses on imported wheat are offset by Government profits on locally produced wheat. Internal farm prices, however, are being increased slowly.

Internally it appears that the Government has been more influenced by the political pressures of the refugees, migrants, and squatters in the principal cities than by the agricultural groups. Thus, an adequate supply of low cost food becomes an important element in lessening political instability, while the Nation tries to stimulate local production and marketings by nonprice means. A major share of the rupees accumulated has been allocated to the support of the Pakistani military buildup as a member of the Baghdad Pact. Some of this military effort does have economic development significance, both in the training of soldiers to handle machines, and in the improvement of communication. The quantitative importance of this aspect of the program is not clear.

Japan: In the case of Japan it appears that the Ministry of Agriculture is a major local supporter of Public Law 480 agreements. (Some $150 million of commodities are involved.) Most of the accumulated yen are used for agricultural development, or for U.S. Government expenditures which save dollars (such as housing for military dependents). The Ministry of Agriculture appears to be able to induce the Ministry of Finance to permit the use of some of these funds outside the regular Government budget. In this way irrigation and drainage programs are implemented which were planned for a later date. Thus, despite a decrease in dollar earnings, the program has contributed to development, and to an earlier reduction in food imports. On the other hand, there appears to be a change in dietary patterns from sweet potatoes to rice, and from rice to wheat, which has the reverse effect. Much of this is due to the rising levels of living within Japan, and not solely to the availability of Public Law 480 commodities—which really do not bulk large in the total Japanese trade.

The Philippines: For the Philippines (with a small program involving some $15 million) it is necessary to enter into more speculation. General monetary and exchange problems make it clear that a limited amount of exchange would have been allocated to cotton. Many observers suggest that only a few textile manufacturers would have received allocations for the importation of cotton. Consequently the majority would have been squeezed out of the textile industry, with substantial profits possible for the successful applicants. With Public Law 480 cotton entering the country, there was cotton for everyone, enabling the industry to remain competitive. Hence, those textile manufacturers less close to the Government become internal supporters of the program.

Indonesia: In this country, the local currency (from a $100 million program) has been accumulated. However, in an effort to control inflation, the Indonesian Government has directed that almost none of the funds be spent. Thus, it becomes necessary to look at the general monetary and fiscal program and identify the marginal reductions in expenditures had special import programs not been available—admittedly a difficult problem. The foreign exchange crisis and/or the local food problem probably would have been more severe. More should be said, but I am unable to do so.

India: The largest single program is in India (attaining $425 million of farm products). It appears that the imports went largely to feed the major port cities of Bombay, Madras, and Calcutta. Shipments from the interior to these areas were blocked to avoid cross shipments, but probably also with some impacts on the internal price structure. It appears that prices are lower than they would have been with no program—however, a series of donations is probably the real alternative. It appears that the large income elasticity for food and semisubsistence level of production may have held greater food supplies in the villages in recent years—thus contributing to urban shortages. Both price policies and the distribution of income between sectors appear to have been affected in consequence.

Under the agreements, a major part of the rupee balances were allotted to economic development. These funds were deposited in the central bank. There is reason to believe that the Indian Government, with sophistication issued other currency to support its development program. It avoided the use of Public Law 480 currency accounts, and in this way was able to support local programs without having to clear programs with U.S. officials. Again the identification of this extra program is an exceedingly difficult task.

Brazil: Wheat is a major part of the program in Brazil ($180 million of agricultural products are involved). Part of the U.S. supplies replaced wheat normally purchased from Argentina, but not available because of production and price policies there. While the funds presumably were used for economic development, there are indications that the first agreement was an exceedingly loose document. Brazilian authorities appear to have had great discretion in the use of the funds, and have added substantial fuel to the already roaring inflationary fire. In effect they spent the local currency twice.

Canada: Finally we turn to Canada, where many people feel that the U.S. program has cut in on Canada's wheat export prospects. Mr. C. D. Howe, Minister of Trade and Commerce in 1955 stated:

"I think there is no doubt that by their (United States) disposal policies they have displaced our products in certain markets. What we can do about it, I do not know. The policies of the United States are their policies and are not ours. We follow our own policies. As I say, we protest where we think a protest is warranted, and we have protested in connection with certain recent transactions."

In a recent document published jointly by the National Planning Association and

the Private Planning Association of Canada, the statement is made.[1]

"Canadian protests have gone much further than simply criticizing the disposal of surplus wheat. They also have been concerned with the particular methods of disposal—for example, the barter program which has been used to tie the disposal of wheat to the acquisition of minerals for U.S. stockpiles."

One newspaper article reported: "The cards are stacked against us in our economic poker game with the United States. It now has become clear that the only reason we may be able to sell more wheat in the world market is because we will soon be selling a lot less lead and zinc. This tie-up between lead and zinc and wheat is an intriguing one and the strings attached to it all lead back to Washington—Washington has been stockpiling lead and zinc, taking a lot of the minerals in exchange for surplus wheat. * * * This buoyed up the world market and kept prices relatively stable. With United States suddenly cutting off this heavy buying for the stockpiles, the bottom fell out of the market."

One Canadian official commented this week: "We haven't had a chance in this thing. The only reason we were able to sell our lead and zinc was because we couldn't sell our wheat. Now, the only reason we may be able to sell more wheat is because we can't sell our lead and zinc."

At the GATT meeting on November 21, 1957, the Canadian view included the following statement:

"The Canadian delegate pointed out that his delegation did not object to genuine United States' aid programs and the extension of help to needy countries; indeed, within the limits of its capabilities Canada had also extended aid of this kind. Further, in more general terms his delegation had no objection to U.S. disposal programs which had the effect of increasing consumption of the commodity in question by the amount of the disposal. The main objection was that, by a variety of techniques such as export subsidization, sales for local currencies, barter deals and tied-sales, the United States was promoting exports of wheat and flour with such determination and in such volume that it caused great damage to Canada's normal commercial marketing of these products. This was evidenced in export statistics from the United States and Canada in 1955–56 and 1956–57; while U.S. exports rose from 347 to 547 million bushels, in the same period Canada's exports fell from 309 to 261 million bushels."[2]

The Canadians themselves by these figures say that total North American wheat exports have expanded by some 150 million bushels. However, an additional 50 million of exports are a non-Pareto transfer of Canadian exports to American exports. Their objections center on the barter phase of the program.

PUTTING MORE EMPHASIS ON DEVELOPMENT

A little over 20 years ago Fred Waugh led a seminar on this campus in which he outlined the basic idea of the "stamp plan." One of the questions on which he was probed repeatedly was, "Why not preserve consumer sovereignty by giving the low-income families cash and letting them buy food directly?" The answer was along this line. "You cannot get many dollars for such a program from Congress. However, you can do a lot to bring about a better income distribution, if you tie it to an agricultural surplus program. This blending of values makes it more acceptable politically."

There is an analogy with the special export programs even in the discussions in 1954 as the original act was passed. Congress will appropriate a certain amount of dollars and authorize loan funds which contribute directly to economic development. It appears to be willing, at least in the short run, to appropriate additional money to a program which blends two objectives or values—namely, surplus disposal and aid to poorly fed people.

Certainly in these programs Congress is limiting the area of decision available to other countries, in the same way as the stamp plan limited consumer decisions.

In its present form it is clear that the Public Law 480 has no chance of being hailed as another monument in the tradition of lend-lease and the Marshall plan. It is necessary to search for new dynamic and thrilling ideas appropriate to the leadership role the United Sattes should be playing. Just as reconstruction was the major goal in Europe after the war, so economic development is the major goal in the countries receiving much of the surplus food. An appealing and dynamic program could be developed if economic development were blended in as a major goal—rather than as something to be edged into sideways. Famine relief would then be a subsidiary but legitimate part of a program which focused on the twin goals of economic development and surplus disposal. What would such a program look like?

1. It would be a long time program which would make food and fiber available to countries with development programs requiring such supplies. This would permit a country to restructure its economy without the necessity to look at its domestic food supplies crop year by crop year. Once the United States had committed itself to a 5- or 10-year program of agricultural exports, these amounts would become full-fledged claimants to our production in the same way as the domestic consumer.

2. Realistic longtime-development programs in other countries would be needed which contemplated training, investment, population transfers, public and private facilities, etc., as necessary parts of the program. Some countries will need help in formulating such a program. Imported farm products could offset some of the short-term production declines that would follow in some countries, or offset inflationary pressures as people in other countries increased food consumption. Training programs for farm people probably would involve increased consumption by those participating, and some decrease in production on the farms they left.

3. Dollar loans and grants would be needed in association with farm products. It appears that in many of the countries the range of likely projects would require that 40 to 60 percent of the extra needs be in food and fiber, but some nonfarm commodities would be required. (Roadbuilding with a low state of the arts would depend heavily on food and fiber.)

4. A number of projects, particularly strategic in economic development, might not be given proper cognizance unless the United States was willing to provide additional farm products and dollar supplies contingent upon the inclusion of such programs.

5. The United States would by itself or with other nations absorb the risk of flood or drought disaster, through world or U.S. reserves earmarked for this purpose.

6. Presumably as individual countries define their programs and compare local needs with local production, the gaps will add up to a total combination of commodities which is different from the commodity mix now in surplus. Adjustments will be needed in U.S. domestic policies to induce the requisite flow of production. Exports might decline somewhat, particularly while the development programs were being formulated.

7. It will be desirable to induce other developed countries to participate in the program—in an international transfer of resources—so as to utilize the wheat surplus of Canada, the coffee surplus of Brazil and Latin America, and the industrial talents of Western Europe in this effort. The degree of multilateral effort certainly should be increased.

8. Considerable study is needed as to the amount and type of investment, both physical and human, that is needed to enable a particular economy to take off on a self-sustaining cycle of economic growth. Every effort should be made to insure that this level of effort is attained and maintained. Agricultural export programs should be fully integrated with development programs. To do so in our "sectorist" government is difficult. Interested, sympathetic, and competent nongovernment efforts are clearly needed.

FINAL STATEMENT

There are a number of positive elements in the present program. Additional ones could be incorporated into the operations. Unfortunately, many of the positive elements are slipping away because the program is viewed as temporary. Others slip away because we are not giving sufficient attention to the requisites of sustained economic growth, and as economists we do not know enough about how to engineer development. Much of the difficulty derives from the emphasis on U.S. derived values, and insufficient attention to how our values and those of other countries might be blended and compromised so as to attain a larger value satisfaction.

With this, I turn once more to the role which agricultural economists should play. With their training in economics, their knowledge of agriculture, and their familiarity with quantitative methods, agricultural economists have much to contribute to an understanding of economic growth. In the domestic scene we find ourselves concerned with aggregate responses—supply curves, market adjustments, national control programs, etc. Yet, we hesitate to move one step further and inquire into similar relationships overseas. Some of the puzzling relationships might be clarified if we had the benefit of the perspective of another economy.

Secondly, we should stress the importance of value formulation as a vital contribution of our work. We cannot expect the general population to urge upon Congress the importance and validity of certain values which Americans have respecting other peoples, unless we, ourselves, as professional social scientists give a part of our effort to the study of values in the interrelationships of foreign and domestic policy. If you believe, as I do, that the lack of a positive program is a major criticism of America's world position, then the creation and advocating of such a program is fundamental. Against the alternative of thermonuclear war, or even the threat of it, any economic development effort is small change. Surely when the history of the 1960's is written (assuming there is someone to write it), it should not be said that the trained minds stood aside when these human values should have been discussed.

Failure of the Mandatory Farm Price Support and Production Control Program

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. KEATING. Mr. President, I have said many times that our present agricultural mandatory price support program is a failure. Moreover, it is the most expensive failure in our history. During the next fiscal year alone, the American people will be charged more than $1 billion just for storage, transportation, and interest on Government-held surpluses resulting from price support programs. Total expenditures of the Federal Government for programs primarily for the support of farm prices and farm incomes constitute the largest non-defense-related item in the Federal budget.

Mr. Don Paarlberg, now special assistant to the President and former Assistant Secretary, of Agriculture, in a recent address in Ithaca, N.Y., documented the case for new legislation to allow greater flexibility in Federal farm programs and to provide greater freedom for our farmers.

His message contains a timely warning against further temporizing on this issue. The public is becoming increasingly alarmed at the huge cost of these programs to both consumers and taxpayers. The farmers are becoming increasingly restive under the leash of more and more Government control with less and less hope of permanent improvement in their situation.

I know that Mr. Paarlberg's important address on this subject will be of interest to many Members, and I ask unanimous consent that the text of his remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE DON PAARLBERG ON THE OCCASION OF A BANQUET SPONSORED BY THE NEW YORK STATE COLLEGE OF AGRICULTURE, THE GRADUATE SCHOOL OF BUSINESS AND PUBLIC ADMINISTRATION, AND THE NATIONAL ASSOCIATION OF FOOD CHAINS, ITHACA, N.Y., APRIL 29, 1959

In this speech I intend to make three points:

1. The mandatory farm price support and production control program is a demonstrated failure.

2. This failure is to be attributed primarily to outmoded legislation, not administrative shortcomings.

3. The remedy lies in corrective legislation along lines recommended by President Eisenhower and Secretary Benson.

I

The failure of the mandatory farm price support program, after 25 years of trial, is now clear to anyone who is willing to examine the record.

I am not speaking of price supports at moderate levels such as are in use for soybeans and some other crops. Nor am I speaking of marketing agreements and orders as for milk and certain specialty crops. Nor am I referring to the purchase of surplus crops and their diversion to the school-lunch program and to needy persons. Properly administered, all of these have proved helpful. Certainly I am not speaking of the worthwhile programs related to research, education, credit, and the conservation of our soil, water, and timber resources.

What I am speaking of is the mandatory system which requires price support for a few favored commodities at artificially high prices, and couples that support with a half-hearted and ineffective production control effort. This is the system which has failed. The failure has perhaps been most clear with respect to wheat, cotton, and corn, and less so with respect to other crops.

This program came into being during the disastrous days of the great depression, when drastic action was called for. The error lies in that a depression-oriented program was carried forward with relatively few changes first into a time of war, then into a time of postwar prosperity, and now into a time of technological revolution.

To charge the program with failure is a serious matter. I shall cite evidence in support of this judgment.

1. Farmers who grow the regulated crops have lost markets.

Cotton has been the subject of more solicitude in the way of price support and acreage control than practically any other crop. What has been the result?

During the 5 years, 1925–29, before the program began, the United States produced 56 percent of the world's cotton. During the last 5 years, this percentage fell to 31. From 1925–29 to 1954–58, production in the United States fell 16 percent. In the countries outside the United States production more than doubled. Instead of exporting cotton we exported the right and the opportunity to produce it. And we gave encouragement to handmade fibers at home and abroad.

Wheat is another crop which has been the subject of much regulation and support. During this same span of years, the United States share of world wheat production fell while surplus stocks accumulated.

Formerly the largest tobacco market in the world was at Wilson, N.C. Today it is in Northern Rhodesia, in Africa.

It is easy to demonstrate that for a given year, other things equal, a short crop of cotton or of wheat will bring a higher income than a large crop. This is the basic idea underlying production control. The important fact, however, and the fact often overlooked, is that other things do not remain equal. Other suppliers come forward and substitutes are offered. Thus, while we pursue our short-run self-interest, in the long run we do ourselves grave injury.

While supported and controlled crops have steadily lost markets and fallen behind as income earners, that segment of agriculture which has avoided control has continued to expand and win new markets.

Livestock production is not controlled. Livestock producers not only were able to find markets for the natural growth of their industry, but managed as well to market the production from the acres taken out of wheat and cotton. From 1925–29 to 1954–58, per capita consumption of beef, pork, and poultry combined rose 25 percent.

During a quarter century of support and control, the share of our farm income earned by cotton fell from 12 to 7 percent. Meantime, the share of farm income earned by uncontrolled hogs, cattle, poultry, and eggs increased from 34 to 39 percent.

2. Most of the dollars are spent in supporting the production of a few large producers of a few crops.

The favored basic crops have been singled out from some 250 farm commodities for special treatment. Though these six crops bring in only a little over 20 percent of farm income, they account for 85 percent of the Federal inventory of price-supported commodities.

Contrary to popular opinion, most of agriculture is free of controls and most farm products are sold in competitive, unsupported markets.

Also contrary to popular opinion, the price-support program affects primarily the large rather than the small farmers.

Nearly a million and a half farms produce wheat. Ninety percent of the expenditures for price support on wheat result from productions on about half of these farms—the largest ones.

Nearly a million farms produce cotton. Seventy-five percent of the expenditures for cotton price support result from production on about one-fourth of these farms—the largest ones.

For wheat, cotton, and rice producers who have allotments of 100 acres or more, the net budgetary expenditures per farm for the present fiscal year are approximately as follows:

	Per farm
Wheat	$7,000
Cotton	10,000
Rice	10,000

A frequently quoted rationale for the price-support and acreage-control program is that it is needed to make operations profitable for the small producers. But the large producers get many more Government dollars than the small producers, giving them an added competitive advantage.

3. Surplus stocks continue to grow.

Mandatory price supports are at a level which stimulates production and chokes off markets. The control program fails to check the rising surplus.

Despite acreage allotments, despite a soil bank program, and despite massive surplus disposal, Government investment in surplus farm commodities is at a record level, approximately $9 billion, and is still growing.

Just to store this vast hoard costs more than a billion dollars a year.

We already hold such huge stocks of wheat that if not one bushel of the oncoming crop were harvested, we would still have more than enough for domestic use, export sales, foreign donation and needed carryover for an entire year. And, the oncoming crop is estimated at 1,220 million bushels, the fifth largest in history.

4. The program is excessively costly.

During the present fiscal year, the net budgetary outlay for programs for the stabilization of farm prices and farm incomes will be $5.4 billion. Not all of this goes to farmers, of course. Part of it goes to commercial warehouses for storage. There are charges for interest and administration, which do not go to farmers. Some unpredictable part of this outlay will be recovered through disposal operations. But, the net realized cost is certain to be large.

Not a bushel of wheat and not a bale of cotton is presently exported from the United States without a substantial subsidy.

Budgetary expenditures of the Federal Government for programs primarily for the support of farm prices and farm incomes now are the largest non-defense-related item in the Federal budget. They run well in excess of $1,000 per farm. Net farm income in 1958 was $13.1 billion. The net budgetary outlay for the support of farm prices and farm incomes, $5.4 billion, is thus equal to 40 percent of net farm income.

As has been said, not all of this money goes to farmers. Insofar as disposal operations serve foreign policy and relief needs, costs arising therefrom should not be attributed to the price-support program.

But even after making appropriate revisions of the budgetary figure, whatever they may be, the outlay attributable to the support program directly is very great. These heavy costs might be justifiable if they were temporary, if they were solving the problems of our farm people, and if they were leading to a better balance of supplies and markets. But, unfortunately, this is not true.

II

As I said at the outset, the farm price-support and production-control program may now be judged to have been a failure.

Whose failure is this?

The question is asked not in a effort to fix the blame but in order to learn where we may look for a solution.

It is not a failure of our farm people. They are stalwart, self-reliant, and resourceful. They have done an outstanding job of producing efficiently. From the standpoint of technology they have advanced more rapidly in recent years than any other major sector of the economy. They have in fact responded to the price incentive as farm people—and other people—traditionally have.

Certainly the failure cannot be laid at the door of those farmers, a majority of the total, who earn their income from unsupported livestock, poultry, fruits and vegetables, who have steadily fought all efforts to support the prices of their commodities.

The American Farm Bureau Federation, largest by far of all farm organizations, has worked long and hard to get the Congress to relax its legislative grip on farm prices and farm production.

The failure of the farm program is not a failure of the farm people.

Nor is it a failure of Secretary Benson.

The program now in effect is not the program recommended by Secretary Benson. It is a program first enacted a quarter of a century ago, only slightly modified since that time.

In 1954 Secretary Benson asked Congress for legislative changes, and was given part of what he asked.

In 1956 the Secretary asked the Congress for the authority to make further adjustments in the level of price supports. This authority was denied. He asked that the Congress consider placing a dollar limitation on the amount of price support to any one producer. This was not done.

In 1957 the Secretary asked Congress for authority to eliminate the preferred treatment accorded to the so-called basic crops. This was not provided.

In 1958 the Secretary asked for authority to scrap the legal formula which set the stage for increased levels of price support. He was given a part of what he asked—and several harmful provisions which he did not request—for corn, cotton, and rice. Nothing important was done with respect to the other crops.

In 1959 the Secretary tried a new approach. He suggested alternative solutions. Three months have elapsed and the Congress has not even considered these alternatives.

The President has sent to the Congress four special messages on agriculture, all pointing to the necessity of reducing the price incentives which lead to the production of crops for which there is no market.

This long series of recommendations was not based on some whimsical notion of the President or the Secretary. It was based on the widest review of farm policy ever undertaken in this country. It was based on the findings of many competent research and advisory groups, among them the National Agricultural Advisory Commission, a bipartisan group of 18 men, the majority of whom are farmers.

Meantime, the Congress has given the Secretary many things for which he did not ask, legislation aggravating the problem rather than working toward a solution.

Acreage allotments have been increased, raising surplus stocks even higher.

New crops have been added to the list which must be supported.

The production-stimulating payments provided by the agricultural conservation program have consistently been forced upon the Secretary in excessive amounts.

The Secretary has been forthright in pointing out what needs to be done. He has waged an educational campaign that may yet succeed.

The Secretary has thus dealt courageously with a problem not of his making. Though dedicated to economy in Government, he has had to witness a doubling and a redoubling of the cost of programs he could not change but had to administer. Though a believer in the capability of farmers to make their own decisions, he has had to impose burdensome Government controls.

The failure of the mandatory price-support and production-control program is not a failure of the farm people or of Secretary Benson; it is primarily a failure of the Congress.

In making this flat statement, I want to acknowledge the good record of the Congress as regards price-support legislation for most farm products, the commendable action with regard to surplus disposal, and the many excellent continuing services provided for our farm people. I want to acknowledge the directionally correct but insufficient steps taken by the Congress in years past to reduce price-support levels. The onrush of farm technology has been so rapid as to swallow up the effect of these modest downward adjustments.

The truth is that the pace of the scientific revolution in agriculture has been more rapid than either the executive or the legislative branch anticipated. Both should feel regret for having underestimated the bounty of nature and the sharp advance in technology.

The chief failure of which I speak is the present inactivity in Congress in the face of irrefutable and widespread evidence that the mandatory support program has been weighed in the balance and found wanting.

Those Members of the Congress who make the strategy decisions apparently have decided that any real solution to the price-support problem will be most difficult, quite lacking in political dividends. Rather than face up to this problem, they foster the illusion that the failure of the farm program is attributable to Secretary Benson. They count on the difficulty which the public has in distinguishing between legislative and administrative responsibility. They hope to turn public dissatisfaction regarding the farm program toward Secretary Benson, who must administer it, rather than toward the Congress which authored it.

The farm program now being offered by the Congress is a one-point program: "Belabor Benson."

Secretary Benson has taken an oath to administer the laws enacted by the Congress, and this he is doing to the best of his very considerable ability. That certain of these laws are a failure is no fault of his. But, if he can be made the scapegoat, this has, in the eyes of some, the twin merit of safety explaining the failure and postponing the difficulties involved in its solution.

Meantime, while the Congress delays, surpluses mount, costs rise, markets disappear, and dislocations increase.

Agriculture's public relations deteriorate as costs and surpluses rise. The good will of the public, one of the most important assets which our farm people enjoy, is steadily being drawn down. As the farm population becomes a smaller percentage of the total, the need for good public relations steadily increases.

III

What is the solution?

The solution is to be found in legislative changes which provide, for the commodities receiving mandatory price support, treatment similar to that provided for all other farm products, most of which are in reasonably good economic position.

The solution is to be found in returning to our farm people a larger role in deciding what they shall plant and how they shall market their crops.

The solution lies in programs which build markets, not destroy them, which channel farm products into use, not into storage. A warehouse is not a market and a storage bin is not a customer.

On the basis of the record, strict production controls are not the answer. The evidence of 25 years is that the Congress will not enact, the Secretary cannot administer, and the farm people will not accept the kind of production controls needed to balance supply and demand at the price objectives specified in present law.

If farm products are to be abundant, they cannot be priced as if they were scarce.

It would be well to deal with this problem legislatively now. It would be well to make now the reasoned and gradual changes which are the product of rational thinking, rather than to wait and invite the abrupt and painful dislocations which could come when and if the public patience is finally exhausted.

Back in 1950, the public suddenly lost its patience with potato price support and Congress outlawed the entire program. Potato producers, who are relatively few in number, went through a difficult readjustment. To subject millions of wheat and corn and cotton growers to this abrupt kind of adjustment would be a grave matter indeed. It would be better not to test the public patience to the breaking point.

The President outlined a course of action and called attention to the urgency of this matter in a special message 3 months ago. The Secretary of Agriculture followed up with various alternative recommendations within the framework of the President's statement.

The solution need not be precisely the one the administration has recommended. But it must acknowledge the fact that we should no longer, through incentive prices, encourage the production of crops for which there is no market.

If nothing is done, we shall soon be committed for another crop year to the program which causes so much difficulty.

This is a wealthy country. If we were not, changes would have been forced long ago in the farm price support program.

But even a wealthy country cannot continue to waste its substance in the endless accumulation of surplus stocks, particularly when it needs its resources in a struggle for economic leadership with the countries of the Soviet bloc.

Some people have come to say that there is no solution for the farm price-support problem. A better statement would be that there is no easy solution. A 25-year hunt for an easy solution has produced only new disappointments.

Even if needful changes are made now, surplus stocks would continue and costs would remain very high for a long time. Commodities which have been sheltered for 25 years cannot quickly be returned to the rough-and-tumble of the marketplace. Our farmers cannot quickly crawl out from under a nine-billion-dollar stockpile. The return to a more orderly program must be a gradual process. We have started in that direction. The movement must not stall.

Correction of our price-support legislation is retarded by folklore and fairy tales. One of these is the idea that the administration

wants to do away with price supports. There is no intention to take away from farmers the right to legislation which protects them from the excesses of unfettered competition. These rights have been fought for and won, and I applaud the victory. The thing I am saying is that these hard-won rights should not be squandered in the continuation of a self-defeating program.

Another block to constructive action is the erroneous idea that as prices fall farmers will increase production in order to maintain income. This notion is refuted by all objective research. It is refuted by the Congress itself, which as recently as 1958 extended the Wool Act, based on the correct principle that production increases result from high prices, not low prices.

Still another obstacle is the attempted justification of the present program on the basis that other groups are subsidized and other groups have price protection. The question is not whether farmers, like other groups, have a right to helpful legislation; they do. The question is whether the legislation in question is truly helpful. On the basis of the record the answer must be "no."

The time will come when the penalties for temporizing further with this grave problem will be greater than the problems involved in dealing with it directly. And that time may be sooner than some people think.

Address by Dr. You Chan Yang, Korean Ambassador to the United States at Marymount College, Arlington, Va.

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. ROBERTSON. Mr. President, Dr. Joseph F. Thorning, associate editor of the publication, World Affairs, who has on several occasions delivered the opening prayer at sessions of the Senate and who is a member of the faculty of Marymount College, Arlington, Va., has brought to my attention an address delivered before faculty and students of the college on May 5 by Dr. You Chan Yang, Korean Ambassador to the United States.

In this address, Dr. Yang suggested that while the Geneva Conference is focusing attention on the question of German unification, we should not forget the reunification of Korea, which is being blocked by failure of Communist China to carry out her promises.

Dr. Yang's conclusion that firmness is the only thing the Communists understand is one with which I agree, and I ask unanimous consent that his timely reminder may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS GIVEN BY DR. YOU CHAN YANG, KOREAN AMBASSADOR TO THE UNITED STATES, BEFORE THE FACULTY AND STUDENTS OF MARYMOUNT COLLEGE IN ARLINGTON, VA., MAY 5, 1959

Mother Eymard, members of the faculty, distinguished guests, and young ladies, only a blind and foolish man would not welcome the opportunity to address such a charming and attractive assembly of feminine scholars. Only an unperceptive man would fail to recognize the challenge implicit in your invitation to speak to you during these critical times. Only an unwise man would neglect to address himself to the great world problem of the great struggle now going on between the Communist and free worlds.

Thus, for many reasons, I am more than delighted to have the opportunity to speak to you in all frankness and candor about current international developments. As the world awaits the forthcoming summit talks, momentous decisions must be, and shall be, made during the next several months. Speaking for the Republic of Korea, I wish to tell you officially that we are most apprehensive that those talks will be used by the Communists as a propaganda springboard.

Frankly speaking, I know full well the kind of slander and sneers which will be leveled at the Republic of Korea. There will be, of course, as in the past, the same old tired arguments from the Soviet bloc. The free world shall consider their source and ignore them. But the insidious and unfathomable opposition could also develop within the so-called neutral bloc. The confused leaders of this bloc, in seeming impartiality and asserted dedication to peace, have misled, again and again segments of world opinion and sometimes even portions of American public opinion.

College students of this country, in particular, are being systematically fed a steady diet of outright lies, which have been sugar-coated with smooth and high-sounding talk about dedication to world peace.

Let me become more specific. The question of German unification, of course, will arise at Geneva. But let us examine the equally important question of Korean reunification. Some misguided diplomats have manged to distort the record in the past on this vital question. Sometimes they have inferred that the Korean war was really a "civil affair." You have heard that President Rhee has been an unpopular advocate of aggressive means to reunify our country. Many times you have heard the argument that once we recognize Red China, and deal with her as an equal, then some kind of an arrangement can be worked out for Korea. Unfortunately, these are all deliberate lies.

Let us look at the real record on the Korean reunification question. You will recall that after years of deadlock with the Communist Russian authorities the United States took the case of divided Korea to the United Nations. Following the defeat of Japan, Korea was divided along the 38th parallel, with Soviet troops occupying the northern half. The United States had desired to withdraw its troops from the southern half and to have free elections held throughout Korea, leading to a reunited, independent nation.

Despite Soviet opposition, and despite their refusal to permit the United Nations inspection and election teams to enter the northern part of Korea, free elections were held in the southern half which was accessible. Thus, under United Nations sponsorship, the Republic of Korea was born and our great President, Syngman Rhee, was elected as first head of the state. Later, the Republic of Korea was granted full recognition by every major free nation of the world. The United Nations itself recognized the Republic of Korea as the only true Government of all Korea.

Two United Nations agencies, the Commission on Korea and its successor, UNCURK (the United Nations Commission for the Unification and Rehabilitation of Korea) sought to restore my unhappy, divided country to its rightful place in the international community. But they were thwarted at every turn by the Communists.

Finally, in June 1950, just as we had been predicting all along, the Red barbarians launched their infamous unprovoked aggression against the Republic of Korea. Called into urgent session by the plucky and determined President Harry Truman, the United Nations took prompt and vigorous action—authorizing the sending of an international task force of free men to help us stem the tide of Red aggression.

For the first time in the history of this world, the principle of collective security was applied. Men from 16 free nations rallied to our defense—and to the collective defense of the free world. It was at that moment actually that the United Nations was really born. It was at that time when structure really assumed substance.

Then, in February 1951, following the entry of the Chinese Communists into the Korean conflict, the United Nations, by an overwhelming vote, branded as aggressor, the invader—this time Communist China itself. Communist China has been asked to withdraw its troops from the northern part of Korea. Communist China has been asked to observe the stipulations of the armistice agreement. Communist China promised to negotiate the peaceful unification of Korea within 90 days from the signing of the armistice. Still later Communist China was asked by the United Nations to permit the Neutral Nations Supervisory Commission to enter the northern part of Korea and inspect against the possibility of an illegal buildup of military forces there. At the Geneva Conference, Communist China was asked to accede to the very reasonable proposition that free, United Nations supervised elections be held in the northern part of Korea as the means toward unification and to fill the vacancies still left open in the National Assembly since the founding of the Republic of Korea. In every single one of these cases, the Peiping regime violated international law and order, and perversely flaunted the requests and orders of the United Nations. That record is clear; no amount of double-talk can obscure these basic facts.

President Rhee and the Republic of Korea have sought reunification again and again by peaceful means. We have asked only—as has the United Nations—that Communist troops be withdrawn from the soil of the northern part of Korea, and that consequently free elections be held under the supervision of United Nations inspection teams. Our position is as simple as that. Only the nonpeaceful Red Chinese thwarted this logical and simple method of solving the Korean problem.

And please remember that we patiently retain this stand, despite our most grave concern for our brethren in the north. It should be obvious to all, that, given the opportunity, our brothers and sisters, aunts and uncles, fathers and sons, would quickly rejoin us.

The apologists for the Communists like to ignore the fact that since 1943 literally millions of Koreans from the north have braved death in order to escape Communist rule and to join us in the south. Day after day we hear the pitiful pleas of those struggling under the yoke of Communist suppression for us to come and save them before starvation and death conquer all.

It is most difficult, I assure you, for President Rhee to close his ears year after year to these cries of anguish. And in conjunction with that point, I want to make something absolutely clear in regard to the Korean peoples' support of President Rhee. As an American columnist pointed out in a report from Korea recently: "Unity with the north * * * is as much an obsession with the people as it is with the President." Those who overstress domestic difficulties within Korea—and they do exist there just as they do in every country—always ignore the basic fact that all political parties in

Korea are in agreement on the question of unification.

Apologists for the Communists rehearse the same old tired argument in regard to free China. I would not blame you at all if you were confused about the real status of the Chinese problem. Perhaps you have been told that it would be the better part of valor to dump the free Chinese Government. One specious argument being advanced for that proposition runs something like this: "Formosa is not important, nor are its islands. Besides, if the Chinese had their way, they would probably end the conflict and rejoin the central government. Chinese after all are Chinese, and Chiang really does not have the support of the people on Formosa."

People who talk like that have forgotten some very simple facts we learned during the Korean war. Do you remember when the Chinese Communist prisoners of war were screened and given their choice—whether to return to their families and homes in mainland China or to turn their backs on their past lives and choose Formosa and freedom? The stark figures are that of those Chinese Communist prisoners of war, 14,369 chose Formosa and freedom and only 220 expressed a desire to return to Red China. Let us not hear any more argument that the Peiping regime represents the true will of the Chinese people, and hence it is inevitable that they take control of Formosa.

Similarly, the Communists are sowing untruths about the peoples' revolt in Tibet. But, in this case, even neutralist leaders are opening their eyes.

I am personally becoming a little tired of the argument held by many of the so-called neutral diplomats that the growth of the Communist form of government throughout the world is inevitable. Communism is not the wave of the future. It is the deluge from the past. It is a stark and ruthless imperialism that does not even compare with the so-called period of colonialism. Of course, we people of Asia are on the march to greater heights. But let no man presume to speak as representative for all of us, nor to say that the trend is for us to leave the camp of the free world. When you think about Asia, please remember that that team includes the Republic of Korea, Free China, Vietnam, the Philippines, Thailand, the Tibetan freedom fighters, and others, specifically and directly opposed to any arrangement of any kind with the Communists.

Indeed, the Asian People's Anti-Communist League, under the leadership of President Rhee was formed several years ago to consolidate the free Asian nations opposed to communism. I dare say that this side of the Asian coin is not usually shown to you by those diplomats who only pretend to speak for all Asia and to hint that all Asian people are ready to embrace the Communists.

As for the future, perhaps we, as students of American history, could do well to gain guidance from the words of another great President Roosevelt—Theodore Roosevelt—in his speech delivered in Chicago in 1891:

"Our country calls not for the life of ease, but for the life of strenuous endeavor. The 20th century looms before us big with the fate of many nations. If we stand idly by, if we seek merely swollen, slothful ease, and ignoble peace, if we shrink from the hard contests where men must win at hazard of their lives and at the risk of all they hold dear, then bolder and stronger peoples will pass us by and will win for themselves the domination of the world. Let us, therefore, boldly face the life of strife, resolute to do our duty well and manfully; resolute to uphold righteousness by deed and by word; resolute to be both honest and brave, to serve high ideals, yet to use practical methods."

That advice is nearly 70 years old, yet it is as valid today as when first given by Theodore Roosevelt.

Firmness is the only thing the Communists understand. When we are bold and resolute, they shrink back from the field of battle. When we uphold righteousness, they blush with shame.

In conclusion, as the chief protege of the free world, the Republic of Korea extends the challenge to its god-parents to stand firmly against all future Communist tricks and talkathons. We call upon you, the wonderful and generous people of America, for your continued support. Together, believing in the codes of the free world, and determined to liberate the oppressed everywhere, Korea and America can march forward together to make the remainder of the 20th century happier. The way to peace is strenuous, but it is well worth the endeavor.

I thank you.

Law Day Commemorates Basis of American Freedoms

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. JAVITS. Mr. President, the President has designated May 1 as Law Day, an event commemorated in the Congress and throughout the Nation. In this connection, I believe to be of interest an address at the Law Day U.S.A. commemoration in New York City, delivered by Miss Mollie Strum, national vice president of the Federal Bar Association. Miss Strum, an outstanding trial attorney in the Department of Justice, was the first and only woman president of the predominately male Federal Bar Association's Empire State Chapter. I ask unanimous consent to have the address which she delivered on that occasion printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LAW DAY U.S.A.
(By Miss Mollie Strum)

Chief Judge Ryan, Law Day Chairman Judge Cashin, distinguished members of the judiciary and the legal profession, my friends, Law Day, like Mother's Day, now has 1 day a year designated for its celebration. Both deserve daily observance.

As surely as life is the sum of the forces that resist death, so, democracy is the sum of the forces that resist oppression, hate, and intolerance. Democracy must be based upon law. Today is Law Day.

The keynote for our American system of government can be found in the opening words of the Constitution: "We, the people * * *." Uppermost in the minds of our Founding Fathers who wrote the Constitution in 1787 was fear of tyranny. Our Government is based on the divine right of the people.

Our Constitution has become known as a living Constitution. Although it merely prescribes the framework of government, it lives because of laws made and interpreted by men. It is ever being expanded, amended, and interpreted to meet the demands of our people. The Federal judges in our audience today are among the greatest legal minds of our times, whose lives are dedicated to upholding the principles of our Constitution and who do it very ably every day.

Therefore, I stand humbly before you, grateful for this challenging and flattering assignment.

Please grant me poetic license to express the following thought. It may be sacrilegious to talk of changing the lawyer's bible, the Constitution, on Law Day, but I want to rewrite the preamble to the Constitution. I want it to begin: "We, the lucky people," not just "We, the people." After all, we, who are favored with the blessings of liberty, whose rights are guaranteed by the Constitution, are apt to take our good fortune for granted. We, fortunate to be born in the United States of America, to live in the United States of America, to be protected by the laws of the United States of America, should take a moment to contrast our philosophy of government with others; they do. In our country, every individual is a king, as opposed to Iron Curtain countries, where the state is paramount, the individual unimportant.

In this age of jet air transportation, artificial satellites, and space travel, the world has shrunk. Freedom at home is not secure when any part of the world suffers enslavement, oppression, and hunger. It is well known that Communist countries ruthlessly oppose all religion. The flight of the Dalai Lama from his home in Tibet is the latest proof of this sad fact.

The people of the world are reaching out for the essential human freedoms. Today, less than one-third of the world's population is well fed. Today, more than 700 million people—almost half of the world's adults cannot read or write any language. Today, there is untold suffering in many lands. Our form of government, yes—our Constitution gives them courage and hope. The Constitution of the United States guarantees the dignity of man in our country. The other people of the world, who do not have what we have, want the same sacred freedoms under law.

We Americans, aware of the blessings of liberty must remember that the words of the poet, John Donne, written at the beginning of the 17th century, are still true today:

"No man is an Iland, intire of it selfe; every man is a peece of the Continent, a part of the maine; if a Clod bee washed away by the Sea, Europe is the lesse, as well as if a Promontorie were, as well as if a Mannor of thy friends or of thine own were. Any mans death diminishes me, because I am involved in Mankinde. And therefore never send to know for whom the bell tolls. It tolls for thee."

As we count our own bessings, let us pray that the oppressed people on this earth, with the help of God, and the inspiration of our way of life, will someday also enjoy freedom under law, and eventually that Law Day, USA, may be universally observed as Law Day, One World, with liberty and justice for all.

God bless you all, you lucky people.

The Best Protectionism

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. HART. Mr. President, today's Wall Street Journal contains an editorial on the subject of international trade

which I think deserves to be widely read, particularly by those who believe that protectionism from foreign competition in the form of tariff increases and quotas is the answer for American industry faced with competition from abroad.

While I do not go along with all the conclusions which the editorial draws, I think it is well worth our attention. Although the editorial does not specifically point this out, one of the most potent weapons with which to fight inflation is a tariff policy which encourages lively competition both here and abroad.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, May 12, 1959]

THE BEST PROTECTIONISM

A big fair now going on in New York City is designed to dramatize the role of world trade in our lives. Yet, somewhat ironically, at the very same time the trend of American policy is not toward freer international commerce but the reverse.

Both in the administration and Congress, protectionist pressure is making itself felt. There will be much more such pressure the more successful foreign producers are in competing with U.S. business in this country and elsewhere. One measure of their success so far is the heavy outflow of gold from the United States last year, a phenomenon also evident this year.

Now rising protectionism may seem like a perfectly normal reaction in these circumstances; if imports are hurting the sales of some American firms, why not cut down on the imports? Unfortunately, the way it works out is not nearly that simple. The evils of protectionism far outweigh any temporary protection.

This is, after all, a market economy, and the keys to such an economy are competition and the sovereignty of the consumer. Protectionism strikes at both. By reducing competition and putting the protected industry in a privileged status it encourages sloth and inefficiency.

It is often argued that protectionism is merely a means of assuring fair competition; specifically, that it compensates for the fact that labor costs are generally lower abroad than they are in this country. This is one of those superficial bits of folklore that, on analysis, turns out to mean much less than it seems to.

Thus a recent study by the National Industrial Conference Board shows that foreign labor costs are, indeed, often lower than American. But what is of far more significance is that materials costs are generally lower in the United States, with the result that the smaller foreign labor costs may be no competitive advantage at all. And anyway, it is an unquestioned fact that U.S. firms have been managing until quite recently to compete very well during the 25 years that we have been gradually reducing restrictions to trade.

So the argument that more protectionism is needed now to enable American companies to compete falls to the ground. What we find instead is an arbitrary interference with competition, which robs the consumer of both the range of choice and the price benefits to which free competition would entitle him.

We ought to remember that the secret of America's fantastic growth is precisely this competitive consumer-directed market economy. The more we inhibit it the more we dim the prospects for future growth of both the domestic economy and the foreign trade on which so many of our firms depend. It should be unmistakably plain that a nation does not foster economic growth by restrictionist devices; the two things are contradictory. By a policy of protectionism we hurt only ourselves.

But if protectionism is a futile "remedy" because it misses the boat, what is the answer to the competitive difficulties a number of companies are beginning to experience? Clearly enough, part of it is renewed efforts to achieve the most efficient and lowest cost operation. More broadly, the answer also lies in war on inflation, for it is the legacy of inflation that is already causing some of the trouble. Another round of inflation could finally price our goods out of world markets; the effects of inflation are something not even the most efficient producer can compete with.

The people who demand more protectionism are making essentially the same argument as those who want price and wage controls. Unmasked, the argument is this: We refuse to deal with inflation at its source in heavy Government deficits, so we get inflation and then we try to cure some of the effects of inflation through direct economic controls or, in this case, through the control of protectionism.

It is an argument of absurdity, and the protectionism this country really needs is from that kind of thinking.

Price of Eggs

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 12, 1959

Mr. LANGER. Mr. President, once more I direct the attention of the Senators, particularly those on the Agriculture Committee to the low prices that the farmers are getting for their eggs. On April 10, 1959, I placed in the CONGRESSIONAL RECORD a letter from Mr. and Mrs. John Braaten of Kindred, N. Dak., showing the price of eggs at 18 cents per dozen. On May 4, 1959, I received a letter from Alvin A. Olson, of Hillsboro, N. Dak., showing the price of eggs at 17 cents and the prices are still going down because today I received a letter from Mr. and Mrs. Leo F. Stover of Larimore, N. Dak., stating that they are getting 16 cents per dozen. Their letter follows in full.

Mr. President, I know these folks are fine examples of American citizens honestly earning a living and in some of the cases rely upon the money they get from eggs and butter to pay for their grocery bill. I assume, every time I put these letters in the RECORD, they were brought to the attention of the Agriculture Committee and the Secretary of Agriculture. Apparently nothing is being done. Certainly with the Democrats controlling two-thirds of the House and two-thirds of the Senate and with their promises to help the little fellow, here they have a glorious opportunity to pass legislation which will help. I hope they will use the power that they have to get the Secretary of Agriculture and the Congress to do something about these very serious problems.

I ask unanimous consent that the letters from Mr. Alvin Olson and Mr. and Mrs. Leo F. Stover be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

HILLSBORO, N. DAK., *May 4, 1959.*

Senator BILL LANGER.

DEAR SIR: Just wanted to write a line in regard to egg prices. Seems something could be done to stop this unfair profit price the middlemen take on our eggs.

Now we get 17 cents for top grade, and that grade is very tough and sometimes unfair. I am sure a lot of No. 1 we should get. I think they drop in for No. 2, and when they sell them just over counter they charge 35 to 40 cents a dozen, which is a profit of 15 to 20 cents a dozen. A few years ago it used to be 5 or 6 cents over counter. But now they try to get 200 percent profit.

You know we can't come out to pay the feed that they eat by far.

Wish you could get a law that all hatcheries that hatch chickens would not be allowed to keep hens for egg production, as lots of them do. Some have up to 10,000 hens, and that cuts out a lot of us smaller raisers. It looks to me that they want to starve out us smaller raisers like me. We keep about 400 hens each year to help along on our farm, as we farm only 160 acres, and we need a little income from different small sources.

If these bigger raisers or hatcheries get control of market, I am sure we would have to pay 40 or 50 cents a dozen.

Wish you would try and do something about the egg price and grading, and I hope a law could be passed in Washington.

I remain,

Yours respectfully,

ALVIN A. OLSON,
A Dirt Farmer.

(Egg prices don't pay for the wear and tear on the hens.)

LARIMORE, N. DAK., *May 6, 1959.*

Senator WILLIAM LANGER,
Washington, D.C.

DEAR MR. LANGER: Today our local creamery paid us 16 cents a dozen for fresh eggs. We are informed that in cities such as Grand Forks, Fargo, and Minneapolis, that eggs are being sold at exorbitant prices compared to what we as farmers get for them.

We know there is a surplus, but even if there is, we would like to know why there can be such a spread between producer and consumer, and why a variation in prices in different States.

There is a surplus of most commodities, but the prices seem to be more stable in comparison to egg prices.

Any information you can give us will be appreciated.

Yours truly,

Mr. and Mrs. LEO F. STOVER.

Memorial of Bataan Veterans National Organization Opposing Statuary Memorial on Corregidor

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 12, 1959

Mr. ANDERSON. Mr. President, the Bataan Veterans National Organization,

at its annual convention held in Carlsbad, N. Mex., on April 9, 10, and 11, 1959, went on record memorializing the President and the Senate and House of Representatives to oppose legislative action to create a statuary memorial on Corregidor, commemorating those who served in the defense of mankind during World War II. The convention recommended instead that any appropriation for this purpose be diverted to the creation of a research hospital in honor of those who gave their lives.

The national commander of the Bataan Veterans Organization has sent me a copy of the memorial passed and requested that our careful consideration be given to this recommendation.

Mr. President, I ask unanimous consent that the memorial be printed in the Appendix of the RECORD.

There being no objection, the memorial was ordered to be printed in the RECORD, as follows:

MEMORIAL MEMORIALIZING THE PRESIDENT OF THE UNITED STATES, THE PRESIDENT OF THE U.S. SENATE AND RESPECTIVE SENATORS, THE SPEAKER OF THE HOUSE OF REPRESENTATIVES OF THE U.S. CONGRESS, AND THE RESPECTIVE CONGRESSMEN

Whereas the members of the Bataan Veterans National Organization do go on record as being opposed to the legislative action by the Congress of the United States, whereby creating a statuary memorial on Corregidor, commemorating those who served in the defense of mankind during World War II; and

Whereas the members of the Bataan Veterans National Organization do hereby urge the President of the United States, the President of the Senate and respective Senators, the Speaker of the House of Representatives of the U.S. Congress and respective Congressmen to do everything possible in their legislative powers to divert the proposed appropriation for such a memorial statue; and

Whereas the Bataan Veterans National Organization do hereby urge the creation of a research hospital for the betterment of all mankind, such research hospital to advance the treatment and cures of tropical diseases, effects of radiation, and in all ways help to eliminate the sufferings of all people regardless of nationality, color or creed; and

Whereas we, the Bataan Veterans National Organization, would welcome the creation of such a research hospital that we as an organization could foster through our efforts in the coming years, thereby keeping alive the memories of our fallen comrades who so gallantly served and died: Now, therefore, be it

Resolved by the Bataan Veterans National Organization, annual convention April 9, 10, 11, 1959, Carlsbad, N. Mex., That responsible officials of the United States and the Congress and the New Mexico delegates to Congress be respectfully urged to initiate such a change in memorial as we do recommend; be it further

Resolved, That copies of the memorial be delivered to the Honorable Dwight D. Eisenhower, President of the United States; the Honorable RICHARD M. NIXON, President of the Senate of the U.S. Congress; and the Honorable SAM RAYBURN, Speaker of the House of Representatives of the U.S. Congress; and be it further

Resolved, That copies of this memorial be delivered to the Honorable DENNIS CHAVEZ and the Honorable CLINTON P. ANDERSON, U.S. Senators from New Mexico; and the Honorable JOE M. MONTOYA and the Honorable THOMAS G. MORRIS, Representatives at large from the State of New Mexico; and be it further

Resolved, That copies of this memorial be delivered to the American Ex-Prisoners of War Organization, and the New Mexico Veterans Service Commission

---

Cobalt Next Victim of U.S. Ax

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 12, 1959

Mr. CHURCH. Mr. President, at Cobalt, Idaho, the Calera Mining Co. operates a cobalt property which has produced as much as 1,000 tons a day of high grade cobalt ore. This mine is now threatened with extinction by the decision of the administration to look to foreign sources for its cobalt.

The business editor of the Salt Lake Tribune has written a fine article explaining the situation of this mine, and I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COBALT NEXT VICTIM OF U.S. AX

(By Robert W. Bernick)

Domestic cobalt is "headed out."

And this, despite the appeal of westerners and their representatives.

With it goes the creation of another mining ghost town in Idaho and an idle industrial facility employing union labor in Utah.

The decision on whether this disaster will be visited upon the western cobalt mining and refining industry is up to the executive department of the Federal Government at Washington, D.C.

The next 30 days will be crucial in any decision which may come.

But there is, to date, precious little indication that the miners of cobalt will fare any better at the hands of the bureaucracy than have the liquidated tungsten producers, the starved mercury miners, the fluorspar people, or the crippled lead-zinc industry.

The story of cobalt is the same as for other strategic metals in the United States.

It is an old, old story in this between-wars world.

It is a wretched story of lost jobs, lost careers, and a mistake in the national defense.

Prior to World War II, cobalt production in the United States was limited to about 200,000 pounds a year—as a byproduct of iron mining at Cornwall, Pa.

The World War and its desperate need for strategic metals resident to this bastion of freedom caused Washington to search in near panic for U.S. sources of cobalt.

The development led to an expensive gamble by Calera Mining Co. on untried metallurgy, not only at the Blackbird mine in Lemhi County, Idaho, but on the refinery at Garfield, Utah.

Similar processes were involved at the National Lead Co.'s Fredericktown, Mo., properties—where cobalt was to be recovered from complex ores.

The difficulties in refining were not the only ones. Milling the arsenical, cobalt-copper ores at Blackbird posed initial difficulties.

In all it was a gamble for Calera, an affiliate of Howe Sound Co., which represented an investment of more than $12 million.

Calera had just completed opening of its mine, construction of townsite facilities, etc., at what is now called Cobalt, Idaho, when the Korean War broke upon the world. Once again, Washington called insistently for more cobalt.

At this call, the mill at Cobalt was expanded from 600 tons a day of ore to 1,000 tons a day. The General Services Administration entered into a contract to buy 4 years' supply of the metal.

It also entered into longer term contracts with foreign producers of cobalt (this is where the "old, old story" comes in. We're still buying lead from a foreign nation at better than 17 cents a pound, for example.)

Large production potentials were located in Cuba, Canada, and Africa.

(In the case of Cuba, there are now cries that Congress investigate the situation which developed regarding "cobalt and Batista.")

Be that as it may, in Idaho there was founded a community of 1,500 persons, with schools, church, and even a saw mill.

At Garfield, a refinery to produce 3 million pounds of cobalt a year was erected.

The process has been troublesome—and even now, the companies need more time to perfect metallurgy to reduce costs.

But the GSA purchasing contract is running out in a matter now of weeks.

At the same time, the stupidity of the Federal Government's open-handed spending on foreign contracting has now resulted in world cobalt prices dropping to as low as $1.75 a pound.

Domestic consumption of cobalt runs at 7 to 8 million pounds a year. African output, initially subsidized by foreign aid programs, is in the range of 16 million pounds a year.

The Nicaro, Cuba cobalt-nickel properties will deliver 4 million pounds a year—a delivery on which the U.S. taxpayer will pick up the tab if the metal cannot find a market in this country.

The Union Miniere du Haut Katanga, the big Belgium Congo metals producers which is known the world over for its "sweet charity," produces cobalt as a byproduct of open pit copper mining.

With high grade ore and the cheap labor of Congo natives, Katanga can produce cobalt at actual cost for less than $1 a pound. But, in fact, it can sell cobalt for any price it wishes to on the world market, and in the United States force the western miner to the wall merely by letting the "copper carry the cobalt."

Actions of the last decade have proved without a doubt that the executive department of the Federal Government, regardless of incumbent or party in power, has no material regard for the American western miner. In fact, it is apparent that he is a pest which should be liquidated in favor of foreign friends with whom we must share our prosperity but not our poverty.

But irrespective of any attitudes toward the domestic mining industry, Washington is making both a mistake in terms of the national defense of the American people—and also in terms of their pocketbooks.

It turns out that the Howe Sound Co. probably could shut down tomorrow and gain about $4½ million as a tax credit which could be applied to profits of its other divisions. (We even wonder why they want to stay in the mining business.)

That's $4½ million that the Internal Revenue Service can't collect or the foreign aid group can't spend.

In addition to loss of taxes in Tooele County, Utah, Lemhi County, Idaho, will lose its biggest single taxpayer at a rate of $80,000 a year. In 1957, Calera had 450 men

at work at Idaho mine and mill with a payroll of $2 million, from which they paid $332,000 a year to the Internal Revenue Service and $33,000 in State income taxes.

As the end of the GSA contract loomed, employment at Cobalt, Idaho, was dropped to 115 men at present.

As for national defense—what right-minded military man, if he had the say, would entrust the future dependency of the United States in terms of cobalt on a strife-ridden Africa or the stability of Cuba under the Castro brothers?

The answer to this question doesn't require a political opinion. It should be a matter of commonsense.

But when did commonsense have anything to do with Washington's attitude toward the domestic mining industry?

Address by Maj. Gen. Mark E. Bradley, Jr., Acting Deputy Chief of Staff, Materiel, to Chamber of Commerce Armed Forces Luncheon, Charleston, S.C., May 11, 1959

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include, herewith, an address made by the distinguished South Carolinian, Maj. Gen. Mark E. Bradley, Jr., Acting Deputy Chief of Staff, Materiel, to the Chamber of Commerce Armed Forces luncheon, Charleston, S.C., May 11, 1959:

ADDRESS BY MAJ. GEN. MARK E. BRADLEY, JR., ACTING DEPUTY CHIEF OF STAFF, MATERIEL, TO CHAMBER OF COMMERCE ARMED FORCES LUNCHEON, CHARLESTON, S.C., MAY 11, 1959

Thanks, Mr. Fishburn, General Clark, Congressman Rivers, honored guests, ladies and gentlemen, grandpa, it is a pleasure to be here today, and to have the privilege of addressing this luncheon which is the kickoff event of your Armed Forces Week.

As I understand it, during the next several days the citizens of Charleston will have a chance to see static displays, demonstrations, and selected weapon systems representing all our services.

I hope that every one of you and your friends will take advantage of this opportunity—and I believe Charleston will because the military traditions of this city exceed those of any in the country. If any one is interested in our danger and in what we're trying to do about it, I believe you folks are.

At a time in our history when a superior military capability is vital to international diplomacy, and to our Nation's survival, it behooves every American to acquaint himself with the armed services and how they are doing their job.

Let me make it clear that this emphatic thought is not just an idle plea.

In light of present international tensions, the dramatic technical progress being made on all fronts, and the importance of a deterrent force as a tool for peace, the military organizations cannot be isolated from the population.

All of us, in service and out, must join forces in the all-out drive of the free world to prevent communism from reaching its announced goal of world domination.

Now let's talk about the threat—what the United States must do and is doing about it and how the Air Force fits the picture.

I am sure all of you have read or have heard that the aim of Soviet-directed communism is to establish its ideology throughout the world. Yesterday as a Mothers Day greeting, we had new kindly words from Mr. Khrushchev.

In a theoretical sense, the purpose is to create a utopian society—with everybody equal and without government.

Beliefs and peoples being what they are, this ideal can be written off as more Russian propaganda—but it sounds good to a hungry Chinaman or a poor African.

Further, the Kremlin bosses—being what they are—have no more intention of equalizing people throughout the world than they have of granting equality to their own and their satellite citizens.

World control is their real intent, and even if patriotism were dead, from a purely personal point of view—working conditions in Siberia are lousy.

This fact is emphasized by what we know is going on inside the U.S.S.R.

They say they are, and they may be, reducing the number of men in their military forces.

But they are increasing the capabilities of these forces with a vigor and zeal available only to a forceful dictatorship.

Concentrated scientific, industrial, educational, and military programs now underway in the Soviet Union are primarily geared to the creation of an aggressive force.

(And we must call it an aggressive force; it is not a purely defensive structure, for no one has indicated an intent to attack them.)

The results of these programs are well known.

The Soviets have a large number of high performance bombers that can hit targets in this country.

They have built up a large submarine force, probably potentially capable of nuclear power and guided missiles.

And in the field of ICBM's—if they are not ahead of us, they are at least as well advanced as we are.

To assure continued rapid progress, the Soviets have concerted drives going in all the technical fields of endeavor.

For example, it has been estimated that somewhere in the neighborhood of 80 to 90 percent of all their research and development effort is directly related to military and associated programs.

Also, they have built up a large heavy industry complex.

In their recently announced 7-year plan, they set as goals a 68-percent increase in their steel production over 1958, a step-up in pig iron output of 80 percent, and a 65-percent rise in rolled steel production.

Past history of other 5-year plans makes us agree that, while they may miss the exact percent increase—they will make tremendous strides in that direction.

Their space research programs are certainly moving forward.

There can be no doubt that they have up to now put into orbit heavier satellites than we. The only manmade satellite about the sun wears the Red star.

They have made significant accomplishments in the propulsion, guidance, materials, and electronics fields.

And it appears to be logical and feasible that they will put man in space within the relatively near future.

As a guarantee of future progress, the Soviets are increasing the number of graduates in the technical fields.

Unlike our own programs—which incitentally will produce 10,000 fewer engineers than are needed this year—their educational plans virtually guarantee as many scientists and engineers as the state requires.

It appears, then, that on the home front the Soviets are gearing their capabilities to continued aggression on a long-term basis and both economically and militarily.

Their confidence in these efforts is evidenced by the increasing number of international conflicts and crises they are fomenting.

As you know, examples include Lebanon, the Taiwan Straits, Iraq, and certainly West Berlin.

They are now the bear that growls like a wolf—rather than who walks like a man.

Individually, no single one of these poses an immediate threat of war.

But collectively, the involvements do dilute the effectiveness of the free world.

For, although none has led to shooting engagements directly affecting U.S. forces, they require a continual state of readiness and dispersal of power.

We must be in position to react immediately in any world location to local problems without weakening our ability to retaliate in case of all-out aggression.

The pressures exerted by the Soviets against the free world have posed both political and military challenges to the United States.

As a result, the Defense Department—which has the responsibility of equipping a force complex to counteract the military challenge—has created versatile defense/offense capabilities in support of national policies.

These capabilities make up our defense team.

This team must be able to defend the United States from attack, deter all-out war—or win such a war if deterrence fails.

At the same time we must maintain flexibility to cope with local crises whenever and wherever they occur.

In all sincerity, I am convinced that today we possess the ability to meet these requirements.

And when I say "we," I am referring to all the services—Air Force, Army, Navy, and the Marine Corps.

Now, let me assure you right away that I recognize the importance of the whole defense team—Army, Navy, Air Force, and Marines. My mission here, however, is not to discuss them all.

But I do want to give you a brief review of current Air Force capabilities and what we intend to do to meet the challenge of the space age.

Under the new defense organization, established last year, all air combat units will function under the direct command of unified or specified combatant commanders.

These commands are in turn responsible to the Secretary of Defense for the performance of their combat mission.

This authority is exercised for the Secretary of Defense through the Joint Chiefs of Staff.

However, prior to assignment to unified or specified commands, they are outfitted and trained by the Air Force to perform strategic, tactical, and air defense missions.

After assignment the military services continue to retain basic responsibilities for all aspects of administration and logistic support of service forces.

It is our job to obtain and train people for them, conduct the necessary research and development, procure their hardware, provide logistic support, arrange for their internal organization, budget their expenses and develop appropriate doctrine governing their employment.

Now what kind of weapons is the Air Force developing and furnishing now and in the future?

Today, B–52's and B–47's—supported by KC–97's and 135's—have the power and punch to retaliate decisively in case of all-out war.

THEY ARE THE DETERRENT

And within the near future, American-based Atlas intercontinental missiles will provide a faster retaliatory capability.

For the immediate future, the supersonic B–58 will replace the B–47's.

Two other ICBM's will come into the inventory—the Titan, which uses a liquid propellant, and the Minuteman which will employ a solid propellant. And instant reaction.

For the nearer term, the B–52 will be equipped with the Hound Dog air-to-surface missile.

This last, by the way, will have the effect of extending the aircraft's range while at the same time providing increased crew safety and survival.

Beyond this time period in question, some people believe that missiles will entirely replace piloted vehicles.

This I cannot buy.

Until radically different weapons are devised, there will continue to be a need for manned aircraft.

Someone must go look. People and things must be hauled.

A completely static condition on both sides is unbelievable. Can you imagine myriads of characters on both sides poised with finger over button and nothing else.

Accordingly, the Air Force is moving ahead with plans for a truly hypersonic intercontinental, 2,000-mile-per-hour bomber, the B–70. As well as the F–108, a long range interceptor of comparable performance.

As a logical supplement to the long-range bombing capability, tactical units have the speed and mobility to go anywhere on earth in the event of local tension.

Such aircraft as the F–100, F–101, F–104, and the upcoming F–105 provide the free world with improved means to counter limited outbreaks of war—during the next few years I think you can expect to find these aircraft wherever you also find the Navy carriers and the Marines.

For continental defense, an integrated system including Air Force, Army, Canadian Air Force, and Navy piloted interceptors, the Bomarc and Nike defense missiles, radar warning lines, and the semiautomatic ground environment create a formidable network against air attacks by the enemy.

These systems provide a comprehensive blanket of protection for the entire North American Continent.

This is not to say that the defense net is 100 percent penetration proof.

A realistic look must recognize the fact that some attackers can get through to hit targets within the United States.

But we believe the more difficult we make the task of surprise attack, the less likely it is that such an attack will be initiated. I think we all agree, however, that the deterrent threat must remain our real bulwark. A defense never won a war and never will.

These forces represent the air might we intend to rely on to thwart an aggressor.

A primary backup for them, however, is the airlift capability of the Military Air Transport Service.

MATS, which is more familiar to you, perhaps, than the other airpower components, gives us a flexibility of global movement which allows us to exploit the real effectiveness of both tactical and strategic units.

By being able to airlift fighters, weapons, and personnel to virtually any part of the world within 48 hours or less, we actually have the potential of preventing localized "hot-spots" from turning into shooting conflicts.

Last summer, as examples, MATS enabled tactical units to react to two local disturbances—one in Lebanon, the other in the Taiwan Straits.

In less than 2 days' time, we shipped fighter interceptors halfway around the world in C–124's.

In a like time period, we deployed fighter-forces plus support.

In addition to augmenting the deterrent capability of the Air Force, the Army, and the Navy, MATS has a significant economy value.

It permits us to ship high value items—engines, ground handling equipment, etc.—to oversea points as needed, and in short order.

This means that we do not have to buy large quantities of spares to make up for time lost in transit.

Also, during last fiscal year, we moved more than a million military travelers by air; the work time this saved us resulted in making about 27,000 more man-years available for the country's defense.

If time permitted, I could elaborate on an unlimited number of instances wherein MATS has played and is playing a major defense role.

The main thought, however, is that this service provides an essential flexibility for our logistic and combat forces which is an absolute must if the free world is to continue forestalling the onrush of communism.

Now, as all of you know, great forward strides currently being taken are paving the way for true space operations.

The Air Force intends to accept the space age challenge with the same vigor with which it moved into the jet age.

We firmly believe that both piloted and unmanned space vehicles will come into being as operational weapon systems.

To bring this about, we are working closely with the Advanced Research Projects Agency, the National Aeronautics and Space Administration, and the industrial forces of our Nation.

Today I wouldn't even attempt to guess at the shapes and performance capabilities of these future systems.

However, I am firmly convinced that before long they will be operating at hundreds—perhaps thousands—of miles above the earth, extending our defense capabilities, furthering our drive for world peace.

If we do not believe this and work toward it, we will face the same fate that has overtaken so many nations who were too slow, too lazy, or too stupid to take advantage of scientific progress.

At the same time we must also be very careful not to drop our proven manned weapons too soon—in fact, I am confident that the airplane as we know it today is here to stay.

Ladies and gentlemen, as I told friends over in Anderson last Saturday night, I am not complacent about our future military strength when it is compared to the growing might of the Soviets.

They appear to be driving toward the creation of a superior aggressive force with all the resources available to a dictatorial power.

Their purpose is clear.

And it will take a determined attitude on our part to prevent them from achieving their objectives. We must remain ahead of them in brains, technical capability, and development of better weapons and I do not see hiw this can happen on a 35-hour week.

In summary I feel we are in such a strong military posture today that our enemy does not dare attack us.

For the future our work is cut out for us. The pace is being set by a strong and ruthless runner. It will be up to you and me and the people of the free world to determine our fate by our own efforts. I have confidence, but confidence alone will not cut the mustard. We must work, we must think, we must remain the strongest.

Thanks.

GTA Daily Radio Roundup

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 12, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a Daily Radio Roundup, prepared by the GTA Public Relations Department, St. Paul, Minn., dated May 7, 1959.

There being no objection, the Daily Radio Roundup was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF MAY 7, 1959

The fine points of the ways that nations deal with nations are hard for many of us to understand. A question you'll often hear asked at a local farm or co-op meeting is: "Why do nations bicker and quarrel and sometimes get involved in shooting wars?" Maybe the ordinary people of the world can find some answers where diplomats and high officials have failed.

For example, why have some nations been sitting on big stockpiles of wheat and complaining about surpluses when that grain is badly needed in other parts of the world? We hear talk about flooding markets, and stealing customers, and no money to pay. But still here is the wheat and over there are hungry people. Why not bring the two together?

So many ordinary people in so many nations have been asking that question that the pressure on men in high places to find some answers has been intense. You've all heard about the "food for peace" drive in this country. And now there are signs that it may be paying off.

In Washington a 3-day conference of the world's major wheat exporting nations has just been concluded. These countries are the United States, Canada, Australia, France, and Argentina. They talked over and outlined several cooperative programs that would help bring food to the hungry and a tangible profit to the wheat nations.

Here, for example, is what is suggested for the United States:

First. Step up assistance to needy people at home with direct feeding programs, such as the school lunch program and food for people on relief or out of work.

Second. A big increase in projects under which wheat is sold to countries like India. These countries would pay in their own currencies and the United States would lend the money right back to them in the form of long-term development loans.

In addition it is proposed that the big wheat surplus nations get together to set up national food reserves in countries or areas of the world in greatest need. Then if famine strikes, as it has recently in Haiti and India, the food is ready and waiting to feed the hungry.

Now doesn't that sound like good sense to you? GTA members who attended any of the stockholders' meetings in St. Paul in recent years and heard Senator HUMPHREY, of Minnesota, speak will recall that it is essentially his food for peace program. The Senator proposes that the United States have a Peace Food Administrator. Someone, as he said in a recent speech, "with a vision of what our food can mean to the world and someone with the ability and boldness to end buckpassing and conflict between the many agencies of Government involved in food use abroad."

So the pressure has been mounting for such a program. It led up to the recent conference in Washington that we just men-

tioned. Farmers will be watching for a definite program of action to be announced because it is in their interest, too, to have surpluses used to build peace.

And certainly, food for peace costs only pennies compared to the toll that war takes in lives and dollars.

Co-op farmers have always taken a firm stand in favor of programs to feed the hungry at home and abroad through their organizations like GTA, the co-op way.

Oregon Daily Journal Supports Foreign Aid Funds

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 12, 1959

Mr. NEUBERGER. Mr. President, I think all of us in the Congress have been impressed by the very strong and effective bipartisan support which has been given to President Eisenhower's foreign aid program by the only living ex-President of the United States who is a member of the Democratic Party. Of course, I refer to the illustrious Harry S. Truman, whose 75th birthday anniversary has just been celebrated by the Nation.

Because this whole question is most timely today, I ask unanimous consent to have printed in the Appendix of the RECORD a cogent and informative editorial in support of foreign aid, entitled "Aid a Part of Foreign Policy," which was published on the editorial page of the Oregon Daily Journal of Portland for May 5.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AID A PART OF FOREIGN POLICY

Protected as we were for many years by miles of ocean and warned from the beginning of entangling foreign alliances it is our nature to ask only that we be let alone.

We have fought, as a rule, only when attacked and then we have fought with a civilian army which wanted to end the war as quickly as possible and get back to the business of peaceful living.

An example was our refusal after World War I to join the League of Nations and another, our all-too-hasty demobilization after World War II.

Events subsequent to World War II thrust us into the middle of world politics but as a people we still resist the theory of Clausewitz, German military theoretician, that "war is a continuation of politics by other means." Neither do we really like the idea of using foreign aid as an instrument of politics. We are exceedingly generous when famine, flood, or earthquake ravages a foreign land, but except for this we are intolerant of an expenditure which does not produce immediately a dollar's worth of results for every dollar invested. And we believe the least to be expected is gratitude for our largess and loyalty to the form of government which made it possible. These attitudes are reasonable and could be the basis of foreign policy were it not for policies of the Russian and Chinese Communists.

They are not interested in keeping the status quo nor are they interested in self-determination for the people of Asia and Africa. To them war, particularly localized conflicts, is an instrument of politics and economic aid is in the same category.

This does not mean we must descend to the same level. It does mean we cannot rest secure behind a Maginot line of atomic missiles and a policy of massive retaliation, and it means we must look at economic aid as an important part of long-range foreign policy.

It is for this reason that some of the recent sharpshooting at the economic development loan program doesn't make sense. The fact that economic aid is to be used as an instrument of foreign policy does not mean we should close our eyes and throw away the key to the treasury.

Aid, whether it be to a flood or famine victim or to a government which wants to build a power dam, should be administered efficiently. But this should be achieved by proper supervision at the administrative level and not by a meat-ax approach to appropriation measures.

The Challenge of the American Economy

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Senator HUBERT H. HUMPHREY, at a Democratic dinner meeting in Portland, Oreg., on April 22, 1959, "The Challenge of the American Economy."

On April 23, the distinguished senior Senator from Minnesota [Mr. HUMPHREY] spoke at a Democratic dinner meeting in my home city of Portland, Oreg. His remarks, addressed to the question of the challenge which the world situation and our own domestic situation poses for the American economy, were typical of the insight and the leadership which this outstanding Senator, this great Democrat, and great American has continued to demonstrate.

This speech was a good speech, Mr. Speaker. It did not equivocate, it did not evade issues, it did not flinch from facts. It was a speech which deserves the careful attention of every American interested in the future of our economy and the future of our people. I ask unanimous consent that it be printed, following my remarks, in the Appendix of the RECORD:

THE CHALLENGE OF THE AMERICAN ECONOMY

I want to talk to you tonight about the great challenge to the American economy—about my deep concern over its domestic aspects and my even deeper preoccupation with its implications in the field of world affairs.

There could be no more fitting place to probe this challenge than here in the great Pacific Northwest. Those who first opened this area breasted an immense challenge to their courage and strength, their practical ability, their imaginative faith. They persisted when the going was most severe.

But today, the past seems less inspiring than the eternal, forward-looking thrust of the people of this area. The very air here is quick with a sense of unmet needs, restless aspiration, determination to press ahead and to excel.

And those are the very qualities that are needed to meet today's challenge.

This challenge to the American economy can be simply stated: It is to live up to our full potential.

If we achieve this goal, our position as a world leader will be the stronger and our capacity to do the domestic jobs at hand will be the greater.

If we continue to fall short of that goal—as we have in the past half decade—the world will hold us in less esteem. And, more important, we will be less able to carry out those programs, both here and abroad, that go with world leadership.

A nation that aspires to world leadership—a nation that must lead to survive—must set its standards high and its goals higher.

Think, for a moment, of the image we now present to the world.

Twice in 5 years our economy has been ravaged by recession.

Today, 4½ million Americans are without jobs—and yet our Government glows with satisfaction that the number is 4½ instead of 5 million.

For more than half a decade, our economy has been crawling forward, while other nations have been speeding ahead.

We lack the schools and hospitals and roads and health services that we could and should have. We, the richest Nation on earth, assert that we cannot afford to raise our sights or our standards in these fields. Our Government even tells us that we cannot afford the national defense that our military leaders say we need.

We alone of all nations stand on the very threshold of realization of the prophets' dreams of unlimited abundance. Our troubles arise from our failure to call forth this abundance fully, and to use it wisely.

Others suffer because they cannot yet do what they need. We suffer only because we are not yet doing what we can.

This has not always been true of America. We have risen to challenges and attained our full potential in times past. But more recently, we have been dozing, and even the Lilliputians could tie up Gulliver when he fell asleep.

What are some of our major defaults today?

Let's look first at the greatest economic resource of any nation—its people, and especially its young people.

Millions of our youngsters are in overcrowded classrooms, with insufficient and inadequately paid teachers. Hundreds of thousands, with both ambition and ability, are denied higher education, either because they cannot afford it, or because the schools of higher learning have no room for them.

In the underdeveloped countries, only a tiny fraction of the children obtain even the rudiments of formal education. This, however, is not by any fault of theirs; they simply lack the resources to do more now.

But our own educational deficiencies exist while we have idle resources begging to be used. We have or can easily produce the steel and cement and lumber to build schools. We have idle manpower, waiting to be put to work. And what's more, if we were able to keep our economy running at full capacity, there would be ample public revenues to pay for the schools—and the teachers too.

And yet we are told that we cannot afford more schools.

Our people also need good housing and health services. But isn't it tragic that almost a quarter of the richest Nation on earth is still living in urban and rural slums. Isn't it tragic, too, that health services for a majority of the people have not begun to keep up with the amazing progress of medical science. Doctors and nurses, hospitals, and other health facilities, are in nationwide short supply, acute short supply in some areas, because of uneven distribution. Here

again, we do not lack the basic means to do better; we simply have not marshaled the determination.

What of our older citizens? We now have more than 15 million senior citizens, 65 years of age and over, and the number is increasing very rapidly. Despite some recent progress in social security programs, a large majority of these people still live in genuine deprivation. Their incomes have not kept up with the rising cost of living, and have fallen even more seriously behind advances in technology which should mean better living standards for all. A vast expansion of social security is imperative.

Two million American families and individuals still have incomes below $1,000 a year. More than six million American families and individuals have incomes below $2,000.

Of course, poverty is infinitely worse in many other lands, where tools and skills are not available. But it seems hard to believe that so many millions of citizens of the richest Nation on earth lives in poverty or close to it, only because our tools and skills are not being fully used.

After human resources, the second great source of the wealth of nations is natural resources. Some countries lack these resources. Others have them under the ground or in the water, but do not yet have the techniques to call them forth. But we in America lack neither resources nor know-how.

We need a tremendous lift along the whole front of resource development and conservation. The magnitude of the job, the high costs, the interstate character of much of the work, and above all the national interest, demand that the Federal Government—in cooperation with States and localities—resume its historic responsibility for resource deevlopment. In fact, the programs need to be bigger and better than ever before, responsive to the new needs and economic capabilities of our country.

Why are we falling so tragically short in the development of our human and natural resources? Because we are saddled with an administration that believes in living off our inheritance rather than adding to our substance.

The Republican administration has allowed our economy to limp along over the past half decade, faltering badly at times, falling far short of the growth it should enjoy.

During the past 5 years, the economy has grown less than half as fast as it grew in the first half of the 20th century—and only about one-fourth as fast as it needs to grow if we are to prevent new technology and automation from becoming an economic Frankenstein that we cannot control.

The losses from this economic slowdown are staggering. In the past 5 years, our low growth rate caused us to lose an estimated $150 billion in production. It forced upon us 10 million man-years of needless unemployment. It costs the average American family almost $3,000 in income.

And it has cost the Government billions of dollars in lost revenues—dollars that could have been put to work building schools and hospitals and broadening social security and building natural resources—and, at the same time, giving jobs to millions who sought but could not find them.

The Republicans decry spending and waste. But they are the greatest wasters of all. For how could there be greater waste than men without jobs, factories and mills without production, children without proper schools, families without proper shelter?

The Republicans also decry deficit spending. But under whose administration, I ask, are we suffering a $13 billion deficit—the largest in peacetime history? We are suffering this under a Republican administration which has sat through two economic recessions hoping America would come through on a swing and a prayer.

The Republican decry big spending. But it doesn't seem to bother them that the interest payments on our national debt have risen nearly $2 billion a year since they took office. And this is the direct result of their high-interest, hard-money, tight-credit policy which bears the trademark of a man named Humphrey. But I can assure you, it is not the HUMPHREY you see before you now. I can also assure you, we are not even remotely related—either biologically or politically—a fact that pleases both of us.

By the time this tight-money policy has run its course, nearly $20 billion will have been taken from those who have little to embroider the earnings of those who already have much.

I leave it to your own imagination as to what could have been done with that $20 billion—in schools and roads and hospitals and higher unemployment benefits and social security, not to mention the defenses we need but supposedly cannot afford.

The financial policies of this administration are not only wrong in detail; they are wrong in philosophy. They assert that we can meet larger and larger problems by doing less and less.

They do not understand the ultimate source of the wealth of nations: the improvement of human resources, the conservation and expansion of natural resources, the building of plant and tools to the full limits of technology—and, most important, the full employment of the people.

What could the attainment of these goals mean to America in the next 5 years?

If we brought our economic growth up to proper rates, and avoided a repetition of our limping progress over the last 5 years, we would, in the next half decade, produce an extra $400 billion in goods and services.

We will have the benefit of more than 16 million man-years of productive employment.

The average family would enjoy $6,000 more in income.

And local and State governments, together with the Federal Government, would have the use of an added $70 billion in revenues with which to meet the needs of a growing population.

We cannot attain these goals without looking ahead and planning for the future, setting targets for ourselves and devising programs to meet them.

So far as I can see, this Republican administration has only one goal: to balance this year's budget. That one shining goal seems to blind our national leaders to any grander goals for future years.

Mr. Khrushchev must be mighty happy to view this Nation devoid of any long-range goals or aspirations, to hear America's leaders assert that a free people cannot look ahead as a nation, cannot translate their aspirations into bold targets, and cannot call upon their unique combination of free enterprise to meet these targets.

I do not believe in an all-powerful centralized government. But I do know that our Federal Government is, or should be, a great instrument of the whole American people. I do know that it is, or should be, an effective single mirror of their yearnings and servant of their needs.

The Thirteen American Colonies recognized that they could survive only as one Nation. Lincoln put the holding together of the Union above all other objectives. And Franklin D. Roosevelt, in the time of the great depression, was able to bring home to the whole American people that the Federal Government was their Government, and that it bore a bedrock responsibility for their well-being in times of stress.

I cannot believe that we have now come to a time when the Federal Government should become a silent junior partner in the saga of America, or take a vacation.

But that's just what this Republican administration seems to want. They want a caretaker government—not a positive force for progress. They want a custodial government—to keep books and records, not to help make records of social progress.

My friends, the farmer must cultivate his farm well; but he cannot solve the problem of world food prices.

The small businessman must watch his expenditures and his sales and improve his methods; but he cannot protect himself against monopolistic threats, nor survive in a sluggish national economy.

The worker must do his own job faithfully; but he cannot create job opportunity when it is not there.

The average family must try to live within its means; but it cannot do this if its breadwinner is unemployed, and it cannot prosper and advance against a powerful headwind of unfavorable nationwide conditions.

The States and localities have much to do; but they cannot be solvent if their industries and workers are on part-time.

In these times, families and localities and States can be strong only in a strong nation. But a strong nation needs strong leadership. A national administration which tells the people only what they "cannot afford," can never fulfill the role of a leadership which realizes what the American people can do. A national administration which believes in scarcity and stagnation, can never achieve the results of a leadership dedicated to abundance and economic growth.

To resume the progressive evolution in our national life which has been the hallmark of American achievement, we need a new spirit in Washington.

This administration appeals to the people's timidity and their caution.

The times call for a government which appeals to men's confidence in themselves, which challenges them to meet higher goals, and which dares men to dream great dreams.

As the Bible tells us, "If the trumpet gives an uncertain sound, who shall prepare himself to the battle?"

Our responsibility to ourselves and to the world is such that we must act with greatness. No people has ever risen to greatness without being called to greatness.

The tragedy of these years is that the voice that should summon us is silent.

The Search for Water in Arid Regions

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. KEFAUVER. Mr. President, in our search for a solution of our domestic and international problems here in the Congress, it might appear at times that we fail to recognize the individual efforts of scholars and scientists who work toward these same goals.

I should like to call attention to Mr. Olindo Romulus Angelillo, an American consulting engineer and scientist.

Mr. Angelillo only last week was highly honored by two great Italian universities for his study on the practical possibility to expand the normal horizons of preparation, conducting an economic utilization of hydrogeological researches and exploration of water from rock fissures,

Mr. Angelillo received the medals entitled Galileo and Curtatone from the University of Pisa. He also was awarded the gold medal of the University of Padova. Both of these were singular honors.

The search for water in arid regions of the world most certainly deserves the attention of this Nation and of all nations.

As Mr. Angelillo said in his lecture before faculty members and students of the Universities of Pisa and Padova:

Water will provide the means for those in the regions of the world less endowed by nature, to have new hope and to make further progress in dignity.

After considerable research, Mr. Angelillo has concluded that a vast underground supply of water is available to arid countries if they follow his principle of the exploration of water from rock fissures.

Following his lectures in Italy, the hope was expressed by Mr. Angelillo, and by responsible faculty members of the two universities, that there be established an international foundation to be known as "Galileo Galilei" in honor of the father of science. This international foundation would develop through research the location, development, production and utilization of especially deep flowing waters beneath arid regions.

Such a foundation would coordinate the scientific disciplines of the Universities of Pisa and Padova, as well as major institutions of advanced thinking in the United States and elsewhere.

This is a project of vast magnitude, and one which, it is hoped, will be marked with full success.

I ask unanimous consent that the attached papers be printed in the Appendix of the RECORD at this point in my remarks.

There being no objection, the statement and letters were ordered to be printed in the RECORD, as follows:

ADDRESS BY MR. OLINDO ROMULUS ANGELILLO, MAGNIFICO RETTORE OF THE UNIVERSITY OF PADUA, PADOVA, ITALY

Egregio Rettore, thank you for the privilege of highest liberty accorded me to present the charts that set forth my studies and interpretation of the geohydrology of the Mojave Desert in California.

The approach to the location and production of water flowing along deep fractured rocks, termed rock fissure acquifers, required consideration and coordination of fundamental data contributed by each of the several scientific disciplines.

I can best set forth this significant fact by relating my experiences at your historical University of Padua.

At the conclusion of an examination of the Mojave charts under the conference chairmanship of Professor Del Nunzio, Professor Marzolo and Professor Ghetti took me to the Galileo Room and to the Morgagni anatomy amphitheater and thereafter to the Senato Accademico salon; where while facing the busts of both Galileo and Morgagni I said: "By proceeding along the path to which these great men guided us we should succeed in the quest for water thruout the world."

Professor Marzolo repeated the question he asked me in the Morgagni anatomy amphitheater:

"Do you believe that the fractures within the crust of the earth are interconnected?"

My answer was "Yes; and that we will so find it; provided we fully understand the motion within the earth itself."

A study of your hydrological field models shows how the underlying formulations, as a result of the processes of deep underground water, occasioned the swing of the lamp for Galileo to observe, as this lamp became a most extraordinary instrument to register the motion within the earth itself.

In a like manner the waters, which your professors suggested I inspect at Abano, brought forth in bold relief that which is intended by the term "the behaviour pattern of waters flowing along interconnected deep rock fissures." A system similar to the anastomosing system defined by Morgagni. This is only fully indicated by the observed evidences at your large scale field hydrology models constructed to study nature in its wholeness.

I was gratified by the manner in which your continuing uninterrupted contributions to the science of hydrology during the past eight centuries became living present in our discussions with Professor Tonini and Professor Harzolo at Abano.

I was pleased to note at your institute laboratories as well as at your field laboratories the scope of your researches, such as:

1. Your study of entrained gases in water and their effect upon the precipitating tendencies of water.

2. The study of that fluid state between water and gases while water is in an imbalanced equilibrium.

3. Your study of rock cavitation, a problem of prime importance in the understanding, of the action of deep migratory water.

Also of promise are your studies of the many characteristics of snows and glacial-snow hydrology.

All this work together with your studies of massive hydrology should contribute much to the practical recognition of time and changing patterns in the subsurfaces of the desert areas.

I was particularly impressed by your field studies of turbulences, profiles, and flowage behavior which approximates the cascades in rock fissures, either displaced or contorted by crustal disturbances.

Your planned studies of the deserts of the Middle East merit my highest commendation for its clear openminded approach; which is the result of your centuries of experience in the multipurpose utilization of water.

I am confident that the methods with which you pursue the quest for facts through research, is an assurance to humanity that there is now, and that there will continue to be an enthusiastic dedicated leadership able to resolve the integrated hydrological problems with respect to the availability of an adequate supply of water in arid regions.

It will be only as a result of the fullest application of your eight centuries hydrological knowledge that will give accessibility to the many continuing replenishing sources of water flowing deep beneath the less endowed arid regions of the world.

Your history since Galileo's pupil Benedetto Castelli (1511–1643) and Domenico Guglielmini (1655–1710) gives hope that the door to deep rock fissure water will be opened. This hope will give to all mankind the opportunity to build an enduring foundation for the peace with dignity.

REPLY OF IL RETTORE OF UNIVERSITY OF PADOVA

PADOVA, 5 MAGGIO 1959.

Mr. O. R. ANGELILLO,
Consulting Engineer,
Los Angeles, Calif.:

In view of your gracious visit during the last few days at the hydrological laboratories of this university, I am pleased to receive your statement.

I am also happy that you have initiated the suggestion of an international foundation, Galileo Galilei, whose purpose is to develop through research, the location, development, production, and utilization of especially deep flowing waters beneath the arid regions. Such scientific progress will be a contribution to the peace of the world.

Our university is grateful and happy to be enlisted in the cause, and as a Galilean University to assume responsible leadership in scientific research with respect to the Mediterranean regions and Middle East including India.

This is to confirm the fact that the University of Padova will be happy to make its appropriate scientific contribution in the development of such a program, with particular reference to such disciplines as geophysics, meteorology, snow and glaciology, hydrology, geotectonics, all directed toward the utilization of water for agricultural and domestic purposes.

To this end there will be devoted the scientific skill and experience of our scholars to accomplish the practical objectives.

This activity will be undertaken by an approach of coordinated scientific disciplines on the part of this and in cooperation with other universities of Italy and the entire world, in order to realize the maximum advantages of teamwork of comprehensive scope.

In brief time we will present a program to set forth what be required to attain the results hoped for.

As a token of recognition of your evaluation of the concepts of Galileo and your contribution to create a foundation for the true peace of the world, the University of Padova is happy to confer upon you a Gold Medal of Merit.

GUIDO FERRO,
Il Rettore.

Helping Satellites Become Free

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 12, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared recently in the New York Herald Tribune regarding the bill which the Senator from Vermont [Mr. AIKEN] and I have introduced to amend the Battle Act. I believe this editorial states most effectively the reasons which make this change in the law compelling.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Apr. 15, 1959]

HELPING SATELLITES BECOME FREE

A bill being introduced in the Senate today by Senators AIKEN and KENNEDY, with administration backing, deserves wide support and quick passage.

The bill would make it possible for U.S. aid to be extended to countries now bound by the Iron Curtain, if those countries were making a bid for freedom from Soviet domination. Under present law, the United States may aid only nations found not to be controlled or dominated by the Soviet Union. Under the Kennedy-Aiken proposal, aid would be specifically denied only to the U.S.S.R., Red China, and North Korea. It would make it possible for aid to be given to other presently Communist bloc nations on

a presidential finding that such aid would help those nations break free from Sino-Soviet control.

In the self-defeating limits of the present law, we deny ourselves one of our potentially most effective means of weakening the Soviet empire. We force the satellite nations to be dependent on the Soviets. Humanitarian considerations aside, our own national interest demands that we should open every practicable avenue of escape to these captive nations.

We have recognized, and rightly so, the urgent need to counter Soviet economic offensives in the underdeveloped and uncommitted areas. Yet at the same time we have clung to an outmoded law by which we deny ourselves the opportunity to launch an economic offensive in presently Soviet-dominated areas that might show signs of disaffection.

In the global chess game in which we and the Soviets are the principal players, the deliberate limiting of our own strategic initiatives is sheer folly. A bill similar to the Kennedy-Aiken proposal was defeated last year, 43–42. Let's see that it passes this year.

The Crackdown

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article published in this week's Newsweek, written by Ben Bradlee, the Newsweek correspondent, which outlines in clear terms the mobilization of the Teamsters Union against the labor reform bill that recently passed the Senate by a vote of 90 to 1.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CRACKDOWN

In its 2-year drive to rid organized labor of racketeers and corruption, the Senate Rackets Committee has turned up incontrovertible evidence that the biggest union in the Nation—the Teamsters—is also the most corrupt and graft-ridden. Witness after witness took the stand to detail the Teamsters' long record of shakedown, fraud, mayhem, and murder. The Senate committee's exposures led to the ousting of the Teamsters from the AFL–CIO; to the jailing of the Teamsters' ex-president, Dave Beck; to the trial of his successor, Jimmy Hoffa; and to the nationwide cry for labor reform.

As a result, the Teamsters kept quiet while the Kennedy-Ervin labor-reform bill made its way through the Senate (Newsweek, May 4). Chesty Jimmy Hoffa and his boys knew that public sentiment was against them and that AFL–CIO leaders found them despicable. They knew, moreover, that in the U.S. Senate, any lobbyist tainted by association with the Teamsters might do them more harm than good.

But now that labor reform is before the House of Representatives, the Teamsters have moved out of the Capitol Hill shadows. Now, the International Brotherhood of Teamsters is leading the fight to weaken—or kill—any labor bill in this session of Congress.

The Teamsters battle plan has been skillfully drawn:

Jimmy Hoffa himself is to be publicly disassociated from the campaign.

Pressure will be applied to Congressmen only through officials of local Teamsters unions. Many of these local officers are known to Congressmen as "nice guys, and anti-Hoffa," and this suits the Teamsters' strategists perfectly.

As fronts for their lobby, the Teamsters are putting up two of Hoffa's smoothest lieutenants—professorial Harold J. Gibbons, a vice president, and pudgy, affable Sidney Zagri, a Teamsters lawyer. But the man staging the drive from behind the scenes is Hoffa—profane, crafty, and bellicose as ever.

WITH SCRAMBLED EGGS

The key maneuver in the Teamsters plan involves a series of explanatory breakfasts for Congressmen, not at Hoffa's headquarters, but in private dining rooms at the Congressional Hotel, a few steps from the House and Senate Office Buildings. Here is how it works:

Shortly after KENNEDY's bill passed, Zagri wired the officers of Teamsters locals in Kentucky, West Virginia, and Tennessee, notifying them of the time and place of a breakfast, and giving them their instructions. The local officers, in turn, wired their Congressmen invitations to the breakfast, and reminded them of the number of Teamsters in their districts. The local officers then flew in to Washington, and at 8:30 a.m. Friday, they were on hand in the Veto Room of the Congressional Hotel to serve as hosts. But they did not speak.

Instead, after the orange juice and scrambled eggs, Harold Gibbons rose to welcome the guests (nine Congressmen and several aids representing absent Congressmen), and to introduce Zagri, who would analyze the Kennedy-Ervin labor bill from the Teamsters point of view.

A master of low pressure sweet reasonableness, Zagri outlined the Teamsters' principal objections: The ban against hot-cargo contracts (which permit workers to refuse to handle products of a firm that uses nonunion labor), the picketing restrictions, and excessive powers for the Secretary of Labor.

The Teamsters' Tennessee-West Virginia-Kentucky breakfast is but one of many that will be held before labor reform comes to a vote in the House. Similar breakfasts have already been held for California and Pennsylvania. The New York Congressmen will sit down with the Teamsters at breakfast this week. Nick Morrissey of the New England Teamsters Council has invited the New England delegation for May 18. Lawrence W. McGinley, president of the New Jersey-Delaware Council has issued invitations to Congressmen from his districts for May 26.

With every meeting, the Teamsters seem to be gaining support. One Congressman who attended a session, an expert on both labor and lobbying said the Gibbons-Zagri presentation was "probably one of the best lobbying jobs ever done." And though Jimmy Hoffa might be out of sight, his purpose was plain to see. He is moving skillfully and with apparent success, to block any new law that would force the Teamsters to clean house.

More Waste by Defense Department

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. YOUNG of Ohio. Mr. President, a recent editorial, entitled "More U.S. Arms Waste," which was published in the Cleveland News on April 28, 1959, is worthy of study.

The Cleveland News is a leading Republican newspaper in the State of Ohio, and the statements in this editorial appeal to me. In fact, the editorial expresses, in excellent language, my own thinking that we Senators must do our utmost to end the waste of the taxpayers' money.

It appears to me that officials of the Department of Defense are to be condemned for their wasteful policies.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD. I commend the editorial to my colleagues in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE U.S. ARMS WASTE

The Army has let the city of Cleveland know that production of self-propelled 90-mm guns will continue at the Cadillac tank plant until June 1, but that thereafter the plant will not be leased either to the city or private interests. The plant is one of a number of facilities being studied for possible use in a limited or general war for production of armaments.

This was all brought out in testimony before a House appropriations subcommittee. The military spokesman, however, was a bit vague about what the Army had in mind.

Does this mean a mothball process? Some 59 plants are now being held by the Government but produce nothing, thus adding to costs and waste of taxpayers' money.

The worth of these mothballed industrial plants, according to earlier testimony before a House armed services subcommittee, is $1½ billion. Unused plants held by the Army, Navy, and Air Force originally cost $1½ billion, but would cost much more to replace now.

And it is taking more than $31 million a year to maintain these installations which are now lying idle.

Here, if the Federal Government is interested in cost reductions and economy, might be a fine place in which to start a pruning process. We can't believe that holding all these plants is necessary when Defense Department officials have said it is cheaper in most instances to expand private plants than to convert Government-owned facilities.

A House subcommittee is reported to be studying the possibility of eliminating many of these plants or reducing the list of those mothballed. The longer it takes to make these decisions the longer harassed taxpayers are forced to contribute to the armed services' wasteful housekeeping.

Hon. John W. McCormack, House Majority Leader, Honored by Children's Hospital

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. BASS of Tennessee. Mr. Speaker, today I had the rare privilege of attending a most impressive and inspirational ceremony in honor of our great majority leader, the Honorable JOHN MCCORMACK, of Massachusetts. During this cere-

mony, a plaque in recognition of this gentleman's devoted and effective interest and support in behalf of Children's Hospital was unveiled.

It is certainly unnecessary for me to point out this great man's many achievements in the interest of humanity during his long and active career as a public servant. However, I would like to include in my remarks a copy of the speech made by the president of Children's Hospital, Mr. R. B. Swope; a short biographical sketch of Mr. McCORMACK, which was included in a brochure published for this occasion; and, a message to the Congress which was also included in the brochure.

I shall long remember this well deserved honor which was accorded our distinguished majority leader, as his lovely wife and many friends came to pay tribute to his service:

Ladies and gentlemen, may I extend to all of you a warm welcome to what I regard as an especially significant occasion.

We are gathered here to honor an annual member of the hospital. This particular annual member also is a Member of Congress and majority leader of the House of Representatives, the Honorable JOHN W. McCORMACK.

The special significance of this gathering lies in Mr. McCORMACK's dual connection with this institution, as an annual member of the hospital and also as one of the leaders of the group of busy public servants who have the responsibility for governing the great Capital City this hospital was founded to serve.

The issue of our hospital publication, the Arrow, which all of you have been given here today, expresses more fully the thought which I would like to repeat to you now—that this hospital owes a debt of gratitude to Mr. McCORMACK, and through him to all Members of Congress.

That men and women as busy as the Members of Congress take time from crowded schedules to offer us wise counsel, to listen to our problems, and to give us the governmental support that we must have to continue in our mission as a hospital, is to me a great source of inspiration.

It is likely that without the support of Congress this hospital could not survive.

The lobby where we are standing now would not have been possible without financial aid authorized and appropriated by Congress.

Congressional action made it possible to build our new research center. And I am proud to say that our drive for $460,000 in matching funds now stands at approximately $350,000.

These things and many more are in the minds of all of us today as we gather to honor a man who symbolizes the warm relationship that exists between this hospital and Congress. He sets an example of devotion to which all of us might well aspire.

I shall not attempt to recite Mr. McCORMACK's many achievements and honors. Some of them are set forth in a brief biography which also is included in your copy of the Arrow.

I shall simply sum up by saying that in addition to the many, many things he has accomplished during his long and productive career as a member of the governing bodies of his State and country, he has been our unfailing friend to whom we have never turned in vain. And now I am going to ask two of the children this hospital exists to care for if they will please step forward. I believe they have a small token of our esteem for Mrs. McCormack, who also honors us by her presence here today. I am going to ask Cathey Finnigan and Jimmy Weiger to unveil the plaque in honor of Mr. McCORMACK which will always have an honored place here in the main lobby of our hospital.

THE HONORABLE JOHN W. McCORMACK

On National Hospital Day, May 12, Children's Hospital honored the Honorable JOHN W. McCORMACK, House majority leader, a friend of all Washington hospitals and an annual member of Children's Hospital.

Last year Mr. McCORMACK marked 30 continuous years in the Congress of the United States. He was elected in 1928 to fill a vacancy, having won a nine-man contest for the seat.

MAJORITY LEADER SINCE 1940

Mr. McCORMACK first became majority leader in 1940, succeeding Representative SAM RAYBURN upon his election as Speaker of the House. With the exception of the Republican-controlled 80th and 83d Congresses, Representative McCORMACK has held the office of majority leader in each succeeding Congress.

Among those colleges and universities which have bestowed honorary degrees on Mr. McCORMACK are Boston University, Holy Cross College, Boston College, and Tufts College in his home State of Massachusetts. Villanova College, Georgetown University, and Catholic Universeity also have conferred honorary degrees on this outstanding Congressman.

Mr. McCORMACK's church honors include the Order of Malta First Class, the Peace Medal of the Third Order of St. Francis, and knight commander, Order of St. Gregory, with star. He is also a member of the Knights of Columbus.

The House majority leader has been decorated by the Governments of the Philippines, the Dominican Republic, and Italy.

LONGTIME INTEREST IN HOSPITALS

Mr. McCORMACK's interest in hospitals dates from his early career. In 1926, as a member then of the Massachusetts Senate, Congressman McCORMACK introduced legislation to establish a Cancer Hospital in Massachusetts—a State institution to be operated by public funds. Under the leadership of the then State Senator McCORMACK, the bill passed the Massachusetts General Court and was signed by the Governor and became law. The Cancer Hospital was located at Pondville, Mass., and has been in existence there ever since. This is the first public Cancer Hospital in the United States.

During his career in the Congress, Congressman McCORMACK has been one of the leaders in the fight to appropriate Federal funds for medical research, and as the years passed, to increase the appropriations for such purposes. As the Congressman well said on several occasions when an appropriation bill was before the House of Representatives: "There is no better investment we could make than appropriate funds for medical research to bring hope to the sick and afflicted, not only of our country but of the entire world."

A MESSAGE TO CONGRESS

The most valuable resource of America is a child. Without a generation of healthy, happy, well-adjusted children there would be nothing—nothing to work for, nothing to plan for, no one to carry on.

It was the fact that the then existing generation of Washington children was not as healthy, happy, and well-adjusted as it ought to be that impelled a group of Washington citizens in 1870 to incorporate under the name "the Children's Hospital of the District of Columbia."

It is doubtful if any thinking person would contest the statement that Children's Hospital in the ensuing 88 years has made a contribution toward helping its community to possess succeeding generations of healthier, happier, and better adjusted children.

Throughout these years the hospital has healed the sick child if it was humanly possible to do so and has helped to keep the well child well. There are grandparents alive today whose lives would not have been as fruitful, healthy, or happy except for some act of caring on the part of Children's Hospital.

Children's Hospital could not have accomplished these things without the wholehearted support of the Washington community and the wholehearted support of those who govern the National Capital.

In dedicating a plaque in honor of Representative JOHN W. McCORMACK, of Massachusetts, majority leader of the U.S. House of Representatives, Children's Hospital in a very real sense also is paying tribute to the entire Congress of the United States and to preceding Congresses, to whom it has never turned in vain for wise counsel and help in fulfilling its mission.

Children's Hospital is privileged to be one of the Washington health institutions which annually is asked to help care for the increasing burden of poor children who need care but who could not be cared for without the approval of Congress in setting contract rates and providing public funds.

Children's Hospital is privileged to have been one of the Washington institutions that has been given by Congress the ability to grow and play an increasingly important role in the field of public health through such farsighted measures as the Hospital Center Act and the Hill-Burton Act.

Children's Hospital is privileged to be one of the research institutions that receive grants of funds appropriated by the Congress to help in the unceasing fight against ill health caused by little understood or unknown diseases.

Representatives of Children's Hospital invariably have been received courteously and sympathetically by the committees of Congress studying legislation that affects its work.

Children's Hospital owes a debt of gratitude to the busy Members of Congress. We take this opportunity to express our appreciation of their continuing support.

R. B. SWOPE,
President, Board of Directors.

Inflation: Cause and Effect

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. ADAIR. Mr. Speaker, we are all interested and concerned at the prospect of continuing inflation. A recent editorial in the Shelbyville (Ind.) News is illuminating, I think. Therefore, under leave, I include it herewith:

INFLATION: CAUSE AND EFFECT

Almost everyone talks about inflation—and it is certain that everyone is hurt by inflation—but too few of us actually know much about it. Perhaps if we did, then we would be in a better position to fight it, and more inclined to fight it.

A very pointed discussion of the subject was presented recently over the Manion Forum Network by a distinguished American citizen—Charles B. Shuman, president of the American Farm Bureau Federation—and we

think some of his statements are worth careful consideration by us all.

In answer to the question: "What is inflation?" Shuman says "It is simply a constantly rising price level with the resulting decline in the purchase power of money."

He goes on to point out that we are now in the midst of a long sustained period of inflation. "During the last 18 years, the prices of goods and services have doubled in the United States. In other words, the dollar of 18 years ago is now worth 50 cents. * * * The $750 that you invested in a Government bond 10 years ago was the cash difference between your old tractor or your old car and a new one. Today you would need to add more money to the $1,000 from the bond to make the same trade."

Mr. Shuman points out that: "Higher wages cause higher prices which bring on demands for another wage hike and so on until the bitter end. This is inflation.

"Inflation, what does it do to you?

"Constantly rising prices destroy much of the value of insurance policies, annuities, social security, pension and other savings plans for old age. The incentive to save is reduced. Capital for business, industry and agriculture becomes scarce. Unemployment increases because of reduced investments in factories and tools.

"With either gradual or rapid inflation, savers become spenders as they lose confidence in the value of tomorrow's dollar. Young people find their savings for the education of their children or the business they hope to own is destroyed by inflation more rapidly than it accumulates.

"Yes, inflation hurts us all. Inflation is short-changing today's citizens and threatening to bankrupt the next generation. Inflation is the Nation's No. 1 economic problem."

The American Farm Bureau Federation president correctly points out that this short-changing, or failure to receive full value of income dollars, has reached a serious stage when the purchasing power of the U.S. dollar has been cut in half in 18 years. "Worse yet," he states, "if the inflationary trend continues at the present rate, it appears that the dollar's purchasing power will be cut in half again in the next 18 years. If allowed to continue unchecked, inflation could well destroy the value of our dollar, bringing economic ruin to the Nation."

This is just an idea of the effect of inflation. Now, what are its causes?

"Today," he says, "there are two major causes—the continuous round of wage-price increases and excessive spending of the Federal Government."

During World War II, there was a logical excuse for huge Federal budget deficits. But why should they continue for 13 years? Why indeed. As Mr. Shuman also points out, it is easy to spend money, especially when it does not seem to belong to anyone. "Demands by citizens for Federal aid for highways, schools, river dams, slum clearance, airports, and hundreds of other desirable projects, plus additional billions for foreign aid, veterans' benefits, and farmer ACP payments add up to deficit financing and great inflationary pressure. When Government spends more than it takes from the taxpayers, it competes for goods and services and drives prices up with money that has not been earned. Excessive Government spending long has been recognized as an important cause of inflation. Government creates inflationary pressures whenever it spends beyond its income."

As Mr. Shuman says, there are two major inflationary pressures at work, and both are, in a sense, either Government induced or sanctioned. One is the wage-price spiral, "where strongly organized labor asks for and gets increases not necessarily based on increased productivity. Many times," he adds, "industry's resistance to unjustified wage demands is not as great as it should be. Too often, big business and big labor sit across the bargaining table to establish wage rates and selling prices of manufactured products with little regard for the consumer's interests.

"The second pressure at work to cause inflation is that created by Government when it spends more than it takes in, thus competing for goods and services, driving prices up with money that has not been earned."

How to combat inflation? Here are three needs to get the job done, according to Mr. Shuman:

1. Monopoly and price-fixing powers which big labor and big business have today must be curbed.

2. Spending by the Federal Government should be reduced to the level of its income—in short, balance the budget.

3. Citizens must take a greater interest in local and State governmental affairs and improve their ability to perform necessary Government functions at the local level.

The American Farm Bureau Federation president concludes that: "If we do not discontinue the continued pressure of inflation, if we don't set our financial house in order, we strike a serious blow at the structure that has made for success in this Nation."

The Summit Conference

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. SMITH of Kansas. Mr. Speaker, much is being written about the impending summit conference between top men of the United States, Russia, Great Britain, and France. It is generally recognized that at these top level conferences in the past 20 years, the United States has generally come out second best. These conferences began back at Yalta, Teheran, Berlin, and the last one at Geneva, Switzerland.

Recently I received a copy of 10 recommendations that U.S. members should remember when they go to this impending conference. They were received from Robert Welch, head of the Committee Against Summit Entanglements.

I append these 10 items:

The committee respectfully petitions the President of the United States not to attend a summit conference with the tyrants of the Kremlin, for the following reasons:

1. It will further increase Soviet prestige.

2. It will further discourage, and weaken the will to resist, of anti-Communists everywhere.

3. It will play right into the hands of all of the appeasement-minded politicians, and weaken the position of the firm anti-Communist statesmen, in all the governmental circles of the remaining free world.

4. The results of the last summit conference have proved to be huge gains for the Soviets, and huge losses for the anti-Communist forces. We should be guided by this experience.

5. Experience has further and fully demonstrated that any agreements which the Soviets do make will be ignored or broken, as soon as it suits their convenience.

6. The only questions raised or discussed will be as to how far we will give in to Soviet demands. Under such conditions we have all to lose and nothing to gain.

7. The President of the United States is seriously handicapped, in bargaining in any such conference with a man like Khrushchev. The President's commitments are not final, but must later be ratified by the Senate, as is well known to the Soviet Premier, who can himself speak with dictatorial authority.

8. It is an unconstitutional way for an American President to conduct foreign affairs. Treaties must be entered into with the advice and consent of the Senate. Even if retroactive consent is later obtained, both Senate and Executive are violating the Constitution as to the advice of the Senate during the negotiations.

9. Syngman Rhee is correct that "what is morally wrong can never be politically right." It is morally wrong to fraternize with murderers.

10. And Jacques Soustelle is correct that, when dealing with the Soviets, always or on any issue, "to negotiate is to surrender."

The Cause of Human Dignity

EXTENSION OF REMARKS

OF

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. HALPERN. Mr. Speaker, last Wednesday, May 6, I had the great privilege of attending a dinner given by the National Conference of Christians and Jews at New York's Waldorf-Astoria Hotel, in honor of Mr. Louis Stein, president of Food Fair Stores, Inc. Mr. Stein was awarded the National Conference's Brotherhood Award for 1959, in recognition of his outstanding contribution in this most meaningful of all fields of endeavor.

The occasion was a most fitting one for the delivery by the guest speaker, the Honorable James P. Mitchell, Secretary of Labor, of one of the finest and most moving addresses on the unbounded capabilities of the human spirit and man's infinite potential for moral brilliance and grandeur that I have ever heard.

I was so stirred by the spirit and breadth of the Secretary's excellent remarks, entitled "The Cause of Human Dignity," that I felt they should be brought to the attention of all Members of Congress.

The Secretary devoted his text to reaffirming with brilliance and clarity that if mankind is to preserve and advance the great ideals of human freedom and dignity, he must realize that their effective consummation is inextricably interlocked with the duty to strive toward their effectuation. Stressing the moral and economic reasons for the elimination of barriers of prejudice and bigotry, he emphasized that both deep moral values and enlightened national self-interest demand the eradication of discrimination. This challenge, he explained, "is the most important decision facing America today."

Secretary Mitchell's moving thesis reflects so fully the great aims of the conference and is so appropriate to the needs of the times that I deem it an honor to request that it be printed in the RECORD at the conclusion of my remarks, as follows:

THE CAUSE OF HUMAN DIGNITY

(Address by Secretary of Labor James P. Mitchell before the National Conference of Christians and Jews, New York, N.Y., May 6, 1959)

I am happy to be here this evening, to add my voice to the others who have taken this time to honor Mr. Stein.

As you know, Sir Winston Churchill is visiting in Washington at this very moment. It was 18 years ago this coming June that Sir Winston was in the United States on a previous visit; as some of you may remember, he spoke at the University of Rochester, here in New York State. In that speech he presented an idea that has remained with me, and one, I believe, that we here this evening can review with good advantage.

"The destiny of mankind," Churchill said, "is not decided by material computation. When great causes are on the move in the world * * * we learn that we are spirits, not animals; and that something is going on in space and time, and beyond space and time, which, whether we like it or not, spells duty."

For us, of course, the greatest cause is that of human freedom, as it expresses itself in the cause of political freedom, the cause of individual liberty, the cause of human dignity, the cause of freedom from want, and freedom from ignorance, and freedom to worship as one will.

Mr. Churchill, with his customary wisdom, did not relate these things to mere material computation. He did not add up imports and exports, investments and labor forces, industrial plants and agricultural potentials, and give the total of these as freedom.

He related the great causes, rather, with "something going on in space and time, and beyond space and time." He was certain that any computation would fall into a great error which did not account for the accountable, the unpredictable: the creative power of the free spirit.

He perceived that man's greatest causes, today as 18 years ago, arise from the acknowledgement of that spirit.

Some people saw, 18 years ago, that this was the fundamental distinction between the free societies of the Western World, and the tyranny of the Communist world.

So coarse and shallow is the Communist view of man and his destiny that a few weeks ago a Soviet theorist announced that the satellites and rockets of recent years have adequately disproven the idea of God since they reached into heaven and didn't find Him.

I sometimes think that this kind of moral moronity is a greater danger to peace than armed aggression.

You will note, also, that Mr. Churchill's idea of a transcendental destiny is interlocked with the idea of duty.

Having realized what he is, man is obligated to act upon that knowledge.

Certainly our philosophy of life is much more than a structure of thought and logic; it is a pattern for action and plan for activity.

Thus, we in the Western World are presented with this decision—what actions are we to to take in response to our public belief in man's dignity?

Let's start right here at home.

I need not tell a gathering like this how short we are of acting as if we believed in the dignity of all men—both in what we do and what we say within our own border.

We pride ourselves on being a state created to protect human dignity. And we have a long tradition of opportunity here, based upon our early history when every newcomer to these shores found an open road and a wide land.

Now, however, the test of freedom is no longer only whether or not we can provide opportunity to newcomers—but to our own people who are witihn our borders but outside our society, closed off from the full experience of American life by barriers of racial and economic discrimination.

To meet this test, we can no longer rely on wide ranges of open land and new roads through a wilderness.

The old national road to the west, the old Homestead Act, find their equivalents in equal job opportunity in all our plants and offices and mills and mines and ships. The road to new opportunity is no longer a geographic line on a map; it runs through the plant gate to the hiring office, and it may end in the President's office.

But we all know it has barriers, detours, do-not-enter signs for many thousands of American citizens who hope to travel down it. It was not long ago that Jews and Irish immigrants faced these signs. Today the Negro in the South, and in some northern communities; the Puerto Rican on the east coast; the American oriental on the west coast; the American Indian—these stand by the wayside, watching the parade of American progress go by. Their presence is enough to make us suspect that what we say about America and what we do about it are sometimes two different things.

Yet this discrimination is intolerable, not only from moral but for economic reasons as well, reasons that can be proven down to the last decimal point.

Economically, we cannot support our standard of living for an exploding population, and maintain an adequate defense, without making use of all our human resources. We need all the talent, all the skill we can muster, and we need to develop it now.

Let me give you the figures:

There are 100 million more people in this country than there were in 1900. More than 50 million children have been born since World War II. By 1970, there will be 210 million Americans.

Now, note this fact:

In 1970, there will be 20 million people in this country over 65 years of age. That is a tremendous number of people not in the most productive age group. At the same time, because our birth rate was very low during the depression years of the 1930's, there will actually be nearly 2 million fewer 20- to 29-year-olds in our male population in the 1960's than there are now.

Consider what that means in terms of need for skilled manpower, for reviewing our personnel policies in regard to older men and women.

But that isn't all the story. Within those statistics there are important currents and changes which put an even heavier strain on our supply of trained, educated manpower:

The composition of the workforce is changing. We are needing fewer unskilled laborers; in fact, we will need no more to do all the essential jobs in the 60's than we have today. But we'll need 50 percent more professional and technical workers, 30 percent more craftsmen, and 30 percent more semiskilled workers.

Those are the figures. To sustain our present standard of living, to say nothing of mobilizing better the human resources we have in a highly competitive world, we must start now to train and educate all our young people, whatever the color, wherever their parents were born, wherever they may worship, because we cannot be without them.

The low birthrate of the 1930's has produced a generation which will be able to produce enough goods and services for a much larger population only if it is fully used, only if we waste none of our human resources. That is a practical argument which should satisfy even those who have no patience with history—or with humanity—or with religion.

But, although this practical argument is a compelling and convincing one, our stake in broader opportunity is much larger and much more essential to America on another level, and one that is difficult to document.

In the world today there are 20 new nations under the sun. They are something new to history—and they are going through a measuring-up and sizing process, making a careful estimate of the value of friendship, especially when it comes to the two most influential members of the community of nations: Russia and ourselves.

How do we look to them?

Do we look like a society topheavy with the chosen and preferred? Do we look like a society that makes varvelous progress at the expense of the least of us? Is it as Ghandi said to an American visitor inquiring about peace: "Go back to America," Ghandi said, "and when you have learned to treat your Negro citizens as equals, then come talk to me of peace. Until then, I will not listen to you."

In a world in which the educated, opulent white man is in the small minority, just how far do we expect a society to be honored that honors him to the exclusion of others?

It is against that background of world awakening and of domestic economic need that the true stature of the opportunity problem in our Nation must be measured.

The chance to live a decent comfortable life, to enjoy the products of industry and agriculture, to have the protections of medicine and savings, to have open access to the benefits of education and employment, and to worship in the manner that the conscience dictates—that is what the struggle for the world is all about. This is what it boils down to, as an aspiration only for many, many millions, and as a reality for a few lucky ones. How we conduct ourselves in the pursuit of these goals, whether selfishly or selflessly, is the most important decision facing America today.

One might think that there are few occasions for a practical pursuit of our duty; as a matter of fact, almost every day is an occasion.

A great number of writers have, for a long number of years now, tried to write about what they call "the American experience"—trying to define it, to analyze it, to picture it. I think, in the end, it is this—a feeling of respect for each and every fellow human being, knowing in our hearts that there really is something going on in space and time which has to do with the human spirit, and knowing in our hearts that we have a duty because if it.

Thank you.

What We Give and Get Back

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. SPRINGER. Mr. Speaker, I attach herewith a very thoughtful editorial from the Decatur Herald, Decatur, Ill., of May 10, 1959, with reference to a survey of the Congressional Quarterly on Federal-aid grants. This is a nutshell

résumé of Illinois and what it can expect to derive from Federal-aid grants—and also what it will pay in taxes to get its proportionate share returned to the State of Illinois and its municipalities.

The editorial follows:

WHAT WE GIVE AND GET BACK

Illinois is not among the favored States in the distribution of Federal aid grant funds.

A compilation of aid payments to States, made by Congressional Quarterly, shows the State receives a smaller proportionate share of funds from the Federal Government than the proportionate share of Federal taxes collected in the State.

Actually, the total returned to the States through grants in aid is less than 10 percent of the total Federal tax collections.

Congressional Quarterly's compilation shows $7,420,770,000 returned to the States in 1958 as compared with total Federal tax collections of nearly $80 billion.

Illinois received about $285 million in grants and paid the Federal Government $6,478 million in taxes.

This made Illinois sixth among the 48 States surveyed (Alaska hadn't been admitted yet) and third in taxes paid. The Illinois figures are roughly comparable to those of Ohio, a State slightly smaller in population.

In percentages, Illinois provided 8.1 percent of the taxes paid into the Federal Treasury by the States and received 3.8 percent of the grants to States.

The largest category of grants came in the form of highway funds ($57 million), old-age assistance ($41 million), veterans' readjustment benefits ($31 million). Other categories of Federal aid include Air Force and Army National Guard, soil bank payments, aid to dependent children, unemployment compensation, and agricultural conservation.

Generally, big industrial States such as Illinois account for a much larger proportionate share of the Federal tax collections and receive a smaller proportionate share of the grants in aid.

The highest per capita return in grant money ($150) went to Wyoming. Illinois' share in the "largesse" from Washington was $29 per person, not much more than the lowest per capita payments ($21) to New Jersey.

Of course most Federal expenses are for services (such as the Armed Forces) not duplicated by the States. But the figures above give a much clearer meaning to the term "Federal aid" so often sought after by State and local governments.

Credit Unions—Bulwark of Economic Democracy

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. HECHLER. Mr. Speaker, credit unions are economic democracy in action, as I indicated in the following statement which I made this morning:

STATEMENT OF THE HONORABLE KEN HECHLER, FOURTH WEST VIRGINIA DISTRICT, PRESENTED TO SUBCOMMITTEE NO. 3, HOUSE COMMITTEE ON BANKING AND CURRENCY, MAY 12, 1959, ON H.R. 5777 AND RELATED BILLS TO AMEND FEDERAL CREDIT UNION ACT

Mr. Chairman, on behalf of over 36,000 credit union members in my home State of West Virginia, I wish to express my support of your bill, H.R. 5777.

I know your committee is aware of the great progress credit unions have made since the first one was established half a century ago in the United States. And I would like to commend you, Mr. Chairman, for your untiring work on behalf of credit unions in the quarter century since the passage of the Federal Credit Union Act of 1934.

As time and experience move along, the 1934 act needs strengthening. Exactly 9 years ago this month, I was with a great champion of credit unions, President Harry S. Truman, when he dedicated Filene House in Madison, Wis., to the memory of the Boston merchant and philanthropist who did so much for this movement. But since that day in 1950, as in other fields in the mid-fifties, we have not made the bold progress of former years.

I believe, as proposed in H.R. 5777, that Federal credit unions should be permitted to invest in the shares of central credit unions. I would also like to see the limits on certain types of loans raised, including the limit on unsecured loans, and I believe it would be wise to extend loan maturity from 3 to 5 years. The limit on unsecured loans should be increased from $400 to $1,000. After all, we know that since 1949 the purchasing power of the consumer dollar has decreased, and a $1,000 loan today would barely exceed the purchasing power of a $400 loan made in 1949.

It is for the welfare not only of individual credit union members, but for the entire economy of our country, that I support this legislation. In making these statutory changes, we are only taking note of the changes which have occurred in our economy—changes which, in most instances, have had their most telling effect upon the little man, the wage earner and the white-collar worker.

Mr. Chairman I believe deeply that the strength of our way of life lies in the fact that you and I and a majority of the Congress and the American people are convinced that freedom of economic opportunity is essential to our survival. Freedom of economic opportunity can only be achieved if we are concerned with the protection of that freedom for the little people—because we know that the big boys can take care of themselves.

Now credit unions are one of the best examples of economic democracy in action, for the benefit and protection of the little people, and we ought to do everything in our power to strengthen them. The people need a source, a safe source, from which to obtain small loans at low interest rates without turning to loan sharks.

In these days when we hear and read so much about Government expenditures and taxes, it is refreshing to recall that the Federal Credit Union system under the Department of Health, Education, and Welfare does not cost the American taxpayer a red cent, and is self-sustaining. And we have an opportunity by passing H.R. 5777 to strengthen the whole system without spending any more money.

Several weeks ago, I had the honor to be invited to address the annual luncheon of the West Virginia Credit Union League, in my home town of Huntington, W. Va. I expected 30 or 40 hardy experts to be present, but I was amazed when 130 credit union officers from all over West Virginia turned up at the luncheon. Since they had been getting a steady diet of credit union facts for 24 hours I told them I'd talk with them about outer space and the work of my Committee on Science and Astronautics. I've never had such an attentive audience and while they listened to me talk about outer space they indicated by their questions that they had their feet on the ground. Finally, I did slip over a few remarks about credit unions, and I pledged my support for H.R. 5777.

This morning, Mr. Chairman I am here to redeem that pledge. For West Virginia, for the economy of the country and for the average man everywhere, I hope you will use your efforts to secure the enactment of this worthwhile legislation.

Congratulations to the New Government of Laos

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. POWELL. Mr. Speaker, I wish today to greet the Kingdom of Laos, Prince Souphanouvong and His Excellency, Ourot R. Sovannavong, Permanent Representative to the United Nations. I take this opportunity, also, to congratulate the new Laos Government, presided over by His Excellency, Phoui Sananikone. This Government, whose policy is one of restriction, austerity, and order, has set itself a hard and definite objective which can be summed up as follows:

First. Fight against Communist infiltration and development in the kingdom.

Second. General reorganization of the political, economic, financial, and social fields.

Third. National recovery.

The task of stabilizing nations newly emerged from colonialism is an immense one which we of America too often fail to appreciate. For, as His Excellency Sananikone states it:

> Yesterday, we had to work out the reunification of our motherland and the reconciliation of all the Lao peoples. Today, our goal is to safeguard our independence and our newly achieved unity by protecting them against the most terrible evil that threatens them: Communism.

His Excellency, Phoui Sananikone, emphasized that the government program rested on the following basic principles:

First. The fight against extremist ideology.

Second. True unity and independence of the Kingdom.

Third. The well-being of the Lao people and respect for the regime while seeking to promote education and medico-social welfare even to the most desolate regions; and to contribute to the maintenance of peace through a strict policy of neutrality within the framework of the principles of Panchasila and of the Charter of the United Nations.

In addition to the above enunciated policy of Laos, His Excellency pointed out that in the area of economic and financial policy the country's objective is the economic development and full exploitation of the country's national resources. In this latter regard, he pointed out that his government supported an all-out drive in favor of both foreign and local investments.

His Excellency deserves the commendation of leaders of this country for his announced policy and for the resistance

he has maintained against Communist infiltration. It was his forthright leadership that saved that nation from being overrun by the Communists last year. But for the $48 million in United States aid which tiny Laos received in 1957, the Communists might have rolled up an added victory in Asia and have now been in possession of another beachhead there.

Though determined to define itself, Laos wishes to remind its friends everywhere that it is traditionally a peace-loving country with only one wish to rebuild its economy severely damaged by war and lift the level of its people on all fronts. Again, I wish to salute the tiny country for its determination to be both free and peaceful.

National Association of Plumbing Contractors Will Hold 77th Convention in Florida

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. HALEY. Mr. Speaker, one of the great trade associations in the construction industry, the National Association of Plumbing Contractors, will have its 77th annual convention and its 1959 National Plumbing-Heating-Cooling Exposition in Miami Beach, Fla., May 31–June 4, 1959.

There is an excellent reason why this splendid trade association is meeting for the first time in its long history in Florida, and that reason, Mr. Speaker, is because its president, John M. Rhoades, has been successful in his strenuous endeavors to bring this outstanding conclave to Florida.

The president, John M. Rhoades, of Sarasota, Fla., is one of our most respected citizens. He has built a fine business—a credit to himself and his profession. He is not only a successful businessman, but also a thoughtful, constructive, and progressive contractor.

Mr. Rhoades was born in Lakeland, Fla. He attended Georgia Tech and served region 4, Federal Public Housing Authority, as a mechanical engineer in Atlanta, Ga., during World War II. He is president of the John M. Rhoades Co., in Sarasota.

In association work, he served three terms as president of the Associated Plumbing and Mechanical Contractors of Florida, and is secretary-treasurer of his local association. He has been active in the National Association of Plumbing Contractors for the past 12 years, serving as chairman of the conference, sanitary, and sanitation committees, and as a member of the convention auditing, industry development, policy and interindustry liaison committees. He served on NAPC's board of directors in 1952–53 and was elected second vice president of NAPC in 1956.

He has been associated with the plumbing busines in Sarasota, Fla., for the past 34 years. A member of the Episcopal Church of the Redeemer in Sarasota, he is also a Kiwanian and an Elk. A 32d degree Mason, he is a member of the Egypt Temple Shrine in Tampa, and Samoor Grotto and Scottish Rite Club in Sarasota.

I wish to take this opportunity to join with my fellow Floridians in congratulating President John M. Rhoades and the National Association of Plumbing Contractors on 77 years of achievement and service to its membership and to the construction industry. My best wishes go to President Rhoades and the NAPC for a most successful convention and exposition in Miami Beach within the next few weeks.

Federal Administrative Practice Act

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. FASCELL. Mr. Speaker, I have reintroduced today a bill I was privileged to cosponsor during the last Congress, entitled the "Federal Administrative Practice Act."

This is a major and comprehensive piece of legislation which would implement proposals advanced by the American Bar Association after intensive study and independent evaluation of current administrative procedures and practices.

Mainly, the bill does four things. It would establish at interagency level the Office of Federal Administrative Practice which would be the vehicle through which badly needed coordination and direction of procedures and practice on matters of concern to all governmental agencies would be accomplished. The bill would provide new and improved procedures for the selection, appointment, and administration of Hearing Commissioners. The bill seeks to increase the efficiency of the Government legal services by establishing for the first time a legal career service for civilian lawyers in Government which would serve not only to attract the more capable and talented lawyers to Federal service but would provide incentive and encouragement so desperately needed to keep them in Government service. The final major purpose of this bill is to assure all persons the right of representation before Government departments and agencies by both attorneys and qualified lay persons, the bill would assist attorneys around the country by providing for centralized admission to practice; at the same time, it imposes standards of conduct upon these representatives, and contains a provision for adequate disciplinary proceedings.

During the last Congress, reports were requested from 26 Government departments and agencies. The reports have been received, most of them in support of the general objectives of the bill, some in support or in opposition to some parts of the bill, and most of them suggesting amendments to the legislation.

I respectfully submit that with the ever-increasing amount of administrative practice within Government circles, there is a great need for a thorough congressional study of this field to bring up to date and to improve the legal procedures and services of all of our Federal departments and agencies, some 70 in number. My bill seeks to simplify and modernize these procedures, to make them more uniform wherever that can be done, to encourage able lawyers to enter Federal service as a career, and to assure our citizens that they will receive fair and impartial consideration at hearings conducted before truly independent hearing commissioners.

Each of us in Government and all of our citizens have an interest in this proposal. I hope the Committee will see fit to schedule consideration of this legislation in its agenda this year, so that full testimony and study can be given this subject and all suggested amendments carefully reviewed, to the end that our vast governmental operations in this field are improved and modernized in the best interest of our citizens and the legal officers of our Federal Government.

Deficit Spending Means More Inflation

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. MACK of Washington. Mr. Speaker, continuation of unbalanced budgets means more inflation which is another way of saying means a dollar of constantly shrinking value. The present day American dollar compared to the dollar of 1939 now will buy only 48 cents of merchandise.

Today's 48-cent dollar, unless Federal budgets are balanced, may become a 24-cent or even a 10-cent dollar.

The wise thing for Congress to do is to balance the budget and keep it balanced. That is the way to end inflation.

The following article by columnist David Lawrence tells the dangers inherent in unbalanced Federal budgets:

THE PEOPLE WILL HAVE TO MAKE A CHOICE—BUDGET BALANCING, DEFICITS, AND THE THREAT OF PRINTING-PRESS CURRENCY

(By David Lawrence)

WASHINGTON.—It's hard for the average man to realize just what is involved in Federal budget balancing and in the increases in Treasury deficits.

At a National Press Club luncheon the other day for Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, this question was asked with reference to the drop in the purchasing power of the dollar from 100 cents in 1939 to 48 cents today:

"If I have only a 48-cent buck in my pocket, haven't I got 48 cents more than I had in the depression?"

Dr. Saulnier replied that nobody now is much concerned with 1939 except historically, and then added pointedly:

"I'd like to protect your 48 cents, you see, from now on."

This is a simple statement of a dilemma that faces the American people. Do they want to see the dollar decline still further in purchasing power so that the 48 cents they have today would before long be cut down to 24 cents?

A LIVE TOPIC

The drama of money—the threat of printing-press currency—is not yet a subject of popular discussion. But among those whose business it is to deal in Government securities—a man, for instance, like Aubrey G. Lanston of the New York firm which bears his name—the topic is very live. Lanston, speaking a few days ago before the Cleveland Society of Security Analysts, said:

"I think it will become plain that the people of this country will have to make a choice, some time over the near future, either by positive action or through default.

"They can force Congress to administer Federal finances in a responsible way—something we have urged other so-called less advanced countries to do—or we will end up, first, with selective controls of a mushrooming character and, ultimately, with a chaotic breakdown in our economy.

"The financial irresponsibility on the part of the Government has created a series of deficits that have been financed by commercial banks. No matter what you have read to the contrary, that is the fact.

"Further, it seems inevitable that the commercial banks will be obliged to absorb whatever deficits develop from here on. It also seems likely that the increase in the Government-security holdings of commercial banks will enlarge by somewhat more than the amount of future deficits, because the banks will be the only major buyers left.

"Therefore, the banks also will have to absorb whatever Government securities are sold by others.

"This kind of frenzied public finance poses a serious threat.

"We should recognize now that the number of spending measures that have been, or will be passed between now and the close of the 86th Congress, call for increased Government spending for fiscal 1961 and for later years, too.

"AN UNHAPPY PROSPECT

"The prospect of another deficit—for fiscal 1961—coming on top of a deficit for fiscal 1960, and all those that have preceded these, could produce some substantial, unstabilizing, psychological repercussions. The nonchalant, fiddling attitude of Congress—as a whole—toward a balanced budget for 1960 may be building a base for explosive developments later on."

These are significant words from one of those persons who normally speak in the most restrained phrases about Government finances.

SHORT TERMS FAVORED

Lanston's concluding advice to the public might well be pondered by those Members of Congress and others who have been ridiculing the idea of a balanced budget. He said:

"Here is the way I look at the picture: I can see no point in investing in the lowest yielding credit of all—United States Treasury securities—at long term in a background wherein the purchasing power of the dollar has been depreciating and seems likely to continue to depreciate. * * * Therefore, the best buys in Government securities are those that are short in term."

But what is this going to do to the Treasury, which has to sell for cash somewhere between $11 billion and $12 billion in Government securities during the present calendar year, to say nothing of refinancing the many billions of other previously issued securities which come due in the next 18 months?

When will Congress realize that the Treasury Department's task is of transcendent importance to the American people and the future of the whole economy?

The Cruelest Tax

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Evening Tribune, of Lawrence, Mass., on May 7, 1959, about the important matter of inflation:

THE CRUELEST TAX

The cruelest tax in the United States hits Americans in the low income brackets most heavily. It is called inflation. Increased Federal spending, which liberals insist has the purpose of aiding people of limited means, actually makes daily living much more difficult for these citizens. This is a highly important point.

Incidentally, Sylvia Porter, whose daily syndicated column appears on this page, wrote a series of articles on blame and remedies as far as inflation is concerned. It starts Friday and it concerns some of the top experts assembling in conference to find solutions to this Nation's key public problems. Inflation must come close to heading the list if it doesn't already occupy that position.

For the man-in-the-street, in Lawrence or in Los Angeles, inflation represents a kind of creeping paralysis. He can't juggle his investments to compensate for the higher cost of living; he hasn't got any investments except, possibly, a home and life insurance policy. And inflation makes maintenance of his home increasingly difficult and reduces the value of his life insurance.

Constantly rising prices destroy much of the value of insurance policies, annuities, social security, pensions and other savings for old age.

The incentive to save is reduced. Capital for business, industry and agriculture becomes scarce. Unemployment increases because of reduced investments in factories and tools.

Parents find the money saved for the education of their children is destroyed by inflation more rapidly than it accumulates.

The high cost of living affects entire communities as well as individuals. Real estate taxes rise as cities seek funds to carry on municipal housekeeping. Every item a municipality buys is boosted in price by the pressure of inflation. Thus, homeowners find it more and more expensive to maintain their homes and to get free of whatever indebtedness they may face. Money that a homeowner would use to discharge a mortgage must be turned over to the Federal Government. We can see all this right in our own area.

There is almost no end to the list of fields in which the Federal Government is handing out funds. The way that Americans are paying is through inflation—and history tells us that inflation has caused more human misery and suffering than anything short of war, famine and pestilence. In brief, it is a matter of returning to a sound economy or suffering the consequences.

If it is allowed to continue unchecked it can bring economic ruin to the Nation.

You have watched inflation corrode the dollar in your pocket year after year. You have a right to demand that every dollar is well spent and fully accounted for, and to ask that the unneeded dollar is left in your pocket.

If you don't think the job is being done as well as it should, use your citizen's privilege and make your voice heard. Maybe with some sharp prodding from you, our watchdogs in Washington will do more than bark at shadows. Maybe we'll get the sound, sensible, sizable savings we're entitled to have in this continuing battle with inflation.

On Inflation

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks on the important subject of inflation, I wish to include a factual editorial from the Poughkeepsie New Yorker bearing on the so-called price notification bill.

You will note that this deplorable situation is attributed to four major items—taxes, wages, raw materials, and Government deficit financing. The second and third items are surely akin and while I am unalterably opposed to higher taxes, the fact remains that it has been a long time since we have had a substantial tax increase at the Federal level. And so there remains a choice between high wages and deficit financing or possibly a combination of the two.

The Poughkeepsie New Yorker editorial follows:

RIGHT PROBLEM, WRONG ANSWER

Nobody likes high prices. That's why Senator JOSEPH C. O'MAHONEY, Democrat, of Wyoming, has a chance of getting his price notification bill passed.

Something needs to be done about high prices, but it's even more important to do the right thing. This bill might look as if it would stem price rises. But it couldn't, and it would probably even keep prices up. Here's why:

This bill provides that certain businessmen would have to give 30 days' notice before raising prices, and then explain to the Federal Trade Commission in a public hearing why the increases were necessary. After the hearing, no matter what the FTC or the public thought, he could raise his prices.

So, the law could delay a price increase for 30 days, but could not prevent it.

But it could prevent reductions. Who would lower prices on the basis of a temporary drop in raw materials, if raising them when the raw material costs returned to normal would require 30 days' delay and be a Federal case?

Even in sluggish lines like machinery, business changes its prices at least three times a year on the average. In some lines there are changes almost daily. But these changes are not all upward. Among 1,500 products studied, more than two-thirds have had downward as well as upward changes

in the last few years.

Furthermore, the rising cost of living, statistics show, isn't due to manufactured products affected by the bill. While durable goods have gone up only one-tenth of 1 percent and soft goods only 1.5 percent in the last 6 years, the cost of services has risen almost 5 percent. So this bill would have no effect on the prices showing the biggest jumps—haircuts, medical service, laundry, and countless other budget items.

This bill was written on the theory that company profits have been responsible for rising prices. But the Department of Commerce figures show that company profits, both in percentage and in actual dollars, are much less than they were even 10 years ago.

Prices are set to include all costs. Profits are limited by the actions of competitors.

Prices have gone up because of increases in taxes, in wages, and in the cost of raw materials—and because of inflation caused by Federal deficit financing.

The businessman has the least power to do anything about prices. It's silly to try to control prices by controlling him, when he cannot control the costs imposed upon him. It is like writing a price bill making the clerk in the supermarket responsible for the price he stamps on a box of detergent.

Commission on Country Life

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. THOMPSON of Texas. Mr. Speaker, of late we have seen in many of our large metropolitan newpsapers much criticism of the agricultural situation in this country today. It was, therefore, with much pleasure that I read an article by Aubrey Graves in the May 10, 1959, Washington Post about the real tragedy facing agriculture—the possible extinction of the family farmer and the end of a way of life that has become a basic American heritage.

Mr. Graves makes reference to my bill, H.R. 5022, to establish a Commission on Country Life patterned after the one sparked by President Theodore Roosevelt in 1908.

Preliminary hearings in the family farms subcommittee disclosed differences of opinion as to the makeup of the Commission; but there was a general agreement that such a body could at least focus national attention on a disastrous prospect for the rural areas. It goes far beyond the realm of farming and includes an equally serious problem of what to do with the farmer who is unable to earn a living at his chosen profession and yet wants to raise his family in the healthful environment and atmosphere of the country.

The Commission on Country Life is of great interest to those who live in rural areas; however, it should be very carefully considered by urban people and their representatives because if country people are forced to go into the cities to seek a livelihood, the problem will be dumped squarely into the laps of the city folks.

Mr. Graves' article follows:

FINALLY THE FIGHT BEGINS FOR A BELOVED WAY OF LIFE

(By Aubrey Graves, the Squire of Grisby Hill)

"We need the development of men in the open country who will be in the future, as in the past, the stay and strength of the Nation in time of war, and its guiding and controlling spirit in time of peace." (Theodore Roosevelt.)

So concluded a special message to the Senate and House of Representatives dispatched from the White House 50 years ago.

It transmitted the report of a Commission on Country Life which, after holding hearings in 30 communities, blueprinted a better future for the Nation's farmers.

The effect of these 1909 recommendations stimulated improvements in rural health, rural schools and churches, and youth work. It led to formation of the Agricultural Extension Service and gave the background information and understanding necessary for development of cooperatives and farm organizations.

Now, after a half a century, there is need for further congressional action to save the best of our rural values. The factory in the field threatens to supplant family-farm operations. Unless steps are taken now to prevent it, it seems inevitable that large, industrialized farming enterprises, heavily subsidized by Federal price-support programs, will replace independent family units, which rarely receive any substantial help.

Between 1950 and 1954, according to the Census Bureau, 600,000 farm units of 259 acres or less disappeared.

The only place for the family farm, one group is saying, is as an adjunct to industry. Unless you take industry out into the country and let a fellow farm part time, when he is not working in the factory, then he has no future, this bloc contends.

If he doesn't like that prospect, well, then, get off the farm. This, in effect, is what the little man who considers farming not only as a way of making a living but also as a way of life, is being told.

Former Representative Brooks Hays, of Arkansas, isn't buying any of that. "It reminds me," he said, "of what the Indian chief said when a new area was taken into the United States and an agent went out and found the chief with 10 wives.

"'Look, you cannot have 10 wives, you are under Federal law now,' the agent said. 'What do? What do?' the Indian asked. 'Tell them they cannot be your wives,' the agent answered. 'Just pick one and tell the others they will have to go somewhere else'."

"'Umm, you tell them,' the Indian replied.

"The family farmer," Hays said, "is tired of being told to go somewhere else."

On Capitol Hill last week, hearings were started on legislation, introduced by Representative CLARK W. THOMPSON, Democrat of Texas, to help the man on the land cling to his heritage.

"It is significant," said Milo K. Swanton who came halfway across the continent to testify, "that the Communists were not able to substitute their system for the family farm system of Yugoslavia." Swanton operates a 130-acre farm near La Crosse, Wis.

"One of Stalin's bloodiest orgies," he continued, "resulted from his efforts to overcome the tenacious love of soil and home possessed by the Russian peasants."

Swanton said it was "not a matter of trying to hold on to a nostalgic past of the farm I knew as a child, and which I would like oftentimes to go back to. That is gone. I want to strengthen the family farm that we have today and put it into a stronger position to face uncertainties of the future."

"The world," Hays said, has tended to go off and leave the little farmer. He has been left on a hillside, suffering the ravages of erosion. While we have given notable service to the problems of harvesting and marketing, the problems of the farmer's children—their health, education and opportunities—have not received the attention they deserve."

THOMPSON'S bill (H.R. 5022) would establish a second Commission on Country Life, to delve into its trends and influences and to chart a course for the years ahead.

The Highest Tax: Unemployment

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. QUIGLEY. Mr. Speaker, I was among the honored guests at the second annual dinner sponsored by the York County, Pa., Democratic organizations dedicated to the memory of Franklin Delano Roosevelt, last Thursday, May 7, 1959, at York. It was my privilege not only to be among the honored guests, but it was also my great privilege to hear an address by the distinguished and able senior Senator from Minnesota, the Honorable HUBERT H. HUMPHREY. It was an address that I commend to Members of both Houses of Congress, to members of both political parties.

The address follows:

THE HIGHEST TAX: UNEMPLOYMENT

(Remarks of Senator HUBERT H. HUMPHREY, Democrat, Minnesota, York County Democratic Committee dinner, York, Pa., May 7, 1959)

I want to talk about a subject that is supposed to be forbidden to politicians: taxes. (Did I hear a groan in the back row?)

Now before you begin heading for the exits, let me make it clear that I am not going to talk about the taxes that you pay to your county or your State or the Federal Government. The memory of that April 15 deadline is, no doubt, all too vivid in your minds to require any refreshing from me.

But there are other kinds of taxes—taxes the Republicans don't talk about, and don't want you to think about.

Let me tell you what I mean.

Here in York County, I am told that about 1 out of every 10 job-seekers is out of work. Now I consider that a tax of the worst kind, for it deprives the people of this county of things they ought to have.

It deprives the breadwinner of an honest means of earning a living for himself and his family.

It deprives the businessmen of purchasing power that is needed to keep Main Street prosperous.

It deprives York County of badly needed revenues to help conduct the public's business: roads and schools and teachers' salaries and sewers and clean streets.

Yes, unemployment—needless unemployment—is a terrible tax on the people of this county. It is a foolish, wasteful tax.

Pennsylvania is paying the tax of unemployment, too. I am told that almost a half million Pennsylvanians are out of work.

I am also told of the vigorous efforts being made to improve the economic well-being of this State by your fine Governor, Dave Lawrence. I know he will do everything—and I mean everything—within his power to reduce unemployment in the State.

But there is only so much a Governor can do. For unemployment is not just a State problem; it is a national problem.

No State can do well when the Nation is not doing its best.

Unhappily, this particular kind of tax—this tax of unemployment—is not just being paid by the people of York County or Pennsylvania. It is being paid in hundreds of counties across the nation. It is being paid by much more than four million Americans.

Now I hope that no one will breathe a word of what I have just told you about all this unemployment. I'm afraid I have just divulged one of official Washington's best kept secrets.

You know, I sometimes get the impression that the Republicans honestly believe that if they ignore unemployment long enough, and refuse to recognize its existence, that somehow, by some miracle, it will go away.

Every month, the leaders of this Republican administration breathlessly await the latest unemployment figures to be worked up by the Labor Department. If the figures are encouraging, they release them a little earlier than usual—but not before the President, and the Secretary of Commerce and the Secretary of Labor have all issued separate glowing statements telling the country how great the new statistics are going to be.

Now I join with the leaders of this administration in rejoicing at every gain in employment and every drop in unemployment. But when I look at these glowing statements issued by the Republican leaders, I look in vain for some expression of compassion for the millions of families who have no breadwinner. I look in vain for some sign of concern for the hundreds of thousands of families who have exhausted their unemployment benefits and have nowhere to turn.

And I am filled with misgivings and mistrust when I see these Republican leaders juggling with these figures as if there were no human lives involved.

The Secretary of Labor tells us that there will be only three million Americans unemployed by next October. Of course, to the man who's out of a job, "prosperity-around-the-corner" doesn't go very far toward paying the bills or feeding the family.

But no matter—what's important to the Republicans is that the slogan sounds good. Prosperity by fall. Prosperity by October.

What the Republicans don't tell you is that October is traditionally a month of very low unemployment—a month when the figures look the best. But when you take into account the seasonal swings in unemployment, three million in October is actually almost no improvement over what we have now.

But that's not what this Republican administration would have you believe.

Maybe you don't believe me when I tell you that national unemployment is a tax. Well, let me put it in dollars and cents.

Since this Republican administration took office, the American economy has grown only half as fast as it did in the previous 8 years.

That half growth has cost the average American family $3,000 in real income since 1953.

It cost the Nation more than $150 billion in lost production—goods that should have been produced and bought and put in every American home.

It cost the American farmers $30 billion in income.

It cost American businessmen some $40 billion in investment opportunity.

And it deprived State and local governments as well as the U.S. Treasury between $25 and $30 billion in badly needed revenues—money that could have been put to use in building better roads and better schools and more hospitals—and a stronger defense against the Communists.

Now maybe you begin to understand what I mean when I call unemployment a tax.

Let me tell you about some other Republican taxes.

Let me tell you about the tax of Republican inflation. Now in a sense, this is the most remarkable tax of all, for the Republicans have achieved the impossible. They have brought on rising prices in the midst of high unemployment.

As they say on the radio these days, "They said it couldn't be done."

But Humphrey did it—and not the HUMPHREY you're looking at, either. It was a Humphrey named George who preferred a stable dollar to a vigorous economy and got neither.

The Republicans are fond of talking about the sound dollar. It may surprise you to know that the Republican inflation since 1955 has been the most rapid we have ever experienced except under conditions created by war.

How did they do it?

How did they cause recordbreaking inflation during recession?

Well, they did it partly with economic slack, for idle plants and idle men breed inefficiency, and inefficiency means high prices.

But they also did it with some costly economic policies, costly to every American man, woman, and child.

Perhaps the most high-priced of these is the so-called tight money policy. In case you don't know what the tight money policy is, it's what makes it cost so much to borrow money for a car or a house.

Before that tight money policy has run its course, it will have taken about $20 billion out of the pockets of the American people, an average of about $400 per family.

If that's not a tax, I don't know what is.

It's the Republicans who are the taxers of this Nation, for they tax America with unemployment; they tax it with tight money; they tax it with inflation. If you want to go on paying that kind of tax, it can be easily arranged; just vote Republican in 1960.

Personally, that is a prescription I do not commend to my own family, so I hardly feel it fair to recommend it to you. In fact, I am tempted to slip in a suggestion that you vote Democratic.

Now let me tell you about the taxes we can all avoid paying, if we are able to achieve once again the same economic growth we had under President Truman.

If we do that instead of allowing our growth to lag at its present pace, America will gain some $400 billion in total output in the 7-year period from 1958 through 1964.

The average American family will enjoy about $6,000 more in real buying power during that same period.

Federal, State, and local governments will have the use of about $70 billion more in revenues.

Which way will America choose? The way of stagnation? Or the way of growth?

This question is not just important to America. It is important to the entire free world.

America today is challenged, but not merely by Communist growth and expansion. Even if that threat were to disappear—and it will not—we would still be challenged by the knowledge and aspirations of millions of people all around the world.

For the first time in human history, these people know that there exists the means, the know-how to stamp out starvation and to create plenty. They know that the economic and political means can be devised to harness this technology to the service of mankind.

Because of our unrivaled potentials here in the United States, these people's eyes are fastened upon what we do.

To the extent that we do what we can and should, we shall provide an example for others to follow. To the extent that we fail or falter, many will be drawn by the blandishments or yield to the threats of the totalitarian States.

Our influence abroad depends in large measure upon our policies at home. There is no such thing as a forward-looking international policy and a backward-looking domestic policy. A nation which is not in tune with the second half of the 20th century at home, cannot hear the impelling cry of the second half of the 20th century all around the globe.

Nations and peoples overseas, struggling despite pitifully scarce resources to provide full employment, cannot maintain high respect for a nation which tolerates or even cultivates high unemployment.

Poor nations and primitive peoples who cannot afford to do what they need, cannot greatly respect a nation which says that it cannot afford the essentials which its idle resources would easily provide if put to use.

Free nations growing several times faster than we and watching the totalitarian States grow even faster, cannot greatly respect a nation which confuses economic stagnation with economic stability.

Other nations cannot greatly respect a nation which refuses to join them in using some of our surpluses of foods and other materials to help erase a small portion of their staggering deficits.

Nor is our world prestige enhanced when, preponderantly through their own hard efforts, other peoples improve their economic condition, only to have America begin to fear that they will take markets away from us or impair our world trade. Can it do us any good to pretend that we want the rest of the free world to become stronger, if our leadership regards their weakness as the source of our strength?

For international as well as domestic reasons, therefore, America must return to the road of full prosperity, full employment.

One of the great legislative milestones of the postwar era was the enactment of the Full Employment Act of 1946. That law pledged the Government of the United States to devote every resource at its command to assure maximum employment and production for America. It called on the Government to plan for that purpose.

If the present Republican administration has not flagrantly violated that law, it has totally disregarded its spirit. For it has now sat through two great economic recessions, devoting most of its energies to a desperate search for signs of better times, and seeming to place its faith in the song, "Wishing Will Make It So."

There has been no Government thrust for full employment because our Government has lacked that essential ingredient: Presidential leadership.

Fortunately, this has not always been the case. Presidential leadership was not lacking when America heard the words, "We have nothing to fear but fear itself"—words that came from the magic voice of Franklin Delano Roosevelt.

Nor was presidential leadership lacking when the White House was occupied by that man of Independence, who tomorrow celebrates his 75th birthday—Harry S Truman.

Before the war, Franklin Roosevelt devoted his energies to banishing the scourge of a Republican depression and seeing to it that there was a job for every American.

After the war Harry Truman devoted his energies to banishing a time-honored economic axiom: that every war must be followed by a recession.

Under Harry Truman, America adjusted from war to peace, without faltering.

Under Harry Truman, the Congress enacted the Full Employment Act.

Seven years later, as he was leaving office, President Truman told Congress of the true meaning of that act. Let me recall his words for you:

"Full employment means more than jobs. It means full utilization of our natural resources, our technology and science, our farms and factories, our business brains, and our labor skills. The concept of full employment values ends as well as means: it values leisure as well as work; it values self-development as well as dedication to a common purpose; it values individual initiative as well as group cooperation. In the broadest sense, full employment means maximum opportunity under the American system of responsible freedom.

• • • • •

"We cannot afford to be complacent. We cannot assume that henceforth what needs to be done to promote the maintenance of full employment will be done. None of us—regardless of party—should let the idea of full employment generate into a slogan bandied about for narrow political advantage. Like freedom, it needs to be guarded zealously and translated into action on a continuing basis."

Those words of Harry S Truman ring true today. Let every American take them to heart.

People to People in South America

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. PORTER. Mr. Speaker, last November a group was formed to travel through South America as a part of the President's people-to-people program. In this group was Mrs. Oscar M. Ruebhausen, observer for the League of Women Voters at the United Nations. In the national publication of the league, the National Voter, for May 1959, Mrs. Ruebhausen reported on her trip. I commend this report to my colleagues and under a previous consent include it here:

PEOPLE TO PEOPLE IN ACTION

(By Mrs. Oscar M. Ruebhausen, observer for the League of Women Voters at the United Nations)

When asked "How would you like to travel in South America for a month?" I said "Who wouldn't?" My offer came from the Carrie Chapman Catt Memorial Fund, who gave me a grant to represent them and the League of Women Voters on a people-to-people mission under the auspices of International Seminars, Inc.

Last November, 30 men and women representing 25 U.S. organizations set forth to meet South American leaders and discuss mutual problems. The organizations, whose membership totaled over 60 million, were a real cross section. Among us were representatives of groups who sometimes oppose each other's policies, such as AFL–CIO and National Association of Manufacturers. Our first adjustment was to learn to know each other. Many of our group had never talked personally to a labor leader, joked with a Catholic priest, or sat down to eat with a Negro.

Since we were so different, I wondered if in our meetings with the South Americans we would bicker among ourselves over controversial aspects of U.S. policy. This did not happen. The more the United States was criticized by the South Americans, the more our group became a cohesive and friendly whole.

The impetus for our trip came last May after Vice President NIXON's visit to South America when it became apparent that anti-U.S. feelings were rising. We wanted to comprehend the South American point of view.

In our tour of three-day visits to eight cities in seven countries we followed much of Mr. NIXON's route. The pattern in each city consisted of one seminar on economic affairs and one on social and cultural matters with South American leaders who were more or less our counterparts—a doctor for our doctor, architect for architect, farmer for farmer, etc. The seminars were followed by a town meeting to which anyone could come and ask questions.

SE HABLA INGLES

Luckily, IBM had provided us with earphone equipment so that with the help of interpreters we had simultaneous translation. Over 70 percent of the South Americans we met spoke fluent English, but they were highly critical of us for not speaking their language. All we could do was agree.

Another thing which distressed the South Americans was the tendency for North Americans to think of all Latin Americans as being alike. The nationals in each country are proud of their own heritage and don't wish to be lumped together as South Americans. It is certainly true that Peruvians, Brazilians, and Chileans are as different from each other as, say, the Spanish, the Portuguese, the Germans and the Irish.

Another common criticism of the United States was that we are soft on dictators. Again and again we were asked why we gave Perez-Jimenez, of Venezuela, a medal and a visa to our country. Repeatedly we were asked why we gave arms to Batista, of Cuba, and Rojas Pinilla, of Colombia, which they in turn used to kill their own people. It is ironic that we in the United States worry that South Americans will turn to dictatorships while they worry that we are too friendly toward dictators.

INFLATION, CROPS, BABIES

Although South America does have serious political and social problems, the overwhelming difficulties are economic. Practically all countries suffer from galloping inflation. In the United States the cost of living has risen nearly 25 percent in 10 years, but in Chile the rise is that much or more every year. Since self-imposed austerity programs and higher taxes are always unpopular remedies for inflation, many Latin countries look to "somebody else"—the United States—to help rescue them. They want a bigger share of U.S. loans and private investment, and fail to realize that our efforts to stabilize the economies of countries in other parts of the world also benefit them.

The other serious economic problem of South America is that so many countries are dependent on one crop, whether it be oil in Venezuela, copper in Chile, or coffee in Brazil. When the price of this commodity falls or when the United States imposes trade barriers, financial loss is extreme. When we protect a special interest which may provide one percent of our national income, we are likely to hurt a South American industry which may provide 80 percent of its income. The protection gained is hardly commensurate with the injury inflicted.

In our travels we saw the need for more production, more food, more schools, more everything. South America has the fastest growing birth rate in the world. Its population has trebled in the last 50 years and will do so again in the next 50 years. Although keeping up with its babies is a real struggle, South America is a rich area with many resources to develop.

HANDS ACROSS THE EQUATOR

Along with our discussions of South America's opportunities and difficulties went a great deal of friendship and hospitality. They are a warmhearted people who will turn themselves inside out to extend friendship.

I had the opportunity of visiting many of the women's groups which had been assisted previously by the Carrie Chapman Catt Memorial Fund. Although there are no counterparts of the League of Women Voters, the existing organizations have similar questions. Over and over again I was asked how a group raises money, gets and keeps members and organizes committees that will work. Although women have the vote in all the South American countries but Paraguay, and do serve in the legislatures, most women are not supposed to concern themselves with political issues. Their status is more that of U.S. women in the 1920's whose interests were largely in the field of women's rights with an emphasis on education and social welfare.

However, these women deeply appreciated our coming, and one of them put her thoughts in a touching way when she said, "It comes inside to my heart to be thanking you for making a so big traveling for a woman at woman look and talk and feeling of friends." I wish I could have expressed the thought as well in her language.

Poison in Your Water—No. 75

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Washington Post and Times Herald, Washington, D.C., on January 22, 1958, entitled "Pollution High in Northern Virginia."

The article follows:

POLLUTION HIGH IN NORTHERN VIRGINIA

(By Ralph Reikowsky)

The Capper-Cramton money was designed for the purchase of land along certain streams which drain northern Virginia. Instead of park land which could help carry off high water, Northern Virginia has flooded basements.

Consultants have told Fairfax County that a costly flood control program will be necessary if subdividers continue the practice of building homes on flood plains. Such a flood control program would be a sinkhole which would eventually swallow up millions of dollars more than a modern park system would have cost, consultants predict.

To complicate the problem further, every stream valley designated for parks in the Capper-Cramton Act, and in fact every stream valley in the area except Colvin and Cub Runs in western Fairfax County, is heavily polluted. While this pollution exists, planners feel it is doubtful if the NCPA would approve, or the localities would desire, the development of parks along the streams. Health experts have told northern Virginia planners the life of every person playing in them would be in jeopardy.

REGIONAL APPROACH

A regional approach to the park problem is the only answer, according to most of the officials. Such an approach is being made more difficult because of the growing complexity of government, eepecially in Fairfax County.

Officials feel that fledgling local governments may delay too many precious years while solving more pressing problems before they are prepared to cooperate in a regional park plan.

Meanwhile the suitable park land is disappearing. There are no large undeveloped areas in Arlington and few small areas left which would be suitable for parks. In fact, only two small sites were recommended for park acquisition in a recent county study.

Alexandria's position is only a little better. Nearly all of its vacant land lies in a pocket in the western part of the city, which is surrounded by heavy development and far removed from the homes of most residents.

Falls Church, Vienna, and Fairfax are too preoccupied with other problems of annexation, sewage, and water to think about park purchase programs.

FAIRFAX STUDIES

No action has been taken or is contemplated in the near future on the recommendation of planner Francis Dodd McHugh that Fairfax County develop its school grounds into community recreational centers. The Fairfax planning office, however, has barred any building development on the flood plains of the streams in the county, another McHugh recommendation.

No planning is being done on another proposal, made by a study group of the Fairfax Park Authority, that five natural areas on the western and southern fringes of the county be converted into regional parks.

These areas and their proposed approximate acreages are: Great Falls, 800 acres; Elk Lick-Club Run Park, 300–500 acres; Bull Run Park, near the Manassas Battlefield, 2,000 acres; Occoquan Park, overlooking the lake created by the Alexandria Water Co. dam, 800 acres; and Gunston Cove, a proposed nature sanctuary near Gunston Hall, 500 acres.

The study group, noting that 25 years ago the population of northern Virginia was 76,000 concluded:

"In another 25 years it is conceivable that unless controlled the entire county will present an industrial and commercial complex rivaling the bleak concrete and steel landscape now existing between Jersey City and New York.

"The time to acquire open spaces and natural area parks is now, before the onrushing tide of development engulfs all traces of natural landscape."

Controlling Inflation

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. HOLTZMAN. Mr. Speaker, I am introducing in the House of Representatives today a bill which is to be known as the Anti-Inflation Act of 1959. The bill would authorize the President to freeze our entire economy for a period not in excess of 90 days, during which period the Congress of the United States would have time to adequately consider the advisability of continuing the freeze, and the best manner in which to effectuate controls, if found necessary.

We all recognize that resort to direct controls is dangerous to economic freedom and incompatible with our free enterprise system. Nevertheless, in an emergency, I feel that the President should have authority, at least for a limited period, to protect consumers, workers, farmers, persons living on fixed or limited incomes, and business against the menace and danger of runaway inflation. The position of world leadership of the United States rests primarily upon the strength of our economic system, and must not, under any circumstances, be jeopardized by sudden inflation.

Our dollars purchase less and less every day, and it is about time that the machinery to cope with this problem be made available if and when needed.

When I first came to Congress over 6 years ago, in 1953, the purchasing power of the dollar, using 1947 to 1949 as a base period, was 87.4 cents. As of March of this year that purchasing power had been reduced to 80.4 cents, a decline of almost 7 cents in a 6-year period. Using 1939 as a base period we find that the dollar is worth only 48 cents at the present time, so we can clearly see that in a 20-year period we have lost over 50 percent of the value of the dollar.

History has demonstrated that the greatest danger from inflation comes when an emergency suddenly develops. It is national policy that the President have the authority, at the moment of crisis, to take the necessary steps to protect the economic stability and security of the Nation. I believe my bill will provide such protection.

Revise and Prosper: Depreciation for Tax Purposes

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. HIESTAND. Mr. Speaker, industry faces a peculiar problem in this area of startling developments. From day to day, mechanical and scientific breakthroughs are achieved which give a constantly changing complexion to values.

To keep pace with the time, to compete in this rush of astonishing accomplishment, is a task of itself. There are countless businessmen, manufacturers, producers who would move to close the gap—who would keep pace—except the Federal tax policy for depreciating their expensive equipment and plant acts as a drawback rather than an incentive.

Calling attention to this important matter is McGraw-Hill Publishing Co. with an editorial which appears in publications of the company for April and May, 1959. Under leave to extend my remarks, I insert at this point the article on depreciation reform, entitled, "Why Industry Needs a Modern Tax Policy":

A shockingly large proportion of our industrial plant and equipment is obsolete. Over $95 billion would have to be spent—and spent soon—to bring our industrial facilities up to the best modern standards. Yet plans for 1959 call for little more than $30 billion of actual spending—barely enough to make a start on this backlog of modernization.

At the heart of the problem of obsolescense is a Federal tax policy that discourages business from replacing inefficient facilities. It is the purpose of this editorial to spell out a tax reform Congress can make this year—with little cost in terms of tax revenue—that would go a long way toward removing the barrier to modernization of plant and equipment. This reform is a more realistic system of tax deductions for depreciation and obsolescence of productive facilities.

A BARRIER TO MODERNIZATION

Industry abounds with examples of old and obsolete facilities—despite large expenditures made in the past few years. Two-thirds of our metalworking equipment is over 10 years old. Over half the capacity of our chemical process industries was installed before December 1950. Only a minor fraction of our railroad freight moves in new freight cars or the new pushbutton freight yards.

The tax law bears a large part of the responsibility for this lag in modernization because of its important influence on business investment in plant and equipment. For many years the tax law has permitted as a deduction from income a reasonable allowance for wear and tear and obsolescence of productive facilities. These annual deductions affect business investment in several ways.

They are the way a company recovers its investment in plant and equipment.

They determine in large measure, the amounts of money that are spent each year to replace and modernize facilities.

Furthermore, the schedule for depreciation often determines when a specific machine or building is actually replaced.

The law requires that depreciation deductions be spread over the useful life of a building or machine. But the periods of useful life for tax purposes today still depend heavily upon tables drawn up by the Treasury almost 20 years ago. These tables reflect the replacement practices of depression years. Also, they were compiled at a time when the pace of technological progress in industry was much slower than it is now. For nearly all types of equipment the indicated period of useful life is longer—sometimes much longer—than most experts consider realistic at today's rate of technological advance.

The result of these outmoded depreciation schedules is that the recovery of investment is dragged out, and the replacement of obsolete equipment is delayed.

IN THE RIGHT DIRECTION

Congress should establish, by law, the right to use shorter depreciation periods on productive equipment. It should do so in a way that would free industry from obsolete concepts of the rate of technological change and would provide incentives to install new equipment and produce new products.

The Tax Reform Act of 1954 made some progress in this direction—but not enough. It introduced new methods for calculating depreciation—the declining balance and the sum-of-the-year's digits—which enable a business to recover most of the investment in a new facility in the early years of its useful life. However, these new methods do not accomplish their desired purpose when the supposed useful life is still an unrealistically long period of years.

Industry is by no means free from blame for the failure to bring depreciation policy into line with the needs of a modern, growing economy. According to Joel Barlow, president of the Tax Institute, "Management has largely ignored the Commissioner's invitation * * * to come into the Internal Revenue Service office and make a case for

shorter depreciable lives by establishing technological obsolescence."

The failure of many companies to see their own interest in more realistic depreciation not only holds them back from modernizing their own facilities but also lends support to the Treasury in its continued adherence to an outdated policy.

A SUGGESTION FOR REFORM

An excellent model for reform of the depreciation policy in our tax law is the system used successfully in Canada for a decade. In Canada, all productive equipment may be depreciated at relatively fast rates assigned to each of 14 broad categories. The Canadian system permits depreciation up to twice as fast as the antiquated tables of useful lives now followed in the United States. It also gives the individual business far greater flexibility in determining depreciation schedules that fit its own needs and experience.

For example, in the category or bracket covering general machinery a taxpayer in Canada may depreciate up to 20 percent of the machine's value annually, on a declining balance basis. In the United States the fastest rate at which many types of machinery can be depreciated is only 10 percent. In other categories, from tools and dies to buildings and pipelines, the Canadian system also allows faster depreciation and provides greater incentive to invest in new facilities.

The cost of this reform in terms of lower tax revenue would be small—probably less than $500 million in the first year. And even this would merely be postponed, not permanently lost. Indeed, there is very good prospect that tax revenue would not suffer at all. The increase in spending for new plant and equipment resulting from this tax reform would mean an increase in wages and profits—and therefore in taxes—in industries that produce machinery and other capital goods.

A realistic tax policy on depreciation would provide a badly needed incentive for industry to replace obsolete and inefficient facilities with up-to-date plants and equipment. It would step up our rate of technical advance and economic progress. And it would put U.S. industry in better shape to meet the growing competition from other countries that have grasped the advantages of fully modern technology.

Happy Anniversary for General de Gaulle and France

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. CELLER. Mr. Speaker, our felicitations go forth to France and her great president and leader, Gen. Charles de Gaulle.

A year ago, France was in a desperate plight. Chaos impended and all looked to De Gaulle. He responded bravely. France, having been rescued from bloody uncertainty, breathed freely. The world was relieved, especially the Western World. France became her historic self again, proud and glorious.

The general, with heroic effort, rebuilt the government, strengthened the central authority, and freed the nation of the splintering political factions that had plagued France for decades. Communists were given cold comfort; they were no longer able to foment strife and trouble.

In his 1 year of tenure, the general has revalued and made firm the franc, increased taxes, and inaugurated a system of austerity for his fellow Frenchmen, and they did not rebel. He has cut many unwarranted and unfair subsidies, even reduced veteran pensions. He has strengthened the presidency, the office he holds.

Recently, as a result of all these measures, French exports topped imports. The franc is presently so stable that tourists are no longer looking for bargains on the black market, but are getting their francs from the banks. The threat of further inflation has so lessened that the Bank of France, in a confident mood, has lowered the discount rate from 4½ percent to 4 percent. This lowered rate should encourage borrowings for plant expansion and extended activities.

The unresolved problem is Algeria. This unruly area has caused the French much concern and casts a shadow over the good works of De Gaulle. The relentless war is like an open wound that is draining France of much blood and treasure. Four hundred thousand of her men are pinned down in this long drawn-out struggle. If there is a way out, it is hoped General de Gaulle will find it. We wish him success. The solution of the Algerian problem would add even greater luster to his name. Let us hope, for the sake of Algeria and France that this tragedy will end soon and peace shall descend upon a land torn asunder with flame and bullet.

Then De Gaulle can tackle other difficulties besetting France and especially, give further impetus to her economy. If anyone can make France bloom and boom, it is General de Gaulle.

In an article in the current issue of Fortune, entitled, "De Gaulle's Audacious Economics," there aptly appears the following:

"The road is hard, but it is beautiful," De Gaulle told the French a year ago. "The end is difficult, but it is great. Allons." And France has indeed gone forward, into the Fifth Republic, now into a grand design of economic reforms almost as radical as the political. * * * The astonishing news out of France is that the grand design is taking hold.

Mr. Speaker, we all hail France and her great leader on this eventful anniversary.

"Our American Heritage"—Mary Aline Magner

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. FASCELL. Mr. Speaker, in this era of uneasiness in world and domestic problems, it is a refreshing privilege for me to call your attention to the efforts of Miss Mary Aline Magner, a resident of my congressional district, and to her fine music, copies of which she has recently provided each Member of Congress, along with a thoughtful and sincere letter.

We should be especially proud of the spirit, pride, and love for God and our country demonstrated in Miss Magner's words and music. Through these carefully written lyrics, we are reminded that our cherished freedom remains a priceless privilege—gained through struggle, prayer, and unity in our American heritage.

Justin Smith Morrill Homestead

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. MEYER. Mr. Speaker, on March 23 I introduced a bill to provide for the establishment of the Justin Smith Morrill Homestead at Stafford, Vt., as a national monument. This bill, H.R. 5934, now with the Committee on Interior and Insular Affairs, is most appropriate for Congress to consider at this time, because we are approaching the centennial celebration of the great Land-Grant College Act of 1862, better known as the Morrill Act for its sole author, Senator Justin Smith Morrill, of Vermont. It would be fitting indeed to make provision in ample time for the dedication of this shrine to the memory of Senator Morrill during the year of events which is being planned for 1962 to mark the 100th anniversary of the establishment of our national system of land-grant colleges and State universities.

In connection with this proposal, I would remind the Members of the House that we have already acted favorably on April 20 on a bill, H.R. 4012, to provide for a Centennial Celebration Commission and for other appropriate recognition of the Morrill Act in 1962. This bill, introduced by the distinguished chairman of the Committee on the Judiciary, Congressman CELLER, takes note of both the establishment of land grant colleges and State universities and the establishment of the Department of Agriculture, both of which occurred in 1862. These historic acts have had an invaluable, almost incalculable, bearing on the development of agriculture and higher education in the United States.

It is fitting indeed for Congress to establish such a commission as provided in H.R. 4210 in order that appropriate events can be arranged and supported during 1962.

One such appropriate event of this centennial celebration would be the dedication as a national monument of the home of the author, in fact the sole author, of the act which we will be commemorating, the Morrill Act. Senator Justin Smith Morrill was born in Strafford in 1810, the son of a blacksmith, and he received his own formal education in the little red schoolhouse of the day. He had to leave school at the age of 14

to go to work, but he never forgot the importance of books and education. Morrill was successful in business, and when he felt that he had acquired enough to live on, he turned to public affairs and served Vermont in the U.S. House of Representatives and Senate for 44 years. Having been denied higher educational opportunities himself, Justin Smith Morrill was resolutely determined that others would have this great opportunity, and he initiated and provided the leadership for passage of one of the most memorable educational measures yet known, the Morrill Land Grant Colleges Act. It was the high point of a distinguished career.

We all know the enormous importance of the land-grant colleges and State universities. There are now 68 of them in our country, at least one in every State, including Alaska and Hawaii, as well as one in Puerto Rico. It is estimated that about 20 percent of the Nation's college students are enrolled in land grant institutions. More than 40 percent of the doctorate degrees in all subjects, more than half in the sciences and in the health professions, and all those in agriculture, are conferred by land-grant colleges and universities. Furthermore, the quality has been extraordinary. Of 35 living American Nobel Prize winners who went to college in this country, 21 have earned degrees from land-grant institutions. This is truly evidence of the national character of the Morrill Act and of the interest that there is in honoring is author, Justin Smith Morrill.

Morrill distinguished himself as a legislator, and was referred to at the time as the "Gladstone of America." It is said that in the field of finance lay his greatest talents, and he gave years of leadership to the Ways and Means and Finance Committees in Congress. Also, he served as chairman of the Senate Committee on Buildings and Grounds and is largely responsible for the planning and execution of the terraces, fountains, and gardens around the Capitol, as well as the completion of the Washington Monument. However, it is interesting that this Vermont Senator, deprived of higher learning himself, should be remembered best for the Land Grant College Act, and for his important part in the establishment of the Library of Congress as a truly national institution during the 19th century. This merely serves to confirm the broad character and vision of Morrill, a man to whom higher education and the Nation owes so much.

Strafford always remained home for the Senator, and his homestead there is an attractive, charming place, definitely and closely related to the Senator's work and achievements. Acquisition would be by gift from the Strafford Historical Society, Inc., and would be made possible by the generous support which is already indicated by friends of the society and admirers of Morrill. The house is reasonably well preserved, and is a delightful example of Victorian gothic. It is set near the Common in one of our beautiful Vermont villages, the village where Morrill was born and went to school, where he operated a general store, and where he returned regularly all during his 44 years in Congress. This village will be within about 15 miles of a main intersection in the projected new Interstate Highway System, making it easily accessible to travelers from both Boston to the east and from Connecticut and New York to the south. Yet it will at the same time be far enough from these main routes so as to be assured of the quiet and deep charm which our Vermont villages exemplify.

There is wide interest in this project among educators all over the country. Everyone familiar with land-grant colleges will agree that it would be fitting to honor the man whose vision is responsible for their establishment. The centennial office of the American Association of Land-Grant Colleges and State Universities has already indicated its interest for this proposal in conjunction with its plans for the centennial celebration in 1962. We will want to take action early enough so that dedication can be arranged in conjunction with the centennial activities planned for 1962. That is the obvious and appropriate year for such a dedication, and it would be a high point of the celebration. The impact of Senator Morrill's efforts are national and even worldwide in scope, and in many ways they are more memorable and more important for their positive results than are many of the other events which we already commemorate. The name of Justin Smith Morrill means a great deal to our country as a whole and is particularly honored in the field of higher education.

In Vermont our State legislature is taking steps already to do its part in observing the centennial celebration, as urged in section 7 of the proposed H.R. 4210. I am sending a copy of the recent resolution to this effect by our general assembly to Chairman CELLER, and I would also like to insert this resolution in the RECORD at this point:

JOINT RESOLUTION 23

Resolution relating to the observance of the 100th anniversary of the enactment of the Morrill Land-Grant Act of 1862

Whereas the Morrill Land-Grant College Act was enacted into the laws of this Nation in 1862; and

Whereas the author of this act was Justin Smith Morrill, of Strafford, Vt., a Member of the U.S. Congress from Vermont for the period 1855 until 1898; and

Whereas the act which carries the name of this famous Vermonter has resulted in the founding of 68 land-grant colleges and universities, of which the University of Vermont is one; and

Whereas those 68 colleges and universities have given instruction and training to hundreds of thousands of young men and young women of our Nation, many of whom could not otherwise have afforded a college education; and

Whereas the year 1962 will be the 100th anniversary of the Morrill Land-Grant College Act; and

Whereas the American Association of Land-Grant Colleges and State Universities are planning a nationwide observance during 1962 for the 100th anniversary of the Morrill Act: Now, therefore, be it

Resolved by the senate and house of representatives, That the Governor of the State of Vermont appoint a committee of five members to serve without compensation. This committee's duties will be to plan a suitable statewide observance during 1962 for the 100th anniversary of the Morrill Act and to honor the famous Vermonter, Justin Smith Morrill, who designed the Morrill Act.

Mr. Speaker, I would also like to bring to the attention of the House two further resolutions in support of the Morrill homestead bill, H.R. 5934. These resolutions show the strong local support which such a project will have, as well as showing the interest which Vermont has in obtaining its first national monument, and in fact its first recognition of any sort by the National Park Service. At present our State has no national monument, and no more appropriate one can be suggested than the homestead of Justin Smith Morrill, a great Vermonter and a great American statesman, whose vision and determination served the cause of education, and thus the Nation, so well. It would be a monument of truly national interest and character. The resolution of the Vermont General Assembly, passed on April 14, the anniversary date of Morrill's birth in 1810, and the resolution of the Strafford Historical Society, Inc., which has been most active in support of this proposal, are as follows:

JOINT RESOLUTION 27

Joint resolution relating to the Justin Smith Morrill Memorial and urging the passage of H.R. 5934 by the Congress of the United States

Whereas Justin Smith Morrill of Strafford, Vt., was a Member of the U.S. Congress for nearly 50 years; and

Whereas he served his State and country with honor and distinction; and

Whereas there is now pending before the Congress of the United States a measure, H.R. 5934, providing for the purchase and restoration of the Justin Smith Morrill homestead in the town of Strafford for the purpose of its preservation as an historical monument to his memory and achievements; and

Whereas on April 14, 1810, 149 years ago today, Justin Smith Morrill was born in the town of Strafford; and

Whereas this general assembly is cognizant of the great honors that have been brought to the State of Vermont by his many achievements, particularly as to his authorship of the famous Land Grant Acts to colleges in the field of education: Now, therefore, be it

Resolved by the Senate and House of Representatives, That the General Assembly of the State of Vermont hereby goes on record as favoring the passage of H.R. 5934 by the Congress of the United States, and urge early and favorable action by the Department of the Interior in this matter; and be it further

Resolved, That the secretary of state is hereby directed to send copies of this joint resolution to the President of the United States, the Vermont congressional delegation, the Secretary of the Interior of the United States, the president of the University of Vermont, the president of the University of New Hampshire, the president of the University of Massachusetts, the director of the Vermont Historical Society, the chairman of the Vermont Historic Sites Commission, and the president of the Strafford Historical Society.

RESOLUTION OF THE STRAFFORD HISTORICAL SOCIETY, INC., STRAFFORD, VT.

Whereas Justin Smith Morrill contributed much for the good of the country during his long service as a Member of Congress; and

Whereas his most memorable achievement was his authorship and adoption by Congress of the Land-Grant College Act signed into law by Abraham Lincoln on July 2, 1862; and

Whereas the impact of this legislation has been and will continue to be of enormous value to our Nation's progress; and

Whereas in recognition of the Nation's debt of respect, a bill has been introduced into Congress by Representative WILLIAM H. MEYER, providing for the acquirement and administration by the Secretary of the Interior of the Morrill homestead in Strafford, Vt., as a national monument: Now, therefore, be it

Resolved, That the board of directors and members of the Strafford Historical Society urge the passage of the bill; and be it further

Resolved, That favorable consideration be given to dedicating the monument on July 2, 1962, the centennial of the Land-Grant College Act; and be it further

Resolved, That a copy of this resolution be sent to Congressman MEYER and to any others whom our members may select.

Liberalism's Full Circle

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks there follows an article published in the Wall Street Journal under date of May 4, 1959. It is something on which those in and out of the Congress could well reflect:

LIBERALISM'S FULL CIRCLE

What is present-day liberalism?

Six Congressmen who consider themselves liberals recently attempted to give their own personal answers to that question. Though a number of the answers, which appeared in the New York Times magazine, sound like platitudes, they nonetheless reveal some of the difficulties with liberalism as a political philosophy.

Consider these responses:

Wisconsin's Representative REUSS said the "liberal" has "no particular body of doctrine." New York's Senator JAVITS stressed as a guiding principle the "preservation and strengthening of free institutions." And Minnesota's Senator HUMPHREY declared, "The liberal's answer to the crisis of our time is a program of action to summon all the resources and resourcefulness of free men."

Now among these definitions are very considerable divergences, and this fact seems to reflect intellectual confusion. Part of the confusion, we think, can be explained in historical terms.

The European liberal of the past (and some Europeans who use the term today) had a clear body of doctrine. He stood for maximum individual freedom as the only source of an acceptable political structure and of material abundance. Acutely aware of the lessons of past tyrannies, he opposed particularly the encroachments of the state.

Somewhere along the line, in the transplanting from Europe to America, the liberal lost his historical perspective and, it would seem, some of his capacity for cold clear thinking. Dissatisfied with the lot of man as he found it, he began to fall into the fallacy of human perfectibility.

This is fallacious because it rests on what is essentially a sentimental view of the nature of man. It assumes the evil man does is attributable not to himself but to society. Implicit in such an attitude is a denial of the most fundamental criterion of human conduct—individual responsibility; simply reform society and you automatically improve man's soul.

Thus for individual initiative and individual responsibility is substituted some form of collective approach. But appealing to the better nature of this or that group does not work fast enough to suit the metamorphosed liberal; he wants utopia today. His problem is how to get it.

Accordingly, while still paying lip service to the preservation and strengthening of free institutions, the liberal in our time tends to think much more in terms of a program of action to summon all the resources and resourcefulness of free men.

This last description is in fact the most revealing of all. For clearly it is only the government that can devise such a program of action; the government must do the summoning. In that notion lies the antithesis of the free society.

In a free society men are not zealots rushing to the banner of some total government program of action, devoting all their resources to it. They are individuals pursuing their diverse interests, and from that diversity comes the material and spiritual richness found only in a free society. And since individuals will not, as the liberal wants, willingly embrace a total program of government action, the liberal must turn to government compulsion.

So it is that the liberal has come full circle. Born of statism, he rebelled against it, and now has been led back to statism. It is an unhappy progression, and the Congressmen's confusion of definitions suggests that many liberals today are not fully conscious of the logical conclusion of their approach.

That indeed is just the pity. Men who are blind to history, human nature, and the consequences of human action are not the best guardians of human liberty. The well-intentioned can become the worst tyrants.

Home No Longer Castle

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Christian Science Monitor on May 6, 1959:

HOME NO LONGER CASTLE

Many Americans will be profoundly shocked by the news that their homes can now be invaded without a search warrant. Protests are rising. We trust that the Supreme Court will find in new cases good reasons to reverse a 5-to-4 decision just rendered. For as Mr. Justice Frankfurter said regarding another search and seizure case in 1950: "Progress is too easy from police action unscrutinized by judicial authorization to the police state."

We recognize that questions of "search and seizure" are among the most difficult the Court encounters. We sympathize with its problem in maintaining individual liberties when they conflict with community interests. And we have often commended the High Court for its devotion to the rights of citizens. But in view of what it has done in that cause in the past this latest decision is all the more strange and questionable.

It involved the case of a Baltimore citizen who refused to let a city inspector search his home for rats. The majority of the Court held that a health inspector need not obtain a search warrant for such purposes and that the citizen was properly subject to fine for resisting. This is a major blow to the old doctrine that a man's "home is his castle."

Speaking for the minority, Mr. Justice Douglas said: "The decision today greatly dilutes the right of privacy which every homeowner had the right to believe was part of our American heritage."

This ruling is particularly hard to understand in the light of earlier decisions barring search. For instance, the Court has held that police cannot hunt for stolen property in an automobile without a specific Court writ. Only last year it voided the conviction of a man because police broke into his house without telling him they had a warrant for his arrest. Two years ago it set aside—because of illegal search and seizure—the sentences of three persons who had harbored Communists convicted under the Smith Act.

Curiously enough, Justice Frankfurter, speaking for the majority, indicated that it was because search in the present case was not for evidence of crime that it should be permitted. This puts the Court in the position of saying that a search warrant is required to enter a house to locate a murder weapon or to look into an automobile which may hold money from a bank robbery, but is not required if some local sanitary inspector desires to see whether premises contain some material he considers unhealthful.

This appears all the more unreasonable since in a murder or robbery case delay might permit escape while presumably unsanitary conditions would not ordinarily get out of hand while a search warrant was being obtained. The Supreme Court nobly resisted the public hysteria which assumed that if a charge of communism was involved the Bill of Rights should be forgotten. We hope that after more consideration it will similarly resist the too-common assumption that if someone says health is involved the fourth amendment and other constitutional guarantees are void.

Untold Story of Panama

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. THOMPSON of Texas. Mr. Speaker, since becoming actively associated with interoceanic canal problems in 1949 as chairman of a Special Subcommittee To Investigate the Operation of the Panama Canal, I have noted the publication of thoughtful works dealing with canal history and problems.

The latest addition to this cumulating literature is a book by Earl Harding, former day news editor of the New York World, entitled "The Untold Story of Panama," published April 27, 1959, by the Athene Press, and distributed by the Bookmailer, both of New York.

Its importance is indicated by United Press-International cabled news story of April 26 to Panama, Latin America, and Europe by Harry W. Frantz, distin-

guished Latin American correspondent of that press organization.

Because of the growing public interest in the Panama Canal, under leave granted, I include the indicated news story:

UNTOLD STORY OF PANAMA

(By Harry W. Frantz)

WASHINGTON, April 26.—U.S. citizens face a long political struggle to keep control of the Panama Canal, according to a new book entitled "The Untold Story of Panama," which appeared today.

The author was Earl Harding, a New York writer. He was a correspondent and investigator for the New York World during the period of its defense preparations against a criminal libel suit brought by President Theodore Roosevelt against the World and the Indianapolis News.

The suit was quashed by a Federal court ruling in 1910 that there was no Federal libel law, a view upheld by the Supreme Court. Harding now offers a digest of information and documentation which the World would have used if the case had been tried on the facts.

The book appears to have current significance because of its general exposition of the historical background of Panama-United States controversy concerning Canal Zone sovereignty provisions in treaty of 1903; agitation for internationalization of the Panama Canal, and recurrent incidents connected with relations between the Canal Zone and the Republic.

These problems have created international confusion which may have to be clarified before the U.S. Congress decides whether to build an enlarged locks canal at Panama, a sea-level canal there, or an entirely new canal on the Nicaraguan route.

In a preface to "The Untold Story of Panama," Harding wrote:

"Nasser set a pattern for canal seizure at Suez in 1956. Although legally inapplicable to the Panama Canal, the Nasser example of expropriation delighted Panamanian radicals. The danger implicit in ignoring their reactions was not recognized by most North Americans, who have assumed for half a century that trouble at Panama always evaporates.

"The seriousness of the situation at the isthmus was brought home to the United States by the Nixon incidents in Lima and Caracas in May 1958, and by almost coincident outbreaks of wild disorder in Panama, with defiant challenging of U.S. sovereignty over the Canal Zone preceded by a Panamanian flag-planting invasion of the zone heralded to the world as Operation Sovereignty.

Harding said that pressures little realized by the North American public have been building up steadily and persistently in Panama and elsewhere since the Suez crisis. He said that anti-American attitudes in Panama can be traced to fact that the Panamanians and many North Americans do not know the historical truth about events early in the century.

Harding wrote that the Panama waterway seems to be approaching its greatest crisis due to fact that problems of increased capacity and modernization have been complicated by organized attacks against U.S. jurisdiction in the Canal Zone.

He said that Congress recognized this situation by adoption in February 1957 of a resolution for a comprehensive inquiry into all aspects of the interoceanic canal problem. "Out of this inquiry by the board of consultants, now only partially completed, U.S. taxpayers hope for a constructive reassessment of isthmian canal problems and a program for their permanent solution which an informed Congress can approve and authorize."

In a chapter on the Nicaraguan route as an alternative to the Panama Canal, Harding said that the first essential step would be a reexamination and interpretation of the Bryan-Chamorro Treaty of 1914.

Ratification by the U.S. Senate in 1916 contained a proviso that Nicaragua's failure to consult Costa Rica before entering into a canal treaty with the United States should not invalidate Costa Rica's rights under the Costa Rican-Nicaraguan Treaty of 1858.

Another question would be whether the Bryan-Chamorro Treaty gave the United States an enforceable option to build a canal. Some experts think that the treaty would be merely a preliminary to further agreement on terms of construction.

Alaska Fisheries Problem

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. RIVERS of Alaska. Mr. Speaker, I have heretofore extended my remarks in the RECORD in support of legislation to ban importation of salmon caught by the Japanese in their North Pacific high seas fishery because of the ruinous effect of such fishing on Alaska's Bristol Bay salmon runs. The fact is, however, that not only the Bristol Bay fishery has been critically depleted, but the salmon runs on the entire coast of Alaska have been seriously depleted during the years of Federal management of this important resource. Accordingly, I am pleased to submit for the consideration of my colleagues an important document from the Alaska State Legislature, which cogently portrays the entire situation and the need for Federal assistance to restore this great national asset. The document follows:

"SENATE JOINT MEMORIAL 4

"To the Honorable Dwight D. Eisenhower, President of the United States, and to Each and Every Member of the Congress of the United States:

"Your memorialist, the Legislature of the State of Alaska in first session assembled, respectfully submits that—

"Throughout the history of Alaska as a Territory, since 1867, the fisheries have constituted Alaska's most valuable resource. During this period more than 11½ billion pounds of salmon constituting protein food of superlative quality has been shipped from Alaska to the rest of the Nation and to the world;

"But, unfortunately, most of the income from these salmon fisheries, amounting to over $2 million on the wholesale markets, has passed to interests outside Alaska, and the salmon harvests of Alaska have fallen from their sustained optimum levels of 6 million cases average and 8 million cases maximum, from 1926 to 1944, to less than 2,500,000 cases in more recent years;

"During this same period, inadequate, indeed negligible, amounts (less than 1 percent of the total wholesale income) have been spent for the conservation and propagation of Alaska's salmon fisheries which, under many years of Federal stewardship have declined severely and are rapidly approaching extinction, notwithstanding it is of paramount importance to the maintenance of this valuable food resource and to the economic well-being of the State of Alaska and the United States that these fisheries be restored to their maximum productivity as rapidly as possible; and

"Therefore, the Legislature of the State of Alaska, in first session assembled, asks that the Congress of the United States be respectfully requested to provide the State of Alaska Department of Fish and Game with annual funds to be spent for the rehabilitation of Alaska's salmon resources, including such activities as research, fish laddering and guiding devices, stream-clearance projects, and fish hatching and rearing operations as may be necessary to restore these resources, and that the funds shall not be less than $5 million per year and shall continue for not less than 15 years or until the harvest of salmon in Alaska reaches and maintains a sustained level of 6 million cases."

Passed by the senate April 3, 1959.
WILLIAM E. BELTZ,
President of the Senate.

Attest:
KATHERINE T. ALEXANDER,
Secretary of the Senate.

Passed by the house April 16, 1959.
WARREN A. TAYLOR,
Speaker of the House.

Attest:
ESTHER REED,
Chief Clerk of the House.

I hereby certify that the above and foregoing constitutes a full, true, and correct copy of Senate Joint Memorial 4 as passed by the Senate and House of Representatives of the State of Alaska.
KATHERINE T. ALEXANDER,
Secretary of the Senate.

National System of Interstate and Defense Highways

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. HOLT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution that was passed by the Van Nuys Chamber of Commerce. I am sure the resolution will be of interest to my colleagues in the House of Representatives:

Whereas the Federal Highway Act of 1956 stated "it is the intent of Congress that the National System of Interstate and Defense Highways" be completed as nearly as practicable over a 13-year period and that the entire system in all States be brought to simultaneous completion, and also establishes the amount of appropriations for each year authorized by the act; and

Whereas in said act there was established a highway trust fund for which gasoline and some other highway users taxes were earmarked, however, the greater part of excise taxes on sales of automobiles, tires, and accessories (which are also paid by highway users) are still left to the general fund; and

Whereas by this arrangement, approximately 42 cents out of every dollar of Federal automotive taxes went into the general fund of the Treasury in the fiscal year 1958; and

Whereas in said 1956 act it was declared to be the policy, "if the receipts of the trust fund * * * be less than the total expenditures from said fund, that * * * the Congress shall enact legislation in order to bring about

a balance of total receipts and total expenditures * * *"; and

Whereas section 209(G) was adopted just before the bill was passed by Congress, requiring that the trust fund be put on a cash basis; and

Whereas the Federal Aid Highway Act of 1958 increased certain allocations somewhat over the 1956 act, and set aside the pay-as-you-go plan as provided in the Byrd amendment to permit full appropriations for the 1958–59 and 1959–60 fiscal years; and

Whereas as a result of the act of 1958, and in anticipation of future appropriations to be made to the various States in conformity therewith—

A. The State of California's Department of Public Works has geared its activities to the purpose of constructing the interstate highways in the State of California as specified in said 1956 act, by (1) building up the organization of engineers and other employees in the State highway department, to meet the increased demands; (2) purchasing hundreds of millions of dollars worth of required rights-of-way for the Interstate System; (3) preparing engineering plans for several years in advance to keep ahead of construction.

B. Contractors have purchased millions of dollars worth of equipment to handle the contracts awarded them, and in anticipation of future awards. Also have built up large organizations of technical and highly skilled employees to handle current and anticipated contracts.

C. The entire economy of the State is now geared to accomplish the declared purposes of Congress as set forth in the 1956 act, for instance: construction of plants to proivde cement, steel plants to manufacture steel for bridges, machinery companies to build highway machinery, etc.; and

Whereas stopping of the interstate program would bring about a chaotic condition in the entire economy, and increase the cost of the highway system, when construction is resumed; and the delay would greatly inconvenience the millions of people in the State of California (and particularly in the San Fernando Valley, with its explosive population growth) depending almost entirely on their automobiles for transportation; and would disrupt the organization of the State highway department, as well as the contractors, who would face enormous losses on account of idle equipment, and dismissal of their employees, resulting in a pyramiding of unemployment in the State of California; and

Whereas if the funds earmarked for the general fund, being collected from excise taxes on automobiles, tires, and accessories were added to the trust fund, no problem of shortage in the trust fund would exist; and

Whereas there is inherent in the designation National System of Interstate and Defense Highways recognition of the importance of this system to the military and civilian defense of the Nation, and implying support for the system from other sources than merely the funds produced by automotive and highway users taxes;

Now, therefore, we respectfully urge that Congress pass without delay, such remedial legislation to continue without interruption the established pace of the construction of the National System of Interstate and Defense Highways, and provided definite assurance of its uninterrupted continuance until the entire system is completed. We also urge the President of the United States to approve such legislation as expeditiously as possible, so as to avoid any slowing down of the present program.

Adopted by the executive committee of the Van Nuys Chamber of Commerce in session this 28th day of April 1959, by unanimous vote.

Attest:

NELSON LAVALLY,
Secretary-Manager.

Tribute to Miss Mary O'Keeffe of Riverside, Calif

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 12, 1959

Mr. ENGLE. Mr. President, well-deserved tributes have been paid recently to a grand lady, whom I am proud to call my friend, Miss Mary O'Keeffe, of Riverside, Calif.

Intrepid in her devotion to her faith, her country, her political convictions, and her nursing profession, Miss O'Keeffe will continue to exert an influence in her community and beyond through the period of reduced activity made necessary by her present illness.

I was fortunate in my recent campaign for the U.S. Senate in having Miss O'Keeffe as my campaign coordinator in the Riverside area. For her loyalty, her energy, and her political acumen in my behalf I will always be grateful.

The California State Senate has unanimously adopted a resolution praising Mary O'Keeffe for "half a century of devoted service to the cause of good government." In her home city of Riverside a few weeks ago an overflow crowd gathered at a testimonial dinner in her honor.

I ask unanimous consent to have printed in the Appendix of the RECORD two articles about Miss O'Keeffe from recent issues of the Riverside Daily Enterprise.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Riverside (Calif.) Daily Enterprise, Apr. 5, 1959]

CROWD PAYS TRIBUTE TO MARY O'KEEFFE

An overflow crowd of more than 500 persons attended a testimonial dinner in honor of Miss Mary O'Keeffe, member of the Riverside County Democratic Central Committee, in Arnold Heights School auditorium last night.

The dinner, sponsored by the Democratic Central Committee, paid tribute to more than 10 years of civic work in Riverside County on the part of Miss O'Keeffe.

Congressman D. S. SAUND told the audience that he attributed much of his success in Washington to assistance he had received from Miss O'Keeffe, and said that his desire to run initially for the office had been prompted by her.

Delivering testimonial speeches to Miss O'Keeffe were Alex Yakutis, president of the Democratic County Clubs, and Jack Kovely, candidate for sheriff in the last election. Clifford Dean of Banning, a candidate for State assembly, presented a gift to the guest of honor.

Tape records and telegrams congratulating Miss O'Keeffe and praising her civic contributions were presented from Paul Butler, Democratic National Chairman; Gov. Edmund G. (Pat) Brown, Senator Clair Engle, and numerous other dignitaries. Resolutions congratulating Miss O'Keeffe were read from the Riverside City Council and County Board of Supervisors.

John McSweeney, chairman of the County Democratic Central Committee, presented a scroll to Miss O'Keeffe bearing the signatures of committee members.

William Siape, candidate for Riverside City Council, inaugurated a scholarship fund which will raise $1,000 to be presented to a student nurse chosen by Miss O'Keeffe, who is also a nurse.

Chairman of the dinner was Joseph M. Kelleghan. Coral Davis was master of ceremonies. Harry M. Daugherty introduced Miss O'Keeffe.

[From the Riverside (Calif.) Daily Enterprise, Apr. 30, 1959]

SENATE COMMENDS MARY O'KEEFFE

Praising her for half a century of devoted service to the cause of good government, the State senate has unanimously adopted a resolution commending Mary E. O'Keeffe, Riverside County Democratic Party leader.

The resolution, introduced by Senator Fred Farr (Democrat, Monterey), states the senate has learned with regret that illness has forced (her) to take temporary relief from her duties as senior Democratic leader of Riverside County.

Miss O'Keeffe recently was honored at a testimonial dinner attended by Congressman D. S. SAUND and other Democratic Party notables.

The Senate resolution notes that Miss O'Keeffe served six times as a delegate to the Democratic National Convention and has long been a member of the Riverside County Democratic Central Committee and the State Democratic Central Committee.

It points out that in her vocation as an obstetrical nurse she has rendered a devout and competent service to great numbers of residents in her neighborhood.

It says that Miss O'Keeffe, a Catholic and a leader in the Catholic Daughters of America, "is not only distinguished by her interest in public affairs but is also known as a person of devout religious faith."

The resolution congratulates Miss O'Keeffe on her enviable record, commends her for her faithful service to the right as she sees the right, and * * * hopes for her speedy recovery.

A copy of the resolution and a scroll were forwarded to Miss O'Keeffe by the secretary of the senate.

The resolution was prepared by Thelma Zulch, former Riverside County Democratic Central Committee member who now resides in Palo Alto.

Sound Financing Pays

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria, Ill., Journal-Star of May 10, 1959:

SOUND FINANCING PAYS

Illinois is a fortunate State. More than half the States in the Union—29 of them—are in serious financial trouble this year, according to Newsweek magazine, but our State is not one of them.

There is just one reason for this happy situation. Illinois did not embark on fantastic welfare schemes as Michigan did or spend money freely on roads and schools and hospitals as some other States did when they thought the high wartime revenues would continue indefinitely.

Illinois has lived within her budget. We have not had as many new university buildings as we might have liked to have, or as

many new roads, or as many State services as we might think we need but we kept within the amount of money which was in hand. The result is that we are facing no such deficit as Michigan, which can't pay her university teachers, or Minnesota, where they are talking about adding a sales tax to their already stiff income tax, or Ohio, which is running in the red at the rate of $166 million a year.

Under pressure of demands for additional facilities, Governor Stratton is talking about an increase in the sales tax this year but our present situation is all the more reason for the institution of more rigid economies and a squeezing of every bit of fat out of the State budget.

Illinois stands to profit from her favorable financial situation. Increased taxes in other States—Massachusetts is thinking about the first sales tax in the State's history and California needs $256 million in new revenue—will prevent some new industries from locating in those States. If Illinois can present a favorable tax picture we will be in a good position to invite new industrial development to our State.

Governor Freeman, of Minnesota, has ordered his State legislature to sit until the State's financial problem is solved. His recommendations are for an increase in each bracket of the State's income tax by roughly 1 percent, to raise corporate income taxes, to install a tax-withholding system, and to increase taxes on iron ore, cigarettes, whisky and other items. The income tax with a base of 1 percent on the first $1,000 of income already is one of the stiffest in the Nation and high corporate taxes already have caused Minnesota-Honeywell, one of the State's biggest industries, to favor out-of-State expansion.

Sound financial policy has paid off for Illinois in the midst of economic disaster in all the States around us. The success of this policy in the past is all the more reason for continuing it in the future. The legislature should take a microscope to the Governor's budget and strain out enough of the excess in it to keep it within balance without the imposition of additional taxes.

Lt. Gen. S. T. Williams, U.S. Army

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. MILLER of California. Mr. Speaker, toward the end of last month I took advantage of the privilege granted me and inserted in the CONGRESSIONAL RECORD of March 20 a statement in which I expressed my high regard for Gen. Samuel T. Williams, Chief of the U.S. Military Assistance Advisory Group for Vietnam.

Last fall I had the pleasure of revisiting Vietnam, having been there in 1955 for the first time. On the occasion of my earlier visit General Williams was just taking over as Chief of our Military Advisory Group. He is one of America's greatest soldiers and has done a remarkable job in that country, as I outlined for my colleagues.

A copy of the March 20 RECORD found its way to the desk of Mr. Ed P. Williams, business manager of the Fort Worth, Tex., Independent School District and brother of General Williams. This is not strange. But the sequel is worth recording.

Mr. Ed Williams wrote our beloved Speaker of the House of Representatives the following letter:

FORT WORTH INDEPENDENT
SCHOOL DISTRICT,
Fort Worth, Tex., April 7, 1959.

Hon. SAM RAYBURN,
House of Representatives,
Washington, D.C.

DEAR SAM: Back in 1920, I lived in Van Alstyne, Tex. Our late mutual friend, Sam Pattie, bless him, operated his drygoods store next to the bank where I worked.

At this time, the boys were returning from World War I and being mustered out. My brother Sam was located at Camp Pike, Ark.

One morning I received a phone call from Sam in which he told me he was in trouble and needed help quickly. He said there was a mixup of names in his outfit and that he was being mustered out when really it was another Williams who wanted out. He, Sam, wanted to stay in and the records would have to be straightened out in Washington.

I told him I would see what could be done. Sam Pattie was next door and I told him the story. He said, "I know what to do, I'll wire SAM RAYBURN." He did wire you and in a few days brother Sam advised that his troubles were over and that he was to remain in the Army where he wanted to be.

SAM, please refer to the CONGRESSIONAL RECORD for March 20, 1959, page A2506, which contains an extension of remarks by Representative GEORGE P. MILLER.

The soldier referred to by Mr. MILLER is the Sam T. Williams you befriended in 1920.

I am calling this incident to your attention in order that you may know your assistance to this young man in 1920 was not misplaced.

With very best regards. and good luck, I am,

Sincerely,

ED P. WILLIAMS.

Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. SMITH of Kansas. Mr. Speaker, a few weeks ago the DAR was in Washington for its annual convention. As usual, both before and after this assembly, which is held in Constitution Hall—their own—the internationalists, intellectual carpetbaggers of the ADA and other noted leftwing promoters all made their usual silly and unpatriotic remarks about this organization.

Some said "These elderly ladies should confine themselves to past history." One woman commentator even tried to ridicule the hats worn by the members. Not one paper gave this convention any front page coverage. If the ADA had been in convention, the Washington Post, the bellwether of the leftwing press would have had their news on the front page and a lead editorial on the leftwing pink page of the Post.

When some delegate took the convention floor to ask that the DAR go on record as favoring the United Nations, this event was broadcast from coast to coast as a great event. The commentator said, "This is the breakup of the old conservative DAR clique. A new day portends, no longer will patriotism be the only virtue, and that, at long last the DAR has finally admitted that patriotism and reverence for its ancient heritages is nothing more nor less than bigotry run wild."

But with all the carping criticism in the press and radio, the DAR brought forth their usual down-to-earth patriotic resolutions.

One of their resolutions called for the withdrawal of the United States from the United Nations.

Henry Cabot Lodge, U.S. representative to the United Nations released a public letter he wrote to the DAR condemning their action for recommending withdrawal by the United States from the United Nations.

I consider the reply made to this letter by Mrs. Mary Barclay Erb so outstanding that I commend it in the highest terms. Mrs. Erb's reply can well be used as a textbook on the United Nations and what it really means to all citizens who still believe in and cherish the patriotic ideals of our ancestors.

Here is Mrs. Erb's letter to Lodge:

JULY 2, 1958.

The Honorable HENRY CABOT LODGE,
U.S. Representative to the United Nations,
New York, N.Y.

DEAR MR. LODGE: According to several radio broadcasts and the daily press, you released, on June 17, 1958, copies of a letter written by you under date of May 15, 1958, to the National Society, Daughters of the American Revolution.

The office of the president general advised me that this letter has been acknowledged; nevertheless, I cannot, as a loyal member of our national society resist comment in justification of the adoption of the resolution pertaining to withdrawal from the United Nations.

I should like first to refer to your statement that you note with interest the resolution of the national society of 1956 in support of the United Nations. I feel that you should reexamine the resolution to which you refer. I do not believe you will derive much comfort from this resolution as supporting the United Nations with which you are associated. For the sake of the record, let me quote the 1956 resolution:

"*Resolved*, That the National Society, Daughters of the American Revolution, continue to support the United Nations Organization in its original purpose as a group of sovereign nations working together for world peace and understanding, and to oppose its threatened conversion into a world government.

"Whereas our national society has been consistently on record as against the many specialized agencies, which purport to be a part of United Nations, formulating policies such as the Genocide Convention and Covenant of Human Rights, which would deprive us of the individual liberties and free enterprise on which our Nation was founded so firmly and which have made it so strong and great;

"*Resolved*, That the National Society, Daughters of the American Revolution, again stand firmly and emphatically on its insistence that the United Nations abide by the objectives set forth in its charter and desist from participation in any plan, project, agency, or principle which would intervene in our internal affairs, interfere with our domestic legislation, or spread doctrines

contrary to our American philosophies and way of life."

I believe that your misunderstanding as to the import of the action taken by the national society in 1956 as compared with the action taken in this year, 1958, arises from a failure on your part to recognize that the term "United Nations" has two distinct meanings in current terminology among American citizens. There is a United Nations which represents the hope and aspirations of every intelligent American who is devoted to world peace and is in favor of any organization which would be solely devoted to and effective in its operations for the assurance of peace, honor, and good will to men. This was the type of organization which the American people and their representatives in Washington were informed had been created in 1945 in San Francisco.

The second United Nations is the United Nations which has revealed its true nature by actual operations during the past 13 years. It is this United Nations with which the Daughters of the American Revolution was dealing this Spring, 1958, and it was from this United Nations that Congress was urgently requested to withdraw and it was the withdrawal of this United Nations from the soil of the United States of America that Congress was urgently requested to demand.

Whatever might theoretically have been possible for the United Nations created by that charter of 1945, can no longer be the basis for appraisal by American citizens in the light of the judgment of actual history.

It was only 4 years after the adoption of the charter that the American people learned that the chief architect, supposedly acting on our behalf in San Francisco, was actually the treacherous agent of our most deadly enemy. History has also revealed and developed many other significant facts concerning this organization which was planned with such high hopes but was actually born in treason.

I believe it is only by consistently recognizing the existence of these two United Nations that any intelligent discussion can be carried on at this time.

For instance, when you say that only 6 percent of the American people favor withdrawal from the United Nations, implying that 94 percent approve of the United Nations, such statement can have meaning only if you are talking about the ideal United Nations for which most Americans might fervently wish.

We would be inclined to think that a very small percentage of the citizens of the United States know factually what the present United Nations in reality is; how it functions, and what its results have been. Certainly, a great majority have never even seen or read a copy of the Charter of the United Nations. A large number of our citizens have been propagandized through every channel of communications into believing that the United Nations is the only alternative to war, and that it has been somehow designated as the savior of mankind. Given the same use of communications and channels for propaganda, the opposite could be proved. If our citizens could be told the facts about the activities of the specialized agencies of the United Nations, it is very likely that that opinion could be changed.

You state that withdrawal of the United States from the United Nations would surely result in disaster for our country apd that indeed it could lead to world war III.

There are many clear-thinking leaders in our country today who would not, in any sense, agree with this statement.

I believe that such a sweeping prediction of disaster must be carefully examined dispassionately by statesmen and experts far removed from the center of United Nations' activities in which you find yourself. Let me merely ask you one question to illustrate what I mean. What has this United Nations accomplished in opposition to the spread of godless communism throughout the world during the period of its existence? During the life of the United Nations, communism has spread its sway from 200 million to more than 900 million people.

Is an organization which is powerless or unwilling to oppose the forceful extension of Communist slavery calculated to preserve ultimate peace, or will it result in a final choice between world slavery and world war? Let me deal with this general question in greater detail below.

In your comments on some of the "factual errors" in our resolution, you adopt the somewhat baffling tactic of repeating our affirmative statements with the injection of the negative, underlined or in italics. Let me endeavor to deal as fully as possible with your individual comments one by one.

1. You say that the United Nations has no "anti-Christian philosophy" and is not hostile to the "Christian fundamentals of the United States of America." Let me suggest, on the contrary, that the net impact of the United Nations has revealed itself as not only anti-Christian, but anti-God. I should like to have some significant instances where the influence of the United States in Christian philosophy and Christian fundamentals has countered to the slightest degree the impact of the powerful Godless forces of the Communist bloc in the proceedings of the United Nations or in any part of the field of activities radiating from or sponsored by the organization. When you say that "it is certainly a Christian precept that nations should live together in peace with one another as good neighbors, which is what the United Nations Charter says and what the United States is trying with all its strength in the United Nations and everywhere else, to bring about," you are affording another excellent example of the confusion between the two United Nations. The ideal United Nations should be exactly what you described. This United Nations presents merely a question of facts. I await your factual instances in support of your position.

2. You say that the "United Nations is not a declining factor in the maintenance of international peace." Its "influence is demonstrably growing. It has done things in the field of war prevention, notably in the Middle East, which no country, including the United States, could possibly have done by itself. It is often—but not always—an effective instrumentality for peace. It is never a cause of war or anything harmful to the United States."

The objective historian of current events will have great difficulty in following you in these statements. As I write, violent conflicts exist in a dozen places throughout the world. In the Middle East, in which you feel the United Nations has been notably influential, battles rage in Lebanon, Cyprus, and north Africa. Recently, a Canadian high official in the so-called United Nations Control Forces between Israel and Egypt was killed. The Arab bloc under the tutelage of Moscow is arming—for peaceful purposes? The encroachment of Soviet influence in this area, which you mention with pride, has been enhanced significantly in recent months and years, making it more and more inevitable that any controversy which touches off violence will create an expanded area of conflict rather than a restricted area. You apparently regard with satisfaction the presence in this troubled area of the pathetically weak United Nations patrol. What will you expect of the United States if and when the members of this little force are besieged and murdered? Is the United States committed to back up this force by military means or is it not? What chance is there, therefore, of the United States remaining neutral in the event of an outbreak of hostilities generally in the Middle East, no matter who is the aggressor or what the merits of the campaign?

As I write, the last vestige of resistance to the Communist-inspired Sukarno Government in Indonesia is crumbling despite the assurance of the United Nations to respect the aspirations for independence of the Indonesian groups. Need I point out the tragic retreat before the forces of Communist slavery in China, Indochina, Middle Europe, including Hungary? I believe it is fantastic that you in the year 1958, after the 13-year record of the United Nations, bring yourself to boast of the United Nations as a growing influence for international peace.

While I am on this subject, I note that you make no reference to Korea. I should like very much to present to you my version of this tragic war and disgraceful truce in defeat, but before doing so I wish to ask you to favor me with your version of one phase of this conflict. Was the Korean war commanded and directed by the United Nations or by the United States of America? I earnestly hope that you will find time to enlighten me on this one subject in advance of all others.

3. You say that "the Bang-Jensen incident was not 'an instance of violation of diplomatic immunity' and did not 'prove the United Nations to be a center of international espionage' and did not prove the United Nations to be 'a refuge for disloyal American citizens'—which it is most certainly not, since every American employee of the United Nations must be cleared under U.S. civil service and the FBI procedure."

Concerning the Bang-Jensen incident, I refer you to the enclosed editorial from the June 12 issue of the Indianapolis Star. In view of this disgraceful development, will you still insist that the Bang-Jensen incident is not a violation of diplomatic immunity? It certainly is a notorious example of Communist domination of the United Nations. Why has no action been taken by the United Nations on the Bang-Jensen U.N. Report on Hungary? What did our representative in the United Nations do about that report? Could our United Nations delegation have prevented this latest outrage against the author of that report? If we are powerless in these situations then why are we tied helplessly into this web of intrigue and why should we not leave such an organization where we share its moral and financial responsibilities without equivalent authority in such important phases of its activity?

If clearance of American employees of the United Nations by the FBI and the Civil Service is a guarantee of their loyalty to this country, then please explain the second report of the U.S. Senate subcommittee of the Committee on the Judiciary, reporting on the administration of the Internal Security Act, March 22, 1954. This report concludes that:

1. American Communists had penetrated the United Nations Secretariat.

2. They aided one another in getting jobs in the United Nations.

3. They are particularly valuable to the world Communist conspiracy when employed in the United Nations from which they can operate both here and abroad under cover and sometimes even with diplomatic immunity.

Can it be denied that the individuals found guilty in the Senate investigations were protected by the Secretariat of the United Nations under the provision of chapter XV, article 100 of the charter?

Why did 200 American employees of the United Nations suddenly resign when this committee began its hearings in 1951? Were not 17 American employees in the United Nations Secretariat discharged by the United Nations Secretary General Trygve Lie when they refused to affirm or deny to the Senate

committee that they were members of the Communist Party? Did not the United Nations Administrative Tribunal rule (Aug. 21, 1953), that the United Nations Charter does not justify discharge of a United Nations employee for membership in the Communist Party and that these discharges, for that reason, were illegal? It is my recollection that the permanent employees in this group were ordered reinstated with backpay (in one case $40,000), and that the United States paid one-third of these backpay accumulations. Does this not prove that the United Nations is a refuge for disloyal American citizens.

4. You say that "the small nations in the United Nations do not vote as a bloc and the United States has never been defeated in the United Nations on any vital question. Moreover, the United States is completely protected by the veto against any act contrary to our interests."

Since 1945 the number of nations belonging to the United Nations has increased from 49 to 81. Of those 32 members added since the launching of the United Nations, 15 are either obvious puppets or at least satellites of Communist Moscow. Of the remaining 17, not more than 5 can possibly be regarded as allied in tradition or interests or religion with the United States. Has this disproportionate increase in the atheistic communistic powers in each instance been approved by the United States? Can anyone viewing this tremendously overwhelming existence of power in unfriendly nations possibly assure the American people that the interests of the United States and of these other powers will not diverge on occasion when the United States will be outvoted?

But you say "the United States is completely protected by the veto." I should like to ask you whether the United States will use its veto power to prevent the admission of Red Communist China when such admission is approved by the membership as will inevitably result ultimately in view of the more or less furtive support for such admission emanating from official leadership and, incredibly, from some American businessmen. However, your reference to the veto cannot be permitted to pass without the recognition of the similar power possessed by the Soviet Union. How many times has the Soviet Union exercised its veto power? The record shows 81 times. How many times has the United States protected its interests by use of its veto? None.

I await with great interest your analysis as to the command during the Korean war in the light of the Soviet power of veto. I do not have to remind you that the Military Staff Committee of the Security Council of the United Nations has without exception at all times functioned under the aegis of a Soviet executive officer of the Security Council. The under-secretary for Political and Security Council Affairs, who is at the head of the Military Staff Committee, has consistently been a Communist—three times of the Soviet Union and once of Yugoslavia. This actual power, coupled with the veto power, makes the United Nations a queer organization with which to conduct conflicts in which the lives of American boys are jeopardized.

In this connection, with reference to the concern of the United Nations with the fate of American soldiers, I might tell you that I am fully aware of the failure of Dag Hammarskjold and yourself to see the group of 83 mothers of boys missing in Korea when they attempted to interview you at the United Nations in 1954.

5. You say that "the United Nations does not have any means of shaping domestic law in the United States of America by treaty law or by any other means. It is instead specifically precluded by the Charter from interfering in a member state's domestic affairs."

It is quite incomprehensible to me that anyone in your position could possibly make any such sweeping denial of the revealed and potential power of the United Nations to create domestic law in the United States. I should like to call your attention to the resolution adoped by the Daughters of the American Revolution in 1955. This resolution listed specific instances in which interference with, and threats to the Constitution of he United States, emanated from the United Nations. It referred to: (1) The Fujii case in California, (2) the steel seizure case, (3) the propaganda of the declaration of human rights, (4) the genocide convention, (5) UNESCO.

6. You say: "The United Nations is not 'a socialized one world state'; it is not 'being developed' into one; and I would oppose its becoming one. The United Nations is not a government of any sort. It has no sovereignty. It cannot impose a tax, draft a soldier, or pass a law. Everything that it does is purely recommendatory."

The following citations from the United Nations Charter are pertinent to this statement:

Article 2–7. "Nothing contained in the present charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state."

So far so good, but note these:

Article 7–1. "There are established as the principal organs of the United Nations * * * an Economic and Social Council."

Article 13–1. "The General Assembly shall initiate studies and make recommendations for the purpose of * * * (b) promoting international cooperation in the economic, social, cultural, educational, and health fields, * * * assisting in the realization of human rights and fundamental freedoms."

Article 55. "The United Nations shall promote: (a) higher standards of living, full employment, and conditions of economic and social progress and development; (b) solutions of the international economic, social, health, and related problems; and international cultural and educational cooperation; * * * (c) universal * * * observance of human rights and fundamental freedoms."

Article 57–1. "The various specialized agencies, * * * having wide international responsibilities, * * * in economic, social, cultural, educational, health, and related fields shall be brought into relationship with the United Nations."

Article 62–1. "The Economic and Social Council may make or initiate studies and reports with respect to international economic, social, cultural, educational, health, and related matters and may make recommendations."

Article 62–3: "It may prepare draft conventions for submission to the General Assembly."

(You are aware, of course, that by Supreme Court decisions—*U.S.* v. *Pink*, volume 315, page 203—such treaties or executive agreements change the internal law of the United States.)

Article 64–1. "The Economic and Social Council * * * may make arrangements with members of the United Nations and with the specialized agencies to obtain reports on the steps taken to give effect to its own recommendations."

Article 56. "All members pledge themselves to take joint and separate action * * * for the achievement of the purposes set forth in article 55."

Article 2–2. "All members * * * shall fulfill in good faith the obligations assumed by them in accordance with the present Charter."

Article 2–5. "All members shall give the United Nations every assistance in any action it takes."

In the light of the activities of the ILO, GATT, WHO, UNESCO, and the technical assistance board supported by the World Bank and International Monetary Fund it is difficult to understand how other than a socialized world state can be expected. These claims can be supported by the official publications of the different specialized agencies and, in addition for UNESCO, by the statements of many associated with its history.

In his book, "Modern Law of Nations," Dr. Philip Jessup charted the practical path from the charter of the United Nations to world government. This, he claims, can easily be done by charter interpretation, with no change whatever in the charter. In his book, "War or Peace," page 204, Secretary of State, John Foster Dulles, states, "I have never seen any proposal made for collective security with 'teeth' in it, or for 'world government,' or for 'world federation' which could not be carried out either by the United Nations or under the United Nations Charter."

My apologies for the great length of this letter, but because of your interest in our resolution I thought you might also be interested in the thoughts of another American. I wish to make it very clear that in no way is this to be considered an official reply from the national society, for that prerogative remains with the Executive.

I believe that continued membership by the United States in the United Nations will result in loss of the prestige presently enjoyed as the leader of the world. Our Nation will gradually be forced to conform to the practices supporting the ideals of the international oligarchy and will lose its sovereignty and independence. Its wealth will be sacrified in support of worldwide activities. Every year finds our blessed country more strongly enmeshed in the schemes of the internationalists. It will require the strength and courage of fearless, clear-thinking, dedicated Americans to lead us back, through the maze of articles, conventions, and treaty law which now threaten us by their eventual acceptance, to the Constitution of the United States.

As a free nation, divorced from the United Nations, the United States would again control its destiny and the freedom of its citizens. It would as a Christian nation give, but according to its own decisions, to those in need all over the world. Its foreign relations would be conducted by diplomatic negotiation, its youth would be brought home from the more than 60 countries where they are stationed. Without question, the United States as a strictly sovereign nation would quickly supersede Russia, her greatest enemy, in all ways, therefore control the world situation and bring peace to mankind.

Sincerely yours,

MRS. RAY L. ERB.

"Hanging Sam's" Memories

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. MILLER of California. Mr. Speaker, a tragic error which could have robbed America of the services of a man who has proved himself to be one of her great military leaders was averted by the interest manifested by the then young Congressman from Texas, SAM RAYBURN.

Incidents like this have marked the long career of our Speaker and have endeared him to the hearts of all of us.

It is interesting to note that since my remarks on March 20, the New York Herald Tribune published an article on Sunday, April 12, by Mr. S. L. A. Marshall on General Williams that confirms that which I told the House.

I include that article as part of these remarks:

OF ARMS AND MEN: "HANGING" SAM'S MEMORIES

(By S. L. A. Marshall)

"Hanging" Sam Williams must have a smile on his face these days. The newspapers say the Allies have a neat top-secret plan for undoing the Russians should there come a military showdown west of Berlin.

If the word that everything is peaches in the Western camp travels as far as Saigon, Vietnam, where "Hanging" Sam holds forth, it could either give him a chuckle or cause the raising of a questioning eyebrow.

Now a three-star general of the U.S. Army, and one of the better-loved and saltier characters of the Army, Sam is chief of MAAG operations in the southeast Asia rice bowl region, maybe taxed with problems, but at least happily remote from the Berlin dilemma.

There was the other time, though, when Sam carried most of its weight on his own square shoulders. In 1948, there were other Americans on the pivot, but it was Sam's nose which was to be used to bulldoze a way into Berlin, if the Russians got tough. While sweating out how to discharge this minor chore, Sam read a few stories from the home press carrying the good news that the U.S. Army was prepared for any eventuality. It's a national habit.

Much water has flowed under the Elbe bridges since he told the story, but that's all to the good, since it might have fulled and ripened with the years. What follows is a reasonable facsimile thereof.

In the late spring, 1948, when the threat of blockade loomed heavy, Sam was commander of the 26th Infantry, the Blue Spaders of the big Red One Division. It was his second tour as such and he felt right chesty about the prime condition of his regiment.

Stationed at Bamberg, just north of Nurnberg, the Blue Spaders spent much of their time training on the ranges at Grafenwohr. There they were visited frequently by the division commander, Maj. Gen. "Shrimp" Milburn, whose fame was made more lustrous in later years by his flawless leadering of U.S. I Corps during the worst days in Korea.

At Grafenwohr there suddenly descended on Williams & Regiment a party of senior officers from stateside. Gimlet eyed, they looked the blue spaders over. The intensity of this inspection, left unexplained, built up a mystery which baffled Sam wholly.

One four-star general said to him: "These men don't look like they are afraid of Russians." Sam was proud of his outfit; he felt it was bursting out all over with esprit. So he answered: "Why should they be?" We don't think every Russian is 9 feet tall and weighs 300 pounds." He thought that crack reflected unit sentiment but it caused a certain lifting of the eyebrows.

The visitor departed. Then Milburn came over to unbag the kitten. If troops had to be used to break the Berlin blockade, Sam's blue spaders would be the main body. With the column would ride some division engineers and part of its organic tank battalion. To give the venture an allied flavor, one company of British rifles and one of French would also start. What other plans were afoot, or what hand would hold the overall responsibility, Sam heard not.

But Sam, like the namesake McGee, stayed cool and calm in the heart of the furnace roar. Being tagged meant first of all rounding up every bit of information which might help with the problem.

Right off, he was told that the blue spaders would have a 20-kilometer-wide corridor to move through. That wasn't too bad; there is some elbow room within such latitude.

So Sam immediately requested higher headquarters to supply him with maps which would show down to the last meter the boundaries of the strip over which he would be allowed to maneuver.

In due time, back came the reply that there was no 20-kilometer on the ground, but only in the air. By land, the corridor was limited to the pavement of the autobahn and the few feet of earth shoulder on either side.

Said Sam, in words not intended to be a classic of understatement: "Quite naturally, the extraordinary conditions complicated my tactical problem somewhat."

He forthwith instructed his battalion commanders that the first movement of any man or vehicle off the autobahn would enable the Russians to claim that the movement had violated their territory. Put in that straitjacket, he had less time to worry about what he would do if the Russians blew their bridges in his face, and none at all to become confused because his engineers couldn't round up enough materiel to span the possible water spaces.

"I remember," said Sam, "telling 'Shrimp' that when the regiment started, I wanted to go and go fast. I couldn't be looking over my shoulder all the time for orders. I wanted a clear unequivocal directive before crossing the border that I should make Berlin come hell or high water. If the Russians tried to stop us, that would mean war. I didn't relish having some second guesser saying later that Sam started it all on his own.

" 'Shrimp' agreed. He said: 'I'll have several copies struck and placed in bank vaults back home for future reference and the sake of history.' "

So ends Sam's story, which has no moral. The airlift, which also developed happenstantially, relieved him of the necessity of having to save resolute national policy by the seat of his pants.

Florida Oldsters Refuse To Decline

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. BENNETT of Florida. Mr. Speaker, everyone knows that Ponce de Leon came to visit Florida in 1513 in search of a fountain of youth. In 1564 when the French came to settle Florida, under Rene Laudonniere, they found no one but Indians living in what is now the United States and among these natives there were many who were very, very long lived. Today, all of us who live in Florida know that the beauties and opportunities in our fair State give good incentives for living just as long as is possible. Yet, even in our beautiful State, with its many opportunities, there are many people of advanced years who are able and willing to do work which society has attempted in the past to reserve for younger people. Somehow, everywhere in America, we should find a way to provide more employment opportunities for those in advanced years.

Recently I read an excellent editorial by Mr. Kenneth A. Brown, executive director of Goodwill Industries of Jacksonville, with which I will conclude my remarks. This was published in the April 2 edition of the Capital Labor News. Mr. Brown points out that the Goodwill Industries organization is making available to many of our older citizens the constructive work which many of them seek, not only in Florida but elsewhere in the United States:

FLORIDA'S SENIOR CITIZENS

(By Kenneth A. Brown)

All too often the senior citizen is what a Florida newspaper writer has called an arbitrarily retired member of society to be congratulated on the way he carries his years, and regaled at intervals with pep talks, travelogue pictures, and amateur theatricals at sessions of the Homeville Civic and Social Club.

Compliments, felicitations, and entertainment are well and good; but what the sincerely well-meaning friends don't seem to know is that a lot of the oldsters make their regular appearances at the agreeable and helpful events because so little else is left to do.

A very considerable number of these older citizens don't like the prospect of continued doing nothing. They have no quarrel with those who try to add to their enjoyment of the golden years, but they would like to be doing something on their own.

These are times of seeming contradictions, in many ways. Doctors, insurance companies, and everyone else, it would appear, are engaged in the effort to prolong the lives of our people.

Within a short period of time, life expectancy has been lengthened by a score of years; and social workers, welfare agencies, community clubs, and civic organizations vie with one another in the creation of programs to insure a greater measure of enjoyment for the oldsters during their declining years. But the joker in the rummy-deck is that a large segment of the seniors are not declining at all.

They're still in good trim physically, mentally alert, and fully capable. But they are off the job, usually without their consent: and if you ask us, whose work puts us in direct touch with their situation, it's not at all funny.

We all love babies and teenagers, and other groups of all ages, but no one is so deserving of our love and helpful attention as a grand old lady or gentleman. Old-age pensions, retirement pensions, social security, and the like are all very fine, but they don't fill the hours.

They don't meet the psychological needs of the elderly who continue active in mind, and potentially useful to themselves and to society in every way.

Many of them are resentful of the practice, in busines and industry, that almost literally says "Get out!" to the person who long has contributed the best of his hand and brain, just because he has rounded out a certain number of calendar years; and it is most regrettable to see them denied the privilege of doing something for themselves.

Our Goodwill Industries has endeavored to fill the breach between creative action and what one of our older friends has defined as "fruitless repose."

The more than one hundred Goodwill chapters in the United States have in their employ many of the seniors whose experience, aptitudes, and skills add not only to material production but to their own mental and physical satisfactions. For them, the same as for our multitude of handicapped employees, Goodwill has become what one

of their number has denominated "the organization with a heart."

It is the contention at Goodwill that to do our full part in the field of human service is to see that every willing worker, regardless of age or any other extraneous condition, is given the opportunity for employment as long as he is able to handle the job.

And this, I should say, can be done with no denial of opportunity to those of younger years, who have no reason, as a rule, for application to a welfare agency. It is beyond reason that in an economy in which everything is ready at hand—machinery, tools, raw materials and all—the way may not be devised to meet all demands.

Minor unemployment periods come and go—sometimes greater ones; but soon, we may confidently believe, we shall have improved and expanded our industrial system in a way to see that no willing worker shall be unwillingly idle. That is one of the slogans at Goodwill Industries—no unwilling idleness; and its application to the needs of the senior citizen, everywhere, should be as directly objective as we have made it for the handicapped.

We are hopeful that nothing in these lines may be taken as a slap at the carefully outlined plans by which thousands of our older people are enabled to get more out of life. What we are emphasizing is the fact that so many of these fine citizens, of both sexes, are still without the opportunity to exercise the abilities and realize the desires they yet retain.

Development of Our National Forests

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. MEYER. Mr. Speaker, from the vantage point of the professional forester, I wish to comment briefly on the report "Program for the National Forests" which the Agriculture Department sent to the Congress on March 24, 1959.

Because of the multiple use aspects of forest land which this report involves, it should be of interest to every Member and more particularly to my colleagues who have national forests in their States or districts.

With the rapid increase in our population and the increasing demand for natural resources to maintain an expanding economy, the use pressures on forest land are growing daily. Careful planning and full development of our forests are therefore necessary if both current and long-range resource needs are to be met.

Winter sports have become an intensive use on the Green Mountain National Forest in Vermont. We welcome this activity because it balances the recreational use in the forest and provides a year-long use by tourists. Because the areas are accessible to the heavily populated metropolitan areas in New England and the Northeast, their orderly expansion as provided for in this "Program for the National Forests" is essential. The local economy of the area is considerably benefited by the money which the skiers and recreationists spend on winter sports and other outdoor activities on the national forest.

This "Program for the National Forests" will improve hunting and fishing. Our lakes and streams on the Green Mountain National Forest provide sport fishing for thousands of visitors each summer. As more thousands come to Vermont and to the other national forests throughout America, full development of this wildlife resource of the forest is necessary and desirable.

To a forester, multiple use means the full use of all the renewable resources on forest land. The growing, cutting and sale of timber is one of these uses. In Vermont, much high quality maple timber is harvested from the national forest.

This activity supports many small community forest industries. It provides the raw material for the manufacturer of maple bowls and other specialty products which require a high input of local labor. These wood products supplement the tourist trade and again the local economy of areas surrounding the national forest is improved. Also there are other special uses of national forest trees which provide the sap from which the famed Vermont maple syrup is made.

The nature of our country in Vermont and much of New England is such that watershed values are high. The land is glaciated and unstable. We have found that forest cover is one of the best stabilizing forces to keep the land from eroding into our streams and valleys. As a forester, I am pleased that this "Program for the National Forests" has plans for stepping up the management and protection of the watersheds on all the national forests throughout America.

This broad-scale program for the national forests includes accelerated research in forest genetics, timber cutting methods, new uses for low-quality trees and better protection from fire, insects, and disease.

Such research is essential if the forests' resources are to be kept renewable in quantities to meet the impact of present and future use.

Mr. Speaker, it is gratifying to know that the Forestry Subcommittee of the House Agriculture Committee plans to hold hearings on May 14 and 15 on this long-range conservation and development program for the national forests. I hope many of my colleagues will take advantage of this opportunity to indicate their interest in the full development of the national forests.

Cross Country With the on to Oregon Cavalcade—II

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. PORTER. Mr. Speaker, the on to Oregon cavalcade is making its way across country and finding warm hospitality wherever it goes. Under leave to extend my remarks in the RECORD, I include the following story from the May 7, 1959, Drain Enterprise which covers the journey on the trail from April 27 through May 2. This daily diary of the trip to Oregon from Independence, Mo., by wagon train is being written by Mr. Robert R. (Rudy) Roudebaugh, of Drain:

WAGON TRAIN ENCOUNTERS RAIN, WIND, FOG, AND HEAT

Jotting notes on a pad while jostling along in the driver's seat of a covered wagon traveling a rocked road in Kansas does not sound exactly easy. Also scribbling a few lines during meal and rest stops and dropping the notes at post offices en route is the method the Drain covered wagon driver, Robert "Rudy" Roudebaugh has been supplying North Douglas County readers of the Drain Enterprise with a firsthand, personal account of the 2,000-mile trip from Independence, Mo., to Independence, Oreg.

The notes are mailed from day to day and are complete up to and including last Saturday, May 2. Mrs. Kiwanda Roudebaugh will join her husband on the wagon train trek shortly after their daughter Judy, graduates from Drain High School the end of May.

April 27: Free breakfast given for wagon train travelers at St. Mary's cafe. Dan and Daze (horses pulling Drain wagon) are in dress and ready to roll. We are leaving one swell town of 1,300 people, about the size of Drain. They gave us four meals plus feed for horses and a good place to camp. Weather is rainy and heavy fog. Time is now 8:07 a.m., and we are on our way saying goodby to a good town and the many good friends I have made.

At 9:38 the wagons stopped to shake rocks out of the brakes as we have been on gravel road all morning. Dan and Daze pulled on the bit all morning. No wind today. Janell still asleep.

At 11:23 we stopped at Histon cemetery to water horses. Cemetery has Indians buried from ages of 2 to 92. We are on our way. At Vermillion River ate lunch. Camped at ball park at Louisville, Kans., (population 200) arriving at 2 p.m. Winds up to 20 miles per hour.

Janell has been invited out to dinner. Townspeople have turned grade school gym and cafeteria over to us.

April 28, leaving Louisville: Rod and Gun Club cooked our meal last night. Janell, also Dan and Daze have a cold. All hooked up and ready to go at 8:09. We are going north on Highway 99 with the sun out bright. At 11:04 going over Port Creek. Saddle club is out to meet us. Arrived in Westmoreland, Kans., 11:27 making camp at ball park. The town fed us at the cafe for lunch. Janell has met another girl from here. We made 11 miles today.

April 29: At 7:35 ready to roll. We have 22 miles to make today. If Dan and Daze are not better will have to travel slower. Weather bright and sunny, temperature 80 degrees. At 9:52 we are 15 miles from Frankfort at place called Blaine. The school pupils are out to see us. Entering Marshall at 11:25. Stopped at school and gave out autographs. 11:15 crossed Clear Port Creek. 12:07 passed Mt. Hope cemetery. 12:19 stopped for lunch and watered horses. Dan drank water and Daze ate some grain and drank. Weather is nice with little wind. We have 5 miles left to Frankfort. We camped at 4:45. The people fed us supper. Janell sleeps good. She slept all morning yesterday.

April 30: All ready to go but Dan does not feel a bit good. He don't eat much grain or hay. We have 26 miles to go. It's 7:49 and we're starting off. Plenty of photographers

here. Janell is driving the team. They have quieted down. We went by the Vermillion river. At 10:45 stopped for a rest 2 miles out of Blue Rapids. Marysville is 10 miles away. At 11:01 in Blue Rapids. We went by high school and grade school. At one school the pupils were not out. Schools are all up in the town square. The band played three songs for us. Town has a population of 1,200 to 1,500. The Blue Rapids Chamber of Commerce gave us a picnic lunch. Dan did not eat, but drank water. At 2:12 we're at Alcove Springs. A historic spot where wagon trains long ago used to stop and fill up with water. We are 6 miles from Marysville. Temperature must be 80 or 90 degrees. Arrived in Marysville 4:29 and pulled into camp at Kansas National Guard building at 4:41.

May 1: Good bright day. At 7:55 ready to roll across Blue River. State line only 11 miles. At 10:56 I see some little town up ahead. Hot winds have came up. Farmers stop their work and cut loose. At 11:46 pulled up to feed horses and give them an hour to feed and rest. Winds are now up to 50 miles per hour. Back roads are dirt and gravel. At 12:68 it's time to roll. At 1:59 we stopped at the only pony express station that is left in the United States. Station is 101 years old. Original building still stands. At 3:51 arrived in camp this side of State line. Dan feeling much better. He is best walker of the pair. People are beginning to come in.

May 2: Ready to roll at 7:51. Stopped in Hollenberg 10:07. This is last t own in Kansas, 1 mile from Nebraska State line. Crossed over into Nebraska at 10:40. We have been on rock and gravel road all morning. At 11:58, it rained half inch in 15 minutes. Now on our way to Steele City. Wet to the skin. We stopped to run down a loose horse. Daze just tries to keep on going. Back on oil road again. Rain peps horses up. At 2:18 its pouring again at Endicott, population 200. At 3:55 we are entering Fairbury. Riding club coming to meet us carrying U.S. and Nebraska State flags. The club is named "Blue Valley Ranglers." At 4:17 arrived at city park where we will make camp over the weekend.

The Proposed Equal Rights Amendment to the U.S. Constitution

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by Miss Sarah Jane Cunningham, the gifted daughter of our former colleague, and friend, Paul Cunningham, points up the injustices under which the women of the United States still labor.

Our Constitution is a very great document, but its greatness hinges on the fact that it is susceptible to change. A change on the status of women is long overdue.

The equal rights amendment, which has been before the Congress for over 15 years, to my knowledge, continues to gather dust in the gloomy files of the Judiciary Committee, while the gallant American male, in and out of Congress, pursues his way in the firm belief that he is protecting American womanhood from the terrors and dangers of equality.

The article follows:

THE PROPOSED EQUAL RIGHTS AMENDMENT TO THE U.S. CONSTITUTION

(By Sarah Jane Cunningham)

The famous 14th amendment to the Constitution was adopted in 1868 after the Civil War. It states that all persons born or naturalized in the United States and subject to its jurisdiction are citizens and no State shall make or enforce any law abridging the privileges or immunities of citizens of the United States. It further commanded that no State shall deprive any person of life, liberty or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

The Constitution is the supreme law of the land and is said to be a great charter of human liberty, unique in the history of the world. But, oh, what the Supreme Court has done to that great charter of human liberty where women are concerned. The interpreter is indeed the lawgiver. The Constitution has been prevented from protecting women from the rankest kind of discrimination, injustice and inequality by the interpretation—or misinterpretation—placed upon it, that is, by benchmade law.[1]

Not many years ago in a case concerning the labor restrictions of women hotel employees, the court said: The law of this land today is that labor restrictions against women only do not violate any rights women have under the Constitution.[2]

The Constitution does not protect any American woman against the enactment by any State legislature of laws prohibiting the employment of women in any kind of business, in any profession or barring her from any lawful means of earning a living. Many States have done just that and the Supreme Court has ruled that in so doing they do not violate the Constitution. The Supreme Court has made the Constitution powerless to protect women.

Shortly after its adoption, the Supreme Court actually announced that the 14th amendment could not be set up to protect women against unequal laws which were a barrier against the right of females to pursue any lawful employment for a livelihood. Mr. Justice Bradley said that and the Court has not changed its mind. If the legislature has not excluded women, it must have intended to, said Justice Bradley; besides, it belonged to men to make, apply, and execute the laws.[3]

In the case of a woman lawyer who requested the right to practice law in a State whose statutes said that qualified persons could practice within the State but was denied that privilege, the Court said that the Constitution does not require States to give to women the equal protection of their laws.[4]

The very latest word on the subject by the Supreme Court is that women may be barred from any employment and deprived of the use of their property in spite of the Constitution.[5]

Because women have been termed second-class citizens because of decisions rendered by the U.S. Supreme Court in interpreting the Constitution, it will be necessary to overcome this discrimination by going to the very root of the trouble and there making the correction.

Although the Constitution of the United States forbids any State to deny to any person the equal protection of the laws, believe it or not—

Men, aliens, and corporations are persons entitled to the equal protection of the laws of this country; American women are not.

It is unconstitutional to try a Negro man with a jury from which Negro men have been excluded; it is not unconstitutional to try a woman, black or white, with a jury from which women have been excluded.

To exclude men from jury service would be to deny them a trial by a jury of their peers and the equal protection of the laws; excluding women from jury service is no such violation of the Constitution.

It is unconstitutional to place restrictions on men's liberty to contract; it is not unconstitutional to restrict women's liberty to contract.

It is constitutional to bar women from any lawful means of earning a living; such laws as to men are unconstitutional and void.

Women may be subjected to labor restrictions; men may not.

Women may be excluded from business and the professions; men may not.

Women in business and the professions may be discriminated against; men may not.

Women may be deprived of their property without due process of law; men may not.

Sex, marriage, and motherhood are the bases of rank injustice and discrimination against American women.

In utter amazement, people ask how such a thing can be in this American Republic. Bishop Hoadly had the answer when he said that "whoever hath an absolute authority to interpret any written or spoken laws, it is he who is truly the lawgiver, to all intents and purposes, and not the person who first wrote or spoke them." Justice Holmes condensed it when he remarked that the Constitution is what the courts say it is.

The Supreme Court of the United States has said that a woman is not a person who is entitled to equal protection of the laws under the Constitution, and that the Constitution cannot protect her against inequalities and discrimination as long as they are based solely on sex.

Our Phony Farm Support Program

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. NORBLAD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include an editorial written by Mr. Kenneth Holmes in the News-Register of McMinnville, Oreg.:

OUR PHONY FARM SUPPORT PROGRAM

The inequity of today's Federal farm program is illustrated by a story in the New York Times telling how 9 out of 12 large producers of crops chose to forfeit all or part

of their 1957 crops rather than to repay their Government support loans.

According to Times a survey of the large loans on corn, wheat, cotton and rice showed that three big growers repaid a total of $1,539,310 plus 3½ percent interest. Nine other large borrowers let the Government take all or part of their 1957 crops placed under price support loans. They obtained loans totaling $3,668,482 and only repaid $1,053,141.

These were among a total of $1,334,318,409.34 loaned out on 1957 wheat, corn, cotton and rice crops. Out of this total farmers paid back to the Government $368,698,232.41 to redeem all or part of their crops placed under price supports.

The above figures came from the records of the Commodity Credit Corporation as of last December 31. Says the Times, "They show how the Government's large holdings of major crops have been built up as farmers permitted the Government to take over their products pledged for the Federal loans because markets could not absorb the abundant production at prices as high as those offered by Federal farm price supports."

Farmers pay the 3½-percent interest on the loans if they redeem all or a part of their crop. If they turn over their pledged crop collateral to the Government, they pay no interest.

They are responsible for storage for the life of the loan; but if they turn over crops to the Government, the Government assumes responsibility and pays producers for holding the crops until the Commodity Credit Corporation arranges for movement into Federal storage. Cotton is an exception in this last case; for cotton growers are allowed to put their product in commercial warehouses, which bill the Government pays for storage.

In the same issue of the Times is the story of how Stanley Yankus, of Dowagiac, Mich., sold his farm at auction for $30,000 because he was tired of the battle over governmental restrictions on his crops which cost him $5,000 over a 6-year period. His farm had a 14-acre wheat allotment. Yankus admitted he raised more but claimed that his chickens were fed every grain he raised.

It looks as if Mr. Yankus was not big enough or rich encugh to manage to clean up on the Government farm support program. He was seeking peanuts (figuratively, of course); he should have been after millions. If he had dealt in millions of bushels and millions of dollars instead of a measley 14 acres and a few chickens, he'd have cleaned up. A person's got to think big to be a success these days.

We think that things have gotten rotten ripe in the Federal farm program, and it is time something drastic was done to remedy the situation. It is bad business; it is bad agricultural; it is bad government; it is planned missuse of Government moneys.

Russia Favors Foreign Aid

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. DORN of South Carolina. Mr. Speaker, of course, Communist Russia favors the U.S. foreign aid program. This is plain commonsense that our taxpayers keep telling me back home. Naturally, Soviet Russia favors foreign aid for two reasons—it weakens the United States economically, and diverts that much money from possible use on our missile program. Soviet Russia, being one of the largest recipients of our aid, would advocate aid for other countries to help promote communism in those countries.

Mr. Speaker, I need only remind you that Soviet Russia received over $11 billion from America during World War II. With this aid, she was able to conquer Poland, Lithuania, Latvia, Estonia, Hungary, Bulgaria, Albania, Yugoslavia, Czechoslovakia, East Germany, East Berlin, Manchuria, China, North Korea, and other areas. Russia's most ambitious and exciting policy is to have America develop the undeveloped countries of the world before she makes her bid to take these countries over. Even in England, a nation with hundreds of years of background in freedom and democracy, our money was used to destroy the free enterprise system.

Mr. Speaker, the following is from INFORM, an intelligence source which has been remarkable for its accuracy:

MOSCOW URGES ACCEPTANCE OF U.S. AID

The winning of underdeveloped countries has long occupied the attention of the Soviet Union, where it comes under the Moscow Institute of World Economy. This institute is directed by an Armenian, Arzumyan, and it has now elaborated a program which will serve as a basis for Soviet policy in the months to come.

Financial aid by the United States to underdeveloped countries will be encouraged in every way by the Soviet Government so long as such aid is granted without strings attached.

Soviet missions in the countries concerned are being instructed to urge the governments to which they are accredited to:

1. Establish state socialism; i.e, use the funds received for purposes of industrialization, mainly of the state-operated sector, and replace individual enterprise wherever possible by state management.

2. Use American funds against America; ie., introduce measures to protect the economy of the country in question from competion on the part of overindustrialized countries, particularly the United States.

3. Seize foreign capital and foreign business concerns, and nationalize banks operating on foreign capital.

4. Institute strict control over imports and currency transactions.

An Open Letter to the Congress of the United States

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. MACK of Washington. Mr. Speaker, the May 1959 issue of Roads and Streets, a national publication serving the highway industry, contains an "Open Letter to the Congress" by the editors. In view of the widespread interest in the present development of our Federal-aid highway program, I feel that this article should be read by all Members of Congress and ask unanimous consent that it be printed in the Appendix of the RECORD:

AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES

Two and a half years ago the U.S. Congress—after months of penetrating investigation—drafted one of the most far-seeing internal improvement programs the Nation has ever witnessed. We refer to the Federal-Aid Highway Act of 1956, which put into being a sound, long-range national highway program. We believe that the roadbuilding program created by that measure (and strengthened by the act of 1958) was an admirable combination of reason and inspiration. It was a clear recognition of the expressed desire of the American people for a safe, up-to-date system of interstate highways.

That program is now in danger of being seriously violated.

The Bureau of Public Roads has reported that because of existing financial limitations, $2½ billion authorized for the 41,000-mile system of national interstate and defense highways for fiscal year 1961 cannot be apportioned to the States this summer, as originally planned. Furthermore, of the $2.2 billion authorized for the following year, only $500 million may be apportioned.

The object of this editorial is to call this problem to your attention and to point out what will be the inevitable result if corrective legislation is not enacted soon.

DO NOT BREAK FAITH WITH STATES

The effect on some State highway programs would be immediate. In fact, the Interstate program would grind to a stop first in those States which have progressed the fastest and made the best record of quick and efficient use of the Federal funds. The first to be penalized would be those States which Congress has repeatedly commended for their progress, Ohio, California, Florida, New York, Louisiana, Illinois, Missouri, Michigan, and others.

Engineers would have no choice other than to shut down major interstate projects. Strips of pavement in some sections would lie half-completed, a silent testimony to indifference. Rights-of-way cleared through urban areas and homes already emptied of families preparatory to construction would stand a witness to apathy.

These are very real possibilities.

A delay of 1 year's interstate apportionment would produce not just 1 year's delay in specific projects, but close to two. It is impossible to just drop such construction projects and pick them up again without losing momentum. The nature of the work, seasonal limitation, advance planning, and the machinery of State contracting procedures are such that if Congress fails to assure the 1961 apportionment this summer, highway departments would lose close to 2 years of production as a minimum.

FORTY-PERCENT DROP IN CONTRACTS FORESEEN

The effect of such a curtailment on the road-building industry would be rapid and tragic. Objective statistics indicate that a cutback in Federal aid for the Interstate System from $2½ billion to nothing this year, and from $2.2 billion to $500 million next year, will force contract awards downward in a dismaying plunge. The Bureau of Public Roads foresees a 40-percent drop in contract awards starting next fall.

The uninformed may assume that the Federal-aid program has produced a surplus of work, which could be shaved down for a year without any real harm to the industry.

This is not true. The big program has just begun to reach the construction stage in volume and the highway contracting industry is still working at only 64 percent of its capacity. Competition for existing jobs is aggressive with a national average of 6.5 contractors bidding on every project.

This is not an industry in which a few huge firms dominate the field. The vast majority of America's thousands of contractors who do highway work head small organizations of men with specialized skills.

We agree with Gen. Louis W. Prentiss, executive vice president of the American Road Builders Association, that any curtailment of the national highway program would produce very real economic distress in the industry. And it would shake the confidence of these hardy businessmen in Congress' intentions of maintaining a long-range, balanced, soundly financed highway construction program.

"It will not be so easy, a second time, to find men who are willing to invest their money in roadbuilding capacity in the expectation of finding a place in an expanded program," General Prentiss points out.

The same might be said of the supporting industries. Equipment producers and materials suppliers have just begun to make the sales necessary to keep their plants on a reasonable level of production. It was only a few months ago that Life magazine ran a full-feature story revealing the plight of people in Peoria, Ill., where the livelihood of so many families engaged in construction equipment production depends upon the continuity of the highway program. The same may be said for numerous other communities throughout the country. And some of these cities are already in depressed areas.

EFFECT ON LABOR

To put an unnatural stop to the interstate program would be to kill jobs in areas already suffering from unemployment and would stifle the comeback many equipment factories have just begun to achieve.

What about the effect on thousands of men and women whose livelihood is in highway construction work? Here is where a recession in the industry would be most painful. The Department of Labor has estimated that a billion dollars' worth of highway construction produces employment for 63,750 men per year on the project itself and another 78,750 men per year off the site. Cancellation of the scheduled $2½ billion apportionment this August and over $2 billion next summer would produce a loss of 641,250 man-years, according to one conservative estimate. This would ripple through the entire one-seventh of the national economy which lives directly or indirectly off of highway transportation.

It is unbelievable that the Congress would permit that kind of distress.

These are the hard facts that cause the roadbuilding industry concern. We recognize that although some of the problems which a curtailment of the interstate program would create are problems of the roadbuilding segment of the American business community, the effect goes far beyond this industry. We have confidence that Congress is interested in the welfare of every single segment of our economic life, large or small.

In the case of the national highway program, so many other Americans are affected, aside from those engaged directly in roadbuilding or equipment manufacturing, or materials production, that we feel we speak for a far greater number of Americans.

EFFECT ON COMMUNITY PLANNING AND INDUSTRIAL EXPANSION

What about the disruption of community planning? In many of the cities you represent, Mr. Congressman, urban renewal projects are intimately tied to the location and completion of proposed expressways. In every city where an interstate freeway is delayed this fall by lack of Federal funds, municipal planning for numerous other allied projects—such as new schools and housing projects—will be thrown out of gear. To delay the construction of these expressways would be to hang a cloak of uncertainty over the fate of many other community projects.

What about the expansion plans of private enterprise? One of the remarkable developments in the national highway program has been the desire it has created for small and medium industries to seek sites adjacent to or near points of access to Interstate System highways. The Nation needs all the industrial expansion it can encourage—to stimulate greater tax revenue, to provide greater employment. A delay in completion of new interstate roads means a loss in much needed revenues and a loss in local employment.

FOUR THOUSAND LIVES EACH YEAR AT STAKE

And most important, what about the curtainment of safety benefits which we know flow from the completion of modern highways. Safety engineers have testified that the opening up of the National System of Interstate and Defense Highways would mean a saving of 4,000 lives a year from traffic accidents. The early beginnings of the interstate program—creating modern highway segments 2½ times safer than ordinary highways—has just begun to bring a small drop in the national traffic fatality statistics, according to the National Safety Council.

Who would want to delay the interstate program for a year, for any reason, if so many human lives were at stake?

This is the picture which, we hope, you as Congressmen will grasp, and in so doing, exert the leadership so sorely needed to carry the national highway program through a period of disagreement over interim financing measures. In the light of these sobering facts, some financing plan, even if temporary, must be enacted.

Too much is at stake to permit the interstate highway program to falter even for 1 year for lack of temporary financing.

Myron Taylor

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial on Myron Taylor and the special service he rendered as the personal representative of the President to Pope Pius XII.

MYRON TAYLOR

The death of Myron Taylor this week recalls the special service of this extraordinary man as special U.S. envoy to the Vatican during the years of the war. Strictly speaking Myron Taylor was never an ambassador and he was never a representative either to the Vatican or the Holy See; as everyone knows he was really a personal representative of the President of the United States to Pope Pius XII.

Whatever else the Taylor mission may have proved it certainly should have made it clear whether or not such representation was to the U.S. advantage; after Taylor it was not necessary to argue the matter academically, the facts were available for judgment. We must suppose that President Truman found the evidence impressive when he saw fit to suggest a successor to Taylor on a permanent and proper basis. For all of that, we do not have such a representative, and, because of strong Protestant pressure, we are not likely to have one for a long time. If this is a diplomatic handicap to the United States in its world operation, we know precisely where the responsibility rests.

Taylor himself, both during and after his years at the Vatican, was a man of the most impressive discretion. He was also an immensely charitable person who contributed to many good causes in this country and elsewhere. Not himself a Catholic, he never allowed himself any but the most proper attitudes toward things Catholic and at the same time even the most nervous of the Protestant elements unfriendly to his mission could find no cause for complaint. To have treaded so gently in delicate paths was a tribute to an acumen which matched his generosity.

His death has now closed a chapter which will be an episode of high historical importance in the history of our country. Few men have entered the service of the state from business who came with so many qualifications and left with such universal respect. Unfortunately, it seems less and less likely that qualified people will accept burdens of this kind in the future if the recent Luce affair is a sample of what they must expect. Taylor was spared all of this and his memory, like his life, will be recalled in dignity.

Farm Production

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. ULLMAN. Mr. Speaker, because I am sure the Members will be interested in the following, under leave granted I request permission to have printed in the CONGRESSIONAL RECORD this article from the Wallowa County Chieftain on Oregon's farm production:

FARM PRODUCTION HEADED FOR HIGHER LEVELS—OREGON AGRICULTURE SEEN AS ONE GIANT SUPERMARKET

Draw a line through Oregon aggriculture and you come up with something resembling a modern supermarket.

From the rain-soaked cranberry bogs of the coastal belt to the high, dry rangelands of eastern Oregon, farmers produce more than 100 commodities on a commercial scale.

As Oregon reaches the century mark, this giant supermarket is pumping more than a half billion dollars of purchasing power into the State's economy each year. And experts say we haven't begun to reach full potential.

Where are Oregon's key reservoirs for such future expansion? A prime example is the sprawling eastern Oregon range. Income from the more than 20 million acres of open range—roughly a dollar an acre from grazing—may double in the next quarter century, believes E. R. Jackman, veteran range crop management specialist at Oregon State college.

New chemicals to kill brush, and machines to seed the range are now available. Ranchers and OSC researchers are teaming up to give the range a badly needed facelifting.

Closely linked to the rangeland potential is stepped-up interest in livestock feeding in Oregon. Increased local production of feed grains and hay may reverse the practice of shipping large numbers of Oregon beef cattle out of State for finishing.

ONE BILLION DOLLARS MORE MEAT NEEDED

Men close to the livestock picture estimate that farm sale of livestock in the Pacific Northwest will have to increase by more

than $1 billion by 1975 to meet fully west coast consumer demands for meat. Value of production at the wholesale processing level is forecast at nearly $1½ billion, adding millions in new payrolls for Oregon.

An even greater challenge in the livestock field is the need for local pork production. Oregon now ships in about two-thirds of its pork supplies, with the Portland market commanding the highest prices in the Nation as a result of transportation costs.

A major step toward more Oregon-produced pork was taken recently with plans for an industry-sponsored swine-testing station near Hermiston. Designed to upgrade Oregon swine-breeding stock, the program has been approved by the swinegrowers, the Oregon Wheat Commission, and Oregon State College agricultural experiment station.

The station will be financed by the commission and will test about 250 hogs annually. OSC scientists will measure performance of animals consigned to the station by local swine breeders.

MORE IRRIGATION ESSENTIAL

Another big potential for the State's agriculture is more and better irrigation. Oregon now has 1½ million acres of irrigated land. Another 1¼ million could be irrigated if available water resources were fully developed, say leading resource planners.

Irrigation not only increases output per acre, it also helps the farmer raise different crops with a higher market value.

The area of land irrigated in Oregon increased 130,000 acres between 1949 and 1954. About half the increase was in the Willamette Valley. Statewide, most of the land that can be developed by individual or local irrigation enterprises has now been placed under irrigation, according to authorities. They add that any extensive future development must of necessity be keyed to multiuse water development projects.

Other major changes on the farm front point to increased efficiency to keep on top in a highly competitive industry. The picture, in dairying for example—fewer but larger dairy farms and plants.

The time may be close at hand when a dairy plant in one area may supply markets all over Oregon, predicts Dr. S. Kent Christiansen, Oregon State College agricultural economist.

FEWER, BIGGER DAIRIES

Economic forces in years ahead may trim Oregon's present 5,000 commercial dairy farms to less than 1,000 farms supplying all dairy products needed in the State.

The dairy plants appear headed in the same direction. About one-fourth of the State's dairy plants went out of existence between 1945 and 1955 and the trend continues.

Such casualties of competition, efficiency, and capital have been hastened by new developments in transportation and marketing. This has helped dairy plants expand into markets outside their immediate locality, Christiansen explains.

Modern agriculture is also bringing the farmer into closer linkage with the total food marketing process. The future points to farm production to meet specifications of giant supermarkets operating on lower per unit profit than the most efficient U.S. corporations of today.

Dr. G. Burton Wood, Oregon State College agricultural economics department head, says supermarkets operating on the slim unit markup will be closely tuned to needs and preferences of food buyers. In turn, the markets will make rigid demands on farmers to produce what the market demands.

Farmers who make the adjustment and use the most efficient technology and research findings have a bright future, believe agricultural leaders. Such adjustment may mean, for example, that a farmer concentrate entirely upon raising pullets for poultrymen or heifers for large superefficient dairy farms.

This increased efficiency not only benefits the farmer, but enables those living off the farm to live better. Today it takes only 20 minutes of labor to earn the money to buy a pound of rib roast; it took about 48 minutes a generation ago.

Other off-farm benefits of modern agriculture are the increases in related industries such as farm equipment, chemicals, fertilizers, containers, transportation, public services, and power.

MEAT PACKING TO EXPAND

Even more allied industries of the processing type are needed if Oregon is to share fully in its increased farm efficiency, say the experts. More livestock feeding in the State could mean expansion of the meatpacking and processing industry for distribution to rapidly growing west coast markets.

Canning and freezing of fruits and vegetables from more irrigated acres is another Oregon industry being eyed for expansion. Production of potato starch—used in pulp, paper, and fiberboard manufacture—is another possibility.

Oregon farmers now spend $200 million a year—one-third more than they did 10 years ago—for hired help, gas and oil, fertilizer, feed, seed, machinery repairs, and similar expenses.

Fortunately, these new allied industries and other off-farm job opportunities are providing employment for man-and-woman power no longer needed on the farm. There are now 4 million fewer jobs on U.S. farms than 20 years ago, but there are 20 million more jobs off farms.

These trends of expanded agriculture and associated industries promise to pump still more farm money into the Oregon economy this centennial year.

Incentive To Discover

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. VAN ZANDT. Mr. Speaker, in a recent issue of Air Review, published by the American Legion National Security Commission, there appeared the following article, entitled "Incentive To Discover," which should be of interest to not only Members of Congress but also to the readers of the CONGRESSIONAL RECORD.

The article follows:

INCENTIVE TO DISCOVER

"To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." (Article 1, section 8, Constitution of the United States.)

The first patent legislation was enacted by Congress in accordance with the Constitution in 1790, and it has been modified and refined over the past 169 years. But the laws have all been directed toward one prime objective: Provide incentive to ingenious individuals and business for development of new products and the improvement of existing products.

Certainly no one can dispute that these wise and equitable laws have been a major factor in the spectacular economic and technological growth of this Nation, a growth unequalled by any other Nation.

Inventions made in the course of weapon research and development programs are properly governed by different rules than those for commercial products. These rules are simple and fair to both the inventor and the Government. Briefly, they permit the retention of title to an invention made in connection with a defense contract, with the Government holding license rights only. Again, these regulations have retained the all-important incentive clauses, and protected the Government. Inventive progress in defense industries, particularly the aircraft and missile industry, has been dynamic.

The historic policies enunciated in the Constitution, and by the Congress over the years have been completely reversed in a section of the Space Act of 1958 which created the National Aeronautics and Space Administration for the direction of our civil space efforts.

This section reverses accepted incentive features that have been the guiding principles of previous patent legislation. The patent section states, in effect, that any invention—with minor exceptions—made in the performance of any work under any contract with NASA is the exclusive property of the Government. And the law goes even further. It states that any person, whether under contract to NASA or not, making an invention which might have significant utility in the space program must declare under oath that his work was not related to any NASA contract before he can obtain a patent on his own invention.

The problem is further compounded by the fact that most of the firms holding contracts with the NASA are also contractors for the Defense Department. The delays and confusion possible in space and weapon programs caused by working under two widely different Government policies are limitless.

Although NASA has no plans at the present time to amend the law, the problem was recognized by NASA's general counsel, John A. Johnson, who recently said that "it must be obvious that such a difference in the legal position of two agencies of the Government, both dealing with the same segments of industry on substantially the same kind of business, is undesirable as a matter of public policy and not in the best interests of the Government's procurement program."

The patent section of the NASA was written late in the last session of Congress without public hearings. Perhaps the motivating factor was to insure absolute protection for the Government in administering the space programs. But it also induces a sterility of effort by eliminating important incentives for private business.

It has been said in some quarters that Congress should give further study and consideration to this section of the Space Act. Application of patent laws in weapon development during the past have been most successful. Might it not be well to determine whether these same principles could be applied to our present efforts in the space field? In any event, the main concern of the American Legion is that private incentive for inventors be encouraged consistent with our national security needs.

Dictatorship Close at Hand?

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 11, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following letter from Lord

Macauley to Hon. H. E. Randall, written in London on May 23, 1857, will be of interest to the House:

LONDON, *May 23, 1857.*

Letter to Hon. H. E. Randall of New York. From Lord Macauley.

DEAR SIR: You are surprised to learn that I have not a high opinion of Mr. Jefferson and I am surprised at your surprise. I am certain I never wrote a line and never in Parliament, in conversation, or even on the Hastings, a place where it is the fashion to court the populace—uttered a word indicating the opinion that the supreme authority in a state ought to be entrusted to the majority of citizens told by the head; in other words, to the poorest and most ignorant part of society. I have long been convinced that institutions purely democratic must, sooner or later, destroy liberty or civilization, or both.

In Europe, where the population is dense, the effect of such institutions would be almost instantaneous. What happened lately in France is an example. In 1848, a pure democracy was established there. During a short time there was a strong reason to expect a general spoliation, a national bankruptcy, a new partition of the soil, a maximum of prices, a ruinous load of taxation laid on the rich for the purpose of supporting the poor in idleness. Such a system would, in 20 years, have made France as poor and as barbarous as the France of the Carolingians. Happily, the danger was averted and now there is a despotism, a silent tribune, an enslaved press, liberty is gone but civilization has been saved. I have not the smallest doubt that if we had a purely democratic government here, the effect would be the same. Either the poor would plunder the rich and civilization would perish, or order and property would be saved by a strong military government, and liberty would perish.

You may think that your country enjoys an exemption from these evils. I will frankly own to you that I am of a very different opinion. Your fate I believe to be certain though it is deferred by a physical cause. As long as you have a boundless extent of fertile and unoccupied land, your laboring population will be far more at ease than the laboring population of the Old World, and while it is the case, the Jeffersonian policy may continue to exist without causing any fatal calamity. But the time will come when New England will be as thickly peopled as old England. Wages will be as low and will fluctuate as much with you as with us. You will have your Manchesters and Birminghams. Hundreds of thousands of artisans will assuredly be sometimes out of work. Then your institutions will be fairly brought to the test. Distress everywhere makes the laborer mutinous and discontented, and inclines him to listen with eagerness to agitators who tell him that it is a monstrous iniquity that one man should have a million, while another cannot get a full meal. In bad years there is plenty of grumbling here, and sometimes a little rioting. But it matters little, for here the sufferers are not the rulers. The supreme power is in the hands of a class, numerous indeed, but select; of an educated class, of a class which is, and knows itself to be, deeply interested in the security of property and the maintenance of order. Accordingly, the malcontents are firmly yet gently restrained. The bad time is got over without robbing the wealth to relieve the indigent. The springs of national prosperity soon begin to flow again; work is plentiful, wages rise and all is tranquility and cheerfulness.

I have seen England three or four times pass through such critical seasons as I have described. Through such seasons the United States will have to pass in the course of the next century, if not in this. How will you pass through them? I heartily wish you a good deliverance, but my reason and my wishes are at war and I cannot help foreboding the worst. It is quite plain that your Government will never be able to restrain a distressed and discontented majority. For with you the majority is the Government and has the rich, who are always a minority, absolutely at its mercy. The day will come when, in the State of New York, a multitude of people, none of whom has had more than half a breakfast, or expects to have more than half a dinner, will choose the legislature. Is it possible to doubt what sort of legislature will be chosen? On one side is a statesman preaching patience, respect for vested rights, a strict observance of public faith. On the other is a demagog ranting about tyranny of capitalists and usurers and asking why anybody should be permitted to drink champagne and to ride in a carriage while thousands of honest people are in want of necessities. Which of the two candidates is likely to be preferred by a workingman who hears his children cry for bread?

I seriously apprehend that you will, in some such season of adversity as I have described, do things which will prevent prosperity from returning; that you will act like people in a year of scarcity, devour all the seedcorn and thus make the next year not of scarcity, but of absolute distress. The distrees will produce fresh spoliation. There is nothing to stay you. Your Constitution is all sail and no anchor. As I said before, when society has entered on this downward progress, either civilization or liberty must perish. Either some Caesar or Napoleon will seize the reins of government with a strong hand, or your Republic will be as fearfully plundered and laid waste by barbarians in the 20th century as the Roman Empire was in the fifth; with this difference, that your huns and vandals will have engendered within your country and by your own institutions.

Thinking this, of course, I cannot reckon Jefferson among the benefactors of mankind.

Military Reorganization

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I wish to call to the attention of the Members of the House a copy of a letter which I have addressed to the Chairman of the Council of Economic Advisers, Raymond J. Saulnier, regarding the need for forceful actions toward unification of military supply activities. It has been my strong belief for many years that the enormity of the military supply activities has a tremendous effect on the entire economy. Furthermore, from my personal knowledge of the overlapping, duplication, and waste in and amongst the many military supply systems, there is an urgent need to bring about corrective measures at the earliest possible time.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPESENTATIVES,
Washington, D.C., April 28, 1959.

Hon. RAYMOND J. SAULNIER,
Chairman, Council of Economic Advisers, Washington, D.C.

DEAR DR. SAULNIER: I am sure that you recall the recent discussion at the hearings of the Joint Economic Committee concerning the impact of military supply and service programs on the national economy.

It has been my strong belief for many years that the enormity of the military supply activities has a tremendous effect on the entire economy. Furthermore, from my personal knowledge of the overlapping, duplication, and waste in and amongst the many military supply systems, there is an urgent need to bring about corrective measures at the earliest possible date.

Enclosed is a report of the House Government Operations Committee which, at page 65 and following, details the extent of the military supply inventories. When one considers that the inventory of personal property is almost $120 billion and that in the supply systems alone there is $47 billion, it is no wonder that annual declarations of surpluses run at $8 to $10 billion and will continue to do so. I am sure that the attached monthly list of excess military property I am enclosing as a sample is convincing that factors other than obsolescence are responsible for generating much of the excess military property. If you will analyze the reported inventories of the individual departments and services I am sure that you will agree that much needs to be done to integrate common supply activities. But despite a long history of efforts to do just that, the military bureaucracies have always managed to remain intact.

The proponents of the National Security Act of 1947 intended that the Air Force would continue to obtain supply and service support from the Army. Despite this, the Air Force has worked diligently to become completely independent. In 1951–52, the Bonner committee, of which I was a member, held extensive hearings on military supply management and as a result of the hearings and reports, the O'Mahoney amendment to the 1953 Military Appropriations Act called for the establishment of an integrated military supply system. Some steps were taken by Secretary Lovett, particularly in setting up a coordinated medical supply activity known as the Alameda Medical Supply Test.

This test, though successful, was discontinued despite the recommendations of the Hoover Commission and others who had studied it. More recently, the Department of Defense has set up single manager systems for subsistence, clothing, medical supply, and petroleum products. This effort, though apparently successful, is being stubbornly resisted by the military departments who fear loss of autonomy through any steps that tend toward unification.

The last Congress passed the DOD Reorganization Act of 1958 and included the so-called McCormack-Curtis amendment which gives the Secretary of Defense wide authority to operate supply and service activities through such an entity or entities as he deems appropriate to bring about economy and efficiency. Despite this broad authority there has been but small progress in accomplishing what to me is one of the most fruitful areas for economy. I know of no one who has objectively studied this matter who had a different opinion.

It seems to me that the time is long past when the common inventories and operations of the military services should be brought under unified control so that existing stores are taken in account before additional purchases are made. As a matter of fact, we have expended at least $150 million in developing a catalog system in order that this could be done.

I am sure you are aware that each military department spends hundreds of millions of dollars annually for the operation and maintenance of its own supply and depot system. Furthermore, the services compete against each other in many ways in the procurement of supplies, equipment, and per-

sonnel. Since most of the procurement is by negotiation the net effect of these methods is to accelerate an inflationary spiral in my opinion.

It seems to me that some forceful actions toward unification must be taken not only for the sake of defense itself but to relieve the economy of the inflationary pressures which are now being exerted upon it. Since the legislative framework appears to be adequate, I think that the executive branch is vulnerable in not vigorously pushing this matter. I cannot understand why the Budget Bureau condones this situation while it is simultaneously the management arm of the President, is responsible for reorganizational plans and has the primary duty of screening the various appropriation estimates within the framework of a balanced budget. It is the belief of many people on the Hill that the Bureau has become a prisoner of the Pentagon and that the joint hearings on the military budget do not give the Bureau the control status it should have.

From what I can learn, the Budget Director is doing an excellent job and has the fortitude to do what is necessary. However, it is impossible for anyone to grasp the complexities of the Federal budget within a period of several years and he must rely upon his assistants. I think, however, that time is running swiftly and that some topside decisions must be taken in this area.

I am sending a copy of this letter to Mr. Stans and will appreciate any comments you or he may have with respect to this letter.

Sincerely,

THOMAS B. CURTIS.

How Can World Law Be Achieved?

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting into the CONGRESSIONAL RECORD a letter I received from Donald Harrington, president of the United World Federalists, enclosing a copy of the speech Vice President NIXON delivered on April 13, 1959, before the Academy of Political Science on the subject of how world law might be achieved.

Mr. Harrington believes that this subject merits immediate public discussion and debate. I agree with him. Certainly Vice President NIXON's speech and the comments of the highly respected Columnist James Reston deserve to be read and considered by as many people as possible. Therefore, I am placing them in the CONGRESSIONAL RECORD.

I want to commend the United World Federalists, Inc., for calling this important matter to the attention of all the Members of the Congress. I have always had a high regard for this organization because, unlike so many organizations we have today with ideas and a mission, they have remained open-minded on the subject. They have not resorted to attacking the motives of those who disagree with them. Indeed, their primary objective seems to have been to keep the subject of world law and how we achieve it open for discussion.

I agree with their basic premise: the question is no longer whether world law is desirable but how world law can be achieved. The problem is extremely difficult and the answers will not be found immediately, or probably in our generation, but certainly we should start seeking for the answers in a more determined way and there are some forward steps than can be achieved immediately:

UNITED WORLD FEDERALISTS, INC.,
New York City, April 28, 1959.

Hon. THOMAS B. CURTIS,
House Office Building,
Washington, D.C.

DEAR MR. CURTIS: Enclosed herewith is a copy of a speech delivered by Vice President RICHARD M. NIXON, April 13, before the Academy of Political Science, together with a letter of comment and congratulations which we have written to Mr. NIXON.

We feel that this is a really historic address which at last brings to sharp focus the central issue of this time. The question is no longer whether world law is desirable but how world law can be achieved.

Although President Eisenhower and other prominent members of both political parties have many times called for world law, Mr. NIXON's speech is the first time that a high official of our Government has proposed specific action leading toward the rule of law. Since it was reportedly proposed as a trial balloon, it seems to us most important that Mr. NIXON receive as much reaction as possible to his proposals.

Whether or not this highly desirable public debate takes place may well depend on a few individuals like yourself who have the influence and interest to lead it. I hope you will do so, and will be interested in hearing from you.

Sincerely yours,

DONALD HARRINGTON,
President.

The text of Vice President NIXON's address proposing World Court rule in East-West disputes follows:

TEXT OF NIXON'S ADDRESS PROPOSING WORLD COURT RULE IN EAST-WEST DISPUTES

An invitation to address this distinguished audience is one of the most flattering and challenging a man in my position could receive.

Flattering because the very name of this organization at least implies that the profession which I am proud to represent can properly be described as a science rather than by some of the far less complimentary terms usually reserved for politics and politicians.

And challenging because I realize that an academy of political science expects a speech of academic character. I hasten to add, however, if it is proper to quote a Princeton man at a Columbia gathering, that in using the term "academic" I share Woodrow Wilson's disapproval of the usual connotation attached to that word.

Speaking on December 28, 1918, in London's Guildhall, he said:

"When this war began, a league of nations was thought of as one of those things that it was right to characterize by a name which, as a university man, I have always resented. It was said to be academic, as if that in itself were a condemnation, something that men could think about but never get."

In my view, the primary function of the practicing politician and of the political scientist is to find ways and means for people to get those things they think about; to make the impractical practical; to put idealism into action.

It is in that spirit that I ask you to analyze with me tonight the most difficult problem confronting our society today. It is, as I am sure we will all agree, the simple but overriding question of the survival of our civilization. Because, while none of us would downgrade the importance of such challenging problems as the control of inflation, economic growth, civil rights, urban redevelopment, we all know that the most perfect solutions of any of our domestic problems will make no difference at all if we are not around to enjoy them.

CHALLENGE TO SURVIVAL

Perhaps at no time in the course of history have so many people been so sorely troubled by the times and dismayed by the prospects of the future. The almost unbelievably destructive power of modern weapons should be enough to raise grave doubts as to mankind's ability to survive even were we living in a world in which traditional patterns of international conduct were being followed by the major nations.

But the threat to our survival is frighteningly multiplied when we take into account the fact that these weapons are in the hands of the unpredictable leaders of the Communist world as well as those of the free world.

What is the way out of this 20th century human dilemma? For the immediate threat posed by the provocative Soviet tactics in Berlin, I believe that to avoid the ultimate disaster of atomic war on one hand, or the slow death of surrender on the other, we must continue steadfastly on the course now pursued by the President and the Secretary of State.

May I say that before boarding the plane in Washington, I talked at the hospital with the Secretary of State. I am happy to bring the greetings of one of the most heroic and bravest men produced in our country in this generation.

In the record of American policy, as it has unfolded since the time of Korea, our national resolves to stand firm against Communist aggression are clearly revealed. This has particularly been the case since the policy of containment matured into this policy of deterrence. In the recurrent post-Korean crises of the Formosa Straits, the Middle East, and now Berlin, the President and Mr. Dulles have given the Soviet leaders no possible cause to misconstrue the American intent.

I believe, moreover, that the Soviet leaders are equally on notice that regardless of which political party holds power in Washington these policies of resolute adherence to our principles, our commtments and our obligations will prevail. I specifically want to pay tribute to members of the Democratic Party in the Congress for putting statesmanship above leadership by making this clearly evident in the developing situation of Berlin.

ADEQUATE MILITARY POWER

We can also take confidence in the fact that at this moment the United States possesses military power fully adequate to sustain its policies, and I am certain that whatever is necessary to keep this balance in favor of the free nations and the ideals of freedom will be done, by this administration and by its successors regardless of which political party may be in power.

What this posture of resolute national unity taken alone must mean in the end, however, is simply an indefinite preservation of the balance of terror.

We all recognize that this is not enough. Even though our dedication to strength will reduce sharply the chances of war by deliberate overt act, as long as the rule of force retains its paramount position as the final arbiter of international disputes, there will ever remain the possibility of war by miscalculation.

If this sword of annihilation is ever to be removed from its precarious balance over the head of all mankind, some more positive courses of action than massive military deterrence must somehow be found.

It is an understandable temptation for public men to suggest that some "bold new program" will resolve the human dilemma—that more missiles, more aid, more trade, more exchange or more meetings at the summit will magically solve the world's difficulties.

The proposals that I will suggest tonight are not offered as a panacea for the world's ills. In fact, the practice of suggesting that any one program, whatever its merit, can automatically solve the world's problems is not only unrealistic, but, considering the kind of opponent who faces us across the world today, actually can do more harm than good in that it tends to minimize the scope and gravity of the problems with which we are confronted, by suggesting that there may be one easy answer.

But while there is no simple solution for the problems we face, we must constantly search for new practical alternatives to the use of force as a means of settling disputes between nations.

INDIVIDUALS LIKE NATIONS

Men face essentially similar problems of disagreement and resort to force in their personal and community lives as nations now do in the divided world. And, historically, man has found only one effective way to cope with this aspect of human nature—the rule of law.

More and more the leaders of the West have come to the conclusion that the rule of law must somehow be established to provide a way of settling disputes among nations as it does among individuals.

But the trouble has been that as yet we have been unable to find practical methods of implementing this idea. Is this one of those things that men can think about but cannot get?

Let us see what a man who had one of the most brilliant political and legal minds in the Nation's history had to say in this regard. Commenting on some of the problems of international organization the late Senator Robert Taft said:

"I do not see how we can hope to secure permanent peace in the world except by establishing law between nations and equal justice under law. It may be a long hard course, but I believe that the public opinion of the world can be led along that course, so that the time will come when that public opinion will support the decision of any reasonable impartial tribunal based no justice."

We can also be encouraged by developments that have occurred in this field in just the past 2 years.

Not surprisingly the movement to advance the rule of law has gained most of its momentum among lawyers. Mr. Charles Rhyne, a recent president of the American Bar Association, declared in a speech to a group of associates in Boston a few weeks ago that there is an idea on the march in the world. He was referring to the idea that ultimately the rule of law must replace the balance of terror as the paramount factor in the affairs of men.

NOTED MEN SPOKE

At the time of the grand meeting of the American Bar Association in London in July 1957, speaker after speaker at this meeting—the Chief Justice of the United States, the Lord Chancellor of Great Britain, the Attorney General of the United States, and Sir Winston Churchill—eloquently testified that the law must be made paramount in world affairs.

One hundred and eighty-five representatives of the legal professions of many nations on earth met in New Delhi last January and agreed that there are basic universal principles on which lawyers of the free world can agree.

President Eisenhower, you will recall, said in his state of the Union message last January:

"It is my purpose to intensify efforts during the coming 2 years * * * to the end that the rule of law may replace the obsolete rule of force in the affairs of nations. Measures toward this end will be proposed later, including reexamination of our relation to the International Court of Justice."

I am now convinced, and in this I reflect the steadfast purpose of the President and the wholehearted support of the Secretary of State and the Attorney General, that the time has now come to take the initiative in the right direction of establishment of the rule of law in the world to replace the rule of force.

Under the Charter of the United Nations and the Statute of the International Court of Justice, institutions for the peaceful composing of differences among nations and for law giving exist in the international community. Our primary problem today is not the creation of new international institutions, but the fuller and more fruitful use of the institutions we already possess.

The International Court of Justice is a case in point. Its relative lack of judicial business—in its 12-year history an average of only 2 cases a year have come before the tribunal of 15 outstanding international jurists—underlines the untried potentialities of this Court.

While it would be foolish to suppose that litigation before the Court is the answer to all the world's problems, this method of settling disputes could profitably be employed in a wider range of cases than is presently done.

As the President indicated in his state of the Union message, it is time for the United States to reexamine its own position with regard to the Court. Clearly all disputes regarding domestic matters must remain permanently within the jurisdiction of our own courts. Only matters which are essentially international in character should be referred to the International Court.

But the United States reserved the right to determine unilaterally whether the subject matter of a particular dispute is within the domestic jurisdiction of the United States and is therefore excluded from the jurisdiction of the Court. As a result of this position on our part, other nations have adopted similar reservations. This is one of the major reasons for the lack of judicial business before the Court.

CONGRESS ACTION PLANNED

To remedy this situation the administration will shortly submit to the Congress recommendations for modifying this reservation. It is our hope that by our taking the initiative in this way, other countries may be persuaded to accept and agree to a wider jurisdiction of the International Court.

There is one class of disputes between nations which, in the past, have been one of the primary causes of war. These economic disputes assume major importance today at a time when this cold war may be shifting its major front from politics and ideology to the so-called ruble war for the trade and the development of new and neutral countries.

As far as international trade is concerned, an imposing structure of international agreements already exists. More complex and urgent than trade, as such, is the area of international investment. For in this area will be determined one of the most burning issues of our times—whether the economic development of new nations, so essential to their growth in political self-confidence and successful self-government, will be accomplished peacefully or violently, swiftly or wastefully, in freedom or in regimentation and terror.

We must begin by recognizing that the task of providing the necessary capital for investment in underdeveloped countries is a job too big for mere Government money. Only private money, privately managed, can do it right in many sectors of needed development. And private investment requires a sound and reliable framework of laws in which to work.

Economic development, involving as it does so many lawyers and so many private investors, will tend to spread and promote more civilized legal systems wherever it goes.

Already, in its effort to encourage U.S. private investment abroad, the U.S. Government has negotiated treaties of commerce with 17 nations since 1946, tax conventions with 21 nations, and special-investment guarantee agreements under the Mutual Security Act with 40 nations.

What has been done is for the most part good, but there are several areas where additional action is called for. The countries that need economic development most are too often least likely to have the kind of laws, government, and climate that will attract investment. The political risks of expropriation and inconvertibility against which ICA (International Cooperation Administration) presently sells insurance are not the only political risks that investors fear. Three U.S. Government commissions, as well as numerous private experts, have recently recommended a variety of improvements in our machinery for fostering foreign investment.

I select three for particular endorsement. Our laws should permit the establishment of foreign business corporations meriting special tax treatment, so that their foreign earnings can be reinvested abroad free of U.S. tax until the U.S. investor actually receives his reward.

In addition, more tax treaties should be speedily negotiated to permit tax sparing and other reciprocal encouragements to investors. The ICA guarantee program should be extended to include such risks as revolution and civil strife. Finally, a concerted effort should be made to extend our whole treaty system into more countries, especially those in most need of development.

The great adventure of economic development through a worldwide expansion of private investment is bound to develop many new forms and channels of cooperation between governments and between individuals of different nations.

We need not fear this adventure; indeed we should welcome it. For if it sufficiently engages the imagination and public spirit of the legal profession and others who influence public opinion, it must be accompanied by the discovery or rediscovery, in countries old and new, of the legal principles and the respect for substantive law on which wealth and freedom alike are grounded.

There are encouraging signs at least that we are on the threshold of real progress toward creating more effective international law for the settlement of economic disputes between individuals and between nations.

Turning to the political area, we have now come far enough along in the great historic conflict between the free nations and the Communist bloc to know that negotiation and discussion alone will not necessarily resolve the fundamental issues between us. This has proved to be the case whether the negotiations took place through the very helpful processes of the United Nations, or at the conference table of Foreign Ministers, or even at what we now call the summit.

FACTS WITH SOVIET CITED

What emerges, eventually, from these meetings at the conference table are agreements. We have made a great many agreements with the Soviet leaders from the time of Yalta and Potsdam. A major missing element in our agreements with the Soviet leaders has been any provisions as to how disputes about the meaning of the agree-

ments in connection with their implementation could be decided.

Looking back at the first summit conference at Geneva, for example, we find that it produced an agreement, signed by the Soviet leaders, which elevated the hopes of the entire world.

It should be noted, however, that the President and the Secretary of State repeatedly warned both before and after the holding of the conference that success could be measured only in deeds. One of the announced purposes of the conference was to test the Soviet sincerity by the standard of performance.

The summit conference has since been characterized by some as a failure, but in terms of agreements, as such, it was a success.

Let me quote briefly from that agreement:

"The heads of government, recognizing their common responsibility for the settlement of the German question and the reunification of Germany, have agreed that the settlement of the German question and the reunification of Germany by means of free elections shall be carried out in conformity with the national interests of the German people and the interests of European security."

In other words, those who participated in the conference, including Mr. Nikita S. Khrushchev, agreed at Geneva on a sound method for dealing with the German problem—the very same problem from which he has now fathered the new crisis at Berlin. But while the agreement seemed clear, as events subsequently developed, Mr. Khrushchev's understanding of its meaning was ostensibly different from ours.

The crucial question remained—how was the agreement to be effective when the parties disagreed as to what it meant? This is typical of a problem that can arise wherever any agreement is entered into between nations.

In looking to the future what practical steps can we take to meet this problem? I will not even suggest to you that there is any simple answer to this question. But I do believe there is a significant step we can take toward finding an answer.

We should take the initiative in urging that in future agreements provisions be included to the effect: (1) that disputes which may arise as to the interpretation of the agreement should be submitted to the International Court of Justice at the Hague; and (2) that the nations signing the agreement should be bound by the decision of the court in such cases.

Such provisions will, of course, still leave us with many formidable questions involving our relationships with the Communist nations in those cases where they ignore an agreement completely apart from its interpretation. But I believe this would be a major step forward in developing a rule of law for the settlement of political disputes between nations and in the direction all free men hope to pursue.

If there is no provision for settling disputes as to what an international agreement means and one nation is acting in bad faith, the agreement has relatively little significance. In the absence of such a provision an agreement can be flagrantly nullified by a nation acting in bad faith whenever it determines it is convenient to do so.

While this proposal has not yet been adopted as the official U.S. position, I have discussed it at length with Attorney General William P. Rogers and with officials of the State Department and on the basis of these discussions I am convinced that it has merit and should be given serious consideration in the future.

The International Court of Justice is not a western instrumentality. It is a duly constituted body under the United Nations Charter and has been recognized and established by the Soviet along with the other signatories to the charter.

There is no valid reason why the Soviets should not be willing to join with the nations of the free world in taking this step in the direction of submitting differences with regard to interpretation of agreements between nations to a duly established international court and thereby further the day when a rule of law will become a reality in the relations between nations.

And, on our part, as Secretary Dulles said in his speech before the New York State Bar Association on January 31:

"Those nations which do have common standards should by their conduct and example, advance the rule of law by submitting their disputes to the International Court of Justice, or to some other international tribunal upon which they agree."

We should be prepared to show the world by our example that the rule of law, even in the most trying circumstances, is the one system which all freemen of good will must support.

In this connection it should be noted that at the present time in our own country our system of law and justice has come under special scrutiny, as it often has before in periods when we have been engaged in working out basic social relationships through due process of law.

It is certainly proper for any of us to disagree with an opinion of a court or courts. But all Americans owe it to the most fundamental propositions of our way of life to take the greatest care in making certain that our criticisms of court decisions do not become attacks on the institution of the court itself.

Mr. Khrushchev has proclaimed time and again that he and his assolcates in the Kremlin, to say nothing of the Soviet peoples, desire only a fair competition to test which system, communism or free capitalism, can better meet the legitimate aspirations of mankind for a rising standard of living.

The world knows that this is the only kind of competition which the free nations desire. It is axiomatic that free people do not go to war except in defense of freedom. So obviously we welcome this kind of talk from Mr. Khrushchev. We welcome a peaceful competition with the Communists to determine who can do the most for mankind.

Mr. Khrushchev also knows, as we do, that a competition is not likely to remain peaceful unless both sides understand the rules and are willing to have them fairly enforced by an impartial umpire. He has pointedly reminded the world that Soviet troops are not in Germany to play skittles. The free peoples passionately wish that Mr. Khrushchev's troops, as well as their own, could find it possible to play more skittles and less atomic war games. But we remind him that his troops could not even play skittles without rules of the game.

If the Soviets mean this talk of peaceful competition, then they have nothing to fear from the impartial rules impartially judged, which will make such peaceful competition possible.

The Soviet leaders claim to be acutely aware of the lessons of history. They are constantly quoting the past to prove their contention that communism is the way of the future. May I call to their attention one striking conclusion that is found in every page of recorded history.

It is this: The advance of civilization, the growth of culture and the perfection of all the finest qualities of mankind have all been accompanied by respect for law and justice and by the constant growth of the use of law in place of force.

The barbarian, the outlaw, the bandit are symbols of a civilization that is either primitive or decadent. As men grow in wisdom, they recognize that might does not make right; that true liberty is freedom under law; and that the arrogance of power is a pitiful substitute for justice and equity.

Hence once again we say to those in the Kremlin who boast of the superiority of their system:

"Let us compete in peace, and let our course of action be such that the choice we offer uncommitted peoples is not a choice between progress and reaction, between high civilization and a return to barbarism, between the rule of law and the rule of force."

In a context of justice, of concern for the millions of men and women who yearn for peace, of a constant striving to bring the wealth abounding in this earth to those who today languish in hunger and want—in such a context, competition between the Communist world and the free world would indeed be meaningful.

Then we could say without hesitation:

"Let the stronger system win, knowing that both systems would be moving in a direction of a world of peace, with increasing material prosperity serving as a foundation for a flowering of the human spirit."

We could then put aside the hatred and distrust of the past and work for a better world. Our goal will be peace. Our instrument for achieving peace will be law and and justice. Our hope will be that, under these conditions, the vast energies now devoted to weapons of war will instead be used to clothe, house, and feed the entire world. This is the only goal worthy of our aspirations. Competing in this way, nobody will lose, and mankind will gain.

I also want to include an article by James Reston, "Search for Rule by Law," which appeared in the New York Times, April 14, 1959:

SEARCH FOR RULE BY LAW—DOMESTIC FACTORS AS WELL AS WORLD ISSUES LED TO TRIAL BALLOON BY NIXON

(By James Reston)

WASHINGTON, April 13.—Vice President NIXON sent aloft in New York tonight a fairly important trial balloon on how to negotiate future agreements with the Soviet Union.

Why not, he suggested to the Academy of Political Science, let the International Court of Justice at The Hague settle all differences of interpretation of future United States-Soviet agreements? The background of this suggestion is as interesting as the proposal itself.

It arises from the fact that almost every United States-Soviet agreement since the war has failed wholly or in part because it was interpreted in one way by Washington and another by Moscow, and there was no legal way of resolving these differences.

Accordingly, the Justice and State Departments have been talking for years about trying to take these questions of interpretation out of the political sphere and placing them in the realm of international law before the World Court or some other court.

Attorney General William P. Rogers and Arthur Larson, former Presidential assistant, have been talking with Mr. NIXON about this for several years. The Vice President, in turn, recently discussed the proposal with Acting Secretary of State Christian A. Herter, and with the President, who knew and approved of the Vice President's decision to discuss the matter publicly tonight.

FUTURE IS EMPHASIZED

It was emphasized here today that the Vice President was not talking about trying to apply the principle of compulsory arbitration to the interpretation of past treaties and international agreements.

He was, instead, proposing a procedure for future agreements so that each agreement could be considered on its own merits. For example, if the forthcoming talks with the Big Four foreign ministers should reach a new agreement on Berlin, or Germany, or atomic testing, that agreement, under the Nixon proposal, would contain a clause stating two things:

1. That any disputes that may arise as to the interpretation of the agreement should be submitted to the World Court.

2. That the nations signing the agreement should be bound by the interpretation of the World Court in such cases.

The proposal was put forward in this way for several reasons. For example, there is still considerable opposition on the Republican right and in the Democratic South to any move that might, even in remote cases, extend the authority of the World Court to matters some people regard as wholly within the domestic jurisdiction of the United States.

The administration would like to repeal the so-called Connally amendment of 1946, which insisted that the United States had the sole right to determine whether cases involving the United States should be subject to the jurisdiction of the World Court.

In the last few years, the administration has with difficulty defeated the so-called Bricker amendment, which would have placed further limitations on the jurisdiction of the United Nations and its associated organizations. And while the supporters of the Bricker amendment have been weakened in recent elections, the State and Justice Departments do not want to get involved in another battle on this issue.

Before the end of this week, the State Department will send to the Senate Foreign Relations Committee its ideas of how the Connally amendment should be modified, but there is some doubt whether any modification will take place in this session of the Congress.

The administration is more hopeful about winning acceptance for the more specific idea of letting the World Court decide disputes arising out of the interpretation of future agreements with the Soviet Union and other nations.

This would enable the Congress to look at one case at a time. It would force the Executive to draft future international agreements in careful language that could, if challenged, be examined by the World Court, rather than leaving them vague, as in the past Big Four agreements on Western access to Berlin. Finally, it would, if accepted by the Soviet Union, provide one way of resolving the interminable arguments over what United States-Soviet agreements mean.

It is pointed out here that, even if the Soviet Union did not agree to submit the interpretaton of future agreements to the World Court this in itself would make clear Moscow's insistence on being the sole judge of its own actions. Whereas, if it did accept, at least some progress could be made toward substituting the rule of law in a limited field for the present rule of force.

There will undoubtedly be opposition to Mr. NIXON's trial balloon. Some Senators feel that the United States, like the Soviet Union, cannot afford to let any court decide matters that might affect its security.

Some for example, would be opposed to letting the World Court sit in judgment on Panama's claim to sovereignty over the 12-mile sea limit beyond its shores. This would take in most of the critical approaches to the Panama Canal and is thus regarded here as vital to the security of the canal and the United States.

Finally, there are some legislators who think that any extension of the powers of the World Court might, at some future date, enable citizens of the United States to claim that they were not enjoying the human rights spelled out in the Declaration of Human Rights under the United Nations.

Thus, Vice President NIXON, in his scholarly address tonight, has opened up, not only some fundamental legal questions, but quite a few important international and national political questions as well.

This is why his World Court idea was put forward as a trial balloon rather than as established administration policy.

The High Cost of Past Wars

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. UDALL. Mr. Speaker, one of the continuing problems confronted by the Congress involves a sound and balanced program which will provide care and assistance for those who bore the brunt of our military conflicts. In a current issue of Reporter magazine its able Washington correspondent, Douglass Cater, discusses some aspects of this problem in thoughtful fashion. It will hardly surprise our colleagues to learn that the chairman of the Veterans' Affairs Committee of the House, Representative OLIN TEAGUE, receives commendation by Mr. Cater for his firm stand for programs that put first things first and provide the greatest aid for those who have been the real casualties of past wars.

For the benefit of those who are interested in this problem I present herewith the Reporter article:

THE HIGH COST OF PAST WARS

(By Douglass Cater)

For the veteran, as for only a few other organized interests such as Irish patriotism and agriculture, the Congressman is capable of astonishing tenderness. And even when emotion does not rule his reason, the icy logic of political expediency is apt to do so. Take, for example, the last time a veterans' pension bill came up in the House of Representatives in 1956. It was a modest little thing, calculated to cost $129 billion over coming years. On a standing vote, which is, of course, semianonymous, the House decided to return the bill to committee. Then someone demanded a rollcall. Fifty-one Representatives were willing to go on record against the bill. But 365 others, liberals and conservatives alike, joined to send it triumphantly on its way to the Senate, where, thanks to the custodial prowess of Finance Committee Chairman HARRY FLOOD BYRD, Democrat of Virginia, it died quietly.

This spring, for the third time in a decade, a veterans' pension bill is destined to slide down the committee skids into the House. The result may easily be a new legislative leviathan that could swamp efforts at budget balancing for years to come.

The situation is serious enough already. In the little pie-shaped chart prepared by the Budget Bureau to show how the Government's dollar is being spent, veterans' benefits now account for the fourth largest slice. If you add this veterans' program to the cost of the farm program—the third largest item after national security and interest on the national debt—nearly a sixth of the Federal budget goes for direct subsidies to individuals.

What's more, the veterans' programs can be expected to grow a great deal bigger without a single change in the existing laws. The increase is coming, not in the service-connected compensation program, but in pensions, which have nothing to do with battle wounds or other service-connected afflictions. Already more than 870,000 veterans and 510,000 of their dependents are on the pension rolls; others are joining at the rate of 10,000 a month. Getting on isn't very difficult. At the age of 65, a veteran must prove only a 10-percent disability—fairly normal for that age—and, if he is married, an annual income of less than $2,700. He need not count his savings, property, or his wife's income. As a recent General Accounting Office survey revealed, substantial numbers of fairly affluent veterans were taking advantage of the loopholes. One pensioner, drawing his full $78.75 a month, had, with his wife, $7,171 of other income each year and more than $15,000 in liquid assets. Another had liquid assets of $51,540, plus a total family income of $3,037 a year. Seventeen percent of the pensioners, it was found, have assets of more than $10,000.

This spring, as the median-aged veteran of the First World War has just passed his 65th birthday, formidable forces are at work to open the public purse still further. One recently formed organization, the Veterans of World War I of the U.S.A., is demanding a flat $100-a-month pension for anyone who wore a uniform in 1917–18. The "Wonnies," as they have come to be known on Capitol Hill, state their claims in fairly elemental terms. As a staff member of the House Veterans' Affairs Committee expressed it wryly, "They argue that Congress has given aid to India, arms to Tito, and a Cadillac to Joe Martin. Why isn't the vet getting his share?"

The veterans' lobby can certainly claim that history is on its side. Ever since 1836, when Congress voted pensions for any surviving Revolutionary soldiers who were disabled or in financial need, the cost of war's aftermath has mushroomed far beyond the cost of war itself. The Spanish-American War, according to a recent study by a Presidential commission, cost this country $570 million; the benefits to its 381,000 veterans will total, it was estimated, $4.8 billion. The military costs of the First World War amounted to $26 billion; its veterans' benefits will probably exceed $60 billion.

PROLIFERATION OF THE FITTEST

Few questions are raised about the money that goes for veterans' hospital services, for compensation payments to those who sustained in-service injuries, and for the various rehabilitation programs. But the pension is strictly a non-service-connected benefit. It can be claimed by any soldier who served for 90 days during wartime. He need have got no further than the nearest training camp.

It is a curious paradox of past-war politics that as the memory of fighting fades, the politicians lose their ability to discriminate among the veterans as a class. Concern for veterans in general mounts in inverse ratio to concern for those who actually suffered in the Nation's cause. It is probably a matter of numbers. Wounded and crippled veterans either die or fade away from the political scene; the more able bodied linger. The Congressional Medal of Honor Society of the U.S.A., an elite and honored group, has sought but has never been granted a congressional charter, but the Wonnies, whose only avowed purpose is to lobby Congress, were given one with alacrity last year.

Compensation payments to handicapped veterans and war widows have been squeezed drastically by the rising cost of living. Yet the Wonnies' bill would award the same monthly payment to the able-bodied pensioner that now goes to the war widow with two children to support. Even more venerable veterans' organizations such as the American Legion and the Veterans of Foreign Wars have shown greater interest in pensions than in the compensation program.

Politics, of course, plays its part in the veterans' groups as well as in Congress. As a matter of fact, the ambitious organization leader more often than not is seeking to enter the larger political arena, and therefore appeals for the widest possible support.

MR. TEAGUE AT THE DIKE

Measured in terms of pressure politics, veterans' affairs have always enjoyed special privilege in the House of Representatives. By some ancient logic, pension bills are granted access to the floor without the usual necessity of a special rule from the Rules

Committee. The Committee on Veterans' Affairs, like other special-interest committees, tends to attract members who enjoy dealing with a special-interest lobby. If they don't, they get off the committee at the first available opportunity. Furious pressures buffet them. The last time a pension bill was in preparation, Chairman OLIN E. TEAGUE, Democrat, of Texas, received an average of 2,000 letters daily. Membership turnover on the House Veterans' Affairs Committee has run over 55 percent for each of the last three Congresses. It's obviously a hot seat.

Considering all their advantages, the professional veterans must wonder at times what cursed fate caused a man like OLIN TEAGUE to blight their lives. They certainly cannot complain that TEAGUE, who took over the committee chairmanship in 1955, lacks interest in veterans' affairs. A combat officer in the Second World War, he was many times wounded and decorated. He still limps from a shell explosion that ripped away part of an ankle, resulting in the shortening of one leg. Unlike many newcomers, when he came to Congress in 1946, TEAGUE voiced a preference for the Veterans' Affairs Committee. His rapid rise to the chairmanship was accelerated by the rush of less interested Members for softer berths.

But it took even less time for TEAGUE to revolt against the state of affairs he found on the committee. He had drafted a simple bill to give orphans of men killed in service the same educational help their fathers would have received under the G.I. Bill. But no one was interested. The chairman was the late John E. Rankin, Democrat, Mississippi, who, playing veterans' politics as callously as he played race relations, was pushing a flat $90 monthly pension for all veterans.

When Rankin's bill came to the floor in 1949, the two Southerners clashed head on. The young Texan, who bears the nickname Tiger, lived up to his reputation for toughness. He made the motion that returned the pension bill to committee by a vote of 208 to 207.

Since he has acquired the prerogatives of chairman, TEAGUE has not hestitated to use them to hold back the pressures that beset his committee. In 1956, after an assault from the lobbyists caused the committee to override him and report out a pension bill, TEAGUE resorted to desperate parliamentary maneuvering to put his colleagues on the spot. First he loaded the bill with a variety of additional benefits that ran its price still higher into the stratosphere. Then he maneuvered the sequence of votes in a way to differentiate clearly between the desire to help the needy and the merely greedy veterans. As TEAGUE walked dejectedly back to his office after the fantastic turnabout on the rollcall vote, a succession of shamefaced congressmen came up to apologize for their cravenness.

For TEAGUE, who represents a purely rural constituency, the perils of defying the professional veteran interests are not so great as for others. Despite numerous threats of political retaliation, he has so far been returned to office without even a contest since his initial election in 1946. But there is further evidence to indicate that the veterans' lobby may not be an accurate spokesman for the twenty-two million veterans in this country. Of the fifty-one representatives (41 Republicans, 10 Democrats) who voted to kill the pension bill in 1956 not one failed to be reelected that fall. In the 1958 elections, though several retired, none was defeated.

Perhaps the most dramatic argument for voting one's convictions was supplied by Congressman WILLIAM H. AYRES, Republican, Ohio. AYRES, who helped Teague lead the fight against the 1956 bill, represents the heavily labor-organized and generally pro-Democratic district of Akron. Directly challenged by a veterans' committee organized to support his opponent, he met the issue without equivocation and won the largest majority of his career. (Rankin, incidentally, was defeated in 1952 by an opponent who kept asking why, if he was such a friend of the veterans, he had failed to get them a pension.)

It is more than pressure from veterans' groups that has prompted the decision to bring a new pension bill into Congress this spring. As pension costs continue to mount under existing laws—assuming no future wars, they will triple by 1985—there has been increasing recognition at both ends of Pennsylvania Avenue that something must be done to keep the program within limits.

In 1956 a Presidential commission headed by Gen. Omar Bradley produced a voluminous report that pointed out many inequities of the veterans'-benefits program and recommended that nonservice-connected pensions be retained for veterans and dependents only as "a 'reserve line of economic defense' until such time as their minimum income requirements are met through the basic OASI [Social Security] program or through any other source of regular income." For his pains, General Bradley was vilified by a number of professional veterans. An American Legion official branded the report as "an insidious effort to discredit the veterans' class as a whole."

The Bradley report also attached the all-or-nothing principle that awards the same $78.75 monthly benefits to the man who earns $2,700 a year as to the man who doesn't earn a cent, but nothing at all to the man who earns $2,701. The commission called for a graduated scale of payments that would make the pension a bona fide supplement to social security and other income in order to assure the aged veteran and his dependents a minimum standard of living. The commission obviously hoped that social security would eventually eliminate the necessity for any distinctions between veterans and nonveterans.

In spite of the persuasive reasoning of the Bradley report, President Eisenhower failed to act on it for 3 years. Finally, on April 15 of this year, his new Administrator of Veterans' Affair, Sumner G. Whittier, dispatched to Congress a bill to modernize the pension structure. It was welcomed by Chairman TEAGUE, who, in a not-so-veiled warning, promised hearings "provided that there can be substantial agreement reached between all of the veterans groups and various Government agencies concerned." As TEAGUE made clear, he was not going to allow another situation like the one that developed in 1956, when the lobby took control of the committee away from him.

The bill has been designed with calculated cunning. A savings provision guarantees that no beneficiary now on the Veterans' Administration rolls will be cut off or have his benefits reduced. Instead, 55 percent of the 1.3 million now receiving pensions will get an immediate increase in benefits. The cost of "sweetening" the reform measure will run an additional $100 million annually for the first few years, to the anguish of Mr. Eisenhower's budget makers.

But over the long run, the graduated scale will go far to ensure that need is the real criterion in fixing pension payments. There will be a much stricter definition of income to include a veteran's entire estate as well as his wife's income. Despite increased payments to those in genuine need, the bill will effect an economy by scaling down payments to the future pensioner who has other income. By the turn of the century, when the peak load of the Second World War veterans has passed, the cumulative saving over the present program is estimated at $48 billion.

ONE-HALF OF A NATION

TEAGUE is shrewdly weighing the political prospects of this bill. He is already engaged in the endless diplomacy of bluff and compromise. So far, the heads of the major veterans' organizations are showing unusual caution. They have much to lose by recklessness. One misstep and they know that TEAGUE, backed by the Veterans' Administration, will slam the door against any change. To make this alternative even less appetizing, TEAGUE may add a few more sweeteners to the bill. He wants to be certain that the pensioners who stand to gain immediate benefits make up a substantial majority of those now on the rolls. They, he reasons, are the ones who will swing the most votes.

TEAGUE's gamble is an important one. It represents a chance to inject reason into a program that has become a political monstrosity and has every prospect of becoming a greater one. It could well be the last chance. In a few more years, HARRY BYRD may no longer be around to serve as a second buffer in the Senate when TEAGUE is overridden. Senator ROBERT S. KERR, Democrat, of Oklahoma, who stands next in line on the Senate Finance Committee, has always been notably easy going on money matters. It is hardly likely, either, that any future President will have a more persuasive voice on veterans' affairs than the former Supreme Commander of the Allied Forces in Europe. As one of TEAGUE's staff members has expressed it, "If Eisenhower and Bradley can't sell this reform, who in hell can?"

Unless someone can sell it, the future management of veterans' benefits present a curious prospect indeed. For the aging veteran population of America can no longer be reckoned as the valiant few who charged up San Juan Hill to earn their Nation's undying gratitude and largesse. The veterans of past war, along with their dependents, will soon total nearly half the Nation's population. With each year that goes by, the millions of Second World War veterans move toward pensionable age.

Is half a Nation to be subsidized by a jerry-built program full of loopholes and inconsistencies, and subject to nearly limitless expansion? Except for a few brave men like TEAGUE, legislators are strangely complacent about this radical, if discriminatory, step toward the total welfare state. In an era of unparalleled prosperity, congressional conservatives and liberals alike seem bent on backing into a tin-plated version of the Townsend plan, which even in the depths of the depression they had the courage to fight off.

Safety Patrol Delegation for 1959 From the First Congressional District of Wisconsin

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. FLYNN. Mr. Speaker, it is with pride that I rise to advise this honorable body of a civic project in my hometown of Racine, Wis., in which a large number of manufacturers, individuals, and private organizations have cooperated. This civic and community project has made it possible for the city of Racine to participate annually in the grade school safety patrol program. Racine, Wis., was one of the pioneers in this move-

ment; the first unit of the school safety patrol program in Wisconsin was organized in the city of Racine on January 11, 1926. It was one of the first such units organized in the Nation. Racine realized then and knows now the value of such a program in protecting the lives of schoolchildren at school crossings adjacent to elementary schools. In the 33 years since Racine has been extremely fortunate in that there has never been an accident involving a schoolchild at a school crossing where these safety patrol youngsters have been on duty.

A distinguished Racine citizen, Dr. George Walter, now deceased, gave of his time for many years in the promotion and development of this project. In his memory the group of industrialists, individuals and private organizations above mentioned have created a memorial fund, a nonprofit organization dedicated totally to providing finances through voluntary donation of funds, which are used to defray the annual expenses of sending one safety patrol boy or girl from each school in the city of Racine to Washington to participate in the annual safety patrol parade. These schoolchildren are accompanied by several civic-minded citizens and officials. The result of this trip spurs the young boys and girls on to dedicated service to the safety patrol. The result is that Racine is developing character in its young people, safety at its school crossings and has a program of which all can be proud.

It was with pride that I witnessed these boys and girls march in Saturday's parade. It was a happy occasion for me to visit and have breakfast with them while they were in Washington. The boys and girls selected this year and the school from which they came are:

School, Racine, Wis.: James Blake, St. John's Lutheran; Gary Bosak, Garfield School; Dale Dow, Winkler; James Esser, Holy Trinity School; Donald Fowler, St. Rose; Stephen Heisa, Stephen Bull; Marvin Johnson, St. Charles', Burlington, Wis.; Dale Ketterhagen, St. Mary's, Burlington, Wis.; Sigmund Kizirnis, St. Joseph's; Robert Knotek, St. John's Nepomuk; Lawrence Kraus, Lincoln Elementary; Craig Monroe, Our Father's Lutheran; John Morgan, Jerstad-Agerholm; Daniel Panyk, Rapids; Jerry Pusch, Trinity Lutheran; Ronald Rasmussen, Howell; Charles Retert, Roosevelt; Robert Richards, Jr., Wadewitz; John Schatzman, Franklin; David Wenszell, St. Mary's; James Stratman, St. Edwards'; Charles Wittkowski, Holy Name School; John Zimmerman, Epiphany Lutheran; Daniel Zuehlke, Washington; Theodore Zukewich, Sacred Heart; Kenneth Burns, Elkhorn School, Elkhorn, Wis.; Dick Pollak, Elkhorn School, Elkhorn, Wis.; Jack Zwieg, Elkhorn School, Elkhorn, Wis.; Lois Dandeneau, St. Patrick's School; Wendy Jane Dibble, S. C. Johnson; Jane Gutknecht, Franksville; Charlene Mae Harlow, St. Stanislaus; Ellen Ihrman, Winslow; Annette Jardina, St. Rita; Jane Mutschmann, James; Susan Oravetz, Fratt Elementary; Joyce Petersen, Gilbert Knapp; Marilyn Schetter, McKinley Elementary; Sally Shookman, Beebe; Mary Teut, St. John's Evangelical Lutheran, Burlington, Wis.; Pauline Walsh, Waller School, Burlington, Wis.; Sandra Weiss, Mitchell Elementary; Nancy Wtipil, Jefferson; Kathie Zabit, Trautwein.

The chaperones caring for these boys and girls were: Harold A. Schink, Racine County Safety Council; Officer Edward Kirt, Racine Police Department; Sgt. James Anderson, Racine Sheriff's Department; Mrs. Bertha Halliday, R.M. Racine Health Department; Miss Grace Piskula, physical education consultant, Racine Public Schools.

I commend both the children and their chaperones for the fine display they put on in Washington and for a job well done. I commend their schools for adequately preparing them for the trip. The chaperones said they were the finest behaved group of children that they had yet taken to Washington and I commend the civic-mindedness of the group and the individuals contributing to the Dr. Walter memorial fund for this most worthy project.

Robert L. Cummings, Jr.

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. DOLLINGER. Mr. Speaker, the following article appeared in Business/Commercial Aviation of April 1959. It is most interesting and informative, and I am including it in the CONGRESSIONAL RECORD so that all Members of Congress may have the opportunity to read it:

ROBERT L. CUMMINGS, JR.

Ever since "Bob" Cummings became New York Airways' first president back in 1951, he and his company have been leaders in the airline 'copter field. On October 15, 1952, New York Airways' became the first airline to offer scheduled passenger service by 'copter. (The pioneer 'copter airline—Los Angeles Airways—had been operating for nearly 5 years, but only carried mail and air express.) Less than a month ago, New York Airways' carried its 250,000th passenger.

Bob Cummings is modest about New York Airways' success. "We've had the best opportunities," he says. "We have the biggest city in the world and the best financing of any small airline anywhere. Operating in the New York area puts us in the limelight. If we can't succeed with this background we ought to be shot."

Those who know Cummings well say it's not quite that simple. They credit Cummings with a major share of the responsibility for New York Airways' success. His chief assets, they point out, are his knack for getting to the heart of a problem, his vision and his capacity for getting people to work together as a team.

An excellent example of Bob's ability to get to the core of an issue is the concept of direct service, provided by steep-gradient aircraft, that he recently laid before the CAB. This concept offers the first real opportunity for aviation to crack the short-haul travel market—now dominated by surface transport. It points the way for today's 'copter airlines to take their place alongside trunk and local service airlines—as a major element of our national air transport system.

Nowhere does Cummings' foresight show so clearly as in NYA's well-developed equipment plans. Considerably along on plans to retrofit turbine engines to its Vertol 44Bs, the airlines technical staff is hard at work evaluating the 44B's sucessor—"Ship X," as Cummings calls it. At the same time, NYA has protected its delivery position for the replacement of Ship X with the recent letter of intent for five Fairey Rotodynes. Of this action, Cummings says "It's an indication of what we think of the future. We have to protect our busines for the future—we don't want to get caught short for lack of vision."

Long ago, Cummings realized that a 'copter airline—buying five aircraft every 5 years—couldn't arouse much interest among manufacturers turning out 30–40 ships a month for the military. Ever since, he's been working quietly with 'copter airlines—both here and abroad—to develop common requirements to present to manufacturers. One important payoff has been worldwide agreement—both in the United States and abroad—on the size 'copter needed for airline operations. Developed in the IATA Helicopter Group, this agreement is also backed by the U.S. military.

The NYA management team is made up largely of "pros" with years of fixed-wing airline experience. All were hand-picked by Bob Cummings—himself a former manager of Pan Am's Atlantic Division. The way this team has stuck together since NYA began is one indication of the effectiveness of Bob's leadership. Many have been offered better paying jobs elsewhere, but they all chose to stay—held together by the challenge of the operation and their devotion to Bob Cummings.

In his dealings with his staff, Cummings gives each man the authority that should go with his responsibility. Observes an associate, "You get help from Bob, you don't get interference. He's never insisted I do something I didn't really want to do—even though I later proved to be wrong."

Small wonder New York Airways looks expectantly toward the future. Biggest hurdles at present are getting CAB recognition of the concept of direct service, with steep-gradient aircraft, and making the airline's temporary certificate a permanent one. Once these hurdles are overcome, Bob Cummings and his team will be climbing out on a steep gradient.

One Citizen's Comment on the Farm Problem

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. HAGEN. Mr. Speaker, I represent a district which is reputed to be the most productive farm congressional district in the United States in terms of dollar value of farm products raised. Authority for this statement is a survey made by the Congressional Quarterly approximately a year ago. Primarily because of this fact I have an acute interest in the farm problem and a proper farm program. Since my service on the House Agriculture Committee I have endeavored to inject some consideration of the laws of economics—in a modern context—into all farm legislative proposals.

My particular point in addressing you here today is to invite attention to the fact that the current farm program,

whether under the present Secretary of Agriculture or his immediate predecessors, has been productive of a large degree of antifarm rancor. Typical of this reaction is a letter I have received from one of my constituents, who, I assume, is not a farmer. The letter reads as follows:

TAFT, CALIF., *May 7, 1959.*

Congressman HAGEN,
House of Representatives,
Washington, D.C.

SIR: This Congress has spent a lot of time on labor legislation but I don't hear you doing anything about the rotten farm program.

You've never seen anyone get rich working and you know it.

You talk about balancing the budget then spend $8 billion on the rich farmers. Who do you rich farm lovers think you're fooling? I'd like to know who puts the farm pressure on you birds and I'd like to know the justification of the farm program.

What hold do they have on you fellows? I actually believe if those farmers met you downtown and told you to stand on your head you'd do it. The Farm Journal says the farmers don't want a Government program and the majority of the people hate the farmers' insides. Now you tell me why the $8 billion on them. It must be the big fellows that are putting the pressure on you.

You tell why an outfit like Westlake Farms of Stratford should get $125,942 on the soil bank. I got the list from the Department of Agriculture. Also the loans in 1957: Kern County land, $531,362; Westlake Farms, $508,667; Mettlers, $414,608.

The farm programs were started to help the poor farmers and look at it now. As long as I live I'll never forgive the U.S. Government for taxing me to near poverty to give it to those rich farmers and I know some of them are foreigners.

How about all the Government money that has been given to the Greeks to build tankers? You stand up and do right. We'll vote you all out; that's the solution.

I believe that any man of your integrity knows right from wrong and you know the rotten farm program is not right. I just went down and registered Democratic for one reason—to vote you farm lovers out next election. Every day I campaign—vote all incumbents out until the rotten farm program is done away with completely. We voted out some last election. We'll vote some more of you farm lovers out next election.

E. H. RANSOM.

If sentiments such as these are not uncommon in an area where agricultural activity is the principal source of income, not only of farmers but also those whose chief customers are farmers, I can imagine the depth of feeling in such urban areas as New York and Boston and Los Angeles.

Dr. Slichter on Inflation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. CURTIS of Missouri. Mr. Speaker, an article by Edward H. Collins in the April 27, 1959, New York Times, on Dr. Slichter's economic views has been brought to my attention. Dr. Slichter was the first witness to appear before the Joint Economic Committee in its studies into the question of maximum employment, economic growth and price stability which the Congress authorized in January and voted $200,000 to finance. After listening to Dr. Slichter testify and after interrogating him I came away with somewhat the same general conclusions on his views that Mr. Collins records in his article:

POSITION OR DEFENSE—A VIEW THAT SLICHTER FORMS OPINION TO CONFORM WITH PREVIOUS SPEECHES

(By Edward H. Collins)

An economist who is qualified to hold the chair of Lamont University professor at Harvard is entitled to his own opinion on any issue, even if that opinion puts him in the small company of experts who profess to regard a condition of perpetually rising prices not only as potentially nontoxic but as an invaluable source of the energy-building vitamins that every growing economy needs.

Nevertheless, the more this wirter, for one, samples the steady flow of speeches and articles of Prof. Sumner Slichter dealing with this theme, the more strongly he is tempted to ask himself one question. That question is: Is he (Professor Slichter) trying to convince his audience of the rightness of his views or is he really trying to convince himself? For the picture he seems to present at this point is that of a man who, finding himself in a position of dubious tenability, has redoubled his efforts to reassure himself, and in the process is inflicting more damage on himself than on his critics.

To get away from broad generalizations, let us consider a recent representative example of Professor Slichter's efforts to defend his position on inflation by what is essentially the technique of simple reassertion. That example is the address he delivered at Boca Raton on April 13 before the Association of Reserve City Bankers. True, one will find here the array of assorted statistics that are the hallmark of a typical Slichter dissertation. Moreover, like most statistics employed by the Harvard professor, the reader will find these decidedly interesting.

STATISTICAL PLAY

He should perhaps be warned, however, against permitting himself to be confused by what may strike him as strange discrepancies between the Professor's statistics and the conclusions that their author draws from them. As someone once remarked, "Slichter sometimes gives the impression that he doesn't think of statistics as tools of his trade; he just likes to play with them."

Of several persons with whom this writer made it a point to discuss the Boca Raton speech the majority opinion seemed to be that it reached a plateau in section II, "The Course of Inflation," established its peak in subsection II(3) "The Effects of Higher Labor Costs," and been degenerated into a hodgepodge of speculation, irrelevancies, and non sequiturs.

Few economists with more orthodox views than Professor Slichter have drawn up a more impressive indictment of the "wage push" as the prime mover in the price inflation of the past decade.

"The period 1947–58," he points out, "was a period of declining profit margins." This fact is important because it shows that the initiative in raising prices was not being taken by employers. From an average of 4.45 cents per dollar of sales after taxes in the years 1947–50, the corresponding figure fell to 3.3 cents in the 3 years 1955–57.

During 8 years of this 11-year period of declining profit margins, he goes on to observe, "the rise in hourly compensation for all workers in private industry exceeded the gain in real production per man-hour, and for the period as a whole that rise was 66.7 percent, or practically twice the gain of 33.6 percent in real production per man-hour. Noting that in 1957 a consolidated income statement of American business showed that labor costs represented about two-thirds of the income originating in business and four-fifths of the income originating in corporate business, he concluded:

"When labor costs are this important and when, year after year, hourly compensation of employees outruns output per man-hour, some increase in the price level is obviously necessary."

CONTROL URGED

Appearing before the Joint Congressional Committee on the Economic Report on March 25, Marriner S. Eccles, former Chairman of the Federal Reserve Board, emphasized this very same point. He then proceeded to add:

"It should be apparent that unless the Government and the Congress have the courage to control the rapidly growing monopolistic poser of organized labor, further inflation is inevitable. The only alternative is to stop the growth of the money supply, which would ultimately bring unemployment and idle facilities."

Compare this forthright and logical proposal by Mr. Eccles with the floundering attempt of Professor Slichter to provide a solution that would avoid doing violence to his frequent statement in which he sought to minimize the importance of inflation. Having diagnosed the recent condition of rising prices as "the tendency of wages to outstrip productivity," one would expect that he would prescribe for their particular ailment.

Indeed, for a brief moment, he actually seemed to be teetering on the edge of such action.

"Since the cause of the trouble was clear," he declared, "the central attack on inflation should be directed to curbing the power of trade unions." But for the information of those who may have applauded his remarks at this point, the present might be a good time to call attention to the fact that one should never applaud any statement in a Slichter speech, because one can never tell what is coming next. What came next in this case was this observation by the speaker:

"Depriving the unions of some of their extraordinary privileges would remove some of the glaring injustices, but would have little effect on the bargaining power of most unions." Thus does Professor Slichter, within the space of a single sentence, propose and dispose. While the professor subsequently introduced a variety of amiable but purely speculative suggestions for solving the inflation problem without touching its heart, that was as near as he came at any time to a frontal attack.

The fact seems to be that the Harvard economist is not nearly as nonfearful of inflation as is popularly believed. A perusal of a number of representative speeches and articles by him on the subject suggests that unless he is attacked or taunted into reckless statements he is apt to confine himself largely to the thesis that inflation is not as serious a threat as most people think. Sumner Slichter, one is forced to conclude, is somewhat less than the menace to orthodox thinking on this subject that he is widely pictured. By the same token, it should be added, it is probably largely a wasted hope to believe that much help can be expected from him in solving the inflation problem. One reason for believing this is that his economic philosophy is largely a philosophy of improvisation. A more important reason is Professor Slichter's addiction to gratuitous prediction.

The study of economic theory and economic problems is a difficult one even for the economist who has submitted to a disciplined spirit of detachment and objectivity. The economist who constantly makes a practice of taking a position with respect to the economic outlook has forfeited the most valuable asset that any scientist can boast. He has become a prisoner of his own public pronouncements.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Lee's Spirituality

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Wednesday, May 13, 1959

Mr. STENNIS. Mr. President, on May 3, 1959, our colleague, the junior Senator from Virginia [Mr. ROBERTSON], delivered an address at the annual meeting of the Robert E. Lee Memorial Foundation, at Lee's ancestral home at Stratford, Va.

This address, entitled "Lee's Spirituality," not only analyzes some of the strong spiritual qualities of the great Virginian, Robert E. Lee, but it reflects also the outstanding spiritual qualities of our colleague, also a worthy Virginian.

Through this emphasis on Lee's spiritual qualities, the Senator from Virginia has rendered a service in making the true character of General Lee better known to the American people.

That there may be further circulation of this worthy address among the people of the Nation, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LEE'S SPIRITUALITY

(Address by Senator A. WILLIS ROBERTSON at annual meeting of Robert E. Lee Memorial Foundation, Stratford, Va., May 3, 1959)

It was on such a spring day as this that Gen. Robert E. Lee was called upon to make the most trying decision of his life. The grass was green at Appomattox, the fragrant arbutus was opening its chalice of perfume among the drifted leaves, the white flowering dogwood would soon be in full bloom. All nature seemed to be proclaiming "God's in his heaven—all's well with the world." But Lee's heart was heavy with the realization of the fact that future resistance to the overwhelming might of Grant's army would be futile. In the bloody battle of Sayler's Creek he had lost one-third of his fighting strength, and to prevent the needless sacrifice of what remained of his brave men, Lee, the professional soldier, must suffer the public humiliation of surrendering his army and admitting that he had lost the war. "How easy," he said as his soul was being tried by the implications of that decision, "I could be rid of this and be at rest. I have only to ride along the line and all will be over. But it is our duty to live. What would become of the women and children of the South if we were not here to protect them?"

In those simple words, "it is our duty to live," Lee expressed the keynote of a character so sublime and so secure in the halls of eternal fame that his memory could not be lifted to any new place of distinction by any man's words of praise. * * *

In the shadows of the historic home at Stratford in which Lee was born, preserved by the unselfish patriotism and loving care of the Robert E. Lee Memorial Foundation, we may well recall the reference to the Lee family by Woodrow Wilson when in a speech on Robert E. Lee, he said: "We like to remember all the splendid family traditions of the Lees, but we like most of all to remember that this man was greater than all the traditions of his family; that there was a culmination here that could not have been reached by the mere drift of what men remember, but must be reached by what men originate and conceive."

In the opinion of that great scholar and statesman, what Lee had conceived, in a superlative degree, was a sense of duty. In the performance of that duty he was a singular contradiction—"a gentleman who loved his fellow men and sought to serve them by the power of love, and who yet won the imperishable fame of a great soldier."

Woodrow Wilson, in the address to which I have referred, explained this apparent paradox by saying: "The lesson of General Lee's life to me is that it is not the immediate future that should be the basis of the statesman's calculation. * * * Even a man who saw the end from the beginning should, in my conception as a southerner, have voted for spending his people's blood and his own, rather than pursue the weak course of expediency. There is here no mere device, no regard to the immediate future. What has been the result?—ask yourself that. It has been that the South has retained her best asset, her self-respect."

Senator John Warwick Daniel, in his oration at the unveiling of the Valentine recumbent statue of Lee in Lexington in 1883, said that the life of Lee taught the grandest lesson: How manhood can rise transcendant over adversity and is in itself alone, under God, preeminent.

"At the bottom of all true heroism is unselfishness," Senator Daniel said. "Its crowning expression is sacrifice."

After years of study, the great historian and brilliant writer, Dr. Douglas S. Freeman, compressed into one sentence his impressions of Lee: "What he seemed," Dr. Freeman said, "he was—a wholly human gentleman, the essential elements of whose positive character were two and only two, simplicity and spirituality." To that we can appropriately add Wilson's appraisal of Lee's life when he said, "Lee spent himself not in his self interest but for the interests of mankind." "It was," said Wilson, "not only moral force, but it was a moral force conscientiously guided by interests which were not his own."

Constituted as he was, Robert E. Lee could not have been true to himself except by spending himself unselfishly for others. He revealed his personal creed when, asked for a word of advice at the christening of a friend's child, he said simply: "Teach him to deny himself." He revealed it again when he wrote down among the maxims which he carried in his saddlebags during the war: "There is a true glory and a true honor: the glory of duty done, the honor of the integrity of principle."

But the self-sacrificing faith of Robert E. Lee was revealed in deeds even more clearly than in words. He showed it when he declined the command of the Federal army, preferring to fight the unequal battles and share the hardships of his own people; at Gettysburg when he took upon himself the blame for a disaster which he might have attributed to his lieutenants; after Appomattox when he walked under the yoke of conquests without a murmur of complain; and at Lexington when he refused large financial offers to devote the last years of his life to training the youth of his country.

Lee's services as an educator at Washington College (later to bear the joint names of two of Virginia's greatest sons) in training the youth of his Southland to successfully meet the challenge of a bitter Reconstruction period—a stain on our democracy which, let us hope, in the final day of judgment, the recording angel will blot out with a tear—was no small part of his contribution to his day and generation. But typical of his great humility, Lee said shortly before his death: "Life is gliding away and I have nothing to show for mine. I pray I may be spared to accomplish something for the benefit of mankind and the honor of God."

Avoiding the forms of discipline which he had known in his military education, General Lee established at Washington College the honor system under which the boys were required to be gentlemen in all things, to study faithfully, to hold high moral standards and to remember their Creator.

Part of that system, which avoided compulsion and stressed moral responsibility, was abolition of compulsory chapel attendance, but Lee himself set the example by faithfully attending religious services at the college and in his own church. He invited the ministers of the town to take turns acting as chaplain. He sent each Lexington pastor a list of boys in the college of that pastor's faith and encouraged the clergymen to keep in touch with them. He carefully selected only Christian homes for students who lived in the town and on one occasion he said: "If I could only know that all the young men in the college were good Christians, I should have nothing more to desire. I dread the thought of any student going away from the college without becoming a sincere Christian."

The point I want to emphasize here is that Robert E. Lee was not merely a man of high ethical and moral principles, but he was a Christian in the fullest sense of that term—one who believed in the Bible, tried to the best of his ability to follow its teachings and who put God first throughout his life.

* * * * *

There was, for example, the occasion when General Pendleton, who was a minister before the war and afterward, had lunch with General Lee in his tent. Afterward each sought to apologize for the fact that no blessing was said before the meal. General Pendleton said he had waited for his commanding officer to suggest it, but Lee said he waited because he felt the suggestion should have come from the clergyman. Then Lee added the significant statement that when nothing was said, he said the blessing silently, as he always did when he ate alone.

In General Lee's home morning prayers were a regular routine, with him reading from a worn pocket edition of the Bible he carried throughout the war, and he referred to the Bible as "a book which supplies the place of all others and cannot be replaced by any other."

Indicating the nature of his personal faith, General Lee said: "There are many things in the Old Book which I may never be able to explain, but I accept it as the infallible word of God and receive its teachings as inspired

by the Holy Ghost. * * * I prefer the Bible to any other book. There is enough in that to satisfy the most ardent thirst for knowledge; to open the way to true wisdom; and to teach the only road to salvation and eternal happiness. It is not above human comprehension, and is sufficient to satisfy all its desires."

On this Lord's day when we meet as it were to give thanks to a Gracious Providence for giving to us in the times of greatest need spiritual as well as military leaders like George Washington and Robert E. Lee, I will feel that my halting efforts to interpret to you the real meaning of Lee's life will not have been in vain if you can leave this meeting with the feeling that the true significance of Lee to our day and generation is contained in Dr. Freeman's summation when he wrote: "Of humility and submission was born a spirit of self-denial, that prepared him for the hardship of war and, still more, for the dark destitution that followed. * * * Had his life been epitomized in one sentence of the Book he read so often, it would have been in the words, 'If any man will come after Me, let him deny himself, and take up his cross daily, and follow Me.'"

"I have fought against the people of the North," Lee once said, "because I believed they were seeking to wrest from the South her dearest rights. But I have never cherished toward them bitter or vindicative feelings and have never seen the day when I did not pray for them."

We must strive for mutual tolerance because the rights for which Lee fought are threatened not only by internal friction at home but by the alien forces of an anti-God ideology. I shall never cease to give thanks for the work of the United Daughters of the Confederacy and of the Lee Memorial Foundation, who keep green the memory of a great spiritual as well as military leader, Robert E. Lee, and who have demonstrated to the Nation and to the world that the fight for a principle of self-government, known as the rights of sovereign States, in which the red blood of the flower of the South was shed on far-flung battlefields, was not a lost cause because in that fight the South saved her most precious heritage—her self-respect.

And so today we can proudly say of Robert E. Lee, as did Pericles of the young men of Athens: "They gave their bodies to the Commonwealth and received, each for his own memory, praise that will never die, and with it the grandest of all sepulchers, not that in which their mortal bones are laid, but a home in the minds of men, where their glory remains fresh to stir to speech or action as the occasion comes by. For the whole earth is the sepulcher of famous men; and their story is not graven only on stone over their native earth, but lives on far away, without visible symbol, woven into the stuff of other men's lives.

A Generous Acknowledgment

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. HOLT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to the following editorial from the Los Angeles Times of Tuesday morning, May 12, 1959. Our country's foreign policy deserves more compliments than we get throughout the world:

A GENEROUS ACKNOWLEDGMENT

A handsome acknowledgment of U.S. economic aid to the world has been voiced by britain's Chancellor of the Exchequer, Derick Heathcoat Amory. Her Majesty's chief money man told a group of American bankers in London that the "calm and intelligent" financial policies of the United States forestalled a serious worldwide recession.

Moreover, he went on, from the same source of wisdom came economic cooperation which is the basis of whatever success Western nations have had in solving postwar problems. About the only thing more he could have said was that West Germany may have taken better advantage of these American policies than have his own people.

Looking forward to more of the same enlightened policies, Mr. Amory rounded out as fine a compliment as the United States has yet received, in a world where real or fancied American ineptitudes are more often remarked.

Nomination of Admiral Strauss

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. YARBOROUGH. Mr. President, the hearings on the President's request for confirmation of Admiral Strauss have occasioned a great deal of comment.

Some of this discussion, I feel, has clouded the issue. However, Senator JOSEPH C. O'MAHONEY, our able and distinguished colleague from Wyoming, has clearly painted the true picture in a letter to the editor of the Washington Post and Times Herald. This letter offers a plain explanation of the reasons for the Senate's actions in this matter.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letter to the editor by Senator O'MAHONEY, published in the Washington Post and Times Herald for Tuesday, May 12, 1959, under the heading "Grasping at Strauss."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GRASPING AT STRAUSS

May I not take the liberty of suggesting taht your editorial of May 2, "Grasping at Strauss," seems to be based upon a mistaken constitutional premise, namely, that "The President, we believe, ought to be entitled to be entitled to have in his Cabinet the persons in whom he has confidence."

This is not what the framers of the Constitution believed. They were of the opinion that the President should be required to have the advice and consent of the Senate not only to the appointment of Ambassadors, other public ministers and consuls and judges of the Supreme Court, but also "all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law."

Is there any present reason to support this view of the members of the Constitutional Convention? Yes. It is to be found not only in the traditional American principle that this is a government by law, not a government by men, but also in the words of your editorial. You said:

"This newspaper has not been by any means an admirer of Admiral Strauss. It has differed with him strongly in the Oppenheimer case, on his defense of the Dixon-Yates contract, on excessive secrecy in nuclear matters and on a number of other important policy questions."

Let me add, it is more important now that we have a President who delegates to others so much of his power that the Senate should not waive its constitutional right to deny confirmation in the case of a nominee whose record amply establishes the charge that he aspires to have his own way in matters of public importance, the Congress and even the President to the contrary notwithstanding.

The battle that is being waged now in the United States is a battle to transfer to private management the powers granted by the Constitution to the Congress to regulate interstate and foreign commerce. It is not necessary in a case like this to find "evidence of serious misconduct or some similar compelling disqualification," as your editorial asserts. It is only necessary to insist that a man nominated to be a Cabinet officer shall have a record which justifies the belief that he will support a government by law instead of a government by men.

This constitutional view was never better exemplified than in the case of Charles Beecher Warren, of Michigan, nominated on March 5, 1925, to be Attorney General of the United States. He was rejected on March 10, 1925, by the Senate by a vote of 41 to 39. President Coolidge renominated him 2 days later and the Senate again rejected him, this time by a vote of 46 to 39.

He was opposed by both Senators from Michigan—James Couzens, a Republican, and Woodbridge N. Ferris, a Democrat. The burden of the argument against him was made by Senator Thomas J. Walsh, of Montana, whose qualifications as a constitutional lawyer no one will deny.

Senator Walsh, in opposing the nomination of Warren, made no personal attack upon him and did not oppose him for any interior office. He said he was not qualified to be the Attorney General because of his association in the activities of the American Sugar Co., which was then generally known as the Sugar Trust.

These activities, Senator Walsh contended, were such that he could not be entrusted with the enforcement of the antitrust laws. Thus the President's nominee, under clear constitutional authority, was rejected because, in the belief of a majority of the Senate, public policy required his rejection.

This is the situation that exists now in the case of Mr. Strauss. Public policy requires his rejection as Secretary of Commerce. Surely the President can find another nominee in whom he has equal confidence who will be qualified both from the President's personal point of view and from the public policy point of view.

JOSEPH C. O'MAHONEY,
Senator From Wyoming.

WASHINGTON.

Israel Independence Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BOLAND. Mr. Speaker, 11 years have passed since the State of Israel was

declared independent in 1948. In that short period of time Israel has evolved from an infant state barely able to survive into a strong and capable country. Its growth can be described only as phenomenal.

Opening its doors to the Jews of the world Israel has absorbed more than 1 million immigrants and has thus trebled its population. The country's agricultural production has doubled and 65 percent of Israel's food needs are now met by its own farmers. The arable land has been increased by well over half a million acres and the near-miracle of transforming the arid Negev desert into green farmland continues.

But Israel is not solely an agricultural nation. Actually it is the most industrialized country in the Middle East. In general, the country has progressed so remarkably that the standard of living of most of its people is on a level with many West European countries. In fact, given a breakthrough in any one of the scientific fields presently being explored in the country—atomic energy, desalinization of sea water, and the harnessing of solar energy—Israel could speedily become one of the world's most technologically advanced countries.

Self-improvement alone, however, has not satisfied Israel. For the past few years it has been providing technical assistance to African and Asia countries, notably Ghana and Burma. Many new African and Asian nations have found in Israel a state capable of extending assistance, entering into trade, and providing capital and technicians without encountering the danger of economic domination or military commitment. Also, the dynamic spirit of Israel and its visible accomplishments provide an attractive example for the Afro-Asians. This is one of the most promising aspects of the relationship between them. Israel's democratic system, rather than that of the Communists, may serve as a model for the underdeveloped areas.

On this, Israel's 11th Independence Day, therefore, it is with great pride that I congratulate its citizens and wish them all peace, prosperity, and continuing progress in the coming years.

Three Hundred and Fiftieth Anniversary of the Founding of Cape May County, N.J.

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me regarding the 350th anniversary of the founding of Cape May County, N.J.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CASE

This year, Cape May County in New Jersey is celebrating the 350th anniversary of its founding, and I am happy to call this historic fact to the attention of my colleagues.

Cape May is a delightful area in the southern part of New Jersey and has long been famous for its excellent recreational facilities. For more than 150 years vacationers and sportsmen from every part of New Jersey as well as from other States have been enjoying the limitless sports and recreational opportunities which abound in this tract of great natural beauty.

But what is more significant is the role of Cape May County in the early history of our country. Henry Hudson was the first to come upon it in 1609 and claim it for the Dutch. Thereafter a succession of navigators were sent from Holland to explore further the area of the Delaware Bay and River. In 1623 the first settlers arrived from Holland (a group of Walloons under the leadership of Cornelius Jacobsen Mey) and soon afterwards colonists from the surrounding territories migrated to the Cape May area, either in pursuit of religious freedom or for economic purposes.

Thus, the same factors which motivated the settlers of our great land were responsible also for the early growth of what is now known as Cape May County.

This is a very proud moment for the residents of Cape May County and I am happy to have this opportunity to express my felicitations to them.

Atlantic Congress—A Break in the Clouds

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. KEFAUVER. Mr. President, as the time draws near for the most important Atlantic Congress meeting in London, I think it fitting to call the Senate's attention to an editorial which appeared on April 12 in the Denver Post. I ask unanimous consent that it be printed in the Appendix of the RECORD.

The editorial shows a keen insight into the importance of this meeting on June 5 and points up how vital the deliberations can be to the people of the free nations of the world.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATLANTIC CONGRESS—A BREAK IN THE CLOUDS

If the principal reason the United States joined the North Atlantic Treaty 10 years ago was the immediate need to stop Russian expansion, there was another longer range aspect appealing to many Americans.

They hoped NATO might prove to be a cornerstone for a truly effective Atlantic Community.

Many who were weary of war recognized that, in the long run, peace must be based on international law administered by some body to which individual nations, renouncing force, would surrender some part of their sovereignty.

The United Nations had been one great focus for these idealistic hopes.

But the cold war, and its symptoms, the Russian walkouts and vetoes, soon indicated that at least for the present the U.N. could not be all they had hoped it might be.

Some wise statesmen, looking for a solution, pinned great hopes in regional organization, where common ties of language and common institutions, such as parliamentary democracy, could provide a firm foundation for international cooperation.

Much of this faith in the regional approach has been borne out by the experiences of NATO, as the article on page 1AA indicates.

It is therefore comforting, at a time of crisis and much bad foreign news, to report that NATO is about to be reappraised by leading citizens of its member countries.

An Atlantic Congress on an inspiring scale will convene in London June 5 to search for ways in which the NATO nations can draw more closely together.

Some 650 people, some of them legislators, but many of them leaders in all varieties of private occupation, will be delegates to this Congress.

It is vital that NATO's impetus toward a common Western policy be maintained as new world problems strain the alliance.

The fact that the organization must live and grow with its times is more important, in the long perspective, than a strategic argument of the moment over troops in Germany or a spat with France over national prerogatives.

The Atlantic Congress should give NATO a new confidence that it enjoys wide support among private citizens who see in the treaty more than just an alliance.

For NATO is, above all, a genuinely hopeful experiment pointing toward that broader international community of law and order which we hoped for at the end of the last war, and which has become an even more compelling necessity in the nuclear age.

The Pendleton East Oregonian and the Development of the Columbia River System

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. NEUBERGER. Mr. President, for many years the foremost advocate in our State of the development of the mighty Columbia River for hydroelectricity, navigation, and flood control was the late E. B. Aldrich, editor and publisher of the East Oregonian. The East Oregonian is published in the famous roundup city of Pendleton.

It is no exaggeration to stress that the great McNary Dam, named in tribute to Oregon's eminent Senator Charles Linza McNary, is a monument to the tireless efforts of Senator McNary, E. B. Aldrich, and a small handful of farsighted and influential men of their caliber and character.

When others felt the cause was hopeless, E. B. Aldrich insisted fervently that some day there would be a vast dam at Umatilla Rapids, tapping the Columbia's surge of power, and sending tugs and barges far into the fastnesses of the inland empire. McNary Dam is that fulfillment.

Mr. Aldrich's successor at the helm of the Pendleton East Oregonian is J. W. Forrester, who continues this heritage of faith and belief in the development of the Columbia River system, the second greatest in the land—second only to "Ol' Man River" itself, the Mississippi. In the East Oregonian of May 7, 1959, Mr. Forrester has described vividly how the Columbia can be to the Pacific Northwest a second St. Lawrence Seaway, with particular emphasis on kilowatts and in land navigation. I ask unanimous consent, Mr. President, that the editorial by Mr. Forrester, entitled "Those Twin Benefits," be printed in the Appendix of the RECORD.

The editorial is of special significance right now, because the Senate Appropriations Subcommittee on Public Works soon will consider funds for the great John Day Dam, which is downstream on the Columbia from the McNary project.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOSE TWIN BENEFITS

Those who really understand the importance of development of the water resources of the Columbia Basin never separate two benefits, navigation and the production of hydroelectric energy. Most will refuse to say that one benefit is greater than the other.

Movement of commerce on the Columbia River is in its infancy by comparison with the scope of navigation on the Mississippi River. But at the rate at which shipping on the Columbia is growing it can be seen that that river will someday mean as much to the Northwest as the Mississippi does to the rich area it serves. When navigation is possible on the Columbia to Wenatchee and on the Snake River to Lewiston the potential of waterborne shipping in the Columbia Basin will be recognized, we think, by those who have doubted its potential.

There is another area of the United States that is reaping the great benefits of abundant, low-cost hydroelectric energy and low-cost river transportation. Senator RICHARD NEUBERGER spoke recently of what those twin benefits are doing in Northeastern United States. We have come upon his remarks printed in the CONGRESSIONAL RECORD which we offer here. We regret that the Wall Street Journal story of which he speaks is too lengthy for reproduction here. We think a significant part of the story is that which tells that bank deposits in some communities served by the St. Lawrence Seaway have tripled. Senator NEUBERGER said:

"It is unfortunate that many people in the great Pacific Northwest still do not realize what low-cost waterpower and cheap river transportation can mean to the development of a vast region like ours in the Columbia River Basin.

"An example of the prosperity which can come to an area by these methods is being created in Northeastern United States on the St. Lawrence Seaway. There, the huge Moses-Saunders Dam is about to generate 1,880,000 low-cost kilowatts, which will make it second in the Western Hemisphere only to our own colossal Grand Coulee Dam on the Columbia. In addition, the slack water navigation and locks produced by the Moses-Saunders Dam will make possible oceangoing shipping all the way to the Great Lakes in the very heart of the American breadbasket.

"An illuminating article in the Wall Street Journal for April 24, 1959, entitled 'St. Lawrence Valley Booms as the Seaway Lures Industry, Tourists,' details just what this development can mean to important sections of both the United States and Canada.

"I commend a thorough and careful reading of the Wall Street Journal article to my own constituents in Oregon. There, we have had to struggle for 5 years to obtain construction appropriations for the great John Day Dam, over the opposition of the Republican national administration. Now we are about to begin our efforts to secure adequate funds to keep the construction of John Day Dam on schedule in the years ahead. Furthermore, we seek to implement the 308 report of the Corps of Army Engineers, which recommends an expenditure of some $63 million to provide effective and safe navigation all the way up the main stem of the Columbia to the orchard city of Wenatchee, Wash., a citadel of the inland empire. Any resident of the Pacific Northwest who reads this Wall Street Journal article about the prosperity brought to Northeastern United States by cheap power and inland navigation on the St. Lawrence Seaway will inevitably become a booster for the same type of development on the Columbia River system."

Operational Ballistic Missiles

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. SPARKMAN. Mr. President, there was published in the Huntsville Times, of Huntsville, Ala., on May 1, a very interesting editorial entitled "Waiting for the Concrete To Set," which relates to the use of the IRBM missiles such as the Thor, which has been deployed to the United Kingdom, and the Jupiter, planned for use in Italy. This is a thought-provoking editorial, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WAITING FOR THE CONCRETE TO SET

The U.S. Army could well wag an "I told you so" finger at the Defense Department and the Eisenhower administration, which has just suffered considerable international embarrassment over operational readiness of the Thor IRBM.

Some time ago Air Force Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff, reported to Congress that Thor IRBMs were sitting "ready to go" in England.

But Senator STUART SYMINGTON, although a former Secretary of the Air Force, shook off usual defense excuses and pointed out on Tuesday at the National Press Club in Washington that he had just visited England and had found nothing ready to go.

Yesterday Secretary of Defense McElroy confirmed that Thor missiles in England are not operational, and apparently will not be for some time. The elaborate firing positions required for the Thor are still under construction.

Rivalry between the Jupiter and the Thor, as intermediate range ballistic missile weapons, is a thing of the past, since the decision apparently has been made to discontinue production of the missiles as weapons when present contracts expire. Efforts will be concentrated on intercontinental range missiles instead.

However, the current situation in England points up one basic difference in the two systems, as well as the danger of allowing politics and selfish interests to influence decisions concerning the quality of our military resources.

The difference, of course, is that the Thor requires permanent and complex fixed bases for firing—bases which require weeks to construct and which can be zeroed in by the enemy. The Jupiter is mobile and can be fired from almost any position accessible by truck. Firing sites can be established in a matter of minutes and moved as soon as the weapon is launched.

This factor alone, assuming the missile systems otherwise equal, should have dictated choice of the Jupiter as the Nation's No. 1 IRBM. But Air Force and aircraft industry politics decreed otherwise. That decision was not influenced by the merits of the proven Jupiter.

And instead of being ready, as is the case with Jupiter, we sit and wait, hoping and praying that the need for the weapons does not come until the concrete sets.

Necessity of Controlling Inflation

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. CURTIS. Mr. President, I am pleased to offer for the reading of my colleagues in the Senate the fine editorial which appeared in the Omaha, Nebr., World Herald of May 7, 1959, stating the great public interest in controlling inflation. Since publication of this editorial, I have received thousands of letters from sincere Nebraskans petitioning Members of the Congress to cope with this problem.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS IS THE GREAT PROBLEM: YOU CAN HELP TO SOLVE IT

The greatest issue in America this year is inflation.

President Eisenhower says that. Secretary of the Treasury Anderson agrees. So do a host of other thoughtful Americans.

This is not a far-away issue involving only politicians and economists. It is a local issue, an individual issue. It affects the well-being, present and future, of every one who lives in the United States.

What is inflation?

It is the process of destroying the value of the dollar, so that it will buy less this year than it did a year ago.

And what is the basic cause of inflation?

It is the constant increase in the supply of money. This is brought about chiefly by too much spending by the Government in Washington out of an empty Treasury.

Secretary Anderson recently explained the problem in these simple words:

"Now suppose I wanted to write checks of $100 million starting tomorrow, but the Treasury was out of money. If I called up a bank and said, 'Will you loan me $100 million at 3½ percent for 6 months if I send you over a note to that effect?' the banker would probably say yes.

"Where would he get the $100 million? * * * He would merely create that much

money, subject to reserve requirements, by crediting our account in that sum and accepting the Government's note as an asset. When I had finished writing checks for $100 million, the operation would have added that sum to the money supply."

This process, the Secretary went on, is about the same as if the Treasury had issued $100 million worth of greenbacks.

And how does constant, continuing inflation harm the American people?

It takes away from them what they gain in wage increases and profits. It robs them of a substantial share of their pensions. It makes the future uncertain and perilous for everybody.

This is not a new problem. The outcome of uncontrolled inflation should be known to all.

Germany has been through it. There the inflationary smash led to Hitler, defeat in World War II, and partition.

Hungary has been through it, and Hungary today is a Communist satellite.

China has been through it, with results that need not be detailed here.

Everywhere, in all ages, uncontrolled inflation has led to unlimited disaster.

But perhaps you say that if the President and the Secretary of the Treasury are aware of this danger, what is there to worry about?

The President and the Secretary do not make the appropriations. Congress does that. A great many Senators and Representatives seem utterly ignorant of the peril, and have set out to wreck the President's budget. If they are successful, they will cause more inflation in the way that Secretary Anderson described. They may cause the inflationary spiral to spin so fast that no one will be able to stop it.

That is where the issue is today—in Congress.

That is where good Americans can and should use their influence.

If our readers agree that this is the most urgent problem of the times, we suggest that they write at once to their Senators and Representatives, urging them to stop foolish spending, to stay within the President's budget, and to make sure that there will be no deficit in the next fiscal year.

To aid those who wish to take part in this campaign, we are publishing on page 9 today a map of the area in which the World-Herald circulates. It shows the congressional districts, gives the names of the Representative of each, and gives also the names of each of the Senators.

This is not a partisan matter. No matter whether your representatives in Washington are Democrats or Republicans, no matter whether they have already taken a stand on this issue, we think it will be wholesome for them to learn directly from you how you feel about it.

If you agree, please send a postcard or letter or telegram to your Representative and your two Senators, expressing your views as plainly as you can, in your own words.

And for the good of your country, do it today.

Eleventh Anniversary of the State of Israel

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

ELEVENTH ANNIVERSARY OF ISRAEL

We honor the courage and industrious people of Israel on the occasion of the 11th anniversary of their independence as a state. Many times in those years they have been compelled by circumstances to reassert their independence by word and deed. Surrounded by dictatorships, they have become the exemplars of freedom and democracy. They have progressively strengthened their democracy in the face of extraordinary natural and man-made obstacles. Hostile nature and hostile men have seemingly conspired—fortunately in vain—to defeat this young nation, and the consequence after 11 years has been a victory of the human spirit which may well be a source of inspiration for all mankind.

The United States can be proud of the fact that its help has been a major contributing factor in Israel's achievement and its ability to keep its doors open to the homeless and persecuted Jews in foreign lands. We can also be gratified that Israel has taken a leaf from our book of deeds, and now in turn has become an aid and guiding spirit for the new underdeveloped nations of Asia and Africa, teaching them the way to healthier, more complete lives without sacrifice of their rights and liberty. Israel's struggle to conquer the desert, make room for the homeless and bring peace to a tense, striferidden region must be waged for many more years. The Middle East is also one of the major arenas of the East-West conflict, and this factor must be reckoned with in any assessment of Israel's future. America must, therefore, continue its aid and support to the end that peace and well-being may be brought closer to achievement in this second decade of the State of Israel.

Rich Historic Heritage of Padre Island, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. YARBOROUGH. Mr. President, in urging the establishment of a national park on Padre Island in Texas, I have pointed out the various factors which make this site so desirable.

The subjects of recreational facilities, wildlife preservation, and scenic beauty have been discussed at length. In addition, the island is rich in history. Here the Karankawa Indians, according to legend, committed racial suicide rather than submit to the rule of the white man. Here explorers blazed the paths which brought the settlers. Here soldiers fought in several wars. And a rich portion of the history of the island recalls the days of buccaneers and plunder on the high seas. Some of these colorful stories were recently collected by Ed Kilman for the Houston (Tex.) Post.

Mr. President, as an example of the color and history of Padre Island, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Ed Kilman which appeared in the Houston Post for Sunday, May 10, 1959, under the heading "Texas Heartbeat—Padre Island Boasts More Buried Gold Per Square Foot (Anyway More Treasure Tales) Than Any Other Place."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS HEARTBEAT—PADRE ISLAND BOASTS MORE BURIED GOLD PER SQUARE FOOT (ANYWAY MORE TREASURE TALES) THAN ANY OTHER PLACE

(By Ed Kilman)

Padre Island hasn't had such a publicity play since the Spanish crown gave the island to Padre Nicolas Balli in 1800 and he founded the Rancho Santa Cruz there, as it has received these last few years.

Next thing you know, the treasure hunters will be flocking over the island again, searching for Lafitte's chests of gold and other buried troves and—Hey, maybe they're already there.

There is more hidden treasure to the square foot on that 117-mile-long narrow sandbar with its smooth packed beach and shifting dunes, than in any other area of Texas. At least, more stories of hidden treasure; but a good deal of it has actually been found. Under the thin fictional disguise of a treasure-hunting character named Walt Conger, my friend Dee Woods of Corpus Christi beguilingly tells the true and the legendary tales of Padre Island treasure, in her book, "Blaze of Gold." It is virtually a history of the island.

First, there is Money Hill—one of the higher sand dunes, on Mustang Island, a continuation of Padre, separated by a shallow pass. Oldtimers call this Big Hill, to distinguish it from a Little Money Hill, down on Padre.

"At the foot of this dune silver coins have been found. There, a rotting chest of old money was dug up many years ago. Certain islanders will whisper the name of the person who found the chest."

For several miles up and down the gulf beach from Little Money Hill, coins have been washed up by the waves like shells upon the shore.

"I've seen as many as 100 kegs of coins loaded on a dray being driven from the bank to the wharf," said Mrs. Royal Givens of Corpus Christi. "There it was loaded on a ship. * * * Sometimes they didn't even bother to count the money, but weighed it—62½ pounds of silver coins were a thousand dollars."

In about 1860, N. B. Hamilton of Mustang Island recalled, a crew of men were unloading the cargo from a schooner washed up on the breakers of Padre Island opposite Murdock Landing. The men forgot their salvage operations when one of them noticed silver coins being washed up on the beach by the waves. They picked up more than $600.

Red John Dunn, an old Padre settler, told of an English sailor called Buttermilk Bill who picked up a couple of half-buried gold coins on Padre, in 1867 or 1869. He said nothing to a companion, but later got a garden rake from Corpus Christi and raked up some $4,000 in gold coins from the sand near the place where he had found the first ones.

Capt. Ed Cotter of Aransas found 30 Spanish silver coins stamped King Carlos and dated in the 1770s, near Money Hill dune. And a fisherman named Charlen Quantan found many coins there.

Capt. Andrew Anderson, who settled at Corpus Christi in 1852, once told Dee Woods of an old man named Sisal, who poured a shot bag of coins out on a table at Jim Dunn's place, for him to look at. Most of them were the size of American dollars and 50-cent pieces and were dated in the 1600's and 1700's. Some were marked five francs, some were Spanish.

"It is not strange that coins washed like shells up on the island beach, with the practice of carrying cash to pay for cargo, and the many shipwrecks of those days. Everything afloat in the gulf has a tendency to wash ashore on the beach of Padre and Mustang Islands."

The Singer family was wrecked on Padre Island in 1847, and took over and rebuilt the long-abandoned Balli rancho. John V. Singer of this family was a brother of the inventor of the Singer sewing machine. Philip Singer said nearly $80,000 was buried there by his father and grandfather when they fled from Padre during the Civil War. After Appomattox, John Singer returned to the island and dug up the money. Taking $2,000, enough to buy a small boat, he reburied the rest between two trees. In 1869 he came back for the buried money, jewelry, and other buried valuable. A hurricane had blown the two trees away and shifted the sand dunes around so that he could not find the treasure. In 1926, it was said, the wind uncovered Singer's box of ancient coins, and two Mexicans from Port Isabel supposedly found it. One of the Mexicans killed the other, and retired to Matamoros to enjoy his wealth.

Robert L. Mercer, of Aransas Pass, told of a muletrain load of pay for Spanish soldiers which was buried at False Live Oak Point to keep Indians from getting it. The Indians killed nearly all the men, and long afterward, "old man Dean of Rockport searched for the buried money. They say he found it. Anyway, he suddenly possessed money, and no one could account for his getting it otherwise."

There is a legend of 16 galleons of Cortes' treasure flota wrecked at the Devil's Elbow on Padre Island in the 16th century. In modern times, Alexander Meuly found documentary evidence of a wrecked treasure ship on Padre, presumably one of those Spanish galleons. He said he knew there was more than a million dollars in gold in the sunken ship, but he had to raise $25,000 for equipment to recover it. At last reports he had not raised the money.

In 1933 the wife of a highway engineer who was working on Padre Island scraped a shell-encrusted gold jewelry box out of the sand. It contained half a dozen gold rings, one set with a huge pearl, and numerous other articles of fine jewelry.

In 1875, the steamer Paisano left Brazos Santiago with $200,000 in canvas bags, being shipped from Mexico to Galveston. The ship disappeared and was never heard of again. It is thought that some of the coins found at Money Hill came from the wreckage of this vessel.

The spot where Jean Lafitte's shipwrecked pirate crew supposedly buried the chest (or three chests) of gold and jewels on Padre Island was said to be marked by a silver spike driven into the heart of a Spanish dagger tree. In 1880, Frank Rodriguez, boss of a Mexican loading crew, found a half-inch copper belt driven into the bole of a Spanish dagger, on the mainland about 40 miles down Laguna Madre. An ancient gold coin was found nearby. It was recalled that the rotting hull of an old ship lay half buried in the sand, some 15 miles down the lagoon—possibly one of Lafitte's rakish craft.

The Mexicans dug and dug all around the place, but found no treasure chest. Maybe the indefatigable Walt Conger, who was still hunting when Dee Woods' book was published several years ago, will find it yet. If so, maybe he can then afford to buy the island and give it to the government for a park.

TVA Extension

SPEECH
OF
HON. FRANK W. BURKE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. BURKE. Mr. Speaker, it seems pertinent to comment upon the definition of area of operations of the Tennessee Valley Authority as contemplated under the provisions of that act.

During the consideration of this legislation by the Committee on Public Works considerable testimony was heard concerning exchange power arrangements between the Tennessee Valley Authority and other utility systems. Under the bill, as passed by the House, economically feasible exchange power arrangements are preserved, and obviously, under the language of the bill, it is not only specific existing exchange contracts which are preserved, but the right to contract in the future for exchange of power is preserved in the Tennessee Valley Authority with respect to any other utility systems with which the corporation had any exchange power agreement on July 1, 1957.

It is a fact of the utility business that exchange power arrangements have been and are mutually beneficial to the Tennessee Valley Authority and its neighboring utility systems, both public and private. It should be very clear that within the geographical area of service of the Tennessee Valley Authority and at its boundaries, the right and the power to execute exchange power arrangements with other utility systems is preserved.

Wellsprings of the Nation's Soul

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. KEFAUVER. Mr. President, Edward J. Meeman, editor of the Memphis Press-Scimitar, is widely known for his personal and professional devotion to the causes of justice and freedom wherever they are at issue. Mr. Meeman has written and published in a recent issue of his newspaper some remarks which clearly demonstrate the broad scope of these topics and his understanding of them.

Next month, citizens from our Nation and from the free nations of the North Atlantic Treaty Organization will meet in London at the Atlantic Congress. They will talk and work for these very things that Mr. Meeman writes about.

I think, therefore, that it is most fitting to place Mr. Meeman's article in the Appendix of the RECORD and ask unanimous consent that this be done.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AT WILLIAMSBURG, ONE OF THE WELLSPRINGS OF OUR NATION'S SOUL

(By Edward J. Meeman)

WILLIAMSBURG, VA.—At least once a year the editors of the various Scripps-Howard newspapers get together to discuss international, national, and their own affairs and decide broad lines of policy.

We find that a quiet place, away from the distractions of a metropolis, is best for this purpose. Williamsburg, which John D. Rockefeller, Jr., giving his personal interest and his millions, has restored to the appearance which it had when it was the colonial capital of Virginia, proved to be an ideal place for such a meeting. It is quiet—sometimes the only sound you hear is the song of the mockingbird or the robin from his perch in the dogwood tree outside the 18th century windows.

And here you find the spirit of the great days when our Republic was being created. Because men dared to form a great Union, our editors could come from San Francisco and New York, from Birmingham and Cleveland, from Houston and Cincinnati, Memphis and Pittsburgh and find a common interest in the welfare of a "nation one and indivisible, with liberty and justice for all."

* * * * *

SPIRIT OF OLD DAYS

We were prepared for such consideration of the problems of the present day by imbibing the spirit which had animated the men who made history in the old town where we met. "The future may learn from the past" is the motto on the flag of Colonial Williamsburg. We had seen, as every visitor to this restored community may see, the thrilling motion picture made by Paramount of those bold days of 1775 when Thomas Jefferson and Patrick Henry dared to think of a union of the 13 colonies. "What do we of Virginia have in common with the men of Massachusetts?" the doubters asked. "Homes, children, the love of freedom," was the answer.

I thought of the men of Holland, Belgium, France, West Germany, England, with whom I will sit in the Atlantic Congress in London in June. What do we have in common with them? "Homes, children, the love of freedom." The Communist tyrant who would oppress us makes Lord North look like a kindly uncle. We had better hang together or we will hang separately.

Tribute to Gov. Mark Hatfield, of Orgeon

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. SALTONSTALL. Mr. President, I have just read an article entitled "Oregon's Golden Boy" in the May 9, 1959, issue of the Saturday Evening Post. This is the story of how Mark Odom Hatfield became Governor of Oregon last fall at the age of 36, surmounting many adversities. This article should be an inspiration to all young people. In my own State of Massachusetts the youth just out of our high schools and colleges are among the hardest working and most loyal of our political workers. They are motivated only by the highest ideals and they work to increase the effectiveness of their party in serving the public good.

I am pleased also that Governor Hatfield has agreed to come to Massachusetts to speak at a dinner on June 4. Based on what I have read about him in this article, I know that his visit to our Commonwealth will be a great inspiration.

I join the Saturday Evening Post in saluting Mark Hatfield.

And so that this story may be more widely read by others who want to encourage the participation of young people in politics, I ask unanimous consent

that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON'S GOLDEN BOY

(By Milton MacKaye)

No one could have had a bigger or more fruitful year than handsome Mark Odom Hatfield, the new political golden boy of the Pacific Northwest. First of all, after a stubborn and almost habit-forming bachelorhood, he became engaged to a beautiful girl. Then, in a matter of months, he won a contested Republican primary, married the girl, was elected Governor of Oregon at the age of 36, and figuratively won the Irish Sweepstakes when he was able to make a postelection announcement that his wife, Antoinette, was expecting a baby in June.

This breathless pace was new even to Hatfield, who has never been laggard to seize opportunity in a firm and adhesive grasp. Romance, of course, is not answerable to the laws of logic, but politics is something else again. Long ago the clear-minded Hatfield charted his course in public life, a careful step-by-step advancement. Subsequently, events ran away with the blueprint. It was with some understandable surprise, then, that he finds himself today not only a happy family man but also potentially a national political figure.

From the horrific massacre of the Republican Party in the country last fall two attractive and magnetic personalities emerged with their scalplocks intact. Both achieved personal triumphs. Nelson A. Rockefeller defeated Averell Harriman in New York and put the Empire State back in the Republican column. Across the continent, in Oregon, Mark Hatfield won the statehouse in the face of a Democratic sweep, and became the second youngest of our new crop of Governors. J. Howard Edmondson, of Oklahoma, is, at 33, the youngest.

Statistics provide the most eloquent measurement of Hatfield's victory. Once a Republican stronghold, Oregon has become increasingly in recent years a Democratic playing field. Both U.S. Senators are Democrats, as are three of four Members of the lower House of Congress. As a portent of things to come, registration in 1958 showed Democrats leading Republicans in voter enrollment by 56,000. The portent was accurate enough: In the election itself Democratic candidates, for the first time in many years, captured control of both houses of the legislature. Yet, swimming upstream, Mark Hatfield won by 65,000 over the incumbent and likable Democratic Governor, Robert D. Holmes.

What occurred? It is interesting to examine similarities in the campaign techniques of Rockefeller and Hatfield, who lucubrating independently, with no personal acquaintanceship, arrived at the same fundamental conclusion: To win, they must ignore party lines and ancient loyalties and appeal to all voters who could be coaxed under the wide and billowing good-government tent.

Both Rockefeller and Hatfield were charter members of the group in the Republican Party which, 7 years ago, managed the defeat of Robert A. Taft, after his years of striving, and the victory of novice Dwight D. Eisenhower. Both were admirers of Wendell Willkie, who won a Presidential nomination against the will of the party bosses and as a result of a revolt of the rank and file in a national convention. They will be thinking about Willkie a lot in the months to come; both have said their earlier conservative political attitudes were modified by Willkie's doctrines.

In Hatfield's case this seems reasonable enough. Although born in the small town of Dallas, Oreg., he was a feudin', fightin' Republican by inheritance; his mother came from the hills of eastern Tennessee where, because of Civil War bitternesses, a Bible-reading population tended to look a little more kindly on Pontius Pilate than a professing Democrat. Mark was first politically active in the Presidential campaign of 1932, when he carried Hoover literature from one place to another on his coaster wagon. Since Mark was then 10, his enthusiasm may have been more representative of his mother's political zeal than his own. But the party branding happened early and burned deep. His admiration for Herbert Hoover increased rather than lessened in the process of growing up—and his subsequent work as a graduate student at Stanford University was importantly influenced by the Hoover legend and the Hoover career.

Rockefeller and Hatfield, sharply contrasted as are their bank accounts and early environments, were both brought up in homes where there was strict parental supervision—and an inculcated code of personal obligation to the family and social obligation to others. People who knew the Governors in childhood have come up with independent recollections which indicate there was a time when both could have been considered by approving elders as—in a phrase from the forgotten Rollo books—"serious little men." That's about as far as the comparison goes. Nelson Rockefeller's grandfather was probably the richest man in the world, and Mark Hatfield's grandfather was a blacksmith. So was his father.

Charles Dolen Hatfield retired a couple of years ago after 35 years with the Southern Pacific Railroad. He came to Oregon from Indiana with his father, who was an accomplished wagonwright as well as blacksmith. Many early pioneers were indifferent to family background: C.D. simply doesn't know whether still-earlier Hatfields participated in a celebrated West Virginia feud. He does know that when his son wins an election someone is certain to remark, "Oregon hasn't got enough McCoys." Today, at 71, the elder Hatfield is a man of physical well-being who can touch his fingers to the floor without bending his knees, a devout football fan—"Mark as a boy just wasn't interested"—who dreams up his own pass patterns and plays. He is also a man of tenderness and kindness and gentle speech. During his active life, his work hours were spent with section hands, gandy dancers and back-country loggers, but he taught Sunday school classes throughout those years and is still a Sunday school song leader.

Times were hard when Mark was a little boy. Families coalesced—the considerable number of Odoms and the fewer Hatfields—and made a communal living as best they could. In Oregon it was an era of layoffs and intermittent employment; the Governor's mother recalls a period when only two adults in the family tribal confederacy were working regularly and keeping rations in circulation. When Mark was 5, his mother went off to Oregon State College at Corvallis, and the boy and his father lived with Grandmother Odom. When she was graduated 4 years later—her husband put her through college—Mrs. Hatfield taught 2 years in Dallas and then moved the family to Salem, Oregon's capital, where she taught for 13 years in a junior high school. Not long ago I interviewed the elder Hatfields at their pleasant but modest home on Waldo Avenue, where the Governor continued to live until he married.

I drove there without warning on a Saturday afternoon and found both in work clothes, transplanting garden flowers. Blacksmith Hatfield had his hand-lettered sign on the front lawn: Saws Filed and Sharpened Here. Mrs. Hatfield quit teaching some time ago to go to work for the State income tax department. "In my civil-service job," she told me, "I am not supposed to talk politics, but when somebody criticizes Mark, I get just as mad as I did in Tennessee when a Democrat came up to our house to argue with my father."

That evening I came back for a dress conversation. Mrs. Hatfield's given name is Dovie. When I asked her about it, the Governor's mother laughed. "When my mother was a girl of 17, she attended a traveling show where there was a blond midget of doll-like appearance who utterly charmed her. The midget's stage name was Dovie. My mother promised herself that if she married and had a daughter, she would name her Dovie. And she named by sister Birdie." In the Waldo Avenue house I saw the piano Mark once played—he also tootled the clarinet in the Salem High School band—saw the vials of sand he filled from the beaches of Iwo Jima and Okinawa, examined the typical memorabilia preserved by parents of an idolized only child. When I left, carrying a piece of Mrs. Hatfield's gingerbread, I was convinced that—after those first depression years—the Governor had had a protected, strongly guided, somewhat lonely childhood. It is often driving parental ambition, rather than a spontaneous sense of destiny, that pushes smart but obedient boys into careers.

Today's Democrats in Oregon still wonder just what happened to them in the last campaign. Some of them speak harshly of Hatfield, but few refer to him—as did a Republican lumberman from Sweet Home—as "that damned Boy Scout." Instead they regard him as the most persistent, the most untiring, the most effective campaigner they have encountered. Harry J. Hogan, attorney from The Dalles and Democratic State campaign manager, put the following on record in a postelection letter:

"We Democrats won in 1954 with DICK NEUBERGER. We won in 1956 with WAYNE MORSE. We were stopped dead in our tracks by President Eisenhower in 1956 and again in 1958 by Mark Hatfied. These elections demonstrate our ability in slam-bang campaigns to defeat classically reactionary Republican candidates. We have not, however, successfully solved the problem of changing our pace so as to defeat Republican candidates who are personally attractive and who, superficially at least, me-too programs. We have 4 years before we get a chance at Hatfield again. Meanwhile, we must learn to counter the peculiar fighting style at which he has proved himself adept."

For a future public official, Salem was a built-in training ground. The population today is about 50,000, but in Hatfield's boyhood it was considerably smaller. It is 50-odd miles south of industrial Portland in the lush, sweet Willamette Valley, and the State government has always been its principal industry—with Willamette University, a Methodist-connected institution of about 1,000 students, in second place. Oregon dedicated a fine new capitol in 1938, and Mark learned his way around at once. He helped work his way through school serving as a guide there weekends and summers and doing other odd jobs in rush times for the late Earl Snell, then secretary of state. Mark and his Young Republicans later put a lot of grateful energy into Snell's successful race for Governor.

Oregon politics in those earlier days had seasonal limits—like deer hunting and trout fishing. Hatfield got his first conception of politics as a full-time operation when, as a member of the school band, he took part in the dedication of a new Salem post office. On hand to give the principal address was Postmaster General James A. Farley. After his speech—in a driving rain—the redoubtable Jim shook every available damp hand in the audience and then personally thanked the members of the band. But that was not all. After Farley returned to Washington,

each of them received a graceful, personal letter of appreciation.

A 15-year-old Republican clarinetist got a big thrill from this surprising courtesy from a man of national importance, and he treasured the letter. That, Hatfield decided, was the way the real professionals did their jobs. Mark had his first personal triumph when he was elected student-body president in junior high school; he defeated Shirley McKay, daughter of Douglas McKay, then mayor of Salem, eventually Governor, and Secretary of the Interior in Eisenhower's first term. He had his first—and last—ballotbox defeat when he ran for student-body president at Willamette University. He majored in political science there, excelled in debate, racked up good grades. He completed his course in 3 years and was called to the Navy in 1943.

Hatfield went at once to Plattsburgh, N.Y., for amphibious-attack training and later embarked for the Pacific on the U.S.S. *Whiteside*, an attack cargo ship. The Governor now speaks of his military interlude as a process of growing up—both physically and menbarked for the Pacific on the U.S.S. *Whiteside*, he was 6 feet tall, weighed a skinny 128 pounds—he now weighs 165—and there were no work pants to fit him. So much taking-in was necessary, he remembers, that his two hip pockets ended up side by side. In addition to his duties as landing-craft officer, his skipper assigned him the chaplain's job. He led Sunday services, presided over burials at sea, and, when in port, often acted as defense counsel at courts-martial.

At grim Iwo Jima and bloody Okinawa, Hatsfield commanded 10 landing craft which ferried troops ashore and brought back the wounded. At Iwo Jima he made 14 trips from the offshore fleet to the beaches and was in action for 5 days and 4 nights, saw the flag go up on Mount Suribachi. Casualties were tragically heavy at Iwo Jima and Okinawa, but he went unscathed through both campaigns.

After the Japanese surrender the U.S.S. *Whiteside* took part in naval-transport maneuver which has never had much publicity—the removal of Chiang Kai-shek's troops from Indochina to Chinwangtao in northern China. The world was supposedly at peace, but American landing craft again hit the beaches under fire—from the Chinese Communists who were ultimately to drive Chiang to Formosa. On liberty time Hatfield was able to see Tientsin, adventure up the Whangpoo and visit Peking.

"Let's face it," the Governor said not long ago. "I went into the Navy a small-town boy and a convinced isolationist. That was before I saw the want and waste in the world, before I saw men and women in Asian streets literally dying of hunger. I know I could never be an isolationist again, and it was a painful awakening."

Mark had been at sea for 18 months when he returned to this country. He received a rugged Navy assignment—duty with the shore patrol in San Francisco. There were often 50,000 to 75,000 sailors in town in those days, and they gave Mark and his associates plenty of rough and tumble.

Hatfield left the Navy as a lieutenant junior grade and entered law school at Willamette. He resumed his Young Republican activities, crossed the street from the campus often to talk politics with Governor Snell at the capitol, but found himself impatient with the disciplines of legal education. What he wanted to do, he decided, was to teach political science as a preface to public service. At the end of the school year in 1947 he abandoned the law and enrolled as a graduate student at Stanford.

Hatfield's 2 years at Stanford were broadening. He studied public administration, political theory, the history of political parties, government organization and international relations. He chose as the subject of his master's thesis the labor policies of Herbert Hoover, and the completed job brought encomiums from the former President. As a write-in candidate Mark was elected to represent the 2,000 graduate students on the university council and, to help pay his way, he took a job as counselor to Stanford's freshmen.

The day after the national election in 1948, boisterous freshmen festooned Mark's room in Encima Hall with crepe. Like many other Republicans, Hatfield had believed that Tom Dewey would win in a walk, and he had been articulate about it. Mark grinned, but he took the defeat hard. He believed that his party, as a result of overconfidence, had kicked away the chances of victory. He made certain rules for his own political future: (1) Never take an election for granted. (2) Present your case to the people instead of the politicians. (3) Remember that no audience that will listen is too small.

It was at about this time that another political neophyte began to help him plan his future. Travis Cross was a Stanford undergraduate, a newspaperman of some experience and a native of Salem. There in Encima Hall the two young men—Hatfield was 26 and Cross 23—formed a career partnership, which has never been dissolved. And there, boldly and confidently, they charted the steps by which Mark was to progress from modest beginnings to the Oregon Statehouse. Cross is now Governor Hatfield's press secretary.

Another good friend was consulted when Hatfield decided to postpone further graduate study. Dr. G. Herbert Smith, president of Willamette, promptly stretched his budget to appoint Mark to a $2,700-a-year instructorship in the university's political-science department. Mark began his classroom work in the fall of 1949 and soon started a radio discussion series, "The Political Pulse." When some of his radio auditors suggested he put his ideas into practice, Hatfield announced himself as a candidate for the legislature. His actual filing for office had a touch of unpremeditated Joe College comedy about it.

When Hatfield walked across State Street, he found himself accompanied by a ragged German band from the Phi Delta Theta fraternity house which sounded off with what was meant to be The Battle Hymn of the Republic. Hatfield knew this was a good-natured rib on a faculty member—and a Beta Theta Pi—whose Republican ambitions were no secret. He was at first embarrassed and then pleased. Later the band accompanied him on his tours around the county and really fetched the customers.

There was nothing of Joe College then, or later, about his campaigning. He hit every dusty road and dusty hamlet; he sought advice from weekly newspaper editors and from laboring men; he was unwearying. In the Republican primary there were 12 candidates for 4 legislative posts; Hatfield topped the ticket in the primary and in the general election. Things have gone on that way ever since. Hatfield served two terms in the lower house of the legislature and one in the State senate. These, of course, were part-time jobs; he continued his work at Willamette, where he became, at the tender age of 28, dean of students. His role as the professor in politics was a dramatic one, and he was frequently offered speaking engagements. He took them all.

It was in February of 1951 that Hatfield, in two addresses, urged Americans to draft Dwight Eisenhower for the Presidency. He did more than that. In July of the same year he began circulating petitions to place Eisenhower's name on Oregon's presidential preference ballot, thus becoming the first Republican to make a serious effort to enter Ike in a primary. The next year he served as executive secretary of Oregon Citizens for Eisenhower, was a delegate to the Republican National Convention—where he celebrated his 30th birthday—and a member of the platform committee. Eisenhower carried Oregon handsomely, but it is interesting that Hatfield, running for reelection to the legislature, got more votes in his own Marion County than Eisenhower did.

Yet many of the old pros in Hatfield's party unaccountably continued to regard him as a well-dressed, well-spoken, pipe-smoking—he doesn't smoke any more—amateur. During legislative sessions he was not invited to the hotel-room meetings where strategy was hammered out. He was not a backslapper, and, because of college duties, he had no time after sessions to stand around swapping bucolic stories. What the party wheelhorses did not realize was that Hatfield, beginning with the circulation of the Eisenhower petitions, was attracting to himself a group of dedicated, selfless followers who believed implicitly in his future.

The Governor told me recently that in 1954 he went through a period of self-examination and self-doubt. As a dean of students he was called upon to resolve the problems of the young when he had not resolved his own. One problem was religion. Mark had grown up in a devout household; he now wondered whether he really attended church out of conviction—or because he had been reared that way. Conforming, he decided, was not enough. For him at least, religion could not be a part-time thing; there had to be total commitment. Hatfield said that his thinking was influenced, to a degree, by leaders of the interdenominational movement who came to the Willamette campus to address student groups. It seemed to him, as it seemed to them, that a great deal of heart and spirituality had been lost to formalism in Americans' religious life.

Mark continued his active interest in Salem's First Baptist Church—he served as moderator for three terms—but he also affiliated with such groups as Youth for Christ, Campus Crusade, World Vision; he became a member of the board of the Western Baptist Theological Seminary, which is located in Portland. In one year alone he spoke before 17 different religious denominations, either as a lay preacher in the pulpit or before conventions. One convention was the national meeting of the fundamentalist Assemblies of God, in Cleveland. On another occasion he and R. G. Le Tourneau, Texas industrialist, conducted the interdenominational Easter sunrise services in Pasadena's Rose Bowl.

Politically speaking, the partnership of Hatfield and Travis Cross hit the big time in 1956 when Mark first sought statewide office. Hatfield believed that 4 years or more as secretary of state would give him administrative experience and a practical understanding of the problems of State government. He won in the primary easily, resigned from Willamette's faculty and then defeated Monroe Sweetland, former Democratic national committeeman, in the general election. Here was the crazy-quilt pattern: Oregon voters chose Eisenhower for President, Democrats WAYNE MORSE and Bob Holmes for U. S. Senator and Governor. It was plain the once-dominant Republicans were in trouble. Hatfield received this telegram from Herbert Hoover:

"Being an itinerant citizen of Oregon [the former President lived in Salem as a boy], I read the election returns with complete dismay until I arrived at your election. You are the only future hope for us."

There is ample evidence that Hatfield had no intention of running for Governor in 1958; he felt that more administrative experience would be useful and that he was young enough to wait. Sig Unander, himself only 44, had been reelected as State treasurer and was considered by many leaders to be the logical candidate. But now evidence of Hatfield's popularity began rolling in; a nonpartisan poll of voters showed him an

overwhelming favorite. So did a poll of the Republican members of the legislature. There was still another factor which led him to take a new reckoning on his political timetable.

One of the State's most experienced political strategists came privately to see Mark. He said his own inquiries had persuaded him Unander could not beat Governor Holmes and that only Hatfield could prevent a Democratic sweep which might keep Oregon Republicans out of power for years to come. Hatfield filed in the primary and received more votes than Unander and Warren Gill, another candidate, combined. Then he went on to wrestle down the Governor.

Campaigners for Holmes knew they were in difficulties almost at once. Mark's acquaintanceship around the State had become prodigious; in his first year as secretary of state he not only ran a busy office but also made 118 full-length addresses, appeared at head tables at luncheons and dinners 252 times, declined 400 speaking engagements. He had become an adept, incisive campaigner and a master of the electric smile and the quick handshake. His impeccable dress and good looks charmed the women. A complaint frequently heard at labor temples was, "Holmes gets my vote, but I can't keep my old lady in line." His appeal to independents, new voters, and nonpoliticals was too evident to be denied.

Actually, Hatfield and Holmes were not far apart on most issues. Hatfield had made very clear his divorcement from the conservative wing of his party. His voting record in the legislature had been liberal; he had voted against an antipicketing law, he opposed all right to work legislation, he had sponsored—without success—a bill providing for State-constitution revision. From most of his political literature, it was impossible to determine whether he was running as a Republican, a Democrat or a Greenbacker. Democrats charged that his metooism was strictly opportunistic; unhappy conservative Republicans came up with ample campaign contributions because, in the wistful words of one, "He's all we've got."

Just before the election race began, Mark married 29-year-old Antoinette Kuzmanich, counselor for women at Portland State College. It was a dramatic storybook match: The son of a blacksmith married the daughter of an immigrant—Antoinette was—and is—a dark-haired beauty with dark, alive, oriental eyes. Her family, like Mark's had known early adversity. Her father, Vincent, came to this country from what is now Yugoslavia. He worked as a deepsea fisherman, as a Portland longshoreman, then operated family-type taverns until he had a competence.

Hatfield and his wife met 6 years ago at a Willamette military ball. A graduate of the University of Oregon, she was teaching English and counseling at Parrish Junior High in Salem. The two had mutual friends and saw each other frequently. During summer vacation in 1954, Dean Hatfield, under the auspices of the Student International Travel Association, led 15 college and graduate students on a 2-month political-science tour of Europe. Antoinette was one of the paying customers as was, she particularly remembers, a pretty psychotherapist from New York. Mark beaued the two ladies on alternate Saturday nights and played fair by taking them together on a moonlight gondola ride in Venice.

When Antoinette took her master's degree in education at Stanford, they did not see each other for 2 years, but occasionally corresponded. Courtship began in earnest after that. They were married in Portland's Hinson Memorial Baptist Church—Mark's best man, 18 years his senior, was President Smith of Willamette—on a warm July evening. There was an overflow crowd and a good many gate crashers; some of the interest was undoubtedly occasioned by the knowledge that Antoinette, before her betrothal a Roman Catholic, had left her church.

Religious issues had no discernible effect on the results of the election, but it would be untrue to say that Hatfield's churchly activities were popular with his opponents. A tiny tempest was created when Governor Holmes, who attends the Episcopal Church, but is not a member, remarked before a Presbyterian men's club that he believed that religious beliefs should not be used to further personal ambition. The Governor mentioned no names, but a press release from his headquarters gave the impression his remarks had been directed at Hatfield. Holmes disavowed the release. Editors seeking Hatfield for comment were amused to discover him eventually in Des Moines, Iowa, where he was in the process of making a speech to the International Sunday School Convention.

However tepid its begininngs, the campaign had its final burst of melodrama. Senator WAYNE MORSE was responsible. A onetime Republican, a brilliant former dean of the University of Oregon Law School, always a powerful vote getter, the current MORSE is an enigma to friends and former friends. He quarreled bitterly with NEUBERGER, his colleague in the Senate, and his intemperate correspondence was made public. Five days before election MORSE exhumed from old headlines and court files a tragedy in which Hatfield had been a participant.

It was a story most Oregon politicians knew, and it was a sad one. When Mark was 17, he was driving the family car near Salem at dusk. He had just attended band practice and was on his way to pick up his parents at a church picnic. A little girl darted across a country road, Mark's car struck her, and she died in the hospital. There were no criminal charges, but the girl's family brought civil suit for $5,000 against the Hatfields' insurance company. Mark testified that the child was concealed by a mailbox and high clumps of grass at the roadside, and that he did not see her until the moment of impact. The trial court awarded damages, and the award was approved by the Oregon Supreme Court. MORSE's viewpoint was that the trial court had refused to accept Hatfield's story. "A man who lies to a jury," he said in a speech at Klamath Falls, "cannot be trusted with public office."

One of the first to answer MORSE was former Chief Justice J. O. Bailey, who had listened to the appeal. Conflicting testimony, he said, was a commonplace in trials of automobile-accident cases, and there was no question of perjury or "lying to a jury"; in split-second glimpses at an accident site, witnesses honestly saw things in different ways. Hatfield had foreseen that the agony of his boyhood might sometime be revived. With only a few changes to bring it up to date, he issued a statement which he had long before prepared:

"The entire case is a matter of public record, and the Supreme Court Reports in every law library in the State have the final chapter of the tragedy. To have brought it up at this particular time will bring on a recurrence of great grief to all who were involved in the horrible accident of 18 years ago. Those who conspire to profit thereby have my compassion."

Senator MORSE's attack backfired. The reaction of former Gov. Charles Sprague, onetime alternate to the United Nations, distinguished editor of the Oregon Statesman in Salem, was typical of the reactions of many. Sprague, though a Republican, thought Holmes had been a pretty good governor and that Hatfield was inexperienced; he had announced that the Statesman would watch the election from the bleachers. After the MORSE blast, the Statesman endorsed Hatfield. Wrote Sprague, "We are out of the bleachers now."

Governor Hatfield has taken office in Oregon's 100th birthday year; a centennial exposition and trade fair will open in Portland in June. Obviously he has cares and crises ahead of him, but he is convinced that, even working with a possibly hostile legislature, a worth while governmental program can be effected.

Oregon's problems are many, and taxation is not the least of them. The State has the highest income-tax rate in the Nation, and yet every recent legislature has balked at enacting a sales tax. The State urgently needs more revenue, but at present does not know where to turn to get it. The State constitution by general agreement is obsolete and ambiguous; in his inaugural address Hatfield again urged a constitutional convention. Public power versus private power has been a subject for bitter wrangling in the Pacific Northwest for years; the Governor hopes that moderates will be able to work out compromises.

From a national standpoint the Governor is an interesting figure. As a politician his shrewdness and energy are difficult to overestimate. He is also bold. Even before he took office he did not hesitate, at a meeting of western Republicans in Hawaii, to criticize the way his own party had conducted last fall's campaigns; he included the White House in his criticism. He is not unaware that Nelson Rockefeller and RICHARD NIXON may be pitted against each other for the presidential nomination in 1960—and that the Governor of New York and the Governor of Oregon might make appealing running mates. His friend, Evangelist Billy Graham, said some months ago, "I predict that if Mark Hatfield stays humble before the Lord, he will hold positions of national responsibility."

But when I breakfasted with Mark and Antoinette recently, the Hatfields were thinking about the more immediate future. They have purchased a square, yellow 87-year-old house on a large open area in Salem known with nostalgia as Bush's Pasture, and they intend to remodel; until that job is done, they will continue to live in a pleasant, small apartment near the capitol. Antoinette was looking forward, over the scrambled eggs, to an event of singular importance to her. "When June 10th comes around," she said, "I'm wondering whether Mark will be cutting the ribbon at the centennial exposition or holding my hand in the hospital labor room."

The Polish Constitution

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 13, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the eastern Massachusetts division of the Polish American Congress which recently held a meeting in the historic Faneuil Hall on May 3.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

CASE FOR POLAND

The Polish American Congress of Eastern Massachusetts held a patriotic meeting in historic Faneuil Hall in Boston, Mass., commemorating the adoption of the 3d of May Constitution of Poland. This bill of rights, proclaimed in 1791, was the first democratic

constitution to be adopted by any European nation. A glowing tribute was paid to the authors of that constitution and to Poland. Realizing the present tragic national and political situation of Poland, the assemblage unanimously voted that:

"Whereas the United States of America and the Western Powers agreed to come to the defense of Free Poland in 1939; and

"Whereas at no time was there a question that this aid was only against Germany; and

"Whereas this did not exclude the defending of Poland against Russia; and

"Whereas Stalin's cunning and treacherous maneuvering had confused the West so as to have the Western Powers thrust aside into oblivion the cause of Free Poland; and

"Whereas Poland was betrayed by her Allies, who consented to cede to Russia half of Poland's territory and place the rest of that country under the occupation and domination of the Soviets; and

"Whereas Poland lost more than 6 million people on the battlefields, in gas chambers and forced labor camps and in the prisons in Germany and Russian Siberia—

"We therefore call upon the United States of North America and the Western Powers to liberate Poland from foreign domination as solemnly promised in 1939; and

"We further ask that our country and the Western Powers recognize the present boundary line between Poland and Germany as permanent, and the Oder-Neisse border as inviolate; and

"We also demand the return of the territories taken by the Soviets in 1939 and which were ceded by the Yalta agreements.

"We finally plead that inasmuch as the Western Powers are responsible for the presence of the Russian troops in Poland, that they request that the Soviet troops be withdrawn from Poland immediately."

Democratic Poland has faith in America. Poland places her hope in the leadership and statesmanship of the United States of America.

JOHN J. TWAROG,
President, P.A.C.;
City Councilor, Salem, Mass.
Rt. Rev. LADISLAUS A. SIKORA, P.A.,
Honorary President, P.A.C.
JOHN SIDERSKI, *Secretary, P.A.C.*

Tribute to J. C. Dykes, a Texan

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. YARBOROUGH. Mr. President, Mr. J. C. Dykes, a native of Dallas County, is largely responsible for the development of the 5-year-old small watershed program.

This former Texas A. & M. professor, in his post as Assistant Administrator of the Soil Conservation Service of the Department of Agriculture, is in charge of the vital program to fill the gap between the flood control programs on the major waterways and the soil conservation projects on farms and in forests.

Mr. President, a description of Mr. Dykes' public service was carried in a recent "Texans in Washington" column by Tex Easley of the Associated Press, one of the very able correspondents in Washington. I ask unanimous consent to have printed in the Appendix of the RECORD his column printed in the Hereford (Tex.) Brand on May 7, 1959, under the heading "A. & M. Professor Responsible for Watershed Program."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXANS IN WASHINGTON—A. & M. PROFESSOR RESPONSIBLE FOR WATERSHED PROGRAM

(By Tex Easley)

WASHINGTON.—A onetime Texas A. & M. professor, now Assistant Administrator of the Soil Conservation Service in the Agriculture Department, is largely responsible for the development of the 5-year-old small watershed program.

He is J. C. Dykes, 58, Dallas County native and a teacher of vocational agriculture in Stephenville and McAllen High Schools before joining the Aggie faculty in 1929.

As a boy Dykes watched torrents roll the topsoil down the tributaries of the Trinity and thought something ought to be done. He studied the problem at A. & M. Since 1935 he has been with the Soil Conservation Service. Fort Worth was his headquarters before he came to Washington in 1942.

The small watershed program itself is set up under a legislative act sponsored by Representative W. R. (BOB) POAGE of Waco as vice chairman of the House Agriculture Committee.

Testifying recently before the House Public Works Commitee, SCS Administrator D. A. Williams said:

"We believe the watershed program is soundly conceived and that it will continue to be an integral part of the Nation's program of conservation, development and efficient use of the land and water resources."

He pointed out it is designed to fill a gap betwen the flood control programs on the major rivers—where the big dams are built, and the programs on farms and forests where contour plowing, terracing and check dams retard the runoff.

Projects under the act are initiated by the people in the area concerned. They are financed about 45 percent by the Federal Government. Local interests pay the remainder of the costs.

Last year Congress appropriated $25½ million for the upstream watershed program. The House Appropriations Committee is working on the Department appropriation bill for the fiscal year starting July 1, and POAGE estimates the Budget Bureau recommendations at about 22 percent under last year's figures.

"This is an example of cuts which I consider unwise," said the Congressman. "I think we need these upstream projects, and we need them now. I am sure that we are ultimately going to build them. They will cost no less a generation hence."

As of April 1 almost 1,300 organizations in 47 States and Puerto Rico had applied for assistance under the act, and formal agreements had been signed by the SCS to aid in preparation of plans in 425 watersheds. The actual planning had been completed for 154 watershed projects and authorized for development in conjunction with the sponsoring agencies.

The SCS uses experience gained in various test watershed programs in recent years in drafting plans under the new act.

Pointing to results from watershed treatment, it notes 1957 floods in Texas and says that on Green Creek in Erath County two storms in April and May flooded 489 acres and caused $6,000 damage. Rush Creek, 25 miles away, had 12,000 acres flooded by the same storms with $493,000 damage. The dams and other structures built on the Green watershed were credited with prevention of destruction in that area. The Rush Creek watershed lies in Comanche, Eastland, and Brown counties.

Moisture penetration studies made in Texas on watershed lands by the Service in April and May of 1957 showed the average insoak was twice as great on protected land as on unprotected.

Texas upstream watershed projects so far approved—already cleared by the congressional committee as required under the act, include: Alamo Arroyo, 83,603-acre watershed, Hudspeth County; Auds Creek, 31,670 acres, Lamar County; Cummins Creek, 204,896 acres in Lee, Fayette, Austin, and Colorado Counties; Diablo Arroyo, 40,992 acres, Hudspeth County; Chiltipin-San Fernando Creek, and San Dieto-Rosita Creeks, covering nearly a half million acres in Duval, Jim Wells, Nueces, and Kleberg Counties.

Dry Devils River and Lowrey Draw, 149,120 acres in Schleicher and Sutton Counties; Johnsons Draw, 101,760 acres in Crockett County; Knob Creek, 23,870 acres in Bell County; Langford Creek, 25,030 acres in Red River County; Lower Brushy Creek, 138,240 acres in Williamson and Milam Counties; Sulphur Creek, 85,120 acres in Burnett and Lampasas Counties; Turkey Creek, 18,880 acres in Fort Bend County; Upper Brushy Creek, 191,360 acres in Williamson and Milam Counties; Upper Lake Fork Creek, 45,472 acres in Hopkins, Rains, and Hunt Counties; York Creek, 93,824 acres in Guadulupe, Coman, and Hays Counties.

A Moral Equivalent for War

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 13, 1959

Mr. HILL. Mr. President, Mr. James Free, the Washington correspondent for the Birmingham, Ala., News, has written an article for his newspaper entitled "A Moral Equivalent for War." This article not only represents sound and thoughtful journalism but is an especially timely and able comment upon the impasse that now exists between the free world and Soviet Russia.

I ask unanimous consent that this excellent article and splendid editorial comment made upon it by the Methodist Christian Advocate be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Birmingham (Ala.) News, Apr. 19. 1959]

A MORAL EQUIVALENT FOR WAR

(By James Free)

WASHINGTON.—Two events the last week give a clue to at least a partial solution for the free world impasse with Russia. And the Western foreign ministers, meeting in Paris this month, surely need to find some common-front proposals to make to the Soviet leaders at the summit conference that is likely to follow.

The events in mind here were the resignation of Secretary of State John Foster Dulles and the dedication on Capitol Hill of the memorial bell tower to the late Senator Robert A. Taft.

In the first instance, the spreading cancer that felled the oxlike Dulles had advertised once again to the world that science is yet to conquer this dread disease. And the United States in particular got another poignant and permanent reminder of the

same unsolved challenge to mankind in the Taft memorial—for all who see it and hear it in the future will recall that it was cancer that struck down the seemingly indestructible Taft.

JOINT WAR ON CANCER MIGHT THAW COLD WAR

Behind the Iron Curtain specific causes of the death of public figures often are not matters of public record. But beyond question every adult Russian knows of the scourge of cancer within his own circle of family or friends.

What this suggests, of course, is that the free world might make progress toward prevention of a threatened future war with Russia by proposing a joint all-out war on cancer and perhaps other boundless foes of humankind.

A start on this kind of international approach to thawing the cold war through combined research programs has been advocated by Senator LISTER HILL, Democrat, of Alabama, and others. But think of the gigantic boost the idea would get from a formal endorsement by the Western ministers.

Acceptance of common, peaceful objectives—however limited they might be—should help get our minds, and those of the Russians, off constant preparations for war.

Many have said it differently, but few better than William James, when he wrote that, to end wars, man must find a "moral equivalent for war."

This, too, is one of the themes of Lewis Mumford in a well worth reading article in the current issue (April 18) of Saturday Evening Post. It is called "How War Began," and Mumford says that one of the ways was that some of the early kingdoms sent out raiders to capture outsiders for sacrifice on the altar to appease the gods. Then the victimized kingdom retaliated for revenge, or for sacrifice victims for its own altars. Thus, as Mumford relates, "what was at first a preliminary, one-sided raid before the sacrifice became the essential sacrifice itself." And that sacrifice was, and is, war.

Mumford points out that modern nuclear weapons, possessed by both the free world and Russia, reduce the prospect of a token sacrifice in war nowadays. "There would now be a total sacrifice," he writes, "merely to bring an end to our neurotic anxieties."

SUCCESS MIGHT MEAN THE END OF WARS

The moral, he adds, is not that we must catch up with the Russians but that we must accept the duties and demands of living in an open world among our equals; that we must try to protect and cherish life. The only alternative, according to Mumford, is the all but fatal shock treatment of war sooner or later.

We must have proposals for political problems, such as Berlin, to be sure. Yet we must somehow get at common health and moral problems, too.

Why not begin at the highest possible official level, and say to our friends abroad and to our potential enemies as well: "We can't seem to lick cancer, so why don't we try to lick it together?" Success in this kind of fight could show the way to victory in the war to end war.

[From the Methodist Christian Advocate, Apr. 18, 1959]

INSPIRING SUGGESTION

James, Free, Washington correspondent of the Birmingham News, has made a truly inspiring suggestion—one worthy of our best spiritual leadership.

Noting the recent tragic inroads of cancer on world statesmen (Taft, Dulles, et al.), he wonders if the time has come when "the free world might make progress toward the prevention of a threatened future war with Russia by proposing a joint all-out war on cancer and perhaps other boundless foes of mankind."

He adds, "A start on this kind of international approach to thawing of the cold war through continued research programs has been advocated by Senator LISTER HILL and others. * * * Acceptance of common, peaceful objectives, however limited they might be, should help get our minds, and those of the Russians, off constant preparedness for war."

Such an international project might furnish the needed moral equivalent of war which William James said is the surest road to peace, Free insists. And if the Western foreign ministers in their upcoming meeting at Paris would declare themselves in favor of such a united effort, the idea would get a gigantic boost which might put it across.

It is a thrilling dream that even Communist nations might be willing to unite in peaceful pursuit of the moral and physical welfare of mankind. Alas, there is little reason to believe that Russia at this time could be diverted from her aims at world conquest by such a benevolent objective. In the meantime the fight against cancer must go on.

Targets for the 20th Century

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 13, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Targets for the 20th Century," which I delivered at the 12th annual convention of Americans for Democratic Action, in Washington, D.C., on May 9, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TARGETS FOR THE 20TH CENTURY

(Address by Senator HUBERT HUMPHREY to the 12th annual convention of Americans for Democratic Action, Washington, D.C., May 9, 1959)

We hear a great deal these days about firmness in our international affairs, and especially in our dealings with the Soviet Union.

I am for being firm. There is no way to deal successfully with Khrushchev and company except to be constant in principle and resolute in purpose. But a policy of firmness does not require us to stand pat and to stand still while our principal adversary carries on a campaign of maneuver and subversion against the free world. To sit tight behind a maginot line of stubborn complacency while our adversary grows stronger and bolder is not firmness; it is folly and suicide.

And make no mistake about it: the Soviet Union is growing stronger—and therefore bolder. The evidence is abundant, not in the windy boastfulness of Comrade Khrushchev but in the fine print of the solid and substantial performance and plans of the Soviet economy and the Soviet military.

Just 3 months ago, while we Americans were listening to the latest unemployment figures and fighting the battle of the balanced budget, the 21st Party Congress of the Communist Party of the Soviet Union was proclaiming the Soviet goals—economic, political, and ideological—in the cold war. To any who bothered to listen, this was sobering news.

The Soviet goals were stated, of course, in the propaganda-tinted phrases of the Communist jargon. In plain English they add up to a declaration of Soviet strategy for the cold war.

In plain English they mean that the Soviet Union has set out to arm itself with such massive economic, political, and military power that it will be able to force an end to the cold war on terms of its own choosing. This is the Soviet version of victory without nuclear war.

Their chosen instrument for this victory is the expanding Soviet economy, controlled and directed by the Communist hierarchy for this overriding purpose.

The Soviet economy must provide the material base for continued expansion of Soviet arms.

It must provide the base for the economic invasion of the underdeveloped neutrals, for yoking them to the Soviet economy.

It must provide the means of persuading the political and intellectual leaders of poverty-stricken Asia, Africa, and Latin America that communism is capable of lifting them by their economic bootstraps.

The 21st Party Congress has put us on notice: "The fundamental problem of the coming 7 years," it said, "is to make the most of the time factor in socialism's peaceful competition with capitalism. Fast rates and the necessary proportions must be insured in developing the national economy."

"Fast rates and the necessary proportions" like these:

Increases in the capital goods industries of 85 to 88 percent in 7 years.

Increases in consumer goods industries of 62 to 65 percent in 7 years.

Raising the productivity of industrial workers 50 to 55 percent in 7 years.

Increasing total output 86 percent in 7 years.

Let's not kid ourselves that they do not mean this, or that they are incapable of doing it. They may not fully meet these goals; but they mean business, and they have enormous resources and a record of getting things done.

We have laughed off 5-year plans and 7-year plans in the past—and to our sorrow. We will laugh this one off to our peril. We have it on the authority of the Chief of the CIA, Mr. Allen Dulles, that for the past 7 years Soviet industry has grown at the annual rate of 9.5 percent. This is about four times the rate of growth of our own economy in the same time.

We have little cause for comfort in comparing our own economic progress with the spectacular performance of the Soviet Union.

While the economy of the U.S.S.R. has been growing at an annual rate of 9.5 percent, the economy of the United States has been growing at an annual rate of 2 percent. And the gap in total output has been steadily narrowing.

While the U.S.S.R. has been racing forward, we have been wallowing in our second unnecessary recession in 5 years. During one quarter of last year, for the first time, steel production in the Communist bloc exceeded production in the United States.

While the U.S.S.R. speaks of increasing the productivity of labor by 7 or 8 percent a year, our productivity has been increasing by less than 2 percent.

The Russians are laying their bets on the proposition that our production will continue to grow at the rate of 2 percent a year while theirs will grow at the rate of 8 or 9 percent. If this happens, as Mr. Allen Dulles says, "the United States will be virtually committing economic suicide."

The answer rests not with them, but with us.

I am not arguing for a competition of keeping up with the Soviet Joneses. It may or may not be necessary to match them stride for stride, industry for industry.

But, I do say that we need to know our goals as clearly as they know theirs. And

we need to manage our affairs as effectively for our purposes as they manage their affairs for their purposes.

And moreover, we must do it by the means of democracy, and to take full advantage of the enormous productive potential of our enterprise economy.

I have dwelt in some detail on the economic competition because it is basic. But this is not the only field in which we have failed to set our goals high enough, or where we are in danger of falling behind in the competition.

In spite of the President's soothing words, there are well-documented doubts about our military strength, now and in the future.

In international politics and diplomacy, by our dogged defense of the status quo we have allowed ourselves to be outmaneuvered in Europe, leapfrogged in the Middle East, and seriously challenged in Asia and even in our own hemisphere.

In the ideological competition we have frittered away the priceless assets of our heritage. We have been silent on the revolutionary implication of our Declaration of Independence and our Constitution, with their universal appeal to mankind. Because we have been so inept in translating these timeless principles into the times and places of the 20th Century, we find ourselves on the defensive against the glittering sophistry of Marxism and Leninism with its perverted appeal to those who have never really known freedom.

Whether we talk in terms of economics, or politics, or arms, or ideas, the conclusion is the same: It is not for want of resources and capacity that we are falling behind in this competition, but because we lack a sense of purpose, a sense of direction, a sense of disciplined action. And this is the massive failure of our national leadership.

We all remember that it was this same failing which cost us so dearly in the days of the great depression of the 1930's. Franklin Roosevelt's greatest service to this country was his gift of leadership, his ability to understand the capacity of the country, to express its purposes, to set its goals and to marshall the richest of our resources—our people—for their fulfillment.

There is much that we need to recall and to learn from the history of those years. Arthur Schlesinger's latest volume of the "Age of Roosevelt" recounts how in 1933 the President and the devoted team who drew their inspiration from him faced the country's terrifying problems frankly and without illusion, and how they set themselves to rebuild the country's resources and put them to work.

There were false starts and mistakes. But over all there was a sense of purpose and direction, as they sought not only to relieve the ills of that depression but to make another one impossible. Before they were finished, they had laid a foundation for national and individual security; they had reshaped the banking system; they had built the framework of a social security system; they had established the rights of labor and safeguarded the rights of homeowners and investors. And most important, they had restored to the country its confidence, its vitality and its belief in the ability of free people to use the processes of democracy to rescue themselves even from the depths of chaos.

We should recall, too, that in the war against facism, F. D. R. once again saw clearly where the destiny of the American people lay and called them to meet it. And once again the country responded.

The contrast with the present is inescapable. Where is the vision now, and the leadership that is both dramatic and realistic? Now, when we should be doing more, we are restrained by timid cautions.

Just this week it was my privilage to take part in a most important conference on India, which brought together many experts on the massive problems confronting that country. We discussed ways in which the United States could cooperate in the solution of these problems. At the climax of the conference, what does our leader say? He is "massively interested" in India, he told the press, but "fearful" of a massive program of aid. If this is the attitude at the top, how is the country to understand that these are times when massive problems required massive solutions?

How different it was with F. D. R.

Who can ever forget his goal of 100,000 planes, which all practical people knew was impossible. Only the visionaries like Bob Nathan knew how to plan and bring them into being.

Even during the war, with its stern military priorities, the President kept before us not only the military but the economic and the political goals. Beyond the goal of military victory he raised the banner of the Four Freedoms and the vision of the United Nations. The American people responded with sacrifice and discipline and on outpouring of energy and devotion. This is what made victory possible, even though Franklin Roosevelt himself did not live to see it.

"Well," you may say, "that was different. We were in a war." Well, my friends, let me tell you this: like the war against fascism, the contest with communism is a total competition for the survival of our system of freedom and our existence as a free nation. It is not a shooting war, thank God. But in its totalness, in its perils, in the imperative tasks it lays on us, and in the frightful consequences if we lose—it is a war.

Fifteen years ago we were in a war and we knew it. Now we are in a war but we don't want to believe it. Those who should summon us to its tasks refuse to recognize it. Instead they dope us with tranquilizing pap which dulls us to the dangers and saps our strength to defend ourselves.

The war against fascism was bloody and tragic and filled with sacrifice. But it was our salvation that it was the kind of war which gave us time to mobilize resources which in the end proved decisive.

The cold war is a different kind of war—a mortal struggle between two ideological and political systems. In this war also our resources can be decisive, but only if they are mobilized in time. And that time is now before there is any shooting. After will be too late.

Our national leaders warn us of the evils of international communism. They profess to recognize its dangers. But when it comes to fighting this war, they tell us we can fight it with one arm tied behind our backs. They propose to fight the balance of terror with balanced budgets, with business as usual, with politics as usual.

Those who are in a positon to make the decisions of leadership shrink from decisions. They refuse to acknowledge that this struggle requires more than we are putting into it, that it should have first priority on our energies and resources.

"If the trumpet give an uncertain sound, who shall prepare himself to battle?"

Comrade Khrushchev says, "We declare war upon you in the peaceful field of trade. We will win over the United States." He boasts that our grandchildren will live under his brand of socialism.

I say we should take up that challenge, not only in trade, but in ideas; in works for peace, and in food for peace; in showing by example that the ways of freedom can build more stately mansions for soul and body than tyranny ever could.

I propose that we launch a grand design for peace—a 7 year plan of our own—beginning right now, or if that is too much to hope, then on January 20, 1961.

I propose that we set the goals which are the price of survival and that we set ourselves to meet them.

I do not propose that we imitate the Soviet Union—either its goals or its methods.

I propose that as they have set their goals for the triumph of communism, we set our goals for the preservation of peace and security and for the extension of human freedom and individual welfare everywhere on earth.

They have set authoritarian priorities by dictate. We must set our goals by consent through democratic processes.

We must demonstrate the superiority of the methods as well as the goals of freedom and democracy.

The highest goal is the winning of a just and durable peace.

But, my friends, this is not a goal that can be reached by wishing, or by recoiling from the unspeakable horrors of war in the nuclear age. It requires cool nerves, but also endless patience and the ability to keep ourselves at the peak of our strength for decades—perhaps for a generation.

We have had enough of nerve-wracking take-offs and crash landings. We need to gear ourselves to a fast cruising speed.

We must seek the way to disarmament, to remove the terror of nuclear extinction and release the productive energies of the world for the works of peace. But even as we seek it, we must maintain our defenses at the peak of efficiency and effectiveness. There is no future for those who undertake to negotiate with the Soviet Union from a position of weakness. They understand and respect power.

Strength for us is not strength of the United States alone, locked in a fortress America, but strength in a community of free nations—with our allies and friends. Our contribution to that strength is not only the strongest military defense of which we are capable, but equally the strongest political, economic and ideological counter-attack against international communism.

We should make and take every opportunity to negotiate agreement with the Communist bloc. There is only one test of the usefulness of an agreement: Will it enhance the strength and security of the free world and the chances for peace? We should encourage and seek opportunities to relax tension by working together on matters like health and science, and through cultural and personal exchanges.

We should move steadily to build the United Nations as an instrument for nations to work effectively together and as a framework of international relations in which law and order are respected.

Our second goal is to realize the American dream of dignity and well-being—life, liberty and the pursuit of happiness—for every American.

I propose that we dedicate the decade of the 1960's to the realization of that dream.

This unfinished business of democracy is necessary to do for its own sake. It is even more imperative now because the rest of the world is watching to see whether democracy can really do it. We must succeed.

To make equality of rights and opportunities for all Americans a living fact. To wipe out the last vestige of discrimination under color of law.

To end forever the poverty which still afflicts, young and old, one-sixth of the richest Nation that is or ever was. To erase slums and banish hunger from our land.

To bring the best of education to every American child. To bring the blessings of medical knowledge and medical care within the reach of every American.

To secure the future of small farmers and small businessmen.

By these fruits shall we be known.

Our third goal is to cooperate with free people anywhere in technical and economic progress—in industry, in agriculture, in health, in education.

In this "only war we seek" food and science, medicine and education, and skills are our megaton weapons of massive rehabilitation.

For this "war" we should plan to set aside $2 billion each year, and as time goes on, maybe even more, for as long as the need persists—for years certainly, maybe for decades.

We must export our know-how carried by a peaceful army of technical missionaries.

We must export our capital, because without it, the revolution of rising expectations may be frustrated and violent, instead of peaceful and beneficent.

We must use the blessings of our agricultural abundance in the war against hunger and malnutrition.

Instead of the ugly American, we must turn the face of America the beautiful, through our art, our music, our books, our theater, our orchestras.

If we do not do these things, it is possible, even likely, that some nations, including some which hold the key to the future, may turn to the Communists in desperation. But that is not our sole reason for doing these things.

We must do them because they are required in this war of interests and ideologies. But we must do them also because this is our mission in this last half of the 20th century. This is our call to greatness, our call to leadership. If we were to fail in this, we would forfeit our claim to greatness; we would forfeit democracy's appeal to mankind.

These goals are no idle dreams. They are the stark necessities of our times. But they will not come easily. And if we choose to live in fat and comfortable complacency, they will not come at all.

They will test our moral and political fiber. They will test our leaders and our capacity for self-government. And they will test our economy.

If we continue as we have for the past 6 years, our economy will grow just about as fast as our population. We will just about stand still.

If that happens, only by rigorous controls of our economy will we be able to give priorities to national defense, to foreign economic development, to education, health and welfare here at home.

On the other hand, if we reach and maintain the 5 percent rate of economic growth that is necessary and possible, there will be enough for the priority purposes and for the free functioning of the enterprise economy.

In our purposes, too, the national economy is basic. Khrushchev is betting everything that we cannot make it. I am betting that we can and will.

The Soviet goals are directed to Communist domination of the world. Ours are directed to the regin of freedom throughout the world.

We are called on to show that a democratic society can mobilize its resources and that a free people can accept the rigorous disciplines of planning and performance without losing their freedom. We are called on to show that a free people can compete successfully with a totalitarian system that uses the disciplines of dictatorship to achieve its ends.

We demonstrated this once before, in the competition with faccism, but not until we had been forced into a shooting war. The challenge is much greater now than it was 20 years ago. Communism, with its massive military and economic power and its sugar-coated ideology, is a more formidable enemy than fascism ever was. Moreover, this time the fate of mankind rests on our being able to win without falling into a shooting war.

This kind of challenge requires the concentrated efforts of all areas of our national life, dovetailed together in coherent, well-planned whole.

I have proposed that the Congress create a Joint Congressional Committee on National Strategy, to consider overall our national goals, our national resources, and our national strategy.

And I have proposed that the executive branch of the Government have a national policy planning staff, responsible for devising and recommending plans to express the national purposes in terms of the realities of the world situation and our own capabilities. The Department of State has long had such a staff to advise the Secretary on foreign policies. We have a Council of Economic Advisers to the President. We have a maze of interdepartmental coordinating committees. We have competing and conflicting policies and priorities—from State, Defense, Commerce, CIA, Treasury, and the Budget Bureau, which often mistake control of the purse for control of policy. Nowhere is there a staff of competent thinkers and planners, undistracted by administrative responsibilities, able to think through plans and priorities of national goals and an integrated strategy for the total of our national effort in all its aspects. I propose that such a staff be created. It is time we took planning out of the doghouse and put it in the White House.

My friends, this country has a glorious future. It has an opportunity which history has offered to no other people, anywhere, anytime. But it is an opportunity that only liberals can grasp. We have seen for 6 years that the conservative mind and the conservative spirit are unequal to it. At best the conservative is dedicated to the constructive preservation of the status quo. At worst he is mired down in the dogmas of things as they were. This kind of challenge takes the boldness, the inventiveness, the imagination, the creative political and economic risk-taking which has been the characteristic of liberals in this country from the times of Jefferson, Jackson, and Lincoln to the days of Wilson, the two Rooseveits, and Harry Truman—whose diamond jubilee we joyfully celebrate this week.

It is a job for you and me. Let's get on with it.

Dedication of Research Center in Wilmington, Mass.

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 13, 1959

Mr. SALTONSTALL. Mr. President, tomorrow, in my home State of Massachusetts, Avco Corp. is dedicating its new $23 million research center in Wilmington, which will employ 800 citizens.

This is still another valued new enterprise to spring up along our circumferential highway around the city of Boston, now often referred to as the "golden arc" because of the new industries which have been attracted by it.

Avco Corp. refers to this suburban area of Greater Boston as "the most highly developed research climate in the United States." We are grateful for this tribute from one of the country's pioneering research and development companies, and this accolade which is equally deserved by our great universities which have produced the scientists, and our great cities like Lowell and Lawrence and Cambridge which have produced so much of the skilled labor that is required.

Labor and industry, sparked by the genius of our scientists, have produced dramatic results which are vital not only to the economy of Massachusetts, but to the safety and welfare of the Nation as well.

I ask unanimous consent that an article in the May 12, 1959, edition of the Wall Street Journal, describing this development, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOSTON'S ACADEMIC AIR WINS RISING NUMBER OF SCIENCE-MINDED FIRMS—AVCO DEDICATES NEW UNIT ON THURSDAY—MIT, HARVARD PROVIDE MANY CONSULTANTS

(By Paul Lancaster)

WILMINGTON, MASS.—This Thursday a swarm of notables—including TV personality John Daly; Dr. T. Keith Glennan, Director of the National Aeronautics and Space Administration; and Nobel prize-winning physicist Dr. Isidor Rabi—will descend on this rural community just north of Boston.

The occasion: The dedication of Avco Corp.'s new $23 million research center. The steel-and-glass structure, already in use, houses scientists and engineers seeking new materials and methods for missiles and other space-age paraphernalia.

The Avco affair is noteworthy because it points up the wholesale proliferation of research labs and research-oriented manufacturers in the area around staid old Boston.

ELECTRONICS, INSTRUMENTS

The Massachusetts Department of Commerce calculates about 250 of these outfits have set up shop in the vicinity of Boston, more than 100 of them in the past 5 years. They operate chiefly in the fields of electronics, nucleonics, and precision instrumentation. Some of the facilities are research and development arms of big corporations, such as Avco or Radio Corp. of America. Others are consulting firms and small companies that develop and manufacture highly complex equipment, often for military use.

What lures them here?

This is "the most highly developed research climate in the United States," claims Avco, whose major effort here right now is the development of missile nose cones. Though Californians probably would argue their State, with its missile and electronics work, boasts an equal concentration of research activity, Bostonians claim even the Golden State can't surpass some of the benefits Boston offers researchers.

Among the claimed advantages: A rich supply of scientific and technical skills, stemming in part from the presence of Massachusetts Institute of Technology and Harvard; an intangible, but nonetheless important, atmosphere of creativity; and a cultural and recreational environment that the companies believe keeps scientists and engineers happy.

MODERNISM VERSUS COLONIALISM

Many of the research-minded companies are strung out along a recently built expressway that describes a semicircle starting near the coast north of Boston and running around the city to the south shore. Housed in low-slung, angular buildings clinging to the hilly New England countryside and frequently bearing fanciful, futuristic names—Dynametrics, Trans-Sonics, Itek, Tracerlab—they strike a strange note in a region where old colonial homes and names linger on.

The role of MIT in Boston-area research is everywhere evident. Glance down rosters

of company officials, and again and again you note that executives are MIT products. Numerous firms have been organized by MIT scientists who decided to strike out on their own—"spinoffs from MIT," one research official terms them.

High Voltage Engineering Corp., located on the semicircular expressway at Burlington, just south of Avco's new lab, is a prime example of a company spawned by MIT. The concern was formed shortly after World War II to produce atom smashers invented by Dr. Robert J. Van de Graaff, an MIT physicist. Dr. Van de Graaff is now the company's chief physicist, besides continuing to teach at MIT. Dr. John G. Trump, professor of electrical engineering at MIT, is chairman of the board and technical director of High Voltage, and many lower level engineers and physicists were formerly connected with MIT.

RESERVOIRS OF CONSULTANTS

Besides serving as sources of full-time talent, MIT and Harvard provide invaluable reservoirs of consultants who can be called in on a moment's notice to help solve prickly problems. Professors generally earn $100 to $200 a day for consulting services, though occasionally fees run higher.

"I'm a native New Englander and I may be prejudiced, but I don't think we could get the really top-grade consultants across the board that we have here if we were located someplace else," comments Frederick H. Greene, Jr., vice president and director of commercial development for National Research Corp., a Cambridge firm specializing in high-vacuum technology. National Research, headquartered on "Research Row," a strip along the Charles River where several research organizations have settled, regularly calls on five consultants from the nearby universities—two physicists, two aeronautical engineers, and a nuclear engineer.

Describing a typical instance in which expert advice from outside might be needed, Mr. Greene notes national research sometimes achieves such high vacuums that measuring the low pressures becomes a problem; this might occur in an attempt to simulate outer space, for example. When this difficulty arises, the company beckons Prof. Wayne B. Nottingham, a physicist from right next door at MIT. Professor Nottingham, who is an authority on measuring low pressures and who has devised extremely sensitive pressure gages, can usually aid National Research scientists in finding the best measurement technique.

Research executives claim the wealth of university and industry research talent here makes for a stimulating, idea-generating atmosphere for scientists to live and work in. "We wanted to be near other research," observes Dr. Robert W. Johnston, a physicist who recruits professional personnel for Avco. "We wanted interaction with universities and with other organizations like ours."

Though companies call on each other for assistance now and then, much of this stimulating exchange of ideas occurs in an informal way, when researchers chat over the hedge or perhaps at social affairs. "More of this takes place over cocktails than during the business day," suggests Dr. Marvin G. Schorr, towering executive vice president of Technical Operations, Inc. Technical Operations is a consulting firm which does everything from studying ways to speed up weather reporting for the jet era to developing a land mine for war games that halts a tank passing over it by electronically putting its gears into neutral.

An official of a company responsible for many advances in the field of electronics sounds a sour note in all this, however. There's too much emphasis here on scientific creativity in an abstract sense, argues Bernard M. Gordon, the intense, hard-driving 32-year-old president of Epsco, Inc., a firm which develops and manufactures complex electronics systems, such as specialized computers and telemetry devices to collect data from missiles. Though spokesmen for other concerns strongly disagree with him, Mr. Gordon says local scientists and engineers conceive brilliant theories and compose superb reports, but are often lax when it comes to meeting deadlines and carrying projects through to the hardware stage.

Says Mr. Gordon of the Boston area: "If you're trying to build a production organization, it's not a good place. There's a negative attitude toward producing a working piece of equipment."

Mr. Gordon, who holds over 100 patents, says this frame of mind carries over into a negative attitude toward material things in general and has a marked impact on the communities where research personnel live. Of Concord and Lexington, where many scientists and engineers reside, he observes: "There's a kind of reverse materialism in these towns. If you buy a new car, you apologize to your neighbor."

Lt. Gen. S. T. Williams, U.S. Army

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, toward the end of last month I took advantage of the privilege granted me and inserted in the CONGRESSIONAL RECORD of March 20 a statement in which I expressed my high regard for Gen. Samuel T. Williams, Chief of the U.S. Military Assistance Advisory Group for Vietnam.

Last fall I had the pleasure of revisiting Vietnam, having been there in 1955 for the first time. On the occasion of my earlier visit General Williams was just taking over as Chief of our Military Advisory Group. He is one of America's greatest soldiers and has done a remarkable job in that country, as I outlined for my colleagues.

A copy of the March 20 RECORD found its way to the desk of Mr. Ed P. Williams, business manager of the Fort Worth, Tex., Independent School District and brother of General Williams. This is not strange. But the sequel is worth recording.

Mr. Ed Williams wrote our beloved Speaker of the House of Representatives the following letter:

FORT WORTH INDEPENDENT
SCHOOL DISTRICT,
Fort Worth, Tex., April 7, 1959.

Hon. SAM RAYBURN,
House of Representatives,
Washington, D.C.

DEAR SAM: Back in 1920, I lived in Van Alstyne, Tex. Our late mutual friend, Sam Pattie, bless him, operated his drygoods store next to the bank where I worked.

At this time, the boys were returning from World War I and being mustered out. My brother Sam was located at Camp Pike, Ark.

One morning I received a phone call from Sam in which he told me he was in trouble and needed help quickly. He said there was a mixup of names in his outfit and that he was being mustered out when really it was another Williams who wanted out. He, Sam, wanted to stay in and the records would have to be straightened out in Washington.

I told him I would see what could be done. Sam Pattie was next door and I told him the story. He said, "I know what to do. I'll wire SAM RAYBURN." He did wire you and in a few days brother Sam advised that his troubles were over and that he was to remain in the Army where he wanted to be.

SAM, please refer to the CONGRESSIONAL RECORD for March 20, 1959, page A2506, which contains an extension of remarks by Representative GEORGE P. MILLER.

The soldier referred to by Mr. MILLER is the Sam T. Williams you befriended in 1920.

I am calling this incident to your attention in order that you may know your assistance to this young man in 1920 was not misplaced.

With very best regards, and good luck, I am,

Sincerely,

ED P. WILLIAMS.

A tragic error which could have robbed America of the services of a man who has proved himself to be one of her great military leaders was averted by the interest manifested by the then young Congressman from Texas, SAM RAYBURN.

Incidents like this have marked the long career of our Speaker and have endeared him to the hearts of all of us.

It is interesting to note that since my remarks on March 20, the New York Herald Tribune published an article on Sunday, April 12, by Mr. S. L. A. Marshall on General Williams that confirms that which I told the House.

I include that article as part of these remarks:

OF ARMS AND MEN: "HANGING" SAM'S MEMORIES

(By S. L. A. Marshall)

"Hanging" Sam Williams must have a smile on his face these days. The newspapers say the allies have a neat top-secret plan for undoing the Russians should there come a military showdown West of Berlin.

If the word that everything is peaches in the Western camp travels, as far as Saigon, Vietnam, where "Hanging" Sam holds forth, it could either give him a chuckle or cause the raising of a questioning eyebrow.

Now a three-star general of the U.S. Army, and one of the better-loved and saltier characters of the Army, Sam is chief of MAAG operations in the southeast Asia rice bowl region, maybe taxed with problems, but at least happily remote from the Berlin dilemma.

There was the other time, though, when Sam carried most of its weight on his own square shoulders. In 1948, there were other Americans on the pivot, but it was Sam's nose which was to be used to bulldoze a way into Berlin, if the Russians got tough. While sweating out how to discharge this minor chore, Sam read a few stories from the home press carrying the good news that the U.S. Army was prepared for any eventuality. It's a national habit.

Much water has flowed under the Elbe bridges since he told the story, but that's all to the good, since it might have fulled and ripened with the years. What follows is a reasonable facsimile thereof.

In the late spring, 1948, when the threat of blockade loomed heavy, Sam was commander of the 26th Infantry, the Blue Spaders of the big Red One Division. It was his second tour as such and he felt right chesty about the prime condition of his regiment.

Stationed at Bamberg, just north of Nurnberg, the Blue Spaders spent much of their time training on the ranges at Grafenwohr. There they were visited frequently by the

divison commander, Maj. Gen. "Shrimp" Milburn, whose fame was made more lustrous in later years by his flawless leadering of U.S. I Corps during the worst days in Korea.

At Grafenwohr there suddenly descended on Williams and regiment a party of senior officers from stateside. Gimlet eyed, they looked the Blue Spaders over. The intensity of this inspection, left unexplained, built up a mystery which baffled Sam wholly.

One four-star general said to him: "These men don't look like they are afraid of Russians." Sam was proud of his outfit; he felt it was bursting out all over with esprit. So he answered: "Why should they be?" We don't think every Russian is 9 feet tall and weighs 300 pounds." He thought that crack reflected unit sentiment but it caused a certain lifting of the eyebrows.

The visitor departed. Then Milburn came over to unbag the kitten. If troops had to be used to break the Berlin blockade, Sam's blue spaders would be the main body. With the column would ride some division engineeds and part of its organic tank battalion. To give the venture an allied flavor, one company of British rifles and one of French would also start. What other plans were afoot, or what hand would hold the overall responsibility, Sam heard not.

But Sam, like the namesake McGee, stayed cool and calm in the heart of the furnace roar. Being tagged meant first of all rounding up every bit of information which might help with the problem.

Right off, he was told that the blue spaders would have a 20-kilometer-wide corridor to move through. That wasn't too bad; there is some elbow room within such latitude.

So Sam immediately requested higher headquarters to supply him with maps which would show down to the last meter the boundaries of the strip over which he would be allowed to maneuver.

In due time, back came the reply that there was no 20-kilometer on the ground, but only in the air. By land, the corridor was limited to the pavement of the autobahn and the few feet of earth shoulder on either side.

Said Sam, in words not intended to be a classic of understatement: "Quite naturally, the extraordinary conditions complicated my tactical problem somewhat."

He forthwith instructed his battalion commanders that the first movement of any man or vehicle off the autobahn would enable the Russians to claim that the movement had violated their territory. Put in that straitjacket, he had less time to worry about what he would do if the Russians blew their bridges in his face, and none at all to become confused because his engineers couldn't round up enough materiel to span the possible water spaces.

"I remember," said Sam, "telling 'Shrimp' that when the regiment started, I wanted to go and go fast. I couldn't be looking over my shoulder all the time for orders. I wanted a clear unequivocal directive before crossing the border that I should make Berlin come hell or high water. If the Russians tried to stop us, that would mean war. I didn't relish having some second guesser saying later that Sam started it all on his own.

"'Shrimp' agreed. He said: 'I'll have several copies struck and placed in bank vaults back home for future reference and the sake of history.'"

So ends Sam's story, which has no moral. The airlift, which also developed happenstantially, relieved him of the necessity of having to save resolute national policy by the seat of his pants.

Israel Independence Day Greetings

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. MULTER. Mr. Speaker, the anniversary celebration of Israel's independence has become a memorable holiday.

It is observed not only in Israel but throughout the world by friends and sympathizers. Since the rebirth of the State of Israel by the attainment of its independence, Israeli citizens as well as Jews everywhere have been living in a new age, ideally and spiritually.

Having seen their 2,000 years old dream come true, by recreating Israel in their ancient homeland as an image of their ancestral kingdom, and seeing it prosper, and register impressive advances in every phase of their national life, on May 13, the 11th anniversary of Israel's independence, they all join hands and celebrate that event in due solemnity.

For nearly 2,000 years Jewish people were practically barred from what had been their homeland. Events at the end of the First World War introduced startling changes in all parts of the world, and historic Palestine was no exception. That part of the old Ottoman Empire was placed under British mandate, and the Jews were allowed to work for the reestablishment of a national home there. At the time the Jewish population of Palestine was about one-tenth of the total. By 1940, they constituted about a third, or about 450,000.

At the time the new state was set up early in 1948 the Jews were numbered close to if not an actual majority of the inhabitants of that area of about 5,000 square miles. Today the State of Israel boasts of more than 1,800,000 inhabitants.

Thus in 11 years the small State of Israel has provided homes and safe haven for more than 1 million homeless Jewish refugees. If Israeli leaders and Israel's citizens had accomplished nothing else, the performance of this daring and difficult task alone entitles them to our admiration. But they have done more, much more than that. They have made the new Israel a living and growing entity as a dynamic and democratic state, a powerful force in the Middle East.

What is more important than the mere counting of numbers of people is the fact that all of the people now living there, Moslems, Christians and Jews, are all first class citizens with equal rights, accorded the same privileges and subject to the same duties. All of them have the right to vote. All of them have the right to hold public office. All of them are covered by the same labor laws, receiving the same compensation and the same benefits for the same work, and none being required to do more onerous or more menial tasks than others. Every child must receive an education and all but the parochial schools are maintained at the expense of the Government.

Not only is religious freedom an accomplished fact but the jurisdiction of the religious courts is preserved by law in connection with matters concerning the marital and family status. The deep religious sentiments of all of the people give emphasis to their universal desire to advance the divine principle of brotherhood in order to accomplish world peace.

For all of these superb accomplishments we salute the State of Israel and all its people and wish them well on this anniversary of their independence.

A Jacksonville Teenage Club Gives Encouraging Proof of What Can Be Done for Florida's Youth

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BENNETT of Florida. Mr. Speaker, the House Education and Labor Committee is giving consideration to the possibility of enacting legislation to provide assistance to States in developing research projects in the field of combating juvenile delinquency. I think that most of us who have children would conclude that any overall analysis of the various ways of combating delinquency, juvenile or adult, should put in a prominent spot the effectiveness of worthy and enjoyed activity. The old adage that "an idle mind is the devil's workshop" is just as true today as when it was first said; and it applies just as much to adults as is does to youngsters.

I recently read a very interesting and constructive article in All Florida magazine, the May 10 edition, in which well-deserved tribute was paid to Lt. Col. Franklin Hibel, Ed Bell, and a number of others who took leadership in starting a teenage club in Jacksonville's southside section. I believe that the article, which I include herein, may be of help to others who are seeking solutions and opportunities in this field:

A JACKSONVILLE TEENAGE CLUB GIVES ENCOURAGING PROOF OF WHAT CAN BE DONE FOR FLORIDA'S YOUTH

In the newspapers and magazines, there is much talk of juvenile delinquency. It is a national problem, but Florida has its own share. Many authorities believe that one of the leading causes of juvenile delinquency is a dearth of wholesome opportunity for youth to blow off steam, coupled with a super abundance of opportunity for unwholesome activities.

A number of Florida communities have concerned themselves with reversing this unhappy status quo. If there are few avenues of attack open to them on the latter aspect of the situation, they have sometimes found the former more vulnerable. Sometimes it has been the community itself, which has carried the ball in this direction—and at other times it has been an interested group within the community. In either case, the results have proven encouraging.

At Lake City early this year, action was taken on a communitywide scale. With the slogan, "Today's youth is your tomorrow," the town set out to build a youth center that they call "Teen Town." To raise funds for the project, one civic club held prefootball game banquets and contributed the proceeds. Other civic clubs joined with a local radio station to bring the Glenn Miller Orchestra to town for a dance. The profits were turned over to the teenage project. Townspeople responded generously to the program. Teenagers responded happily to the efforts in their behalf. Lake City boasts now that it looks after its own teenagers.

In Jacksonville recently the initiative was taken by one individual—and enthusiastically supported by a local group. The results were just as encouraging as those at Lake City, if on a smaller scale. But because it was an individual effort, the response was, if anything, even more dramatic.

The Jacksonville story began with a complaining comment from the 14-year-old son of the commanding officer of Jacksonville's Air Reserve Center. Young Bruce Hibel bemoaned the fact that on all of Jacksonville's well-populated southside, there was no place for teenagers to dance. Other than infrequent high school proms and church socials, local youth had nothing to look forward to in the way of regularly scheduled dances. Bruce's chance remark was enough to arouse the concern of his father.

Lt. Col. Franklin Hibel, a former New York newspaperman and veteran Air Force public relations officer, hit on the idea of a teenage dance club. Through his efforts, the wheels began to turn. He knew that the Air Reserve Center, always eager to further community relations, would make its classroom facilities available for a monthly teenage "hop." He talked up the idea to Ed Bell, a popular local disc jockey. The turntable idol enthusiastically agreed to emcee, and spin the platters for the teenagers.

To arouse interest, Colonel Hibel then sent letters to the principals of several southside high schools, requesting their cooperation in publicizing the projected club in school papers and on bulletin boards. Releases in local news media helped the idea to gain momentum. Letters from teenagers started to pour into the Center. By the time the initial dance was ready to start, over 100 eligible teenagers had requested membership in the club. Attractive cards, with Ed Bell's picture and a jet aircraft superimposed, certified the typed-in names of teenagers authorized to attend sponsored dances.

Colonel Hibel began to worry when the first 50 youths shot in their letters. Nearly 40 of the requests were from girls. Hibel consulted Maj. Ellis Lanquist, a reservist who is an instructor at Bolles School, a southside military academy. Lanquist took up the challenge. He told his cadets of the many girls who would be available as dance partners, and the cadets galloped to the rescue. Within a few days some 30 of them became bona fide members.

There was another roadblock, however, even more worrisome. Previous teenage dance clubs had aborted, due principally to the undesirable element of young hoodlums. Obviously, this is always a source of concern to parents. When a few parents queried the center commander about the club, Colonel Hibel assured them the dances would be well chaperoned. He stressed that they were to be held at an Air Force installation, where no nonsense would be tolerated.

The date of the inaugural hop approached, and with it, more headaches for the harried Hibel. It was not enough that Southside's Englewood High—the school attended by about half of the club members—was having one of its own infrequent dances that night, and five Southside schools, including Bolles, were having basketball games, but the Jacksonville area also had been alerted for a tornado. The tornado didn't develop, but rain came down in torrents. In spite of the complications, a third of the youngsters showed for the hop—a fact that the colonel felt was richly rewarding.

That the dance was a success was evidenced in the comments of the teenagers, themselves: "This is a swell thing. It's recreation that's tops with us and I'm happy to be with it from the start." And from another: "Excellent. Count me as a regular," or "Golly, I'm glad you convinced mother. It gives the kids a chance to get together and keep out of trouble."

Disk jockey Ed Bell also was delighted with the results. "I've spun platters for hundreds of dances here and at Pensacola," he said, "but I've never seen a better-mannered lot of teenagers, or a better organized teenage club." And to top off the teenagers' delight with the affair, Bell gave away top-40 disks to winners of dance contests.

Parents, too, responded to the idea—skeptically at first, but enthusiastically after they had a look for themselves. "I admit that I was skeptical, and that was why I wanted to see for myself," said businessman Harry Rocus, who escorted his teenage daughter to the first dance. Rocus liked what he saw—so much so that he vowed to personally solicit the support of his fellow businessmen for door prizes, and he immediately signed up his other two teenage daughters—twins.

The final outcome of the Jacksonville story was that what started as a disgruntled remark by an Air Reservist's teenage son, resulted in a well-chaperoned, biweekly dance with the happy approval of parents and teenagers alike. It shows that even one individual's initiative can go a long way toward curbing juvenile delinquency in a locality. And when the efforts of people like Colonel Hibel, and of communities as a whole, such as Lake City, are added up throughout the State, the results are bound to make a noticeable dent in teenage mischief. Everybody benefits—from teenager to citizen on the street.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Responsibility of the American Businessmen as Leaders of the Free World

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. BEALL. Mr. President, on May 8, 1959, Mr. Thomas S. Nichols, chairman of the board of the Olin Mathieson Chemical Corp., addressed the members of the Investment Bankers Association at White Sulphur Springs, W. Va.

Mr. Nichols, a prominent business executive himself, presents a thought-provoking challenge to businessmen across the country—that they recognize and assume their responsibility as leaders of the American economy.

I ask unanimous consent to have Mr. Nichols' address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THOMAS S. NICHOLS, CHAIRMAN OF THE BOARD, OLIN MATHIESON CHEMICAL CORP., BEFORE MEMBERS OF THE INVESTMENT BANKERS ASSOCIATION, WHITE SULPHUR SPRINGS, W. VA., MAY 8, 1959

Today happens to be V–E Day—Victory in Europe. I am afraid that the fruits of that so-called victory have not been too well preserved.

As an industrialist, I realize that I am in sophisticated company in this group so I will proceed with at least a moderate amount of caution.

However, as one who has spent a lifetime in the world of business, I have strong convictions that Lord Chesterton was right when he wrote to his son that "few people do business well who do nothing else." Stated bluntly, I believe that today the business community bears frightening responsibilities—burdens we dare not lay upon the future.

We are confronted by an international Communist Goliath and we need a far greater arsenal than slingshots to fell the menace. Our future lies in our own strength, and this in turn rests on a foundation of fiscal responsibility at home, and what I believe to be a new concept of responsible trusteeship by the business leaders of the free world.

However heavy our personal preoccupation with other duties, we can no longer be casual about this matter.

Our Nation is confronted by a unique situation—one that we have never faced before. World history records such events as "The 30 Years War." But the longest armed hostility our country ever faced was the 8½ years of the American Revolution.

Today is different. We are now in a type of war that will probably continue for as long as anyone in this room lives, and may well span our children's and grandchildren's lifetimes.

Any discussion of our Nation's future must start from this premise: "We are up against a problem that has no fixed or definitely foreseeable termination. As long as the Communists insist that their aim is to dominate the world, we have no choice but to adopt measures that will prevent this from happening." Khrushchev stated in May 1957: "We think capitalism should be destroyed not by means of war and military conflict, but through an ideological and economic struggle."

In this continuing fight against communism the free world businessmen has a special role. To the extent that the Communists have challenged us economically, it is up to the businessman to defend us. We must be the merchants of both peace and prosperity. Yet it would be almost true to say that we enter the fray with one hand tied behind our back. For on the economic level the real Communist threat arises from their system of coordination and planning. The Communist state plans economic development according to a system of priorities and assigned productive tasks and for purely political purposes. A market can always be captured by absorbing a loss. On the other hand, the Western businessman plans his individual development on the requirements of competition and the possibilities of profit in the market.

We have the skill and the industrial plant to outstrip the Communists on their own terms. This has been demonstrated by our tremendous war efforts when our very survival depended on rigid business cooridnation. But we would not institute such controls except under the most dire emergency conditions. For we know full well that a regulated economy would destroy the very way of life we are trying to preserve.

In essence, this is the great challenge to free enterprise—a challenge far greater than anything faced in wartime. For we know that our present peace is partly a myth and that a very real cold war exists. Thus American business must meet wartime conditions—or cold wartime conditions—without wartime coordination. Moreover, we must match the productivity of a nation which does have the equivalent of wartime controls.

We confidently accept the challenge. We welcome the opportunity to put the free enterprise system into world competition with state-planned communism, for we know that we can stand the test.

This is not mere patriotic rhetoric. By way of documentation, I cite the following examples:

For years, the Labour Party of Great Britain proudly called itself the Socialist Party. Yet in its most recent publication, "Plan for Progress" (issued last December), which is in fact their blueprint of the future, there is almost nothing said about socialism.

All emphasis is on running a capitalistic society more efficiently than their opposition, the Conservative Party. Furthermore, the Labourites even warn against "damping the vital impulses of economic expansion."

In other words, here are the results from one battlefield where capitalism was pitted against state socialism, and the free enterprise system withstood the assault and proved its superiortiy.

It would be presumptuous for me to outline a comprehensive program for the Nation's businessmen to meet this continuing crisis. But I would like to pull together some guidelines for the journey further down the road.

POINT 1. NATIONAL FISCAL RESPONSIBILITY

Since we will be compelled for many years to live in the shadow of aggression, our own internal solvency becomes even more important. We must buy defense this year. We must be equally able to afford it next year and the year after.

Every businessman knows that you cannot remain fiscally sound if you fail to balance your books year after year. You can operate in the red for awhile, but sooner or later the only answer is to go out of business.

The same rule applies to the financial management of our National Government. That is why the President's fight for a balanced budget is so important. The Government operated with a deficit last year because of the recession. Now all economic indices point to a good business year and so it becomes vital that we return to sound and businesslike procedures.

While it is true, as one has remarked, that the United States can afford to devote as much resources to its own survival as the Soviet Union can to our destruction, some programs will have to be sacrificed to maintain the high defense level.

We cannot afford every pet project plus high defense costs. We know that another unbalanced budget will undoubtedly increase the inflationary pressure.

Since the cost of living has been reasonably steady for several months, those who favor cheap money have been insisting that inflation is a phony issue brandished by reactionaries to fight social spending programs. However, it is just this continuous counterpressure—this public opinion marshalled by the President—that has done so much to arrest the inflationary spiral.

Inflation is an insidious intoxicant. And now is exactly the time to be concerned about it. If we wait until we are caught up in a runaway inflation, it will be too late. And we need not be fatalistic about it—inflation can be checked. Your own private actions and the pressure you can put on the Congress are very potent weapons in this fight.

POINT 2. A NEW LOOK AT WORLD TRADE

We are all in business and I have not come here to plead for a charity or to ask you to deny your own interests. But there is definitely something called "enlightened self-interest." I would define this as an act that helps both your business and the Nation.

Freer world trade can be enlightened self-interest.

It is said that American business has not progressed far enough from the isolationist position on tariffs and world trade of the first part of this century, and perhaps that is true, but business between United States of America and other countries should not and cannot be a one-way street. We must, of course, guard against drying up our own industries by having our markets flooded with foreign goods, but we must also give much more serious consideration to the possibilities of expanding our own business by encouraging other nations' industries to make large enough profits to afford our products. Indeed, in the final analysis, no

political alliance between any two nations can long survive unless there also exists between the two nations a mutually satisfactory economic alliance.

POINT 3. A REAPPRAISAL OF LABOR

The reappraisal I am referring to has nothing to do with the proven personal corruption of certain labor bosses. The question of corruption is important, but it is basically a side issue. We have had corruption in business and in Government. Every decent person opposes corruption. The Nation's responsible labor leaders, as well as intelligent Government action, must clean up this mess.

Out of labor's bigness has resulted some corruption, but far more significantly it has produced a new force which neither business nor labor has fully analyzed.

The situation has changed drastically since the thirties. Organized labor is no longer in its infancy. The Federal Government has recognized the change of labor from an underdog—needing special protection—to labor as a coequal when the Taft-Hartley Act replaced the Wagner Act. Perhaps business and labor will only face up to this when the old leaders on both sides who lived through those turbulent years are replaced by a younger generation.

Today when a president of a union meets with the president of a corporation, they meet not as a man from the shop with the boss, but as one high-salaried executive with another.

The steel industry has recently said that "if we are to combat inflation we must first deal with the primary cause, namely, employment cost increases."

The Committee for Economic Development has written that the Nation tends to deny "that labor is the main economic resource and that wage rates are the main element in costs and therefore in prices."

As an infant is not responsible for his actions and an adult is, so labor must now share responsibility with management for rises in the cost of living, the threat of inflation, the growth and stability of the economy, our economic position vis-a-vis Russia and our free world allies.

Labor and management must together work out a philosophy that defines this new responsibility of labor as coguardian of the Nation's economic future. This cannot be done at the bargaining tables alone. It must be done in the classrooms and over the dining room tables.

POINT 4. A NEW POLITICAL ROLE FOR BUSINESS—A NEW TRUSTEESHIP

In approaching this subject I realize I am dealing with combustible materials. But to do otherwise would be unconscionably neglectful of the overriding mission of enlightened business leadership.

All of us have contributed thoughts on this subject—but not too much thought, I'm afraid.

Now I want to make it clear at the outset that I am not appealing to the businessman to enter politics as a counterweight to labor's expanded political operations. Neither am I asking for a new or revamped business pressure group. In my experience I have observed a number of so-called pressures. Indeed, when I had occasion to serve the Government in one capacity or another, I have been appalled by the inconsistency of some of our fellow businessmen who vigorously complained about Government interference in business only to see them in Washington a few days later exerting every effort to obtain special help or treatment from the Government. Don't forget that a Government big enough to give you everything you want is or may be big enough to take everything you've got.

I am talking about businessmen entering politics in the broadest sense, not in terms of supporting one political party or simply to secure advantages for business.

My point is this: Our problems today—our country's and the free world's—are primarily political. Today it would be ludicrous to have business interests demand that China be divided into trading areas and have nations go to war over business concessions. This is in our past. When we talk now of spheres of influence, we are referring to political, not economic influence.

In a sense it could be said that business is a tool in our cold war fight. We are of course trying to convince others of the rightness of our free enterprise system, but primarily we are trying to sell our system of freedom and democracy.

The era of imperialism and colonialism was an era of economic warfare—overtly and covertly. This is an era of ideological warfare.

Yet almost paradoxically, still today in the United States our brightest young people, as well as the most creative and imaginative of the older generation, go into business. This is a natural result of our Nation's business-oriented heritage; it is also because the greatest monetary rewards lie in the business field.

But to our country it also means that the area of the greatest need for leadership is being denied many of our most gifted people.

This does not mean that I expect every investment banker to become a precinct leader—although some might really enjoy this experience. But what I hope to see is more of our businessmen thinking broadly about national and international questions and not being afraid to offer their opinions and advice.

Moreover, businessmen should be readily on tap as consultants to government; they should be cheerfully available for a term of duty as a public official; and their firms should cheerfully cooperate; they should increase their intercourse with our political leaders through conferences and private conversations; they should take a more active interest in local politics on the theory that there is a very definite trickle up in public affairs and that their local actions can and do affect national actions.

What does all this mean?

Simply this:

We in business have a responsibility for seeing that our Nation maintains a sound fiscal policy; business has a responsibility for reappraising world trade in the light of enlightened self-interest; business has a responsibility with labor of redefining an economic philosophy for the future; business has a responsibility to devote time and thought to national and international political questions.

I think it can be boiled down into a phrase written over 25 years ago in an essay on the businessman, "A great society is a society in which its men of business think greatly of their functions."

Fellow businessmen—or more happily stated, I believe—fellow trustees of the future—here is our summons to greatness. We can do no less. And if we are faithful to these tenets, America will never become a brooding fortress of despair, but will continue confidently on a course that carries her ever onwards and upwards to new peaks of achievement.

Newspaper Boy Values

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. McCORMACK. Mr. Speaker, for the past 18 years the Boston Daily Record-American and Sunday Advertiser—Hearst newspaper—have sponsored a radio program known as the "Boston Daily Record-American and Sunday Advertiser Newspaper Boys Radio Show." This program is intended primarily to give youngsters who sell newspapers an opportunity to develop their talents and to focus the attention of the people on other activities of these boys, whose only contact with the public is as a newsboy on the corner or in the delivery of newspapers to the homes of their customers. Throughout the years men and women in business, finance, and politics, and other walks of human activity have been invited to make remarks appropriate to such a program, which program is now under the direction of Charles Mungie, circulation director of the Boston Daily Record-American and Sunday Advertiser, and produced by Thomas Shulman of the Boston Daily Record-American and Sunday Advertiser.

I was invited to participate in this program on April 27, 1959. It was a pleasure for me to participate in this program which is constructive in nature and productive in excellent results. In my extension I include the remarks that I made on the Newspaper Boys radio show on April 27, 1959:

[From the Boston Daily Record, Apr. 27, 1959]

NEWSPAPERBOY VALUES TOLD BY MCCORMACK

(By Tommy Shulman)

Congressman JOHN W. MCCORMACK, majority leader of the U.S. House of Representatives, praised newspaperboys on the Newspaperboys' Radio Show Sunday morning at 9:30 over NBC's WEZE. We are pleased to publish Congressman MCCORMACK's radio address:

"I am very happy to appear on the Boston Daily Record and American-Sunday Advertiser Newspaperboys Radio Show. Newspaperboys have always held a spot close to my heart. Busy boys who are devoting their spare time to learning and earning.

"Most gratifying to me is the knowledge that the only newspaperboys regular weekly program in the country originates in my congressional district. Many times have I heard the praises of your songs, fine instrumental music, educational and patriotic dramas.

"BECOME SUCCESSFUL MEN

"I assure you that well deserving is the nationwide recognition and the many citations and awards that have been bestowed upon this program.

"For every newspaperboy is a businessman. He is a builder—the size of his route—or the sale of his papers depends a great deal on his ability, his determination and his personality.

"I have never known a newspaperboy who has not been a success. We find the newspaperboys of my days now professional men, leading businessmen. We find them in the arts and the sciences, that is due to the fact that in their early years, they had the determination to go ahead, in a sense to be a Horatio Alger and with that determination, they built themselves, studied, educated themselves and took the journey of life into higher positions of responsibility, enjoying also a position of confidence and respect in the minds of their fellow men.

"WIDE RECOGNITION

"As I have said, I have never known a newspaperboy who was not a success. I have never known one who was not a leader in his community. I feel it would be fitting and proper that your fine Record, American and Sunday Advertiser newspaperboys program, be recognized as widely as possible

and I intend to see that this is called to the attention of my colleagues in Congress.

"The newspaperboys of today, like those of yesterday, typify the real American boys with the interest of God, the interest for his Nation and his family at heart. Many of you boys, newspaperboys of today but leading citizens of tomorrow, will inherit the responsibility of guiding the destiny of our great country.

"I have never known a newspaperboy who did not love his mother and his father or who failed to make contributions to his family, turning in his earnings to his mother in order to enable her and his father to keep the family going. I have seen so many of them myself when I was a youngster and they all made good.

"With such boys as these destined to assume the responsibilities of the future, I have no misgivings for the welfare and the national interest of our country."

Agricultural Abundance: Blessing or Evil?

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from this week's isue of the Saturday Evening Post, entitled "Must Our Food Surplus be Treated as an Evil?"

This article presents, in concise capsule form, one of the most important problems facing our Nation today, that is, how to use our agricultural abundance as a national and international asset instead of continuing it as an economic burden on farmers, consumers, and Government.

The food for peace bill which I recently joined in sponsoring with the distinguished senior Senator from Minnesota [Mr. HUMPHREY] and other Senators, is a positive, dynamic approach to this grave question and problem which has been presented in such excellent fashion in this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post, May 16, 1959]

MUST OUR FOOD SURPLUS BE TREATED AS AN EVIL?

(By John Bird)

Science fiction utilizes a mysterious nerve gas which destroys the victim's sense of reality, rendering him aimless. The hot air surrounding the farm problem has much the same effect.

Certainly, the hodgepodge of Federal farm programs, which are costing taxpayers $5,400 million this fiscal year, can't claim to have solved the farm problem. Surpluses of corn, wheat, and cotton mount higher and higher. Contrary to a popular impression, the farmers' net income from all sources, including Government payments, has declined; in 1958 it was 23 percent less than in 1947 in terms of a stable dollar. Per capita income of farmers is only about half that of nonfarmers. In many respects the outlook of the people on the land is as uncertain as ever.

The Federal farm programs have but slight actual bearing on the challenges the farmer faces today, as a great technological upheaval swiftly changes the face and foundation of rural America. The programs fail to answer the increasingly urgent question: How can the nation use the bounty that its agriculture provides?

The systematic application of research to agriculture has resulted in break-throughs which vastly increase the ability of the farmer to produce food and fiber. Last year on the smallest acreage in 40 years, United States farmers harvested the largest crop output in history. Within the past generation the amount of food that a farmer can produce from an acre has increased 70 percent. Our agriculture has become superproductive.

Like nuclear fission, our explosive farm productivity can bring disaster if not wisely guided. Any realistic national farm policy must recognize that U.S. farmers aren't farming half as well as they know how.

For example, the average milk cow now gives more than 3 tons of milk a year—a great improvement over a generation ago, but still far from the 8 or 10 tons that the best cows, scientifically bred and fed, can yield. Through the use of artificial insemination, the inheritance of the most productive dairy animals is being widely distributed. The average U.S. corn yield now is around 51 bushels an acre, but science has made it possible to double or triple it.

Meanwhile, researchers are unlocking more of nature's secrets through the use of new scientific tools. Where plant breeders in the past relied on rare accidents in nature to produce sports with new characteristics, they now bombard seeds with radioactivity to create mutations in a hurry.

As yet, our patchwork of farm laws has given no answers to questions such as the following:

1. How can agriculture become even more productive—as it will—without repeatedly putting farm people through an economic wringer? Theoretically, the laws of supply and demand eventually would bring farm output into balance with effective markets—but this harsh kind of "adjustment" can bring all of agriculture close to bankruptcy, a price this country no longer is prepared to pay. At the same time, the present so-called control programs have been overridden by rocketing yields.

2. Is the family-type farm going to be abel to maintain its traditional key place in the new kind of agriculture that rapidly is evolving? If so, how? The tide of mechanization and specialization means, as a rule, that small farm units must consolidate into larger ones to utilize modern machines and methods. Capital investment and costs per farm unit continue to expand. A Corn Belt farm, which represented a prewar investment of $29,000, now stands at $97,000. Perhaps just as the small, independent craftsman disappeared from industry, so the small, independent farmer is doomed to disappear from our agriculture, to be replaced by large, industrial-type operations. In any event, within the past 10 years alone the farm population has shrunk by more than 5 million.

3. Must national farm policies continue to be negative in concept, designed only to fight rearguard actions against advancing technology? The most urgent need of agriculture today is a positive means to move its booming output into useful consumption. If a positive attack on the problem requires subsidy, the taxpayers' money might be more effectively employed for the expansion of consumption, aiding needed improvement of the U.S. diet, rather than futile acreage control. In addition, the vast supplies of dried milk, flour, soybeans, butter, and rice that are sterile surplus can become highly useful capital when transferred to backward, hunger-ridden nations. The United States now is disposing of some surplus commodities to such nations, but the times call for a much bolder approach, such as large-scale loans of surplus commodities to friendly countries, wherever these can become sources of energy for self-development.

We can, of course, drift along, risking a farm depression and the sorry spectacle of the leading capitalistic nation smothering in its own plenty. Secretary of Agriculture Ezra Taft Benson has urged that Government price supports to farmers be made flexible, so that they could be used to discourage, rather than encourage, the output of surplus crops. No doubt this would lessen the heavy drain on the Treasry, but it will take far more than a rejiggering of price supports to convert our farms' superproductivity from a liability into the national and international asset that it should be.

Your Stake in Inflation Fight

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Provo Daily Herald of May 6, 1959.

The editorial outlines very effectively the inflationary pressures at work in our economy, and calls attention to the things we must do if we are effectively to combat the wage-price spiral and the inflationary effect of further deficit spending.

I recommend this editorial to every Member of Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOUR STAKE IN INFLATION FIGHT

You central Utahans have watched inflation shrink the dollar in your pocket year after year.

Like people throughout the Nation, you've seen it siphon money from your pocketbook, wither the value of your savings, your insurance, your bonds. You've seen it blight your pension and your social security reserve.

Some months the insiduous eating-away process of inflation tapers off or even stops. In recent months it's been like that. But today the threat of a new inflation hangs over you.

New big union wage contracts have to be talked out and agreed upon in the days and weeks ahead. If higher wages are followed by price boosts, as so often happens, then the corrosion will begin anew.

There's more. If the Federal Government, deep in the red this year, should run a sizable deficit next season, big borrowing will be needed. That will add to the inflationary pressures.

President Eisenhower called Tuesday for mobilization of public opinion against any steel industry wage agreement that would be clearly inflationary. He appealed to both management and labor to use good sense, wisdom, and economic statesmanship, and hinted the Government might step in should they fail to do so.

Both sides pledged sincere efforts to reach a noninflationary pact, but their positions were so far apart that many observers are forecasting a strike when the present contracts, covering half a million workers in the basic steel industry, expire June 30.

Does the public have a stake in the present union-management contract negotiations? It certainly does. Anybody who thinks otherwise has another guess coming.

The public is getting sick and tired of the same song-new verse pattern of prices being raised after a new wage contract, further corroding that already anemic dollar.

Almost everybody recognizes the painful pointlessness of the wage-price spiral. The same goes for a strike, which can do everybody concerned—the workers, the companies, and the public—great harm.

Samuel Lubell's newest researches for United Features claim that across the Nation most steelworkers don't want another pay raise if it will touch off another round of price increases.

Most of us recognize, too, that our pocketbooks are going to get thinner if Government steadily spends more than it takes in.

We understand that a big country can't be run by a small Government. You can't power a tractor-trailer with a bicycle motor. We're aware also that as we grow, our needs will go on multiplying.

But bigness is not and never was an excuse for inefficiency, wasteful duplicating, unnecessary spending of your money. You have a right to demand that every dollar be well spent and fully accounted for, and to ask that the unneeded dollar be left in your pocket.

Because essential spending today is so immense, it becomes daily more urgent that the executive agencies of Government and the watchdogs in and out of Congress carve from the budget every last unessential penny.

At this time, it appears that the most significant thing anybody can do in holding the line is for both sides in the steel industry contract negotiations to follow President Eisenhower's advice and come up with an agreement, within the deadline, that will not result in a new inflation-triggering steel price.

With an attitude of give-and-take, it should be possible to negotiate a compromise, without Government intervention, that will prove satisfactory without upping steel prices and touching off a new round of price increases across the country.

What can you, Mr. and Mrs. Average Citizen, do in the overall war against inflation? You can take a cue from the President and do your part in mobilizing public opinion against a new damaging wage-price spiral.

You can do something else, too. You can let your representatives in Washington know that you expect Government to eliminate useless spending—to cut out needless junkets, avoid duplication, end payroll padding, insist on strict efficiency, etc.

Make use of your citizen's privileges to be heard. Maybe some sharp prodding from you and fellow citizens throughout the country can impress the watchdogs of the Treasury to do more than bark at the shadows. Public opinion can be a powerful tool. The trouble is, the people too often don't use it. They're too complacent.

Inflation is everybody's problem. Let's stir the public on this matter as it's never been stirred before. We must not sit idly by while wage-price spirals and excessive Government spending push prices higher and higher.

If everybody would take an interest, then we'd really get somewhere in the continuing battle to preserve the value of the dollar.

Soil Conservation Is Vital to Our Nation

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. YARBOROUGH. Mr. President, our Nation's soil is one of its most vital resources. We can see in other parts of the world what will happen if we do not care for our soil. Where once crops grew thickly and luxuriantly, improper use of the soil has caused the present barren condition. We cannot afford to allow this to happen here.

Soil Stewardship Week serves to point up the need for soil conservation and proper agricultural management.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on soil conservation which was printed on May 7, 1959, in the Sherman (Tex.) Democrat, an outstanding daily newspaper in Texas, under the heading "Soil Conservation Vital."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOIL CONSERVATION VITAL

Stewardship of the soil is an especially live topic this week. It is national Soil Stewardship Week.

Highlight of the local observance is the staging of the annual banker's dinner at Gainesville for the Upper Elm-Red Soil Conservation District, in which most of Grayson County belongs.

Soil conservation districts of the Nation also have invited churches and civic clubs to devotes attention to the important matter of saving the soil.

The Democrat today is issuing a tabloid edition devoted to soil conservaiton and this paper, together with the loyal advertisers who are saluting the conservationist farmers of the area, join in the national acknowledgement of the importance of agriculture to the American economy.

People who live in the city, though they may never see a harvest, have a direct interest in the soil from which they receive many of the products they use. The shelf or bin in the grocery store is only a step from the soil in which the food was produced. No one is far removed from the soil, its blessings and demands, though he may dwell in an apartment or in a crowded city.

The contribution of the city family in soil and water conservation may come mainly in support given the national effort in soil and water conservation. City dwellers who own agricultural land have an obligation just as those who live on the farms and ranches, to use and keep the land according to the Creator's design. Their responsibility is to encourage good soil stewardship on the part of those to whom they rent or lease the land.

In some nations of the world, famine is the ever-present danger. Men and women live their lives without knowing how it feels to have enough to eat, and lives of families hang in the balance between existence and starvation.

In many of these starvation-plagued countries, the land once yielded bountifully. Unwise use of the land, which permitted erosion to steal away the productive power of the soil, changed abundance into want.

When the soil's precious resources are destroyed, it takes a long time to return the soil to its useful state. It is much wiser to prevent the destruction, to conserve the land and to build up its productivity for the future. In our generation we have seen the cost of neglect of soil, thousands of acres that once produced for family needs now lying idle and unproductive.

With intelligence and foresight we can prevent the tragedy that has befallen other areas of the world.

Tribute to J. Edgar Hoover

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. WILEY. Mr. President, today I rise to pay tribute to a great man, Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation.

For 35 years, Mr. Hoover has served as our Nation's No. 1 G-man. During that period, he has—by foresight, dedication, tireless devotion to duty, and pursuit of well-founded objectives—created for our country the most efficient and effective investigative agency in our history.

In protecting our citizens, and our country, from criminals, subversives and other such dangers, the FBI has established for itself a unique reputation, deserving the respect of all men.

The record of service to our country by Mr. Hoover and the FBI, is unmatched in history, defies description and evaluation. Like my fellow Americans, I can only warmly pay tribute to the dedication, heroism, devotion, and unique qualities of the constructive work by Mr. Hoover and his fellow members of the FBI, much of which will forever remain a secret from the world.

Recently the Milwaukee Journal published a detailed article entitled "FBI Chief 35 Years; Still Zestful," reviewing our No. 1 G-man's outstanding contribution to law enforcement in this country.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, May 8, 1959]

FBI CHIEF 35 YEARS, HOOVER STILL ZESTFUL—NO. 1 G-MAN SHOWS SAME SPIRIT IN JOB HE DISPLAYED ON TAKING IT WHEN 29

(By Jack Adams)

WASHINGTON, D.C.—The Nation's No. 1 G-man reaches an important milestone Sunday—35 eventful years as boss of the FBI, and the longest tenure for a Federal agency head in the country's history.

But there is every evidence that John Edgar Hoover has the same drive and zest

for his job that marked his wonder boy era in the roaring twenties.

That era had its start when Hoover, just 29, was placed in charge of a discredited, scandal ridden organization of political hacks whose staff reputedly included some ex-convicts. It is history now—the story of how he cleaned out the Bureau with a stern hand and went ahead to make it one of the world's most renowned and most respected investigative agencies.

HE WAS 64 ON JANUARY 1

Hoover, who passed his 64th birthday January 1, has no thought of retiring.

A few days ago he told me: "Old age will have to run mighty fast to catch up with me."

The FBI director serves at the pleasure of whoever happens to be Attorney General. Hoover, who has no political affiliation, has held the job under five Presidents and a dozen Attorney Generals, Democrat and Republican.

Attorney General Rogers laughed off a question about a possible Hoover retirement and said:

"I am the 12th Attorney General who has had the privilege of working with Mr. Hoover in the 35 years he has directed the FBI. This is a demonstration of the working of the immutable law of the survival of the fittest. I am sure each of my 11 predecessors have felt as I feel, that without Edgar Hoover his task would have been immeasurably harder."

POSSIBLE SUCCESSORS

Who would succeed Hoover if he should retire? One rarely hears talk about a successor, but two names are mentioned occasionally: Clyde A. Tolson, the associate director who has worked at Hoover's side for 31 years, and Edward A. Tamm, who was assistant to Hoover for 20 years before accepting a Federal District judgeship in the District of Columbia.

A bachelor, Hoover lives in a modest home in a fashionable Washington neighborhood with his two Cairn terriers—and raises roses in his leisure hours.

He believes in keeping fit. Just under six feet, he watches his diet and keeps his weight at 175 pounds. Weather permitting, he daily dismisses his car a mile short of his office in the Justice Department building and strides the last lap at a gait that frequently winds companions.

Hoover reads several newspapers every day—including the comic strips and everything in the sports section. His favorite books are the biographies of great Americans.

GIVES SOME ADVICE

At the office, he maintains constant personal touch with everything of importance that is going on at the moment. There is a standing rule that any employee who wants to see him has only to ask.

I asked Hoover what kind of qualities a young man of today should have to make a success of an important job. He said:

"Most important, to my mind, is humility—to remember that he is not trying to build his own reputation but is serving his fellow man. Many careers are wrecked when individuals forget the role of service and follow their own personal desires, whether for money, social position, prestige, etc. In our society today, the greatest opportunities are those of helping others.

"Next is integrity—that is, being a man of your word. If you say one thing and do something else—well, that is the way to undermine your reputation among others. Stand for what you think is right, regardless of criticism.

"Also, there is hard work. Over my 35 years I can truthfully say that there is no substitute for hard work. To guide your career just by the clock is to lose the true meaning of a job. Give your job your whole heart. If a job is worth doing, do it well."

BEST REMEMBERED DATE

Out of a treasure trove of memories as gang buster, crusader against communism, constant champion of better trained, better paid police, what does Hoover remember best?

May 10, 1924, of course. That was the date Attorney General Harlan Fiske Stone, later Chief Justice of the United States, called him in to take over the FBI. Hoover recalls: "The tone of his voice was such that I knew he was depending on me and I had to do the job right. When a man puts confidence in you, you simply have to live up to that trust. Over the years I've found that this is indeed a good guide to life. That decision put me on the spot. I had to succeed."

May 1, 1936: Hoover flew to New Orleans and personally arrested Alvin Karpis, the No. 1 bad man of his day, who had been boasting that he planned to rush Hoover's office in Washington and kill him.

HE RECALLS PEARL HARBOR

"I remember that day well," says Hoover. "We in the FBI had a deep feeling of satisfaction in finding Karpis. He was a badly wanted fugitive. His arrest helped us defeat the criminal gangs of that day."

December 7, 1941: Pearl Harbor day. Says Hoover: "When the Japanese bombs hit Pearl Harbor, we in the FBI placed into immediate operation previously prepared plans for guarding the Nation's internal security. I was proud of the way FBI employees responded to the challenge—working around the clock to do their job. This was typical of their loyalty to duty."

And finally, May 22, 1950: That was the day that Harry Gold, master Russian atomic spy, confessed his activities after being picked up by the FBI. That confession broke the back of atomic spying in this country.

"Those were busy days at the FBI," Hoover recalls. "Atomic bomb secrets had been stolen by the Russians. The spy was here in the United States—somewhere. We had to find him. We did—a chemist in Philadelphia, Harry Gold. This meant that one of our most important cases had been solved."

Gold, who pleaded guilty to an espionage charge, is now serving a 30 year prison term.

National Parks Increase Tourist Trade and Traffic

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. NEUBERGER. Mr. President, hearings have been started on the Indiana Dunes National Monument bill authored by the distinguished senior Senator from Illinois [Mr. DOUGLAS].

The Subcommittee on Public Lands, headed by the able senior Senator from Wyoming [Mr. O'MAHONEY], is conducting these hearings.

We hope for similar hearings on our Oregon Dunes national seashore bill and other legislation to create reserves for recreation and rest and relaxation in the vast American outdoors.

Now, the Eugene (Oreg.) Register-Guard of May 3, 1959, has published a most informative editorial entitled "Park Impact," demonstrating how such areas as the Great Smoky Mountains National Park has increased tourist trade and traffic by many times over.

I ask unanimous consent that this editorial from the Register-Guard of Eugene be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PARK IMPACT

Some who object to the proposal that a National Park Service preserve be established south of Florence object because of what to them seem to be economic reasons. Figures on the economy of communities around the Great Smoky Mountains National Park should be of interest. That park, on the Tennessee-North Carolina border, is much bigger than the proposed sand dunes area and it is much closer to the population centers. But in one important respect it is similar. No tourist facilities are operated by the park. Lodgings, meals, souvenirs, etc., are sold on the park boundaries by private operators.

Since 1947 traffic on North Carolina highways has increased 88 percent. But in the Great Smokies traffic increased 140 percent. In 1956, 1,559,703 people entered the park. Of these 87 percent were on pleasure trips. They spent more than $26 million that year in the immediate park area. Some were 1-day visitors; others stayed overnight, either at private accommodations on the park fringe or at camps inside the park.

Since creation of the park, the report of the two States' highway commissions asserts, the tourist business has become the economic backbone of the area. Resources are not depleted. The money that is spent there is money made elsewhere.

The two States look forward to an even bigger volume in future years. More than 4 million visitors are expected annually by 1966. In the park area itself, the park has proved popular with the natives who see the wisdom in that old slogan of southern hospitality: "A tourist is worth two bales of cotton, and he's twice as easy to pick."

Challenge to a Basic Freedom

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in a recent issue of the San Francisco Chronicle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHALLENGE TO A BASIC FREEDOM

The U.S. Supreme Court, which traditionally guards against temptations of emotion, prejudice, or any lesser considerations than the ground rules imposed by precedent and the Constitution, veered dangerously close to expediency last week. A precedent-shattering decision would allow health inspectors to enter homes without a warrant.

The decision was based on a Baltimore, Md., ordinance which permits inspectors to enter houses where there are valid grounds for believing unsanitary conditions exist.

The entry must be in daytime and inspectors must not use force.

Justice Felix Frankfurter wrote the 5 to 4 majority opinion for the Court. After citing "the increased awareness of the responsibility of the State for the living conditions of its citizens," he asserted that health inspection "would be greatly hobbled by the blanket requirement of the safeguards necessary for a search of evidence of criminal acts."

Dissenting were Chief Justice Earl Warren and Justices William O. Douglas, Hugo Black, and William Brennan. In his dissent, Justice Douglas charges the majority opinion "greatly dilutes the right of privacy which every homeowner had the right to believe was part of our American heritage."

In the Constitution this right is spelled out in the fourth amendment, which prohibits "unreasonable searches and seizures.'"

Justice Douglas argued that "one invasion of privacy by an official of government can be as oppressive as another." He said:

"The fear that health inspections will suffer if constitutional safeguards are applied is strongly held by some. Like notions obtain by some law enforcement officials who take shortcuts in pursuit of criminals. The same pattern appears over and over again whenever government seeks to use its compulsive force against the citizen." There is no reason, he declared, why health inspectors, like policemen, should not be required to obtain warrants before entering homes.

Or, as the elder William Pitt said long ago: "The poorest man may in his cottage bid defiance to all the force of the crown. It may be frail; its roof may shake; the wind may blow through it; the storm may enter, the rain may enter—but the King of England cannot enter; all his force dares not cross the threshold of the ruined tenement."

The Supreme Court, in the school segregation decision in 1954, and again in the historic Jencks case in 1957, made it clear that neither expediency nor public approval is a proper yardstick. In the health inspection verdict, the Court teetered towards expediency. We join Justice Douglas and his colleagues in dissenting from the majority.

The American Way of Life and Its Comparison to Communism

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. YARBOROUGH. Mr. President, as a great thinker once said, each generation and individual must realize again for themselves and himself the blessings of freedom and liberty.

These wonderful privileges were won for the United States by our forefathers, who were willing to fight and die for them. I feel our modern generations have also shown they understand the magnificent heritage their ancestors have handed down to them.

Miss Wanda Brinkley, a student at the Houston, Tex. Vocational-Technical School, recently wrote an editorial for the school paper which, I feel, interestingly compares our heritage of freedom with the Communist inheritance of fear.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial by Miss Brinkley, which appeared in the Reporter for March 27, 1959, under the heading, "Why Is Our American Constitutional Way of Life Incompatible With Communism?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY IS OUR AMERICAN CONSTITUTIONAL WAY OF LIFE INCOMPATIBLE WITH COMMUNISM?

(By Wanda Brinkley)

The Constitution of the United States is unique in that certain powers are given the Government, certain powers are denied the Government, and individual personality and rights are assured the people. There is no discrimination between one who is capable and one who is not. Each person is treated as an equal in the eyes of the law.

The communistic way of government is "all for the government and nothing for the people." The people live for their state and die for it. They don't have enjoyment and recreation such as baseball, television, radio, or any other free-from-government pleasures. The Communist people are limited in their participation in sports, engaging only in those that would bring glory to the state. They are not to think, but to perform.

The Americans have the liberty to do almost anything they want that is not outside the law. They are informed on all governmental issues by the free press and other media of communication, whereas the Communists are not allowed to listen to certain speeches of governmental procedures, or to print uncensored newspapers. The Communist government keeps its progress and defeats a secret.

In America the men and women who want to enlist in the military services may do so when they reach the age of 18. The Communist people are sometimes compelled at an early age to leave their homes and family to be trained in the science or military fields.

Education in the Communist-dominated countries is restricted to those who have a superior intellect, and their education is highly restricted as far as subject matter is concerned.

In the United States all children have an opportunity for at least a high-school education, even though they be of below normal intelligence.

Look around you. How many luxuries do you have. Look in your refrigerator at the various assortment of different foods. Look in your cabinets and observe the amount of canned goods and cooking utensils. Do you think all Communist people have these?

In the United States even the lowest class of people have a moderate amount of luxuries; compared to the Communist people they would seem like a heaven on earth. Most American families have at least three good meals a day and the items used in preparing these meals are not rationed. They did not have to stand in line from dawn till dusk to purchase the food, only to hear, "Sorry, but we are sold out." How do you think the people under Communist rule would react to these luxuries? Do you think that they are able to walk into a store like we do and purchase them without opposition?

The wages of the Communist people are not sufficient to provide them with money to purchase the necessary items that are essential to everyday life. The working class of people make barely enough salary to survive. There is no going to driveins, rodeos, carnivals, or dances to break the built-up tension of monotony in their everyday life. For most of them, it is eat, sleep, and work, but most times there isn't enough to eat.

Have you ever seen pictures on how people dress in the communistic countries? Does it look dowdy compared to our highly fashioned clothes? The Communist people have, if they are lucky, only four changes of clothes to last them a year or more.

In America, people don't have to wear ragged clothes or unsoled shoes; they dress nicely because the price of these items are not half as high as in the communistic countries.

Communist people have no choice as to the variety of their religious life, whereas, the American people have the freedom to worship as they please. There are no commands as to the church or the religion they may worship. In our country, this subject is left entirely to the people themselves.

So you can see why our American constitutional way of life is incompatible with communism.

Spirit of Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. WILEY. Mr. President, as we face the challenges of the future, we recognize that our country will depend not only upon national programs, but upon the strength and spirit of individual States in our Republic, to meet these challenges.

During a brief lifetime, we in Wisconsin are proud of the progress and accomplishment attained by our Badger State.

Today Wisconsin is the leading milk producing State in the Union, with an output of about 18 billion pounds annually. Our Wisconsin cheese is famous among lovers of "good food" everywhere.

Wisconsin, too, has pioneered in social legislation—providing pensions for the blind in 1907, aid to dependent children in 1939, and old age assistance in 1925. In 1932 our State enacted the first State unemployment compensation law in the country. In addition, we adopted the first statewide primary election law.

In reviewing these marks of progress, it would be only reasonable to also include the enthusiastic, constructive, farsighted support which Wisconsin citizens have given the St. Lawrence Seaway project—the greatest inland waterway development program on the North American Continent.

In addition, our Badger State has a splendid record of progress in development of industry and manufacturing, agriculture, conservation, reforestation, education, and many other cultural fields.

We recognize, of course, that the spirit of a State is more than land, water, and facts and statistics in the record book; rather it is the spirit, ideals, integrity, dedication of its people.

As a State, Wisconsin has shouldered its burdens, fought its way, contributed its share to an ever-greater progress for our Nation.

In the May edition of Wisconsin Alumnus there is a splendid article entitled,

"What is Wisconsin?" written by Lindley J. Stiles, dean of the School of Education at the University of Wisconsin.

In a beautiful portrayal of ideas, Dean Stiles has touched the pulse of Wisconsin, revealing poetically and dramatically the spirit of what is Wisconsin.

I ask unanimous consent to have Dean Stiles' article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Wherever man is, there too is the University of Wisconsin. Its boundaries are exceeded only by its influence; its influence is surpassed only by the devotion accorded it by alumni and friends throughout the world. What is this university? How may its personality be described? Why has it been imitated the world over, but never duplicated? What does Wisconsin symbolize in American higher education?

The University of Wisconsin, above all, is a spirit, a philosophy of life and learning, an idea. An idea as simple as it is potent. Yet, too, the university is a song, played briskly by a fast-stepping marching band, sung with deep feeling and reverence in a far away land, or intoned softly by the chimes of the carillon tower. A poem, painting, statue, concert, dramatic production, newspaper—ah, yes, Wisconsin is all of these.

For many the university is such a parcel of interwoven personal memories that only a sigh and a quiet smile can do justice to their complexity. They remember a boy and girl kissing goodnight in front of Elizabeth Waters Hall or strolling gaily along the lake to Picnic Point. They recall a girl on skis falling down on Bascom Hill, a can of beer, a glass of milk or a cup of coffee with a friend—and classes. These recollections surely are Wisconsin, but they are other universities as well.

What is Wisconsin?

Wisconsin is milk cow, eating the finest foods that chemistry can grow, in the shade of an elm tree.

Wisconsin is a circuit rider carrying the word of truth to farm, village and city, that all may better live.

Wisconsin is a laboratory where dedicated men and women search to know that others may benefit.

Wisconsin is a lake, a hill, some trees—and controversy, especially controversy.

Wisconsin is a teacher, wise, inspired, dedicated, learned, human, helping students set facts and principles to ideas.

Wisconsin is a Street of State, lighted by the lamp of learning, with the approving countenance of Mr. Jefferson clearly visible from the clouds above. It is a student on a soap box impatient with the times arguing that others have a better way, with few listeners, but all ready to defend his right to express his views.

Wisconsin is a library filled with books—all open.

Wisconsin is a meeting place of ideas, cultures, religions, races, nations; but mostly of people.

A quiet man studying Greek, a doctor kneeling at the bedside of all the sick, an engineer planning a bridge across the world—these are Wisconsin.

Wisconsin is an atom—split asunder.

Yes, Wisconsin is a woman, too; a pioneer woman unafraid of work, a homemaker, a scholar and teacher holding high a torch, quietly moving toward equality; a lady, splendid and wise, dressed in purple with a bird of fire circling around her shoulders; a bathing beauty, lounging on a pier with one pretty ankle dangling in the cool waters of Mendota, reading a treatise on American foreign policy. Wisconsin is a statute of Mother and Child.

Wisconsin is a true record of the past married to the present to bring forth the future. It is a giant enterprise that operates at a profit for all.

A monkey teaching a professor; bankers and businessmen going to school; a lawyer reading from his books in the State legislature; and controversy, sharp, sincere, and at times bitter debate—these are Wisconsin.

In another land, the University of Wisconsin is a happy child free from pellagra.

Wisconsin is work before play, mind before the material, character above all.

Controversy is the university. It is eternal conflict between fact and opinion, error and truth, prejudice and tolerance, rights and responsibilities, with newspapers and citizens rallying forces; professors with cap and gown aside mixing in the common brawl—and an editor.

Wisconsin is a week in January between semesters; a stateman pleading that all should rule, and be ruled; a machine testing butterfat. It is an athlete with strong and agile muscles running a race with a Bucky Badger between classes.

Wisconsin is an invigorating climate, both physical and human, that challenges all to play over their heads. It is the itch of curiosity and creativity with unlimited ability to scratch. Wisconsin is both a tender mother encouraging the weak and a stern father admonishing all to do better.

Wisconsin is Christianity and all other religions, all denominations and faiths. It is a priest, a rabbi, a minister talking quietly with a group of students away from home. Wisconsin is equality, democracy, freedom, opportunity, humanity. It is a statue of Lincoln; a flag and a plaque on Bascom Hall.

Yes, Wisconsin is a spirit that encircles the world and reaches into space. It is an idea: that truth in the hands of people is the end of education.

What is Wisconsin? Touch a human being any place in the world and you will feel its image. Listen to the wind and you will hear its song. Watch a shooting missile and you will feel its power. Take a walk in the sun; you will feel its energy. Sit quietly in the shade of a tree by a lake; you will feel its beauty. Search your soul and you will find its values. Recall the passage, "Ye shall know the truth and the truth shall make you free;" and you will catch its spirit and know its mission.

Revelry in the Face of Danger

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent column by Ralph McGill. Mr. McGill has this month been the recipient of the Pulitzer Prize for distinguished editorial writing. Mr. McGill not only serves as editor of the Atlanta Constitution, but his column is now carried by papers over the country. Mr. McGill is one of the ablest modern writers of short essays. This column is but one example of his gifted pen and mind.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Atlanta Constitution, May 9, 1959]

REVELRY IN THE FACE OF DANGER—THOUGH MANY SEEK TO ESCAPE CRISIS BY IGNORING IT, HOPE IS SEEN

(By Ralph McGill)

A friend of mine from New York, whose trade is to work in that nebulous but exacting field called public relations, and whose further chore it is to entertain various clients whose bents run often to night clubs and the like, came to see me.

He looked haggard and there was no bounce in his step, and the bounce, as one and all know, is a necessary attribute of a man whose task it is to bring sweetness and light and mutual admiration where none, or little, before existed.

"I never saw such a frantic season," he said. "Night clubs in New York are doing well and in New Orleans the Bourbon Street strip and jazz joints are jumping with persons energetically seeking recreation. It fretted me because they were working so desperately hard at it."

He paused and sighed from way down deep.

"I wrote something down for you," he said, and took from his pocket a sheet of folded paper. He read from it:

"With the enemy's approach to Moscow, the Muscovites' view of their situation did not grow more serious, but on the contrary became even more frivolous, as always happens with people who see a great danger approaching. At the approach of danger there are always two voices that speak with equal power in the human soul: one very reasonably tells a man to consider the nature of the danger and the means of escaping it; the other, still more reasonably, says that it is too depressing and painful to think of the danger, since it is not in man's power to foresee everything and avert the general course of events, and it's better therefore to disregard what is painful till it comes, and to think about what is pleasant. In solitude a man generally listens to the first voice, but in society to the second. So it was now with the inhabitants of Moscow. It was long since people had been as gay in Moscow as that year."

"I won't ask you to be a quiz kid," he said. "That's from Tolstoy's 'War and Peace,' and the antics of myself and my fellow man over the weekend impressed it upon me."

I reached over to a shelf and got Byron's poem, "Waterloo," which deals also with a latter event in the history of Napoleon. It begins:

"There was a sound of revelry by night,
And Belgium's capital had gathered then
Her beauty and her chivalry, and bright
The lamps shone o'er fair women and brave men;
A thousand hearts beat happily, and when
Music arose with its voluptuous swell,
Soft eyes looked love to eyes which spake again,
And all went merry as a marriage bell;
But, hush, hark! A deep sound strikes like a rising knell!"

It was the beginning of Waterloo and the destruction of the Napoleonic power.

This human, but nonetheless curious, effort to escape from the reality of a situation was never better illustrated than in the Confederate capital city of Richmond in the last anguished months before it fell. Mrs. Mary Boykin Chestnut's "Diary From Dixie" reports its frivolous, almost frantic, attempt to disregard what is painful until it comes.

Today many Americans are heeding what Tolstoy called "the second voice." They squirm away from the reality of the sacrifice in taxes and goods which must be made. They try to find an escape in criticism and doubting.

But there are enough who will face the issues to solve them. There is within the Republic the will and intelligence to find ways and means to meet the threat which is of war, yet not war alone, but war plus a fanatic ideology appealing to millions long without food, direction, education, information or any concept of order. Those who insist on listening to that second voice are just the extra weight we must carry into the fight.

The Citizen and His Living Faith

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. WILLIAMS of New Jersey. Mr. President, in a very particular sense, the citizens of New Jersey have suffered a tremendous loss in the untimely death of Deputy Defense Secretary Donald A. Quarles.

Our State was proud indeed to claim him as our very own, since it was in New Jersey that he chose to make his home. Before his entry on the national scene, he served his home city of Englewood as president of the common council and as mayor. We therefore knew him well, and we followed his career with great personal interest and a deep feeling of pride.

Although we have lost a great citizen, we have the honor of having a living monument to his memory in New Jersey: the elementary school which bears his name. New Jersey will not soon forget Donald Quarles.

I have before me an editorial from the Bergen Evening Record of May 9, 1959, entitled "The Citizen and His Living Faith." It seems to me that no other title so aptly describes him and I ask unanimous consent to have this article printed in the appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Bergen Evening Record of May 9, 1959]

THE CITIZEN AND HIS LIVING FAITH

When the Englewood Board of Education decided by unanimous vote last October to name the new Davison Place elementary school for Donald Aubrey Quarles it did a just and graceful thing which, as was suggested at the time, should be explained to the children who will swarm into the school this fall. Mr. Quarles, who returned to Englewood in November to lay the school cornerstone, was not only—if "only" is the right word—an eminent and honored citizen of the republic. Here it was noted (and we're glad now we could say it while he was with us to hear it):

"He is also the very symbol of an educated man, a scientist at home in the remote reaches of research and theory and at home too in the application and use of pure science's findings. He is, yet again, the very symbol of the intellectual as citizen: member of the board of adjustment, president of the common council, chairman of the board of school estimate, mayor, and servant of his city and county and State in other, often humble, offices. He is the citizen as soldier, from field artillery captain in World War I to his present assignment in charge of defense research and development."

Mr. Quarles, as it turned out, did not at the school ceremony speak on the credo he lived by. We had hoped he would: "It would give any of us, student in Quarles School or adult citizen, a version of democratic responsibility to live up to." Don Quarles, sensitive and articulate as he was, never did get around to talking credo. He lived credo. In the sudden death of its Deputy Secretary of Defense the Nation has lost a public servant of the highest, which is the selfless, kind. We whom he was first to serve have lost a good neighbor and a humble and dedicated friend. From us cannot be taken the clear and tranquil image of the philosopher who was soldier and statesman, in his person a working version of democratic responsibility who understood his faith and kept it.

The GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup dated May 12, 1959.

There being no objection the roundup was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP

What about the wheat referendum? That is a question a lot of wheat farmers are wondering about. They want the answer, and so far the Secretary of Agriculture has been as mum as a clam. But on Friday, May 15, the Secretary must show his hand—unless Congress gives him more time to make up his mind. And wheat farmers want to know what kind of a wheat referendum the Secretary of Agriculture will unfold at the last minute. So does Congress.

What the Secretary of Agriculture does will be watched closely because the chances are 10 to 1 that it will be part of the crowbar technique of tearing down the present farm program of production control and price protection. That we know, because the Secretary of Agriculture already has announced that he wants to eliminate any of the New Deal farm programs that are on the books before he steps out of office, maybe next year. This is part of the Secretary of Agriculture's party politics.

But that does not mean that every Republican in Congress backs the Secretary of Agriculture or the White House in this scheme. Some of the Secretary's severest critics and most outspoken opponents are Republicans from these spring wheat States. They want a strong, sound, workable farm program that gives farmers protection (and protects consumers from high food prices) such as the Democrats do.

But the trouble with the Republicans is that they are stuck with what is called the Benson tag and it is guilt by association. These Republicans know it and know there is not much they can do about it no matter how hard they try.

The Secretary of Agriculture is on the same team with them and is calling the signals for dismantling the price support program.

We want to talk about the politics involved because GTA's general manager, M. W. Thatcher, was in Washington last week.

There were a lot of important matters to discuss, such as co-op taxes, the faked scandal about grain storage, the big noise about the Secretary of Agriculture's newest mess, and the need for farm groups to get together on a farm program and farm prices.

The farmers know that the situation is not as hopeless as the papers make it out. With a little more hard work on some of the Republicans who have been whiplashed by the Secretary of Agriculture, there can be enough Republican and Democratic votes to override any veto the Secretary can get from the White House. Four little votes is all that it will take in the House.

So that means getting four more Republican votes in Minnesota, Wisconsin, and the Dakotas to support a good farm program and keep the Democrats in line.

Can it be done? Well, it may be hard but, says Thatcher, it is not impossible.

The Senate override of the White House veto on REA has shaken the confidence of the Department of Agriculture and strengthened the rebellion of the Republican farm Senators.

And it was only the terrific effort of Minnesota Congressman ANCHER NELSEN that whipped up the necessary four Republican votes to support Secretary Benson. Maybe next time there will be a change.

Now, some city people may well ask why a co-op such as GTA, which handles grain for the farmers who own it, is concerned with such matters—as farm prices being made in Washington. The reason is obvious to farmers. They own GTA and want GTA to speak up for them both in Washington and in the grain markets. As a matter of fact, GTA had an opinion poll taken in the Dakotas to find out how many farmers wanted GTA to keep on doing everything it can to help get a better farm program and better farm prices. Well, 12 percent said "We should just stick to our business." Sixty-eight percent said "Get out there and pitch. Do everything you can. Just marketing grain is not enough." Twenty percent said they were undecided but maybe GTA was doing right.

So, for the thousands of farmers who want GTA to do everything it can to help farmers, we remind you that this is GTA the Co-Op Way.

Charles Howard Silver: School Humanitarian

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. KEFAUVER. Mr. President, Charles H. Silver, the chairman of the school board of New York City, is an outstanding and able public servant.

I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful article about Mr. Silver and his work, which was published in the New York Times of May 13.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOOL HUMANITARIAN—CHARLES HOWARD SILVER

When Charles Howard Silver was a boy on the lower East Side around the turn of the

century, there were two professions that were held in particularly high esteem by the Jewish immigrants who then largely inhabited the area.

One was education and the other was medicine. Mr. Silver, who left school at the age of 15 to help support his family, did not enter either field, but he has since made his mark in both. Yesterday he was elected to his sixth term as president of the city's board of education, which oversees a school system of nearly 1 million pupils. And he is serving his 13th year as president of Beth Israel Hospital.

Impressive in appearence, Mr. Silver stands 5 feet 11 inches tall and weighs 190 pounds. He has silvery white hair and a ruddy complexion.

RETICENT ABOUT HIS AGE

A friendly, voluble person, he is reticent about only one thing—his age. He professes to be 70, although he looks years younger. Intimates, however, think that he has subtracted 1 or 2 years from his age and that he intends to remain 70 for as long as Jack Benny stays 39.

Whatever his age, he is a man of extraordinary vitality and enthusiasm for work, and his daily activities often tire much younger associates. He is an early riser—one of his first chores is to read the morning newspapers (and he is not adverse to reading about himself). He usually arrives at the board of education offices in Brooklyn shortly after 9 a.m.

He spends almost a full day at the board or working on school matters—when his schedule permits he likes to visit schools and chat with teachers and pupils—and around 4 p.m. he goes to Beth Israel Hospital. He has been a trustee of the hospital for 30 years, and in 1954 a new clinic was named in his honor.

After he takes care of administrative matters, he likes to visit the wards and talk to patients. He has been known to spend hours at the bedside of critically ill or elderly patients who have no relatives or friends, in an attempt to bolster their spirits.

Around 7 o'clock he goes home to dinner in their Central Park West apartment with his wife, the former Hannah Bernstein. They have three children and six grandchildren.

In recent weeks, however, the hospital strike has played havoc with his schedule.

Born in Rumania, the youngest of six children, Mr. Silver came to this country with his family when he was 30 months old. While attending public school, he worked afternoons and weekends for his father, who made suspenders in a little shop.

After being graduated from elementary school, he went to work full time as a $2.50-a-week office boy for the American Woolen Co. When he retired 5 years ago, he was a vice president of the company and a member of the board of directors. His annual salary was more than $100,000.

AIDS OTHER FAITHS

Mr. Silver over the years became active in scores of philanthropic and other organizations. An orthodox Jew—he is president of Congregation B'nai Jeshurun and vice chairman of the board of Yeshiva University—he has also been active on behalf of causes of other faiths.

He is a close friend of Cardinal Spellman and is vice president of the Alfred E. Smith Memorial Foundation, which helps support St. Vincent's Hospital. He has also headed fund drives for the Salvation Army.

Although he disclaims any political aspirations, Mr. Silver has been active—largely behind the scenes—in Democratic politics. At various times it has been reported that he turned down offers of nomination for such posts as mayor, city council president, Manhattan Borough president and Lieutenant Governor.

Although he never went to high school, he has received several honorary degrees, including doctorates from Fordham and Yeshiva Universities. He was appointed to the nonsalaried board of education in 1952.

A National Park on Padre Island, Tex.

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. YARBOROUGH. Mr. President, a sixth grade class in Houston, Tex., recently studied the proposed establishment of a national park on Padre Island, Tex.

Since another part of their study concerned their ability to express themselves in writing, their teacher, Mrs. James T. Reynolds, assigned them to write their opinions of the establishment of a national park on Padre Island.

Mr. President, the letters I hold in my hand are from tomorrow's citizens, and, as they themselves point out, the establishment of such a national park would preserve the beauty, history, and recreational and wildlife facilities of Padre Island for them and for their children and succeeding generations.

I ask unanimous consent to have these letters printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

DEAR SIR: I am glad that Padre Island is becoming a park. I hope they will not be too much boat racing. I hope my whole family can see Padre Island.

Yours truly,

MIKE MATHIS.

DEAR SIR: I am glad you are taking part of Padre Island and making a park of it. Then people can spend the night and stay there in the day.

Yours truly,

DENNIS WILSON.

DEAR SIR: I hear you are helping out on Padre Island. I think it is nice of you. It should be cleaned off around the water. They should have places to stay at night.

Yours truly,

TOMMY BROCK.

DEAR SIR: I am so glad that you and the other Congressmen are going to make Padre Island into a national park. People from all over Texas can visit Padre Island and have lots of fun.

Sincerely yours,

LOYD WILKERSON.

DEAR SIR: I am writing you about Padre Island. I am going to go to Padre Island when I get old enough. I think half of it should be for wild animals and the other half for a park like Big Bend.

Yours truly,

WILLIAM HOLCOMB.

DEAR SIR: I am writing to you about Padre Island. I think you are doing a nice job on Padre Island.

Yours truly,

NORMA ENAX.

DEAR SIR: I am writing to you about Padre Island. I think you should put wildlife in Padre Island. I hope your idea is right. When I get old enough I will vote for you.

Yours truly,

THELMA LOFF.

DEAR SIR: I have heard that Padre Island is going to be used for a national park. I very much like the idea.

Yours truly,

SANDRA ELLIS.

DEAR SIR: I am writing about Padre Island. I think it should be made into an animal kingdom and shelter spot. We always need more room for animals.

Yours truly,

WAYNE TRUSS.

DEAR SIR: As a future voter I say we should dedicate Padre Island as a national park. I request this because we need it for a national park and a wildlife conservation area. It may not be a necessity, but I think it would help our country. I think you have a good idea.

Yours truly,

WANDA GRAYSON.

DEAR SIR: I am glad that you are working for building a park on Padre Island for scientists to study sea creatures and animals.

Yours truly,

MICHAEL LARRY MCGRAW.

DEAR SIR: I want to tell you that I think it is a good thing for Padre Island to be a national park. I will soon be a future voter, and I will vote for Padre Island. It is a nice island to have things put on it. When it is finished maybe I will be married and my children will get to play on the things.

Yours truly,

MARY LOU CLUBB.

DEAR SIR: We appreciate what you have been doing to help make Padre Island a new national park. My class thinks that it would be a good thing. So please keep working on it.

Yours truly,

RICHARD UZZELL.

DEAR SIR: I think having Padre Island as a sanctuary is a right smart idea. As I will soon be a voter I believe I would vote for it.

Yours truly,

JAMES MEADOWS.

DEAR SIR: I am writing to you about Padre Island. I think it would be very nice to have part of Padre Island as a national park. It would be something different and better. I am a future voter and if I could vote I would vote yes to have a national park.

It would be very nice for camping grounds for the tourists. It would be nice for wild sea creatures to be in the national park, too.

Yours truly,

CAROL ANN FITE.

DEAR SIR: I am writing you about Padre Island. I think you should put animals in Padre Island. I think a park would be good where people can eat and enjoy the scenery.

Yours truly,

LENDA SIDES.

DEAR SIR: I hear we are going to make a national park of Padre Island. I like that idea very much. I think we could use it for a wildlife conservation, a tourist park, and a laboratory for scientist. If I could I would vote for it.

Yours truly,

JANE ANN SMITH.

DEAR SIR: I think Padre Island should be turned into a place where wild animals should be kept, and a place where sea creatures could be seen. It would be nice for tourist could see the sea creatures and animals.

Yours truly,

DARLENE HALL.

Money Back on Price Supports

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 14, 1959

Mr. WILEY. Mr. President, we recognize that the Nation faces serious, unresolved problems in agriculture.

Despite high costs, the farm program has not succeeded either in reducing surpluses or in solving the basic economic problems in this field. In effect, efforts to enact legislative remedies have not succeeded in curing economic ills. However, the continuation of the price support and other programs, until a better farm program can be established, has been deemed desirable.

However, I believe it is important to put the picture—particularly of farm costs—into proper perspective. For example, a recent report released by the U.S. Department of Agriculture reveals that the Federal Government—during the years in which the price support program has been in effect—has recovered 84 cents for each dollar spent for supporting prices of farm products.

We recognize, of course, that we have a responsibility for attempting to keep the cost of such a program as low as possible. However, I believe that it is important that the Nation be given the picture of farm expenditures in proper perspective so as not to reflect unfairly on the American farmer.

A recent issue of the Farmers' Union Herald, of St. Paul, Minn., contained an article entitled "Uncle Sam Has Recovered 84 Cents on Each Dollar Spent on Farm Supports." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNCLE SAM HAS RECOVERED 84 CENTS ON EACH DOLLAR SPENT ON FARM SUPPORTS

The Government will get back at least 70 cents of each of the approximately $9 billion it currently has invested in farm commodities, according to recently released USDA statistics.

Seventy cents on the dollar has been the recovery rate in recent years and, prior to time flexible supports entered the White House in 1953, the recover rate was even greater; so that the overall average for the entire 25 years that the price support program has been in effect is 84 cents on each dollar.

These facts explode completely the impression administration spokesmen are attempting to create with city people that the money the Government has tied up in farm commodities is money tossed down the drain.

Arthur W. Stockdale, editor of Agribusiness Outlook, emphasizes in a recent issue of that publication that the $9 billion the Government has invested in farm commodities is a good investment.

"The $9 billion has been pumped directly into the economy," Stockdale writes. "Most of it went to farmers who, in turn, spent it in their local communities thus helping to stimulate business. Hundreds of millions were paid to processors, rail and truck companies, the storage industry, etc. These expenditures fanned out through the entire economy and affect such things as industrial production, city employment, and consumer incomes."

Transfer Freedmen's Hospital to Howard University

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. WAINWRIGHT. Mr. Speaker, today I have introduced a bill to transfer Freedmen's Hospital to Howard University, with provision for construction of a new teaching hospital. I hope that Congress will give swift approval to this legislation, which will make possible the construction of urgently needed new facilities for Howard University's medical teaching program and for proper care of the patients at Freedmen's Hospital.

Action on this bill would not only help alleviate the national shortage of medical and allied personnel, it would end the anomaly of the Federal Government's operating a community hospital. It would make the hospital an integral part of the university, with the advantages of unified responsibility and control. Under private control and with new facilities, it could become progressively more self-supporting, without impairment of its teaching function.

This proposal has been drafted by the Department of Health, Education, and Welfare. It is similar to the bill which the Committee on Labor and Public Welfare of the other House reported favorably last year, but which was not acted upon in the final rush of adjournment. It includes provisions to assure continuation of equal pay and benefits to the employees who will be transferred, and gives them all the security it can without continuing them as Federal employees. I understand in addition that Howard University has recently expressed its willingness to accept and operate Freedmen's Hospital in accordance with the provisions of the bill, and has spelled out the undertakings it is prepared to incorporate in the terms of the agreement.

Federal Food Stamp Program

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. DINGELL. Mr. Speaker, I recently introduced legislation to establish a Federal food stamp program for distribution of surplus foods to needy families through the State welfare programs.

The purpose of that legislation is to make food stamps available to State welfare programs for distribution to needy persons within the State certified as eligible for welfare under the program. These stamps are to be redeemed through the regular retail outlets within that State for surplus foods.

In contrast with the present system of dispersal of surplus foods, the needy would have an opportunity to secure regular brands, packaged and handled through the regular channels of distribution and trade.

The present system of Government processing of bulk surplus is unwieldy, and subject to enormous amounts of waste and pilferage. It is so extremely expensive for communities that many refuse to participate in it, despite great need. Indeed, stores participating in the program have urged enactment of food stamp legislation. Other stores refuse to handle some commodities.

Over and above this, under the present system the foods made available have been processed in unwieldy lots, and are often unavailable to many properly certified persons at the appointed time for distribution. Distribution points are unhandy to recipients, and times of distribution often are equally inconvenient to them.

It was interesting to me to note a recent release of the U.S. Department of Agriculture indicating how poorly the program has worked to date.

I insert below a table distributed by the Department of Agriculture for the years 1953 through the first half—projected, I assume—of 1959:

Surplus foods distributed in the United States

Fiscal year	Quantity	Cost
	Pounds	
1953	161, 100, 000	$68, 700, 000
1954	417, 800, 000	155, 200, 000
1955	492, 500, 000	167, 700, 000
1956	789, 100, 000	234, 600, 000
1957	1, 061, 900, 000	236, 400, 000
1958	871, 600, 000	185, 400, 000
1st half 1959	558, 400, 000	113, 700, 000
Total	4, 352, 400, 000	1, 161, 700, 000

The year 1958, which I assume was one of recession in other parts of the country as it was in my own city of Detroit, actually saw some 190 million pounds less of surplus foods distributed than were distributed in the year 1957, supposedly one of the most prosperous years in American history.

Equally interesting is the distribution of our surplus foods abroad, under Public Law 480, under which many commodities, like meat, fruits, and vegetables have been sent abroad, and sold for worthless, or blocked currencies, while our needy have been denied the benefits of our own surplus food.

Despite protests to the contrary our disposal of surplus foods abroad under Public Law 480, is nothing but a foreign giveaway where American surplus foods are dispersed to foreign countries for soft foreign currencies which by agreement are kept in the country of origin, mostly for domestic purposes, such as loans and grants within the country for development projects of various sorts. This is literally a foreign aid program. The people of the recipient country often never learn of our generosity, so it wins few friends, but it alienates to the brink of enmity other food exporting countries like Canada.

A certain amount of these funds are maintained for use by the United States for payment of support of American personnel and American projects within the country in question, but more are either forgiven or used as foreign aid.

From the table below it can be seen that dispersal abroad of American surplus foods has been running very close to double dispersal at home. In terms of dollar value the cost of foods distributed abroad has exceeded domestic distribution from 1955 through the end of 1958. And the total aggregate of the cost of distribution abroad, as well as the quantity for the years 1953 through 1959, has exceeded distribution at home by a substantial figure.

Surplus foods distributed in foreign countries

Fiscal year	Quantity	Cost
	Pounds	
1953	24,132,000	$4,260,000
1954	183,938,000	69,616,000
1955	531,985,000	197,195,000
1956	1,220,490,000	302,488,000
1957	1,728,800,000	253,719,000
1958	1,973,000,000	272,500,000
1st half 1959	904,500,000	109,600,000
Total	6,566,845,000	1,209,378,000

It is high time that we remembered that charity begins at home. Feed our own hungry, and any surplus after that should be used to help others abroad.

From the table below it can be seen that items denied our own hungry, such as meats, edible oils, condensed milk, at times butter, dried, fresh, and canned fruits and juices, vegetables, and potatoes have been going overseas while our own citizens are limited to cheese, dried milk, rice, occasionally butter, and cornmeal, and flour:

Title I, Public Law 480, shipments by calendar years, beginning of program through Dec. 31, 1958—Quantity and estimated market value [1]

Total value			263,305		639,313		763,533		752,348		2,418,499
Total quantity	Metric ton	2,371.61		5,300.20		7,396.86		8,178.31		23,246.98	

[1] Quantity is based on tonnage shown on ocean bills of lading. Value is estimated export market value, basis U.S. port of export. Estimates are revised to reflect actual amounts financed by CCC when this information is obtained for completed P.A.'s. These revisions account for most differences from amounts shown on previous reports.

That is why a food stamp bill is needed now.

Factors in Price-Wage Patterns of the Steel Industry

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. NEUBERGER. Mr. President, a great deal of interest in wage-price patterns has been generated since negotiations got underway recently between steel companies and union representatives. This industry is basic to our economy; the price of its products tend to be influenced by factors other than supply and demand; and its workers are among the best paid in the Nation. Thus, the situation in the steel industry gives us a classic example of some forces in our economy which have major consequences on the trend of inflation.

These aspects of the steel industry negotiations have been the subject of an article which appeared recently in the New York Post. This article by Mr. Malcolm Logan, long-term staff member of that newspaper, is an especially lucid analysis. As a further recommendation, it is free from economic dogma generally utilized by both sides in such controversies to justify their bias.

The author, Mr. Logan, mentions some of the findings of the Senate Subcommittee on Antitrust and Monopoly and of the work by its distinguished chairman, the senior Senator from Tennessee [Mr. KEFAUVER] in his study of administered prices. I ask unanimous consent to have printed in the Appendix of the RECORD with my remarks, the article which was published in the New York Post on May 4, 1959, under the title: "The Price-Wage Merry-Go-Round."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRICE-WAGE MERRY-GO-ROUND

(By Malcolm Logan)

If the United Steel Workers and the country's dozen largest steel companies do not reach quick agreement on a new contract when they start meeting here tomorrow, it will not be for lack of advice.

Seldom have as many offered so much free counsel in any labor negotiations.

President Eisenhower has exhorted both sides to act likes statesmen. To avoid inflation, he said, their differences must be adjusted "in such a way that the price is not compelled to go up."

Senator KEFAUVER, Democrat, Tennessee, has warned big business and big labor that they are getting "their last chance to police themselves without controls" imposed by the Government.

One local financial editor, taking the companies' word that they cannot raise pay without boosting prices has called on USW President David J. McDonald to be a hero and a patriot by refusing to accept any wage increase.

The Democratic majority of Senator KEFAUVER'S Subcommittee on Antitrust and Monopoly, on the contrary, has accused the steel industry of using wage increases as a pretext for unjustified price rises.

There is good reason for the way everyone is getting into the act.

During the past year the inflation that has been with us since World War II ended has slowed down to a crawl.

In the past decade the purchasing power of a dollar has dwindled to about 83 cents. During the past year, however, the loss has been only a fraction of 1 cent. That is the closest thing to stability we have seen in any 12-month period of those 10 years.

This delicate equilibrium could be upset by an increase in steel wages and prices.

Steel is the basic raw material of our economy. About 40 percent of our industries use it in their products and most of the others need machinery made of steel.

So when steel prices go up, the makers of autos, refrigerators, machine tools, tin cans, tractors, toasters, bulldozers and hundreds of other manufacturers generally pass along this increased cost to their customers. And usually they add a little more, to maintain their percentage of profit.

As a price rise sets an example for business, so a wage increase sets a pattern for other unions, particularly in manufacturing. The consumer, in the end, pays for these higher wages, too.

So the steel negotiations are a matter of concern to all of us, as consumers.

They are important in another way, too, for they raise a number of questions regarding inflation that are fiercely argued among businessmen, labor leaders, economists and Government officials.

Have wages driven up price in steel and other industries as management spokesmen say?

Or have wage increases been used as an excuse for unwarranted price increases, as labor leaders charge?

Are prices in steel, autos, machinery, tobacco, rubber products, and other important parts of the economy administered, so they rise even when demand slumps

Are wages also administered in these industries?

Have high prices retarded the country's economic growth by driving away customers and holding down production?

Why, with business rapidly recovering from the recession, is unemployment so high and widespread?

How much unemployment is the result of automation and other improvements in production methods?

DISAGREEMENT: TOTAL

To get back to the steel wage negotiations, the steel workers and the basic steel producers disagree on the answers to practically all those questions.

When President Eisenhower urged them to negotiate like statesmen, Clifford Hood, president of United States Steel Corp., interpreted this as a mandate to refuse any wage increase.

Steel wages are now about $3 an hour for a work week that last year averaged 37.6 hours. Since then, steel production has been hitting new peaks every week, and the work week now is probably above 40 hours.

Hood said steel wages were already so high that he could see no reason why there should be "any more employment cost increases and more price increases again this year."

"We will make every effort to avoid both," he assured the President.

McDonald angrily replied that Hood had made it clear the companies were "hellbent on fomenting a strike."

The union, he said, would enter negotiations with "a deep sense of our responsibility" to the public. But he did not retreat from his position that he expects a "general contract improvement."

He added that since 1946, "for every dollar of wage cost added in the steel industry, prices have been boosted $3."

On April 10 the 12 steel companies followed up with a letter to McDonald. In order to combat inflation, avoid further unemployment and encourage the growth of the industry, they said, the USW should continue present basic wages for a year.

Also, they said, the union should give up its contract clause providing for cost-of-living increases when consumer prices go up.

A COUNTERPROPOSAL

As expected, McDonald rejected this suggestion promptly and vigorously. Three days later he made a counterproposal—no price increases during the term of the new contract starting July 1; and "increases in wage rates and other benefits earned and justified by the increased output per man-hour of your employees and by the industry's profits."

For the industry, Joseph L. Block, chairman of Inland Steel, replied:

"Holding the line on steel wages would enable us to hold the line on steel prices, and the two cannot be separated from each other despite some statements to the contrary."

That was just what United States Steel's Hood had said in March. Again, as it has for years, the argument had gone around in a circle.

The USW gave its final answer to President Eisenhower's appeal for moderation last Thursday when its Wage Policy Committee adopted contract demands for pay raises, a shorter workweek, and other benefits.

Amid cheers, McDonald predicted the union would win "an even greater agreement" than the 1956 contract. That cost 62½ cents an hour, the union estimated, or 81 cents an hour, according to industry figures.

Industry spokesmen tirelessly try to convince us that all steel price rises have been necessitated by wage raises extorted by a powerful and selfish union.

Just as assiduously, the USW has repeated that the greedy companies could have absorbed almost all the wage raises if they were content with reasonable profits.

As long as this basic quarrel remains unsettled, no one can expect any "statesmanship" in the contract negotiations. The dispute will, as usual, end in an old-fashioned, knockdown battle between two heavyweights of industry.

All the skirmishing now going on has just one purpose. Each side is trying to convince the public that it is the other fellow who will be to blame for any price increase following the new contract, and for any strike that may shut the mills on June 30.

Both have spent a lot of money in the propaganda battle.

Early this year the USW began publishing newspaper ads that dangled before various groups of businessmen vision of the increased sales they might expect from "an extra billion dollars" in pay for steelworkers.

To this appeal to the profit motive, the American Iron & Steel Institute replied with its own ads, based on fear of inflation. The theme was: "Inflation robs us all."

The union argument in essence was this:

Steel workers are producing more steel per hour of work than ever before. This means fewer jobs but greater production and bigger profits for the companies. The USW wants a fair share of these profits, so its members can buy the goods the Nation produces.

The Institute's reply was that one of the most important causes of inflation is "rising labor costs without a corresponding increase in the Nation's productive efficiency."

Each side has its economists, armed with graphs and charts, to support its position, and the result, as far as the layman is concerned, is utter confusion.

The fight over pay prices and productivity will be examined in some detail in later articles. For the present, let's just note one fact:

In the contest for public support, the companies are well ahead, though not so far in the lead as they once were.

Most of the country's financial and editorial writers, newspaper columnists, economists and others who are presumed to influence opinion have long accepted it as axiomatic that wages have pushed up prices.

In the past couple of years, however, doubts about the industry's claims have been spreading, particularly in Congress and even in the Eisenhower administration.

What happened during the 1957–58 recession is difficult to ignore.

Production of steel fell to a low point of 47.8 percent at the bottom of the slump and during all of 1958 it was only 60.6 percent of capacity.

But steel prices were raised $4.50 a ton that year.

The increases came in August and the companies said they were only enough to cover the cost of a wage increase, which had been written into the 1956 contract. This raise, the union said, was 13 cents an hour. The companies said it amounted to 16 cents.

The union, as usual, contended that prices needed to be raised only one-third as much as they were—or $1.50 a ton—to pay for the wage increase.

Thanks to the fact that prices went in the opposite direction from demand, the companies made comfortable profits in a recession year.

Those steel workers who remained on the job also got bigger pay checks, but hundreds of thousands went on part time or were laid off entirely.

This left the steel makers in a position to sit out a long strike, if one comes. It also left them vulnerable to the charge that their prices are not governed by demand but are maintained by tacit agreement among their top executives.

New Englanders Lose U.S. Fish Markets to Big New Foreign Fleets

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, May 14, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Wall Street Journal of May 13 regarding the fishing industry in New England. This detailed analysis of the problems faced by the fishermen of Gloucester illustrates the need for legislation to modernize and to improve the competitive position of our fishing industry. This article takes note of the able leadership of the Massachusetts Fisheries Association under the guidance of Mr. Tom Rice in bringing these problems to the attention of the public and Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of May 13, 1959]

IMPORT INVASION—NEW ENGLANDERS LOSE U.S. FISH MARKETS TO BIG NEW FOREIGN FLEETS—HADDOCK, PERCH QUIT NEARBY WATERS; COSTLIER VOYAGES, HIGHER PAY BURDEN YANKS—A TIPSY PARSON GROWS OLDER

(By John D. Williams)

GLOUCESTER, MASS.—Vito LoGrasso's swarthy face wrinkles into a frown as he moodily contemplates the scratched hull of his aging fishing boat floating emptily at wharfside here.

"Last year was slowing down," he grumbles. "This year it stinks. * * * There's no fish. * * * We're staying in."

A mile away, beside a steel and concrete dock, the Blue Trader, a well-kept Canadian freighter which is more than 10 times the size of Vito's boat, is busily unloading more than 1 million pounds of foreign-caught fish, frozen into rectangular blocks. Nearby processing plants, highly automated, will slice, cook, refreeze and package the fish into fish sticks and precut portions for sale in supermarkets around the country.

Vito's black pessimism and the Blue Trader's visit reflect Gloucester's finny paradox: U.S. fish consumption is rising as population increases; foreign fish imports also are setting new records, and yet the local fishermen, by and large, are barely able to make ends meet.

BIGGER, BETTER FOREIGN BOATS

A trick of nature is partly responsible for the fishermen's dilemma; there's a declining supply of commercial fish in nearby waters, forcing the Gloucestermen to go farther out into the northwest Atlantic for their catches, a costlier operation which also puts them in direct competition with bigger, better equipped foreign boats. But generally their problems are not much different from those of a growing number of American industries—machine tools, automobiles, cameras and even boys' clothing—which are finding that lower wages, increasing technological progress, and, in some cases, Government subsidies in foreign countries make for increasingly tough competition.

New England's fishermen have little to counter with. Their trawlers—ships like the Tipsy Parson, Our Lady of Tears, and St. Peter III—are hoary with age, averaging about 22 years. Since little new capital can be lured to this costly, risky business, practically no new trawlers have been built in the United States since 1948. The domestic fleet, meantime, has shrunk to less than 800 vessels, 25 percent fewer than 6 years ago.

Now the remaining trawlermen, who think nothing of risking their lives in the treacherous North Atlantic (their insurance premiums are among the highest in U.S. industry), are looking to Washington to bail them out of some of their economic risks. They think their problems all would be solved if they could get more modern boats and shore installations and higher prices for their catches. They are asking for Federal aid on all these fronts.

TROUBLE FROM A 1792 LAW

"Either the Government should give us a ship construction subsidy or repeal the present law which dates back to 1792, preventing us from buying foreign ships for domestic fishing," declares Thomas D. Rice, executive secretary of the Massachusetts Fisheries Association.

New England accounts for more than 80 percent of U.S. production of ground fish fillets (the boneless slices off the sides of fish). Ground fish, or bottom fish, are so-called because they feed near the ocean's floor. They include ocean perch (also called redfish or rosefish), haddock (or scod, in smaller sizes), whiting, cod, flounder, and many other kinds. Imports of these semiprocessed fillets, mainly from Canada, Iceland, Norway, and Denmark, now hold a 62-percent share of the U.S. market. Eight years ago foreign fish fillets accounted for less than a third.

Gloucester, the Nation's second most important fishing port (only the big tuna center at San Pedro, Calif., handles more tonage), is feeling the brunt of the import problem, but it's shared at Boston and New Bedford, Mass., and Rockland and Portland, Maine (other big fishing centers), as well. These Atlantic ports send their fleets into one of the world's most important fishing grounds—a 260,000-square-mile area stretching 1,000 miles from Long Island north to Newfoundland. The competition in these waters is awesome; at least 14 other nations, including Russia, have trawlers there.

THEY LIKE COLD WATER

Ground fish thrive in the cold water of the area, feeding on plankton (floating living plants and animals) found in the comparatively shallow water, 180 to 300 feet deep, over the submerged plateaus, or banks.

In recent years the fish supply has dwindled in the waters closest to the New England ports, such as Georges Bank, off Cape Cod, or the Gulf of Maine. Haddock supplies, particularly, have been hard hit. U.S. Fish and Wildlife Service scientists admit they are somewhat baffled about the reasons. One theory is that strong northwest winds may have carried many haddock eggs into warm Gulf Stream waters further south where they perished. Or the species may have been overfished.

The slim haddock hauls were the primary reason why total landings at Boston's huge fish pier last year, at 123.8 million pounds, were the lowest in 36 years. The U.S. Bureau of Commercial Fisheries, which sent its research vessel, the *Albatross III*, out over Georges Bank last year, came back with gloomy news. Probably no increases in haddock supplies will take place before the middle of 1960. The big problem is a big shortage of 2-year-old fish, the most prolific breeding age.

While there's no danger of extinction of the major fish species, the New England fishermen are being forced into longer and longer (and thus more expensive) trips, over Browns Bank near Nova Scotia and even up to the Grand Banks, off Newfoundland, for volume catches of such species as ocean perch.

"We're like the old buffalo hunters who had to go farther and farther west to make their kills," says bull-necked Salve Testaverde, as he runs a thick finger over a map on the wall of his dockside office here. For example, less than a quarter of the ocean perch (Gloucester's main fish catch) landed last year was landed off U.S. shores, compared with 30 percent the year before and more than 50 percent a few years ago.

Some folks around Gloucester are hoping for a miracle to pull them out of their current business slough. It has happened before. In 1933, the town was at low ebb because foreign fishermen had robbed it of its eminence as the world's largest salt cod fishing port. Then, it was discovered that folks around Chicago liked the taste of redfish, a species which up to then had been used largely as lobster bait or thrown as trash to the everpresent seagulls. It had some of the mild flavor and texture of lake perch, so they named it "ocean perch" and started shipping it in large quantities to the Mid-

west. Today, it's New England's biggest food-fish catch.

A few years later, whiting or silver hake, not too highly regarded in New England, was found suitable for fried fish sandwiches in St. Louis and Kansas City. Now, fishermen are pondering the commercial possibilities of pollock, still fairly abundant in close-in waters and unexploited.

NO GOOD FOR LONG HAULS

If pollock proves out, the trawlers could stay closer to U.S. shores. The majority of the Gloucester boats are wooden-hull draggers, about 60 feet long with a fish-carrying capacity of about 95,000 pounds—not suitable for the long trips to the Grand Banks. Such trips are limited to a small number of domestic steel trawlers, 100 or more feet long, which carry up to 300,000 pounds of fish and a crew of 17.

Both types of vessels drag big conical-shaped nets along the ocean floor. Metal-bottomed wooden doors keep the net open and weighted down. Buoying up the upper net edge are hollow metal balls; and the lower edge bounces along on rollers. The whole rig is hauled aboard at intervals by winch-operated cables and the fish are dumped onto the slippery deck.

Foreign fishing boats operating off Newfoundland are similar, but newer, more efficient, and tend to be larger. Iceland boasts some with 1 million-pound capacity. New England fishermen complain bitterly that it was Marshall plan money that expanded the Icelandic fleet. They've got another bone to pick—they claim U.S. dollars supporting our airbases in Newfoundland indirectly support that Canadian province's big fishery growth.

Vessels from Newfoundland, New England's prime competitor, put into their home ports and unload their catches on conveyors to be quickly processed in shore plants. The heads, tails, and skin are cut from the fish. Sliced off the sides are the fillets, which are then pressed and frozen into blocks of about 13½ pounds each. Finished and wrapped, these blocks (also called slabs) are about a foot wide and 16 inches long, and some 2 inches thick.

Stacked like lumber in the freezer holds of large Canadian and Norwegian-flag vessels, these frozen fish slabs move to the United States for further processing. The import increase has been so great that Gloucester's Quincy Market Cold Storage & Warehouse Co., which only 3 years ago built a new warehouse and cold storage plant here, already is planning to increase its storage capacity by 22 million pounds.

The big users of these fish blocks here in Gloucester include the cooking and freezing plants of such firms as Gorton's of Gloucester, Inc.; the Birds Eye division of General Foods Corp., and O'Donnell-Usen Fisheries. These firms and others convert the raw material into packages of fishsticks and frozen dinners for national distribution. Huddled up to Boston's fish pier are the plants of A. & P. and Fulham Bros., Inc., which conduct similar operations.

These seafood kitchens operated by American companies are buying the foreign material because it's cheaper. In block form it costs about 25 cents a pound, despite a duty of from 1⅞ cents to 2½ cents a pound. Domestically landed haddock, though it sells for only 7 cents a pound, costs 30 cents or more by the time it is processed, with the head, guts, tail and bones removed. It takes three or four pounds of fresh fish to make one pound of fish usable for a fish stick plant.

"If we didn't import fish, it would be so high priced no one could afford to eat it," says the manager of a seafood plant of a big supermarket chain.

THE PAY DIFFERENTIAL

Canadian processing plant workers earn roughly 40 cents an hour less than those in the United States. And the take of nonunionized Canadian fishermen also tends to be less than here. Vessel owners over the years have had many wrangles with the Atlantic Fishermen's Union over prices and shares of the catch.

As a measure of this union's strength, it now operates one of the principal selling markets here. Members of the union are not paid on an hourly basis, like organized workers in other industries, but instead have a setup whereby the crew members take a 60-percent share of each catch, leaving 40 percent for the owners. The union is especially strong in Boston.

In contrast to the New England picture, Canada's fisheries industry along the Atlantic coast is growing. It has 500 processing plants there, supplied by 400 large, well-equipped vessels and 15,000 smaller boats. Five years ago it had only 300 big trawlers and 14,000 smaller ones.

To get their equipment more nearly up to the level of the foreign vessels, U.S. fishing fleet associations are lobbying for more financing help from Uncle Sam and special measures that would equalize the costs of the foreign producers with those of the domestic fishermen. Responding partially to such pressure, the Government in about 2 months is scheduled to work out the details of a new fishing vessel mortgage insurance plan, which would guarantee repayment of 15-year mortgages or up to 75 percent of a new vessel's cost. A Gloucester banker figures it costs $225,000 to build a new trawler here, compared with $150,000 in Canada—which was about the U.S. cost 10 years ago.

This new aid would be in addition to the Fisheries Loan Fund, set up late in 1956 to provide long-term loans for repairs and upkeep of fishing vessels. New England boats account for by far the largest share of the $7 million already loaned under the program. Another $3 million has been appropriated for the current fiscal year.

The U.S. fishermen argue they could upgrade their fleets much more economically if they were permitted to buy vessels abroad. But Mr. Rice of the Massachusetts Fisheries Association thinks the chances for repeal of the 1792 prohibition on such purchases are practically nil. Because of the decline of the U.S. fishing industry, fishing boats now are realy built in the United States, but there still is strong support in Congress for the old law. Although the administration favors repeal, Mr. Rice says a number of Congressmen "have shipyards in their areas, and shipyard labor is strong in Congress."

Funds Restored to the 1960 VA Budget

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. DULSKI. Mr. Speaker, on Monday last I was happy to play a part, under the leadership of the chairman of the Committee on Veterans' Affairs in having restored to the VA 1960 budget, funds which had been reduced by the Appropriations Committee.

Three important items were restored to the full budget estimate by the action of the House in approving the amendments offered by the gentleman from Texas [Mr. TEAGUE], chairman of the committee.

The next item was for general operating expenses which is in the nonmedical field, and was an increase to the full budget allowance of $163,373,000 for the fiscal year which begins next July 1.

Perhaps the most important item to be increased was the inpatient care program which was increased from $777,500,000 to $792,079,000. This item is $5.3 million more than the budget provided and represents the best thinking of the Committee on Veterans' Affairs which sought to increase this item because of the need for additional money for deferred maintenance.

The last amendment involved funds for outpatient care. These moneys are used for service-connected cases only, and in this case, $866,000 was restored.

The Committee on Veterans' Affairs, in a questionnaire to all VA medical stations, learned that the overall system needed approximately $16 million to meet the backlog of deferred maintenance. The budget estimate only provided $3.1 million and the action of the House in approving the amendment of Mr. TEAGUE will make approximately 50 percent of the overall deficiency in this field available beginning July 1. This sum, apparently, is all the money which the VA could effectively spend during the period. I was particularly interested in this item because of its direct application to our VA hospital in Buffalo. In the fiscal year 1960 the manager had listed projects involving roads and parking facilities of $26,000 for which funds were not presently available. In 1961 the total of $90,000 had been recommended for tuck pointing, replacement of screens, and the installation of storm sashes. With this extra amount set aside for deferred maintenance, and if additional funds can be obtained in the fiscal year 1961, the VA hospital in Buffalo will be able to maintain its plant in a satisfactory manner and in accordance with sound maintenance procedures.

I was very interested to review the statistics of the committee provided the House in connection with the increased cost which all hospitals across the country are experiencing. In the case of our own hospital in Buffalo, the total cost has risen from $5,178,000 in 1955 to $6,445,000 in 1959. Obviously, by far the greater portion of these funds go for payment of salaries of the staff but there have been sizable increases in the expenditures for drugs and medicines, which in 1955 totaled $176,000 and in 1959 had risen to $208,000. These figures, which are similar to those found throughout the VA medical system, indicate very clearly the necessity of providing full and adequate funds for the operation of our VA hospitals.

I am very happy to have had an opportunity to support this important legislation which restored the budget for the VA hospital and medical program. I am firmly of the opinion that the veterans' hospital and medical benefit is the finest service we offer in our veterans' program. I believe that we should take steps to see that the hospital and medical program functions adequately and

receives proper financial support before giving attention to the many proposals before us which would pay pensions to persons with little or no need.

I was particularly pleased that the House added additional funds to become available to remove the backlog of deferred maintenance in VA hospitals. We should not allow our fine VA hospital system to deteriorate. I am listing below a summary of deferred maintenance items which have accumulated in VA hospitals located in the State of New York. I hope that these additional funds which we have provided will permit the hospital managers of these hospitals to proceed to promptly place these hospitals in a current state of repair.

	Backlog of maintenance and repair					
NP STATIONS						
Canandaigua, N.Y.	0					
Montrose, N.Y.	0					
Northport, N.Y.	$70,400	Paint buildings 2 and 4, and water tower.	$11,800	Modernize toilets	$10,000	New doors, personnel garages	$3,000
		Replace deteriorated windows	10,000	Asphalt tile flooring	5,000	Construct deep freeze	7,500
		Condition tile floor, operating suite.	1,000	Replace doors, ward buildings	5,000	Install fluorescent lights	3,500
				New floor surface, gymnasium	4,000	Hoods over grilles and dishwashers	5,600
						Install intercommunication system	4,000
G.M. & S. STATIONS							
Albany, N.Y.	0						
Bath, N.Y.	14,000	Repair and resurface roads, cemetery.	14,000				
Bronx, N.Y.	128,000	Fume hood for clinical laboratory	2,000	Replace kitchen and dining room equipment.	3,400	Dressing sterilizers	3,700
		Sprinkler system, paint shop and storage.	2,000	Air condition units and wiring, ward 2C and dental laboratory.	8,250	Air condition units, dental clinic, medical illustration laboratory, radiation physics laboratory, gastroscopy and photo clinic.	3,450
		Sprinkler system, pharmacy	1,800	Replace laundry equipment	12,500	Metal partitions, serving kits	1,000
		Condenser, refrigeration system	6,500	Renew cold water lines	30,000	Replace floor covering	10,000
		Renew cold water lines	20,000	Relieve electric overload	6,000	Weatherstripping	8,000
		Replace floor covering	10,000				
Brooklyn, N.Y.	63,100	Air condition, rooms N-110 and N-111.	5,000	Air condition, bacterial section	8,000	Install stainless steel pipe, main kitchen.	5,000
		Replace drainage trough, 2d floor kitchen.	3,600	Replace window screens, ground to 3d floor, Building 1.	11,000	Alterations to service buildings	3,400
						Ventilation control system (central office letter, Sept. 10, 1956).	15,000
						Construction parking areas	6,800
						Alterations to recovery room area	5,300
Buffalo, N.Y.	116,000			Repairs to built-up roofs	6,000	Tuckpointing	30,000
				Resurfacing roads and parking	20,000	Replace screens	20,000
						Storm sash	40,000

		Hot water tank for laundry	3,500	Replace primary feeder cable	7,970	Resurface parking areas	3,000
		Waterline, building 17 to building 49.	4,000	Electrical work, housekeeping quarters.	19,900	Rehabilitate lighting service, building 18.	2,490
		Powerline repairs	3,000	Aluminum screens, building 7	2,110	Resurface concrete pavement	7,800
		Catwalks over boilers	2,000	Weatherstripping, building 7	3,000	Door screens, building 44	250
		Repair gutters and downspouts	1,200	Storm drains, buildings 2-5 inclusive.	3,500		
		Waterproof walls, various buildings.	3,400	Replace beveled siding, 7 buildings	4,000		
Sunmount, N.Y.	105,600	Conductive flooring, surgical suite	7,850	Hardware for buildings 4, 6, 7, 8, 11	2,000	Ceramic tile floors	15,000
		Replace laundry equipment	12,000	Rehabilitate showers and water sections.	5,000	Replace porches, housekeeping quarters.	8,000
		Hardware for buildings 4, 6, 7, 8, 11	2,000	Replace cold waterlines, buildings 5, 10, 12.	2,500	Resurface roads and parking areas	15,250
		Rehabilitate showers and water sections.	5,000	Replace porches, housekeeping quarters.	16,000		
		Replace cold waterlines, buildings 5, 10, 12.	2,500	Aluminum edging, all buildings	10,000		
				Replace laundry equipment	12,000		

Have Administrative Agencies Kept Pace With Modern Court-Developed Techniques Against Delay?—A Judge's View

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address delivered by the Hon. Irving R. Kaufman, judge, U.S. District Court Southern District of New York, at the 12th anniversary dinner of the Federal Trial Examiners Conference, at the Indian Spring Country Club, Silver Spring, Md., May 7, 1959. The text of the address follows:

I would like to say initially that I considered your invitation a high honor. I am extremely pleased to be here this evening.

At a recent meeting of the judges of the court in which I sit, we discussed the feasibility of having a full-time staff of special masters associated with the court to supervise the pretrial preparations in the so-called big cases. We were fairly enthusiastic about this idea until we began to receive comments from attorneys and judges to the effect that we were dreamers if we thought we could get lawyers with sufficient stature, ability, and experience to command the necessary respect of the litigants who would be willing to accept what would probably be a thankless and difficult task at a Government salary. This jolted us for a while until someone thought of you men. It was pointed out that somehow those alphabet agencies down in Washington were able to attract people as hearing examiners with all of the qualifications we thought essential—high competence, integrity, judicial temperament, and a magnificent dedication to public service. Even apart from the renewed hope for our little project which this fact permitted us, it made us proud to remember that there are people with your selfless devotion to the well being of this country, I am very pleased to have this opportunity to meet you personally.

Since the rewards for your services are certainly not lavish, you should at least be entitled to the satisfaction of knowing that you are performing an important task well, and that your work is appreciated. Unfortunately, you would be justified in feeling that even these gratifications of public service have been denied to you. The agencies and the administrative process have been subjected to such incessant and scathing attacks of late, that it wouldn't be surprising if you were not only demoralized but even somewhat shellshocked. Only the latter would account for your inviting an outsider to address you who might find the tempta-

tio to take another swipe or two at the administrative process irresistible.

Unfortunately, the agencies have been an excellent target. Even the poorest marksmen, while perhaps not scoring any "bull's eyes," still find it hard to miss entirely.

While there has been enough truth in almost all of these charges to cause concern, it is necessary to be wary of the inevitable flood of "easy" solutions. The cure-a-headache by cutting-off-the-head people continue to advocate the elimination of all administrative agencies and the placing of their adjudicatory functions with the courts. Of course, on alternate days, some of these same people argue that since so many of the courts haven't yet been able to cope with the enormous volume of automobile accident cases, these cases should be taken from the courts and given to an administrative agency. But they tell me that consistency is the hobgloblin of small minds and these people are accustomed to thinking "big." Since they seldom get very specific, it isn't clear whether they contemplate the transfer of the hundreds of thousands of applications before the Veterans' Administration, the Social Security Board, or the Bureau of Old Age and Survivors' Insurance, three of the clearest cases of pure adjudication, to the courts. Heaven forbid.

Now, despite the temptation, I am going to try to avoid heaping more logs on the bonfire of attacks on the agencies and the administrative process. And, if this is some consolation to you, I would like to say that I don't see any elimination of the administrative agency phenomenon. While there may be some reshuffling and possibly the return of certain limited types of cases to the courts which were removed at a time when people were worried about the conservatism of the court—a complaint which isn't heard too often these days—the trend unmistakably points to the further mushrooming of administrative agencies and their powers. The inevitability of this trend was recently illustrated when, at the peak of dissatisfaction with the agencies, while one congressional committee was exposing L'affaire Goldfine, another committee down the hall was preparing to establish a new administrative agency with broad discretionary powers to regulate explorations into outer space.

This illustration points up, I believe, the futility of searching for villains to explain the agency phenomenon. If there is any villain, it is our industrial civilization with its rapid and vast scientific discoveries and technological marvels. Virtually every major technological advancement has created problems which could not be solved by the traditional processes of legislative enactment and judicial enforcement. Even where direct regulaiton of scientific developments, such as in the atomic energy, radio, television, and airplane cases, is not essential, the problems resulting from the giant industries which have sprung up to furnish raw materials and to finance, manufacture and sell the products of technological advances, have required the establishment of such agencies as the Federal Power Commission, the Federal Trade Commission, the Securities and Exchange Commission, the National Labor Relations Board and many others. Consider the enormously complex ramifications of a scientific development as modest as the horseless carriage. Its heirs, to mention just a few, have included not only the enormous automobile, oil, rubber, and steel industries, but also a vast network of traffic and highway regulations, State motor vehicle bureaus, licensing systems, traffic courts, and Federal control of interstate bus and truck operations through the ICC. All of these developments were inconceivable a century ago.

With the pace and complexity of scientific progress continuously accelerating, the problems which must be dealt with have vastly increased. Congress, fully cognizant of the dangers involved in granting broad discretionary powers with only slight control over their exercise, and equally cognizant of the operational failings of the agencies, has been reluctantly compelled, time after time, to place these problems in the hands of the agencies.

The predicament facing Congress is perhaps best illustrated by the treatment accorded the problems of atomic energy development. Without more than the most general guiding standards set forth in the law, Congress gave to the Atomic Energy Commission vast discretionary powers, broader than those given any other administrative agency in this country. In discussing this, one commentator noted:

"There is, indeed, no escape from conferring such powers—from relying largely upon the wisdom of the men who are chosen for these important posts. It is simply not possible, at this stage of the atomic energy game, to write in careful detail the applicable rules of law. Congress knew what it was doing, but it simply could not do differently." (Stason, "Law and Atomic Energy," Annals of the American Academy of Political and Social Science 96 (1947).)

It is time the critics of the administrative agencies disabused themselves of any notion that the agencies are a passing phenomenon. Not only are they here to stay, but if modern science continues its irrepressible forward surge, and there is certainly no reason to expect otherwise, the agency institution is likely to play an ever greater role in our society. Any constructive effort to remedy the defects in the administrative process must begin with a realization of this fact.

The second step, it seems to me, is to concentrate less on the search for all encompassing panaceas, and more on improving the day-to-day mundane details of administrative procedures. While these matters are less exciting, catch fewer headlines, and may even seem trivial, they determine not only whether the entire system will work but whether it will work justly. It took the courts a long time to shift their gaze from the absorbing substantive issues to the problems of providing a procedure which would make sense and give meaning to the abstract substantive rights. While the agencies are still in their infancy, they can't afford to be as long about it as the courts were.

Now I am certainly not in any position to propose definitive solutions to your procedural problems. It would be presumptuous of me to try. Not only are there basic differences between the courts and the agencies which may necessitate different solutions, but there are vast differences in function among the various agencies. Despite these differences, however, there are many problems common to both the courts and the agencies. And to the extent that our problems are similar, the efforts that have been made by the courts to solve them may suggest possible approaches that will be useful to you.

I would venture to say that the greatest procedural problem of both the courts and the agencies is definition of the issues to be tried. Absent such definition, trials will be unduly protracted and will not proceed in an orderly manner; records will be voluminous and will be cluttered with a good deal that is extraneous; and, most significant, the attention of the trier of the facts will not be focused on the real issues in dispute, so that he will be sorely taxed to arrive at a just and intelligent determination. Any hearing where the issues are not well defined is bound to be an inefficient hearing; it is also bound to be unnecessarily expensive and time consuming for all involved.

Neither the courts nor the agencies can or should look to more stringent pleading requirements as the answer to this problem. Under your administrative procedures, as under our Federal rules, pleading requirements are extremely liberal. In the words of the Advisory Committee on the Federal Rules:

"The intent and effect of the rules is to permit the claim to be stated in general terms; the rules are designed to discourage battles over mere form of statement and to sweep away the needless controversies which the codes permitted that served either to delay trial on the merits or to prevent a party from having a trial because of mistakes in statement."

These words could be applied equally to pleadings in administrative litigation. Indeed, Professor Davis has commented that "[t]he most important characteristic of pleadings in the administrative process is their unimportance."

While the policy underlying general fact pleading is a most salutary one, the pleadings often shed little light on the real issues in dispute. In those proceedings which are initiated by a complaint and answer, for example, the allegations and denials are sometimes broad and vague. The agencies not infrequently set out their allegations in general form, perhaps in statutory terms, thus failing fully to apprise the respondents and to permit them adequately to prepare their defenses. Similarly, in the proceedings which are begun by applications, the applicant is put to his proof on such broad issues as public interest, convenience and necessity, although in fact the ground upon which the agency doubts the propriety of a grant may be narrow.

In the face of such imprecise delineation of issues, the old "let them go to trial and everything will come out all right" theory of litigation is about as practical as inviting a group of people to participate in an athletic event without designating whether they will be playing baseball, football, or ice hockey. The litigants are forced to wait until the contest is in progress before they can discover what game is being played. And if this is hard on the litigants—think of the referee.

The Federal courts have sought a cure for these ills in the fields of liberalized discovery procedures, judicial control during the discovery phase, and pretrial conferences. For many years, intensive study into the problems of streamlining and expediting litigation has been conducted by the Federal judiciary through the agency of the National Pretrial Committee of the Judicial Conference of the United States, of which committee I have been a member. Particular attention has been focused upon the problems of the protracted case, and a special committee has been appointed to undertake a study of those problems.

Again and again the committees studying these problems have pointed to increased judicial control during the pretrial stages as the sine qua non of efficient judicial administration. In particular, the pretrial conference has been heralded as the greatest single weapon against delay and inefficiency in the litigation process.

Actual experience has more than vindicated these conclusions. In my own court in the southern district of New York, for example, we have found in pretrial the best answer to a seemingly insurmountable problem. Located in the greatest financial and industrial center in the world, complicated commercial litigation and important criminal cases naturally tend to gravitate to our district. We handle annually one-fifth of all copyright cases, one fourth of all government civil antitrust suits and one-fifth of all private antitrust suits. In addition, New York being the largest port in the Nation, 35 percent of

the admiralty and maritime litigation in the Federal courts is filed in the southern district, as are more than one-half of all Jones Act suits involving injury to seamen. Because of this heavy caseload we found ourselves, a few years ago, facing serious calendar backlogs. Litigants were required to wait for as much as 3½ years before their cases came up for trial. Then on October 3, 1955, we initiated sweeping calendar reforms which performed near miracles. In a relatively short period of time the deadwood had been cleared away and the calendar had been brought up to date.

But our battle did not end there. We soon learned that the likelihood of a speedy trial encourages new filings. Since 1955 there has been a 50 percent increase in annual new filings in our court. In the court year ending June 30, 1958, for example, the number of new cases filed per judge in the southern district of New York was 374 as compared with the national average of 259. Thus, in order to fend off calendar backlogs our judges must each dispose of about 1½ times the number of cases yearly as the national average.

In view of this deluge of new business, you may wonder how we managed to keep from being swamped. The answer is that we are able to dispose of our cases far more expeditiously than ever before. And the pretrial conference is the key to this new-found success. All cases are exposed to at least one pretrial conference before our calendar judge, shortly after a note of issue has been filed. The conferences are usually very informal in nature, and are best suited to the needs of the simple case. Larger and more complex cases are subjected to more formal pretrial and the extremely large, or so-called big case is assigned at the outset to a single judge who supervises discovery and usually conducts several pretrial conferences.

It has been our experience that many cases dissolve under the bright light of the pretrial conference. Not only does the frank atmosphere of give-and-take at the conference lead to many settlements, but oftentimes the issues of fact are stripped away, so that only questions of law remain, which may be resolved on a motion for summary judgment.

The achievements of the southern district of New York do not constitute an isolated example, but are merely illustrative of the excellent results which are being achieved throughout the Federal courts by the use of pretrial techniques.

But what have the administrative agencies been doing during this era of great progress in the courts? I can only repeat the answer which one hearing examiner gave to that question:

"The uncomfortable truth is that whereas the processes of the courts were being rapidly improved and expedited, the hearing processes of the agencies and departments of the Federal Government generally remained virtually at a standstill." (Bond, "The Use of Pretrial Techniques in Administrative Hearings," 73 FCC Bar. J., 55, 56–57 (1953).)

This lack of progress hasn't been because pretrial was unknown to the Federal agencies. Virtually every agency has some form of prehearing conference rule. Nor has it been due to a lack of encouragement. As far back as 1941 the report of the Attorney General's Committee on Administrative Procedure stated:

"[P]erhaps the most fruitful probabilities for expediting and simplifying formal administrative proceedings lies in the field of prehearing techniques."

Through the years this exhortation has been repeated by the President's Conference on Administrative Procedure, by the Hoover Commission, and by a host of others who have studied the problems of administrative procedure.

Why then this failure fully to embrace a procedural weapon which holds out such promise? Are the hearing examiners so foolish that they wish to travel through unknown lands while deliberately eschewing a road map?

The answer is that some few brave pioneers from among your ranks have ventured to experiment with pretrials. And as with all pioneers they have not always found the going easy. Indeed, some of these pioneers suffered serious setbacks which disillusioned them with the pretrial procedure. Because of these failures some hearing examiners have come to believe that the pretrial conference is simply not applicable to the administrative process. I can only say that the courts, too, have had their disappointments with pretrial. In my own court there was a time, not too many years ago, when pretrial was abandoned completely in the run-of-the-mill cases. The belief that pretrial was not workable in a district as busy as ours began to gain fairly wide acceptance. But there were some who felt that pretrial—a more flexible pretrial, tailored to the needs of the individual case—deserved another try. Experience has justified their faith.

When we reinstituted our pretrial calendars many attorneys were heard to moan: "Oh no—not that again." But these moans soon turned to chortles of joy as the attorneys realized that our new procedures helped them to dispose of more business than ever before and helped to clear the calendars for the cases which had to be tried. The reason that we succeeded where previously we had failed was flexibility. We had come to realize that pretrials must not be conducted like the old trials by compurgation—according to an invariable rigid ritual. We hearkened to the words of Judge Murah of the 10th circuit, chairman of the National Pretrial Committee, who described pretrial as "a commonsense method of sifting the issues and reducing the delays and expense of trials so that a suit will go to trial only on questions as to which there is an honest dispute of fact or law."

Within the framework of these guiding principles, the pretrial conference may assume varying forms, depending on the circumstances of the case and the forum.

What is important is that the attorneys get together with the judge some time in advance of trial, and, in an atmosphere of free give-and-take, lay all of their cards on the table. The judge wants to know, and he wants both sides to know, just what is in contention and how it is expected to be proven—witnesses and all. Where this is done under the guiding hand of a conscientious, competent judge, the end product will be an orderly, simplified trial.

To achieve this result in a large, complex case may require lengthy and frequent full-dress conferences in open court with a reporter taking down every word. On the other hand, the small, run-of-the-mill case may only require what Judge Medina likes to call a powwow, an informal talk in his chambers where we can visualize him saying to the lawyers:

"OK, boys, let's cut out the nonsense and talk turkey. What's this case all about?"

The precise form of pretrial conference best suited to your individual situation may not be readily apparent. But I can assure you that the efforts expended in searching for that optimum procedure will be richly rewarded.

They tell me that Thomas Edison achieved a successful dry-cell battery on his 500th try. When a friend remarked that it was a great shame that all that time had been lost on unsuccessful experiments, Edison replied:

"Oh no, not all. Now I know 499 ways not to make a dry-cell battery."

In our efforts to improve the administration of justice, we must adopt Mr. Edison's philosophy. Achievement does not thrust itself upon us. It is almost always the product of much work and some failure. But if we know that the solution to our problems can and must be found, then each failure only brings us closer to success.

I am firmly convinced that with a certain amount of tenacity and willingness to experiment, you will find the answers to the problems that have plagued your attempts at pretrial. It is my firm conviction that the administrative agencies, as the courts, will find in the pretrial conference their most important procedural weapon. I know that in many instances the pretrial is time consuming and difficult for the participants, but I know also that ultimately it will save time and expense and produce a more orderly hearing, and that these benefits will flow in a measure far in excess of the time and effort expended. I urge you to embrace pretrial and to encourage it, and I assure you that, if you do, the time between complaint and decision will be narrowed and the hearing itself will be truly a search for the truth instead of a contest between combatants.

Now I believe that in some cases your disappointments with pretrial may have been due to an inability to secure the necessary cooperation and advance preparation on the part of the litigants. Where this cooperation cannot be secured, the conference is doomed to failure.

Our experience with pretrial has taught us that a successful conference requires hard work and diligence on the part of judge and lawyers just as much as does the trial itself. The pretrial conference is not a job for errand boys or a young clerk fresh out of law school, as some lawyers seem to think; it is a job requiring the utmost skill and ingenuity of experienced counsel and experienced judges. Therefore, if you wish to obtain the rewards of pretrial you must insist that the lawyers do a good deal of work in advance of the conference. Ideally, they will have had a preliminary conference among themselves. And I might note here that in protracted or complex cases I send the attorneys what I call an order governing pretrial preparations, which, among other things, requires them to do some spade work and to meet with one another in advance of the pretrial hearing.

My experience has taught me that you can and will secure the desired cooperation if you make it clear at the outset that you will accept nothing less.

A hearing examiner with the Federal Trade Commission recently summarized his experience with pretrial in this manner:

"I have found the prehearing conference very, very valuable in a lot of cases. The difficulty I have found, and I experienced this more when we first instituted the prehearing trial conference procedure, was that the respondent came in, having had experience with the pretrial practice in the courts, prepared to lay his cards on the table and come to some definite conclusions.

"Counsel in support of the complaint would come in and discuss the matter generally; you could get no frank statement out of him. And after the pretrial conference he wanted to take the matter discussed back to his superior officer to find out what he could do.

"Well, under circumstances like that, a pretrial conference is futile." (Cox, 11 Administrative Law Bull. 146 (Winter 1958).)

I frequently encountered the identical problem in the beginning, but only once, I believe, with any one law firm. Occasionally a firm would send down a young associate without any real authority to discuss the case because they didn't want to waste the partner's time. When, during the course of a conference, it became apparent that this was the case, I would have the associate call his partner and tell him that I wanted him to come to court immediately.

When he arrived I would ask him why he felt he could waste the court's and his adversary's time. This always elicited a promise that it wouldn't happen again and to the best of my recollection it never did. Now the same thing would occasionally happen with the Government attorneys. I would tell them that if they didn't have authority to discuss the case openly and negotiate stipulations, I wanted them to have whoever had the authority in Washington to be in my chambers at the next scheduled conference. This usually resulted in a hurried call with the assistant returning and saying that he now had the proper authorization. A similar situation sometimes developed where the lawyer would say that he agreed fully with a certain point but that his client refused to authorize it. I would then tell the lawyer to bring the client into court. I remember one instance where the lawyer represented a railroad and said that he would have to clear the matter with their claims department which in turn would have to clear it with the house counsel who in turn would have to clear it with someone else. I asked him if the President of the railroad would have the proper authority to give me a definitive answer. When he answered yes I told him to have the President in court at the next conference. Again there was a telephone call and again the lawyer returned with the proper authority.

After a few months of this, word spread around and the lawyers came to the conference properly prepared and with full authority. I don't see any reason why you shouldn't insist on the same both from the agency counsel and the respondent. Where the result of your not insisting is interminable delay, and a waste of your time, it is your obligation to do so. As another hearing examiner noted recently:

"At the present schedule of pay rates, I can't say that our time is valuable, but it certainly is scarce, very scarce." (Hier, "Prehearing Procedure at the Federal Trade Commission," 11 Administrative Law Bull. 140 (Winter 1958).)

In addition to demanding preparation and cooperation on the part of the attorneys, the hearing officer must play an active role in the conduct of the conference. While he must at all costs avoid coercing stipulations, he should actively probe and analyze the case with the attorneys to determine what are the real issues in dispute and what is surplusage. This will call for a high degree of skill on the part of the examiner. It is, in the words of Chief Judge Clark of the second circuit, "the perfection of the judicial art."

Where feasible, the names of witnesses, both factual and expert, should be exchanged at the conference. Often, during such an exchange, stipulations as to the witness' testimony can be obtained, thereby obviating the need and expense of calling the witness. Each side should be permitted to inspect the documentary evidence which the other side intends to offer. In this way needless technical objections may be eliminated and the need to call authenticating witnesses avoided and the hearing will not be delayed while documents are inspected prior to admission.

The end product of such a conference is a streamlined, orderly hearing at which the issues are sharply drawn, many extraneous procedural and evidentiary matters have been eliminated, and the pattern of the hearing is clear to both the hearing officer and the litigants. Compare this to a matter which proceeds to a hearing without the benefit of a prehearing conference. The hearing officer is confronted with a vast array of testimony, documents, pleadings, and technical arguments which is reminiscent of that famous definition of a lawbook—"chaos with an index." He may well sympathize with the English justice, who after presiding over a protracted case for several weeks, leaned forward to ask the attorneys, "Counsel, do you really think my life expectancy is sufficient to enable me to conclude this case?"

There is another reason why you may have had trouble with your prehearing conferences. I refer to the absence of any meaningful discovery procedures. How can you ask anyone to lay his cards on the table when he feels the cards haven't been dealt yet? He doesn't know what his defense is, because he's not sure of what he's really accused. Your prehearing conferences are frequently the only available discovery procedure rather than, as is generally true in the Federal courts, the final discovery procedure. Not only must the usefulness of these conferences suffer, but much more important, the absence of discovery converts any normally lengthy hearing into an endless one.

In place of discovery procedures, there is substituted what one examiner referred to as the gimmick of trial-at-intervals. (Cox in In the matter of Gulf Oil Corp., FTC, docket No. 6689 (order granting motion requesting disclosure).) This procedural gimmick is the complete antithesis of the ideal trial as envisioned by the Federal rules and virtually all State procedures. It is based on the proposition that at least one and frequently both parties will have little or no idea of what they expect to prove and how they expect to prove it when the hearings commence. Trial-at-intervals is predicated on the belief that surprise will be the rule rather than the exception. It would require a great deal of ingenuity to devise a system which would result in a greater waste of the time of the hearing examiner and the litigants. Where the hearing is interrupted for many months to permit the parties to assess the testimony thus far given and to prepare for cross-examination, it is necessary to devote a substantial part of the next session to refreshing everyone's recollection as to where they left off. Huge amounts of repetitive testimony are admitted and it is extremely difficult to rule on questions of relevancy. The stenographic records which are reviewed by the hearing examiner and ultimately by the Commission or Board are of such fantastic proportions that the private parties frequently doubt whether it is humanly possible for the agency to review it with any degree of care. While these proceedings frequently are brought to curb actions which are detrimental to the public interest, and one would therefore imagine that speed would be of the utmost importance, the ultimate decision is generally not made for many years.

I ask what is the crucial value in concealment which requires the sacrifice of all of these other important public-interest benefits? Davis, in his recent "Administrative Law Treatise," states:

"Probably no sound reason can be given for failure to extend to administrative adjudication the discovery procedures worked out from judicial proceedings." (Davis, "Administrative Law Treaties." 589 (1958).)

I have also been unable to find any sound explanation for this situation. The only explanation that I have seen is the old bugaboo rejected by the Federal rules, that all litigants should be treated as though they were Al Capone; that they are not to be trusted with the names of adverse witnesses in advance because they will intimidate them and force them to withhold testimony or to perjure themselves. It is assumed that the criminal sanction is not enough to deter these litigants or their attorneys. Even if it were true that this danger is more than the remotest possibility, although the absence of criminal prosecutions and the experience of the Justice Department in civil litigations against these same defendants suggests that it is no more than that, I would still think that the public value involved in the prompt disposition of the majority of cases and in having an aboveboard procedure, would far outweigh the value of concealment. When a hearing examiner who subscribes to the concealment philosophy admits that to accommodate this view he is forced to follow a procedure which is both stupid and cumbersome, that is almost reason in itself for abandoning it. (Hier, supra, p. 142.)

The use of stupid and cumbersome procedures which result in inordinate delay, vast expense to both the Government and private parties, and a huge record which renders sound and careful judgment virtually impossible, for the sake of avoiding some remote danger, illustrates the rigidities into which the administrative process has settled.

Lastly, your attempts at procedural advancements have been hampered by the absence of any agency to conduct continuing studies into this area and to operate as a clearinghouse for information. Improvement in techniques requires a constant exchange of ideas. Only in this way can each examiner build upon the experience of his fellows. Our procedural advances in the Federal courts were in no small measure furthered by the fruitful work of the Administrative Office of the U.S. Courts. Virtually every group which has made a careful study of administrative procedure has recommended the creation of a similar agency to conduct a continuous study of administrative procedures in action. The time is long since overdue for these recommendations to be taken out of the discussion phase and brought into fruition.

Now, gentlemen, a few moments ago, I spoke of the differences between our respective functions. Certainly, those differences exist but they are as nothing compared to the similarities in our work. For in my trials and in your hearings we seek after the same elusive prize—the truth. We seek the truth when we try to determine which of several contenders for a precious license will best serve the community. And when we strive to set a rate that will be fair to all, we are again attempting to distill the truth from masses of argument and data.

Our professional kinship goes deeper than this because if we are good judges and good hearing examiners we seek to find the truth with the least possible delay and at the least possible expense to the litigants. Frequently the hearing examiner like the judge holds the power to delay justice or to give it speedily. He holds the power to deny justice by permitting costs to pile up.

I must confess that in declaring that the hearing examiner holds the power to give justice speedily, I may have overstated my case. While advanced procedural techniques can work wonders, and are essential to the speedy and just disposition of the caseload, the ultimate disposal of the work is frequently delayed by the fact that there are simply too few hearing examiners. Serious study must be given to the need to increase the ranks of the hearing examiners in many of the agencies.

And, perhaps, even more important, consideration should be given to the creation of a position similar to that of law clerk to aid the harried examiners in their basic research. Such a post could perform the additional function of providing excellent experience for well-qualified law school graduates, and may even prove a fertile training ground for future hearing examiners. The additional payroll expenditures necessary to effectuate these proposals will be modest when compared to savings in time and expense which they will bring about.

Above all, every effort of the members of the bar, the reviewing courts, and particularly the agencies themselves must be expended to increase the prestige of hearing examiners.

They are conscientious men of high integrity, performing an extremely important function. Those who practice before them must never be permitted to lose sight of that fact. The willingness of attorneys to cooperate and to enter into stipulations before a judicial officer is often measured by the esteem in which they hold the position of that officer. Respect for the office of hearing examiner is thus a necessary climate for the germination of procedural advancement.

The battle to provide speedy justice in the administrative hearing, as in the courtroom, is a continuing one. Our warfare against the menace of delay must be all out. For delay is the most insidious of enemies; insidious and terribly dangerous because it can almost always be rationalized away. Some shadow of a right that may be lost through expedition, some fancied danger lurking in efficient disposition is enough to self-justify the granting of extensions, adjournments, continuances, rehearings, ad nauseum.

Gentlemen, the right to be heard promptly and have one's cause decided swiftly is a substantive right—often it is the most important substantive right in the case and one attainable without sacrifice of other rights. If we fail to recognize it as such we also fail those who rely on us.

There was some excuse, feeble as it was, for the damn-the-expense and damn-the-time attitude on the part of judges. They were weighed down by libraries of precedents from other and more leisurely days. The spirit of *Jarndice* v. *Jarndice* was much upon them. But you hearing examiners should suffer from no such mental encumbrances. It would, indeed, be ludicrous if men entrusted with the stewardship of atomic energy, channels of communication and outer space, were to be guilty of 18th century thinking; ludicrous and tragic, because the welfare of tremendous numbers of people rest in your hands. It is you who supervise the awarding of the most valuable busines rights that the Nation can bestow on private citizens and upon you depends the success of the regulatory legislation that keeps us from falling into utter chaos.

If there is anything which symbolizes the disillusion of the proponents of the administrative agency it is the factors of delay, expense, and volume of record. The agencies, it was proclaimed, would avoid the outmoded rigidities of the courts; they would do what it was believed the courts could never do—have flexible procedures which would afford speedy determinations. The courts took these criticisms to heart and they went and proved that they could meet the challenge of modern-day litigation. The shoe is now on the other foot and we are all waiting to see whether the agencies can rise to the challenge.

If you fail us there is no acceptable alternative. If that should happen then we would know that the need for expeditious administration of our most important laws and the concepts of fair play implicit in a full hearing are irreconcilable. That would be a realization of catastrophic effect.

However, I believe that efficiency and an end of unnecessary delay can be achieved within the framework of the present system. I believe it can and will be done by you gentlemen. Not by radical procedures or elimination of agencies but by the utilization and adaptation of procedures already developed in the courts and in some of the agencies. It is a job only you can do and I am confident that you will do it because you must.

Action Needed To Save Small Businessmen in the Dairy Industry

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. PATMAN. Mr. Speaker, a few days ago the National Independent Dairies Association held its annual convention in Washington, D.C. Even the small businessmen who participated in that convention were surprised by the large attendance from all parts of the country. The convention was about two and one-half times larger than it was in 1958. Mr. D. C. Daniel, the executive secretary of the association, is continuing to receive applications for membership and, therefore, the prospects are that the convention of that group will be even larger next year. Also, it should be noted that at the convention this year approximately 150 Members of the House of Representatives and several Senators attended one session of the convention in the evening of April 14, 1959.

In view of these circumstances one is prompted to ask the question, "Why do these small businessmen consider it important for them to travel at the individual expense of each from all parts of the country to Washington in order to participate in a convention?" The record of the proceedings during the course of their convention provides the answer to that question. The answer is that the small businessmen in the dairy industry apparently are facing extinction unless there is action by the Congress in the near future on legislative proposals to restrict the use of price discrimination and other monopolistic practices.

The House Small Business Committee has made and is continuing to make extensive investigations and studies into the use of trade practices prevalent in the dairy industry. Overwhelming evidence has been accumulated showing the appalling effects of price discrimination in destroying free competition and leading to the creation of monopolies in the dairy industry. At this time, I and other Members of the Congress are besieged with appeals from some businessmen in the dairy industry that something should be done to stop destructive discriminatory pricing practices.

Our colleague, the Honorable TOM STEED, Democrat, of Oklahoma, a member of the House Small Business Committee, is serving as chairman of a special investigating subcommittee, which is directing its attention and efforts to these trade practices in the dairy industry about which complaints have been made. Much evidence has been received showing that some large nationwide processors and distributors of dairy products are selling milk at prices below cost, while in other situations they are selling essentially the same products at a much higher price, thereby subsidizing their below-cost sales. Some small businessmen, attempting to compete against such situations in given localities, are finding it most difficult to survive.

During the course of the recent convention of the National Independent Dairies Association in Washington, D.C., our colleague, Mr. TOM STEED, addressed that group. In his address he stated:

I am as convinced now as I ever have been, perhaps more so, that, unless some relief in the legislative field is forthcoming, the day of the independent dairyman is numbered in this country.

Mr. Speaker, I ask that I be permitted to extend and revise my remarks by inserting at this time a copy of the address which was made by our colleague, the Honorable TOM STEED, Democrat, of Oklahoma, before the National Independent Dairy Association in Washington, D.C., Monday, April 13, 1959.

The material referred to is as follows:

REMARKS OF HON. TOM STEED, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OKLAHOMA

Representative STEED. Thank you for your very kind and generous presentation. Like all politicians, we know we do not deserve so many nice things to be said about us, but we would always be disappointed if they were not said.

I am especially happy and delighted to be here today and to have with me two very able men who work on the staff of the Small Business Committee and who are devoted to the assignment that we have before us this year.

I know that many of you had the opportunity to read the report and to have some experience with the work that the subcommittee on the dairy industry problems did last year. I must say that we have received very favorable reaction throughout the industry and throughout the government on this report.

While I have gotten most of the credit for it, the fact is that the report is the work of Mr. Everette MacIntyre, general counsel of the committee, without whom it would have been impossible for us to have made any progress at all. I want today to publicly give him the credit for the very excellent and fine staff job that he did.

The work has increased, so I am very happy today to have my longstanding personal friend, Brooks Robertson, a man with long government experience, on the subcommittee staff. We learned last year, Mr. MacIntyre and I did, that this is a field in which you need a lot of help to get very far along. The truth is, as Scott Daniel, your executive vice president, told you, I got into this milk thing completely by accident. I had no desire to be heading up such a job as I am doing, but I got interested in it and we were happy to have the opportunity to meet so many of you, to have had your cooperation in our task of finding facts about this industry to present to the Congress.

But actually, when we finished our work last year and filed our report, I really

thought that I had finished with the milk business. You can understand why, then, today I have some feeling about the fact that I have twice as much milk business now as then.

We have what might be called a two-headed subcommittee on milk this year. This afternoon the subcommittee will have a conference on a special assignment, to decide what, if anything, we think should be done in regard to the milk situation here in the District of Columbia. We are intrigued with that problem because it involves several subdivisions of government in the same metropolitan area.

I don't think a similar political situation exists anywhere else in the country. There has been a considerable amount of pressure brought on the Small Business Committee for public hearings to be held in order for these confusing and complicated facts about the situation in the District of Columbia to be made of record and to be made available to the consuming public.

Personally, I hope the subcommittee decides that we should have these factfinding hearings.

In addition to that, the subcommittee then becomes the Permanent Milk Subcommittee of the House Select Committee on Small Business. We find that there are a number of current trouble areas throughout the country in which some very extensive staff research work needs to be done, and perhaps public hearings held.

The purpose of public hearings is twofold. It is one method we have of getting a lot of information, and it is also a way of making that information available to the public generally. Sometimes our task is not only to find out the facts so we can make recommendations to the legislative committees of Congress themselves, but also to help the public have a better understanding of the problems confronting us.

We expect that the committee will have a heavy workload throughout the remainder of this year and into 1960. As you know if you read the report, we made certain specific recommendations to which we thought Congress should give attention in terms of additional legislation. We felt that we had found enough facts to justify our saying that the dairy industry is in dire need of some legislative relief.

We still feel that way, and we are sure as we go into this problem more extensively that we will be able to make that case even more strongly than it has been made up to now. There has not been any indication anywhere that has come to my attention which would indicate that the problems besetting the dairy industry have eased up or have found any solution.

I am as convinced now as I ever have been, perhaps more so, that, unless some relief in the legislative field is forthcoming, the day of the independent dairyman is numbered in this country. I don't know whether many people or anybody agrees with my view.

As I have said before, this is a deep-seated conviction with me. I have traveled in some foreign countries, and have convinced myself that the real thing that makes America great is what we call our great middle class, which is another way of saying our small business community. Since I am convinced of that, I think that the future of this country will depend on how well we can keep the small business community in this country not only alive but flourishing.

When we see the trends that have been so dramatic in the last 20 years, and especially the last 10 years, the trends that begin to squeeze out of industry whole segments of the small business community, commonsense would tell us that such trends permitted to exist very long eventually mean there will be no small business community.

If it can happen in one industry, it will spread to other industries.

We have to learn some of the answers by trial and error as we go along. Many years ago, because of the fact that the free enterprise system is susceptible to exploitation and to monopoly, Congress saw fit to pass certain laws called antitrust laws to protect the American businessman against monopoly and exploitation.

A lot of litigation has come out of these acts, and I think any man who will give even a casual study to the situation will realize that a tremendous lot of good came out of these laws. As time goes on, and as the nature of our economic life changes with modern times and trends, we find that these laws sometimes no longer suffice. That is why we propose amendments to them, to meet problems as they come along.

Many problems that are current in your industry also exist in others. Of course, we must always legislate not for class or special interest, but for the general interest. That is why we think that not only can some of the difficulties your industry faces be solved, but that these same problems in all industries can be met if certain amendments to the law can be achieved.

That is why we have recommended to the legislative committees of Congress that the Sherman and Clayton Acts be amended to give the enforcement agencies more power to prevent continuation of what we think are illegal and unfair practices.

There is one recommendation we made about which I personally feel very strongly. We believe that we must find some legislative means to give the law-enforcement agencies the power to grant immediate relief on a temporary basis so that the economic damage being done through unfair competition can be stopped in its tracks and held in abeyance until these agencies have an opportunity to find out what the facts are and to make final and permanent determinations. There are too many cases, because of the nature of the litigation, that take a lot of time to reach final decision, and too often by the time the wheels of justice have turned, the victim long since has passed from the scene.

We would like to find some way, those who feel as I do, to give faster relief, at least on a temporary basis, so that the very passing of time itself will not work to the advantage of those who violate the law.

We also think that these "good faith" parts of the law that are used now for evasion and loopholes should be tightened up. We have specific legislation pending in the Congress today to accomplish this purpose. Those are matters before the legislative committees. We are urging these legislative committees to proceed with the amendments. That is one field in which you can help now because your problems have been reduced to proposed legislation and are now pending before committees where, if the will of the public becomes strong enough, action will automatically result.

In addition to that part of this problem that you are familiar with, we feel on this committee that there is another way that the small business community, as such, in this country can and should receive a great deal of assistance. That is what we choose to call a revision and reform of our tax laws, with special reference as to how these laws apply to small business.

This committee, the House Select Committee on Small Business, has been working on this subject for a number of years. We think we proved in our original hearings, and in the surveys and research on the subject since, that there is no question but that the tax structure, while making a burden on all business, makes a much heavier burden on the small firm than it does on the large firm.

I think that the very fact that the small businessman is cut out from many of the opportunities for capital and financing—that are open to big business—in itself will prove our case.

Because of that, we have insisted that amendments to the Internal Revenue Code be adopted which would give a little bit more breathing room for the small businessman in this country. It has been truly said by those who know that if Henry Ford were trying to build up the Ford Motor Co. under today's laws, it could never become the great corporation that it is. The Ford company is a typical example of how a little business in this country could, under old tax laws, grow to be big business.

I think that epitomizes the free enterprise system, what we call the American way of things. I think that we make a serious mistake when we permit tax laws, even though they were adopted during time of great national danger as emergency measures, to continue on the books interminably, to the extent that they themselves begin to snuff out, to squeeze out, and starve out this great middle class of our economic life called small business.

We have bills pending with 11 points or revisions which we are convinced would help small business.

The Committee on Ways and Means, which is our legislative committee on taxes, saw fit last year to adopt three of these ideas, and to add one or two of its own, which we were glad to see done for two reasons: first, it will help some phases of small business, and second, it got Congress to adopt the idea, the basic idea, that there is justice in granting tax concessions and revisions to small business. We are now in the process of revising our proposed legislation this year, which we will urge before these committees in the hope that we can get additional tax revision to make the burden on the backs of the small business a little less heavy.

I believe that through tightening up our antitrust laws we can make it more difficult for a big corporation with nothing but sheer, ruthless financial power to destroy competition. Once we can protect the small businessman from that type of unfair trade practice, then if he does find himself in a profitable situation where the free enterprise and tax systems let him live and breathe, he can retain enough of his profits to become strong and to grow and expand.

I think when that is done, the economy of the country generally will reflect a very remarkable improvement. I think you will be surprised, that by revising some of these tax laws downward, in the long run the Treasury of the United States will receive more income than it is now able to obtain. There are a number of records to prove that.

In West Germany, they have made some five tax reductions, revisions, and reforms since World War II. Yet the Treasury of the German Republic receives more income than it ever did, because removing these tax burdens caused the economy of the country to grow, to expand, and flourish. It is only under those terms that the Government can hope to get the revenues it must have to carry on the people's business.

I think that is the real, permanent, sound road to what our country needs. We live in a time when the demands for funds to operate the functions of Government are at an all-time high. There are many reasons for that, and the biggest, of course, the most

overwhelming of all, is the dangerous world we live in and the tremendous cost of our national defense.

In this space age, research and development costs are almost unbelievably high. Therefore, even if we have what we choose to call very prosperous times, we see our national debt going up, the cost of Government going up, and the burdens on the people becoming heavier. I think part of the cost is because of the fact that we have tried to make permanent, in effect have made permanent, many of these emergency burdensome tax laws that were adopted in time of actual war.

Congress imposed some of the wartime levies we now operate under, not so much to raise revenue, as to cut down the demand for some things.

Certainly in these times, we are trying to increase demand. Therefore, it would seem completely illogical to me that we continue tax levies which have, as their basic purpose, to curb demand. The best way to expand demand is to remove any and all of the roadblocks that prevent expansion. That is one field, I think, which is very important to the small business community of the Nation. It is one thing to fix it so that the businessman has a chance to make a profit; it is another to make it possible for him to use at least some of that profit to strengthen his business, to let it grow, and to expand it.

We have more people needing jobs all the time. It always has been, and I hope it always will be the case that the small businessmen in the country provides most of these jobs. It is only through increasing his numbers and prosperity that we can hope to create the employment opportunities in every nook and corner of the country that so many hundreds of thousands of our people are now needing and will continue to need.

These are some of the overall and broad things that I feel motivate those of us in this committee work, and which spell out the basic purpose at which we are aiming.

I know that it is a little grand to talk about it in broad terms, and it is a little prosaic to think about it in the humble little means that we use to accomplish it, but it is high time, I think, that some of these steps are taken.

The facts are all too clear that unless this sort of thing is accomplished, very soon there will not be very much little business to save.

I hope that Congress can get around to enacting these proposals while there is still some of it left. Even though it may be on the anemic side, I still hope we can act before there is too much loss of this segment of our industry. Like all other outsiders, I sometimes would like to come up with a magic answer to your troubles or anyone else's, but I know that it isn't that easy.

We can only deal with your problems on the governmental level, and that largely confines us to the field of the rules by which the game is played. We can liken this whole thing to a football game. We can set the boundaries, we can make the rules, and we can have a referee. Then it is up to the players to see which side wins.

If the game is fair, if the rules are fair, that is about as far as you can go if you want to keep the Government in what I think is its proper place.

We think that there is little need for clipping and stripping, that evidence shows there is altogether too much of this fouling going on at the expense of the small business community. That is why we are trying to get a few more rules adopted that give our referee a bigger club so that he can make more people play more fairly in our commercial life.

I hope that as the next few months unfold, if it becomes our sad responsibility to come into some of your communities and hunt for the facts that are troubling you, we can continue to have the same cooperation and assistance you have given us up to now. I know you are a young organization, but in this field of milk our committee is young, too.

Again, I would like to thank and commend Mr. Daniel, as your representative, for the tremendous cooperation and help he has given us. Without him and without many of you, the work we have tried to do would have been mostly wasted effort.

We are going to continue to give you a forum where your problems can be brought, and where the attention of the Congress can be focused on them. We think they are worthy, that they deserve attention. We hope that in doing that we carry out the main purpose that Congress had when it created the Select Committee on Small Business; that we are truly being the eyes and ears of the House in the field of the needs and the problems of small business so that the Congress will have a wiser way of approaching its solutions to those problems.

Gentlemen, I thank you again for this opportunity to participate in your program. I hope that we can meet together some day and talk about the good work that has been done and the problems that have gone, instead of the problems we have and how we are going to meet them.

Thank you. [Applause.]

Israel's Independence Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. RODINO. Mr. Speaker, 11 years ago today the State of Israel was proclaimed. In the brief period of time that has elapsed since 1948 Israel has faced many grave problems. It has been at war with seven Arab States and has been subjected to constant harassment. Its destruction has been attempted by military action, economic boycott, and even by a barrage of propaganda. Nevertheless, Israel has survived and grown. It has absorbed and integrated an average of about 100,000 immigrants every year—a task comparable to the absorption by the United States of 10 million new citizens a year. In addition Israel has raised its agricultural production, increased the amount of cultivable land, extended the social services available to its citizens, and further expanded its industry. In the face of almost insurmountable obstacles the people of Israel have strengthened their democracy and made their country a viable state. Furthermore, not content with just improving its own lot, Israel has given technical assistance to the new Afro-Asian nations and has provided them with a successful alternative to Communist economics.

For all of these achievements Israel deserves our admiration and praise. We can be proud that this young republic is our friend. I can only hope that other nations will follow the example of Israel and that peace will soon reign once more in the Holy Land.

Ruinous Effects of Failure to Enact a Housing Bill

EXTENSION OF REMARKS
OF
HON. CLEMENT W. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. CLEMENT W. MILLER. Mr. Speaker, builders in the San Francisco area are extremely concerned about the failure to secure passage of a housing bill. This has a serious effect on business generally because of their importance to our economy. It also raises costs to the consumer—the homebuyer. This is illustrated in the letters below from Mr. John Tolan, of Barrett Homes, a large developer of the bay area:

APRIL 30, 1959.

Hon. CLEMENT MILLER,
House Office Building,
Washington D.C.

DEAR CONGRESSMAN: It was a pleasure to talk with you yesterday about the crisis in home production which we face in the metropolitan San Francisco Bay area due to failure by the House to act on the housing bill, S. 57.

During our conversation you asked for our views of what will happen to consumer living costs due to the increase in housing costs if S. 57 is defeated.

Here is what would happen:

1. Real volume construction of homes would be halted in 6 months. This high level building production is critically needed to maintain keen competition and existing value, quality and current price levels.

2. New housing payments would increase from 5 to 20 percent due to higher interest on the loans and increased financing expense to the builders. Creditwise, this would disqualify thousands of homeseekers.

3. Average downpayments on economy houses would jump from 3 percent FHA to as high as 30 percent conventional.

4. Volume sales would be impossible due to high downpayments. Most lower and middle income buyers have about $1,000 to $3,000 maximum to get into a new home. Closing costs (insurance prepayment, tax prepayment, title insurance and loan fees) will average $500 and essential appliances, drapes, furniture and some landscaping normally run another $1,000.

5. Sales of older homes will drop off drastically because of the lower turnover. New building stimulates sales of older homes.

6. The risky, high discounted, and inflationary second mortgage would be back. Contingent sales and installment contracts (without title passing) would increase.

7. Unable to buy, the new family would be forced to rent and not get personal income tax credit for that portion of their rental which involves real property taxes and interest.

8. Thousands of skilled homebuilding craftsmen would be lost to the homebuilding industry as they turned to other occupations.

9. Thousands of businesses related to homebuilding, repair, gardening, etc. would suffer.

10. Hundreds of cities with properties off the tax rolls in urban renewal and redevelopment sites would find their rehabilitation program delayed and threatened with abandonment.

As I told you yesterday our city of Richmond, outside its redevelopment areas, has to rent or take a second mortgage and, in many spot lots 25 feet by 100 feet which cannot obtain FHA prior comitments to insure a loan. They sell conventional. They illustrate what is happening today where FHA is not available. Attached is a schedule with detailed compartive figures.

The schedule on home No. 1 shows that if we were forced to drop FHA and GI financing (75 percent of our sales are GI) monthly payments would jump $35 to $40. Buyers now qualifying to purchase with $550 per month incomes would be out in the cold. We would have to find a new market—people earning $700 per month or more. Result: increased marketing cost, fewer sales, higher overhead, higher prices.

The schedule on home No. 2 shows $116.40 per month for a $11,950 house. This is $5 a month more in initial payments than our $14,950 first quality home, and for 400 square feet less living area. We are sold out, can't risk building more. Home No. 2 is being built at a rate of one or two a month and they are slow to sell. But they will be all that would be available for middle income families if FHA is killed.

The schedule on home No. 3 shows a typical house for sale without an FHA prior commitment. Here you have the effect of high downpayments—no sale in 6 months after completion. The builder will finally have any event, leave his capital and profit in the job and soon be out of the homebuilding business. The buyer, should he be required by an emergency to sell, would be caught with an almost impossible resale—too much equity demand. Result: all real estate business seriously affected.

Well, that's part of the story—at least that part where the consumer gets the sharpest blow ever. Don't let that Democratic squabble with the Rules Committee earn a reputation for the House leadership that they are heedless of this little fellow.

Warmest personal regards.

Sincerely,

BARRETT HOMES, INC.
JOHN H. TOLAN, Jr.

Home No. 1: Typical FHA 203 or 220 loan on homes now produced by Barrett Homes, Inc.; Town House (row), 4 bedrooms, electric kitchen, fenced yard; first quality construction; 1,383 square feet, 30- by 100-foot lot

Typical homes financed by savings and loan and local capital, Richmond, Calif.

					Insurance 1.40			
Total 111.72	Total 105.41	Total 145.89	Total 90.15	Total 84.43	Total 116.40	Total 87.48	Total 81.97	Total 80

[1] Interest and principal payments.

[2] Mutual mortgage insurance.

When putting the letter and data on home financing together yesterday I did not compare relative value when FHA financing is replaced by high interest, high downpayment, or second mortgage financing.

The diminution on value can be related to the square foot of living area cost per month of each home (irrespective of construction quality loss).

Home No. 1 and home No. 2 on our schedule show only about 4 percent increase in monthly cost. But I made no adjustment for living space.

Here is the comparison:

Home No. 1, 1383 square feet at $111.72 per month; 8.1 cents per square foot per month. (Barrett-FHA financed.)

Home No. 2, 950 square feet at $116.40 per month; 12.3 cents per square foot per month.

My point is that if we were to lose FHA, home No. 1 would cost $145 per month instead of the present FHA $111.72. Increase, 30 percent.

Further, in order to find qualified buyers we would have to shrink size to hold down monthly payments. This is what the builder of home No. 2 has done. When we compare what the FHA buyer can now obtain from us at 8.1 cents per month per square foot with that same consumer would get for about the same monthly cost without FHA, his increase cost per square foot of living area per month would be 52 percent. Some people might argue about this extrapolation, but when you come out and look at the two houses, you will see that the figures make sense.

NOTE.—The risky second mortgage matures in 5 years—so this agony partially terminates then.

Sincerely,

BARRETT HOMES, INC.,
JOHN H. TOLAN, Jr.

MAY 8, 1959.

If the bill isn't passed by July, we might as well close down our Richmond redevelopment job for this year. We are laying out a great deal of money (so is the Redevelopment Agency) getting ready to build again. We can't go on making large commitments for small action by this Congress.

Sincerely,

BARRETT HOMES, INC.,
JOHN H. TOLAN, Jr.

The Desperate Situation Facing Our Domestic Glove Industry

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. STRATTON. Mr. Speaker, since becoming a Member of this distinguished body, I have spoken out on several occasions with regard to the serious problems facing the domestic glove industry in America, much of which is located in my own congressional district in New York State, in the face of the staggering growth that has taken place in low-cost foreign glove imports. Hardly a day passes without my mail bringing to me further evidence of the damage which these fine independent businessmen in my district are suffering and pointing up the grave impact which these developments have on the livelihood and income of the thousands of fine American men and women who have made their careers in the glove industry.

I have already introduced in the Congress legislation designed to reduce the impact of this unfair foreign competition by the establishment of suitable quotas, and I hope it will soon be favorably acted on.

Under leave to extend my remarks, I desire to enclose a letter from one of the outstanding glove companies in my district, the Serfis Glove Corp., of Northville, N.Y., which points up in simple and graphic form the increasingly tremendous handicaps which these American businessmen are working under.

The glove industry, Mr. Speaker, may be a small one compared with some of the larger companies in our land, but the battle which they have long been waging against foreign imports, backed by low wage scales, is a battle which, I predict, many more segments of American industry will soon be waging too. I believe, therefore, that the circumstances outlined in the letter from Mr. Herman J. Serfis will be of profound interest to every Member of this Congress.

The letter follows:

SERFIS GLOVE CORP.,
Northville, N.Y., March 26, 1959.
Congressman SAMUEL STRATTON,
House of Representatives,
Washington, D.C.

DEAR SIR: We are in receipt of bill H.R. 5445 you introduced March 9, and which was referred to Ways and Means Committee. To us this seems to be a step in the right direction and hope that something really can come out of this.

In new release on imports, leather glove imports went from 84,855 dozen in 1950 to 327,613 dozen in 1957, and 278,457 dozen in 9 months of 1958.

Japan went from practically nothing, or 71 dozen in 1950, to 137,273 dozen in 1957, and 137,525 dozen in the first 9 months of 1958. With the very cheap labor it cannot help to hurt in a big way.

The writer has been around this glove manufacturing in Fulton County since 1922 in this popular priced field, but along with many other small industries around the country it will be a case of being forced out of business.

We do not want to sound pessimistic but we cannot see any thing good over the next couple of years unless there is relief.

Many thanks for your effort in behalf of the industry.

Very truly yours,
SERFIS GLOVE CORP.,
HERMAN J. SERFIS.

Don't Give Another Inch to the Russians

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. WIDNALL. Mr. Speaker, the American Press, an independent magazine for hometown newspapers, published in Stanton, N.J., has taken a most interesting poll. Weekly newspapers throughout the country have shown an almost unanimous approval of facing up to the Russians and keeping an open avenue to Berlin, even at the risk of war. The answer to this and other related questions is appended:

[From the American Press, May 1959]

"DON'T GIVE ANOTHER INCH TO THE RUSSIANS," SAY EDITORS POLLED ON BERLIN SITUATION

"We mustn't give another inch to the Russians."

Over and over again that view was expressed by newspaper editors from all parts of the Nation, who, in response to a survey on the Berlin situation, conducted by the American Press, made it clear that they would choose war rather than condone further appeasement.

In answer to the question: "Do you believe the Western Powers should insist upon open passage to and from Berlin, even at the risk of war?" the vote was an overwhelming "yes." Ninety-two percent of the 310 editors replying answered in the affirmative; only 5 percent answered "no" and 3 percent didn't answer the question.

"If the Russians won't back down we might as well fight now as later," said Frieda J. Monger, of the Duluth (Minn.) Publicity. Her attitude was echoed by many of the editors. But the ready-to-fight sentiment of the editors was somewhat tempered by the answers to a second question: "Is it your guess that the Russians will back down if we take this stand?"

To that question, 89 percent answered "yes," indicating that the editors, although willing to back war as against appeasement, do not anticipate that war will be the result of "holding the line" in regard to Berlin.

Perhaps the best summary of the views of the editors was expressed by Guy W. Paul, of the Bentleyville (Pa.) Courier, who said:

"I think we have gone as far as we can go. Americans have historically stood on principle and backed their stand with every drop of red American blood. This generation owes all it has to that doctrine. Never let it be said that we were unwilling to follow in that tradition—come what may."

An Army general, who fought with Patton during the European conflict, and is now publishing a newspaper in Gering, Nebr., as well as commanding the Nebraska and Iowa National Guard division, said: "The most dangerous thing America faces today is a get-soft attitude and reliance on push-button warfare." Maj. Gen. Warren C. Wood added: "I am for General Eisenhower's draw-the-line and that's it policy in Europe and Far East."

There were, of course, some editors who did not agree that we should be adamant in our stand on the Berlin question. T. C. Merchant, of the Madison (Fla.) Enterprise-Record said that it would be a crime against civilization for the governments involved to get their countries into war.

James Towery, of the Ripley (N.Y.) Review, objected to the rigidity of the administration and expressed his views by quoting the following statement made by Senator MORSE:

"We cannot in this age of total atomic destruction say to the world that we have only one policy in Germany and we are prepared to commit suicide and take the world with us if we do not get our way. We can surely talk about a possible new agreement even as we insist that Russia shall not violate the existing one."

But, in general, the attitude of the editors was that any concessions made to the Russians would just lead to more demands—and that the time has come when we must call a halt.

This was brought out in answer to a question as to whether the President should meet at the summit with Khrushchev. Although 62 percent voted for such a meeting, a large number of those who so voted indicated, by accompanying statements, that they didn't expect anything to come from it—that it would just be used for Russian propaganda. Many stated that the only thing the Russians understood was force or military power and that a meeting as proposed would probably be just a waste of time.

Some believed that any such meeting should be held under the auspices of the United Nations and several expressed the opinion that the whole Berlin situation should be put in the hands of the United Nations. "Now that the United Nations is a functioning organization," said E. E. McCarthy, of the Orlando (Fla.) Corner Cupboard, "such things as the uniting of Germany should be handled there. If a new Germany is to be born, it should be delivered by the world group."

A number of editors felt that a meeting at the summit would do us more harm than good. Ken Byerly, Jr., of the Franklin (Va.) News feared that such a conference would "lull us into a sense of false security."

A number of compromise plans which have been suggested were included in the American Press questionnaire, but all were turned down by a heavy vote. It was clear that the editors are in no mood for further compromise. "The compromise proposals you asked about are all weak kneed and unrealistic in view of the Communist menace," said Louis Gellerman of the West St. Paul (Minn.) Booster. Many other editors echoed his view.

Many brought up the uselessness of trying to have any agreements with the Russians on the grounds that their leaders cannot be trusted to stick to an agreement. The threat to break the agreement regarding the Berlin corridor, they believe, indicates the uselessness of making other agreements.

A question on the advisability of partial mobilization brought forth the opinion that further mobilization does not seem necessary at this time, or that the decision on this should be left in the hands of those government and military leaders who are closer to the situation. A majority voted against partial mobilization, while some pointed out that we have been partially mobilized ever since the last war. But a sizable number of the editors, although a minority, voted for further mobilization now.

Asked whether they favored increased expenditures for defense even though it would mean an unbalanced budget, the majority opposed this proposal. Some pointed out that more should be spent for defense but it should be taken out of other parts of the budget. Others felt that such decisions must be made by the military leaders and the President. Quite a few questioned the inference that the budget would be balanced anyway. Said Tom Tock, of the Dwight (Ill.) Herald: "A balanced budget is one fight that must be won."

Several editors expressed the view that increased expenditures might ruin us economically and that we would be playing into the hands of the Russians if we let them scare us into multiplying the Government's financial woes.

Gordon Spielman, of the Trimont (Minn.) Progress came up with a solution to the Berlin situation which, he believed, would be acceptable to all concerned. He summarized it this way: "(1) A unified Germany; (2) that the unified Germany be permanently neutralized and allowed to be allied with neither east nor west; (3) that both Allied and Soviet troops be withdrawn to the French and Polish borders; (4) that free elections be held in all Germany to establish a central government."

A summary of the questions and answers in the American Press survey follow:

Question 1: "Do you believe the Western Powers should insist upon open passage to and from Berlin, even at the risk of war?"

Answers: Yes, 92 percent; no, 5 percent; no answer, 3 percent.

Question 2: "Is it your guess that the Russians will back down if we take this stand?"

Answers: Yes, 89 percent; no, 3 percent; no answer, 8 percent.

Question 3: "Do you believe the President should meet 'at the summit' with Khrushchev?"

Answers: Yes, 62 percent; no, 20 percent; depends on developments, 13 percent; no answer, 5 percent.

Question 4: "Some of the compromise proposals follow. Please check how you feel about each."

(a) Prime Minister McMillan's proposal that we temporarily recognize the Communist regime in East Germany in order to be able to negotiate with that group? For, 18 percent; against, 77 percent; no answer, 5 percent.

(b) Senate Foreign Relations Chairman FULBRIGHT's suggestion of a slight military withdrawal by both Soviet and Western forces in Germany as a means of easing tension? For, 36 percent; against, 60 percent; no answer, 4 percent.

(c) Polish Foreign Minister Adam Rapacki's proposal to establish a zone in Germany free of nuclear weapons as a means

of inducing the Soviet to withdraw within its borders? For, 28 percent; against, 66 percent; no answer, 6 percent.

Question 5: "Do you think we should consider partial mobilization now to be ready for trouble?" Yes, 44 percent; no, 44 percent; we are partially mobilized now, 4 percent; if leaders deem it necessary, 5 percent; no answer, 3 percent.

Question 6: "Do you think we should increase expenditures for defense even though it means unbalancing the budget?"

Answers: Yes, 27 percent; no, 53 percent; increase for defense but cut down domestic, 8 percent; if President or military leaders think so, 9 percent; no answer, 3 percent.

Federal Support for Education

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. GRIFFIN. Mr. Speaker, in a recent newsletter to my constituents, I indicated my opposition to the so-called Murray-Metcalf bill (H.R. 22), which is now pending before the Committee on Education and Labor. In today's mail, there came a memorandum from the education department of the National Catholic Welfare Conference which contains an excellent statement of sound reasons why H.R. 22, in its present form, should be defeated. Under leave to extend my remarks, the memorandum is reprinted below:

PROPOSALS FOR FEDERAL FUNDS FOR EDUCATION

The department of education of the National Catholic Welfare Conference is firmly convinced of the validity of the American principle that education in the United States is best served when it is locally controlled and locally supported. When questions of Federal assistance have arisen in the past, the department has held that Federal assistance, if it is to be granted, should be granted for specific purposes, and for limited periods in areas of proven need. It has urged that the assistance should be granted democratically to all without distinction of race or creed.

Most of the Federal aid to education measures considered by the Congress since the publication of the report of the Roosevelt Advisory Committee on Education in 1938 have considered Federal aid as a temporary measure, and have been careful to exclude Federal control of curriculum or administration. Some measures now before the Congress incorporate another concept of Federal assistance promoting the idea of continuing support for that of temporary Federal aid.

There is an essential difference between the idea of support and of aid; support is permanent, aid is temporary. Any bill considered by the Congress should carefully distinguish between these choices. Otherwise a bill authorizing a permanent Federal subsidy might well carry in its wake Federal control and permanence which all agree would be harmful to education.

Specifically, the proposal for a Federal grant for teachers' salaries must as a practical matter be a permanent subsidy; it can hardly be considered compatible with the idea of temporary aid. Even should a terminal date be set, it would be almost impossible to shut off that source of financial supply without seriously disrupting local school systems. Furthermore, such a subsidy would give to school maintenance and custodial employees, to firemen, policemen, and other civil servants an equal claim on the Federal Government.

The department is acutely aware of the needs of teachers and is not opposed to the improvement of their position. It questions only the proposal that the Federal Government should subsidize teachers' salaries by means of financial grants.

Federal grants to meet existing emergencies for schoolhouse construction are a type of aid that can, and should, be temporary in nature. The department of education, however, calls to the attention of Congress the heavy financial burdens of parents who choose to send their children to private, nonprofit schools. If Congress determines to aid the parents of public schoolchildren by means of Federal assistance, it cannot in justice be indifferent to the parents of these nonpublic schoolchildren.

Congress can easily avoid an inequity by granting to private, nonprofit schools long-term, low-interest loans for school construction. This is not a new proposal, nor is it outside the framework of existing laws as interpreted by the courts. Rather it is a means devised by Congress itself when it passed the National Defense Education Act of 1958 to provide in an emergency way for the needs of both public and private education. It seems to the department of education that this statesmanlike approach to the question of Federal assistance should be the basic considerations for temporary Federal aid to education.

Private and public education are partners on the American education scene and their welfare should be advanced simultaneously in any proposals for temporary Federal assistance. Such action on the part of Congress will maintain the pluralism which is a cherished feature of the American way of life and avoid reducing educational effort to a common mold.

The department of education of the National Catholic Welfare Conference affirms (1) its traditional opposition to outright continuing Federal support for education; (2) its opposition to the use of Federal funds for teachers' salaries; (3) its contention that Federal assistance, if there is to be any, should be granted on a temporary basis for specific purposes and to areas of proven need; and (4) the claim of private, nonprofit education to that measure of justice permitted by law and suggested by legislative precedent.

Regarding the Snail's Pace

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HOSMER. Mr. Speaker, for the past several Congresses the average age of Members of both Houses has gone down a bit. That means more and more of our colleagues have school-age children. I note that one of our freshman colleagues has 6 youngsters. Obviously, it is impossible for Members to share vacations with their school-age children except during the period of the summer school vacation. Equally obvious is the fact that Congress has a habit of conducting great amounts of activity during these summer months and Members must be on hand for it. Columnist Walter Ridder became bold enough to describe some probable causes for the situation in his column last Sunday as follows:

HOUSE HAS BAD CASE OF "WEEKENDITIS"
(By Walter Ridder)

WASHINGTON.—The House of Representatives is suffering from an acute case of "weekenditis" and a number of Congressmen are not at all happy about it.

The lower Chamber is running at what amounts to a Monday-to-Thursday schedule, and over the weekend the Members take off in all directions. The weekend now in effect extends from adjournment Thursday afternoon to convocation Monday at noon.

A number of western legislators are piqued about the situation. They claim that eastern representatives want to go home to their constituencies, a trip which most westerners cannot afford either in time or money, and they are left twiddling their thumbs here in Washington, while the easterners romp around their home districts.

A look at the CONGRESSIONAL RECORD will fully support the complaint of the western Congressmen. The House of Representatives' work schedule for formal House meetings on recent Fridays has been as follows:

March 13, in session for 5 hours and 1 minute.
March 20, in session for 2 hours and 46 minutes.
March 27, not in session, Easter recess.
April 3, not in session, Easter recess.
April 10, in session for 25 minutes.
April 17, not in session.
April 24, not in session.
May 1, not in session.

The above schedule does not mean that no work has been done in the House of Representatives on Fridays. Committees and subcommittees have held hearings and have worked on reports. Nor does it mean that the absentee Congressmen are necessarily playing golf or otherwise spending their time away from their duties. But it does mean that no bills have been passed and inevitably the lack of formal work on Fridays will take its toll in the form of a longer session in July and August and it will no doubt increase the already great confusion of Congress' closing days.

The practice of knocking off on Fridays has grown up largely as a convenience for those Representatives who have home offices near to Washington. With airplane service being what it is these days, many Congressmen who formerly went home only occasionally can now bounce to their constituencies within a few hours. Congressmen from Maine to Florida can now pop home for the weekend, speak to their constituents, make a few speeches, and be back in Washington Sunday night or Monday morning. As the majority of Congressmen come from the heavily populated eastern part of the country, they can outvote the westerners when it comes to a matter of having or not having Friday sessions.

The westerners have not the easy means of getting home as do the easterners. The flight to the west coast is relatively long and above all relatively expensive. Thus the westerners are now being left sitting around Washington on Fridays with nothing to do and they are understandably irritated at what they consider the waste of time. But whether they can muster enough votes to do anything about it is, at best, highly uncertain.

The Influence of Foreign Markets on Your Business

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the board of the Coca-Cola Export Corp., at the American Society of Sales Executives dinner held at the Westchester Country Club, Rye, N.Y., on May 7, 1959:

THE INFLUENCE OF FOREIGN MARKETS ON YOUR BUSINESS

(Address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., American Society of Sales Executives dinner, Westchester Country Club, Rye, N.Y., May 7, 1959)

You have assigned to me a subject which normally will empty any hall. Few speakers have become popular and few politicians have ridden to success on discussions of foreign trade. But we are professionals in that field and we also are by necessity observers of the vast international struggle which is now worldwide. So we know that foreign economics is not a dismal abyss of figures. It is a major front in a world power struggle.

To untrained observers this is not always apparent. It looks as though American foreign trade was an affair of steel or sugar, Coca-Cola, my own company, or of cotton goods, of oil and of radios—a host of humdrum items. We, of course, know better. The exports we sent abroad and the imports we must take into our own market, represent life or death, progress or depression, comfort or starvation, in many parts of the world. They also represent, in the United States, full employment, or men without jobs; communities at work, or communities in distress. Taken both ways, they represent the growth of world economy—or possibly its recession.

As political observers, we know that recession means trouble anywhere. And in countries which are not advanced and are always close to the hunger line it may mean disorder, revolution, killing. Don't ever tell me that foreign trade is a dull subject.

We are just entering a new and difficult phase in this business of world trade. The bases of it are not unhappy. But they do require some very solid and heavy headwork, and we all have to help.

Briefly, what happened was this. When World War II ended, practically the entire world was in distress—except the United States. We emerged with nearly double our war productions, in fact, we produced about half of the manufactured products of the entire world though we have only 6 percent of the population. Every other country was engaged in trying to get a level of consumption which made it possible for them to begin. Their plants were destroyed, the organizations in bad shape, their production in distress. The vision of General Marshall, then Secretary of State, under the leadership of former President Harry S. Truman, initiated the Marshall plan of foreign aid, primarily, as it turned out, to Western Europe. You will recall that he had hoped that the Soviet Union would collaborate and incidentally get some of the aid. Stalin decided against that. He was not collaborating with anyone; he consciously began the Cold War; he refused to allow foreign aid to the Iron Curtain countries. By consequence, the bulk of our foreign aid went to Western Europe, with some portions left over for Asia and India and an unfortunately tiny fraction for Latin America.

The plan worked. Germany, France, Italy, Great Britain particularly benefited. They rebuilt their factories, they retooled their plants, in some cases they learned American methods of production. In other cases they invented new methods themselves. As of now, we can say, substantially, that the Western European nations are better equipped economically than they ever have been in their history. Now they are beginning to produce, not merely for their own consumption but for export as well.

This means, of course, than in the hour of their success and ours, for it is in considerable part an American achievement, Western Europe now becomes our competitor. There is nothing wrong about this. It was foreseen by every student of the Marshall plan operation. It was assumed that the problem of worldwide production and competition would have to be met when it arose. Now it has arisen.

The standard of living in these countries has improved to a point where it is at least comparable to the United States. If you go to France, Germany, or even Italy in the summertime you will see that steadily increasing numbers of European families now have their little cars; they go on vacations and travel; they send their children to summer camps; they do very much what Americans do. This is what an increase of production has meant to them. But while they are doing that they are casting about for means to export, partly so that they can import, chiefly raw materials which they need. So, they seek markets for their exports and, of course, the greatest market is the United States.

This is why, in mid-1959, we see an uncompleted wage and hour negotiation between American labor and the American steel industry with a new factor added. If the price goes above a certain level, Belgian, French, German, and English steel and manufactures based on it will come here and sell at a price cheaper than our own. We are moving, in other words, into a complex where the American level is not the only thing to be considered.

But while all this was going on a much larger area of the world, with a great many more people in it, was not going ahead so fast. This is partly perhaps because the American Marshall plan flow was not so great in these countries. It was also because many of these countries were not well organized politically and because they were not yet prepared by public education to become productive, and to distribute their income widely enough so that they had large markets of their own. In some cases, we were dealing with countries who by geography or by custom had only a single product, as Chile depends on copper, as Cuba depends on sugar, as Brazil depends, principally, on coffee. The growing production in Western Europe and the high level of production in the United States did not affect them. They could consume a great deal more of European and American production than they do but they did not have an effective way of paying for it. They therefore do the only thing they can from their point of view; they severely limit their imports, which is another way of saying that they will not buy our exports, or Europe's either. They prefer to manufacture, frequently at a far higher cost, in their own countries rather than buy at a lower cost from us. They do that because they haven't the foreign exchange to pay for imports in the first place and, anyhow, their people want jobs in factories. So, as the saying goes, the underdeveloped countries want to industrialize. But then they discovered that even to industrialize means that they have to import, at least for a while. They do not have foreign exchange to pay for these imports so they have to seek credit.

Then comes the next development with which we all are familiar. American, and now European, companies come to these areas and offer to establish plants. These proposals are usually well received, at least at first. The next best thing to having a motorcar company of your own, which is difficult without capital, is to have a foreign motorcar company build and operate a plan in your country. This gives jobs. If the company can use local materials it means an added local market in the country. This is the first great phase and it is here that we can be of solid use. Brazil, for instance, cannot import coffee for everything she needs—people do not drink that much coffee. Brazilian capital plus the know-how may not be available at the time to build let us say, a chemical plant. An American or European company, having the capital can, however, build a chemical plant in Brazil, employing local people and using local products and can sell these products in the Brazilian market which, by the way, is one of the largest and most rapidly growing in the world.

There are some who contend that this is bad for the American export trade. If Brazil, for instance, either builds a chemical plant of her own or accepts building of such a plant by an American company she will not buy as much American chemicals as she did before. So, say some, you are cutting your own throat when you help to industrialize another country.

This is simply not true. Brazil, of course, will have more chemicals if she manufactures some of her own. But if she did not manufacture them she still would not buy American chemicals, for the simple reason that she could not afford to. The top limit on American exports is what the countries to whom we sell can pay and there is no way out of it. Or, rather, not much of a way out. The United States can lend Brazil a certain amount of money for exports, which increases her capacity to buy for a while. But, obviously, this does not go on forever. Also, the U.S. Government is slowly coming to the point where it is going to need its resources here. So it is far sounder for us all to help Brazil, or any other country you choose, to get a good industrial system of its own. The statistical fact is that it is the highly industrialized countries that are the best customers for the export trade.

This, I think, is the first lesson we have to learn. Wherever any of us can assist a country to produce manufactured goods in its own region we have helped them and have helped ourselves. This is particularly true where we help a one-product country like Cuba with its sugar, or Brazil with its coffee, to diversify its product. It is why foreign aid, so-called, if properly handled should leave the countries where it is used with more industrial production than before. They will be stabler, more prosperous countries and, over the years, they will be better customers of ours.

Now I am past the stage where I swallow platitudes whole. I have been told, you have been told, that we always ought to let markets seek their own level and let natural balances work out. This is a splendid trick if you can do it. But the fact is that in my lifetime it has not happened. We had these balances before World War I; for practical purposes we have not had them since, save for very short intervals. Today we cannot have them at all, because half the world is not run on a free market basis. The Soviet Union and China have a planned economy, not a free market economy, and between them they account for more than one-third

of the whole population of the world. Most of Western Europe operates on a planned economy—a fact which few Americans really understand. Rightly or wrongly, in the year 1959, more of the world would rather trust its life to planned economy than to the chances of a free and fluctuating market. Time may prove them wrong, but so far it has not. The United States, Canada, and a few other countries still believe or claim they believe in a free market system, but they are in the minority.

This is why you have in Europe a highly planned economy in coal and steel—they call it the Coal and Steel Community. It is why the European common market is planning its economy today. It is why the Latin American countries are meeting and demanding a planned economy in their region.

Let us face it, we don't want a free market economy either. At this point, I expect you will want to try me for heresy. But my company has a great deal to do with sugar and in the United States sugar is planned under an act of Congress so that domestic producers will have so much, and we are allowed to import an added amount from Cuba and other countries to the end that the sugar produced and imported shall about equal the consumption demand. Face it again, the oil industry is one of the most highly planned in the United States, if not in the world. The Bureau of Mines estimates the consumption; the American oil wells are allowed to produce about enough with imports to supply that consumption—and import quotas have just been imposed so that the total supply of oil in the country and coming into it will equal the demand.

If this isn't planned economy I don't know what is. If the sugar industry and the oil industry here will not risk a free market economy why should you expect that the European steel industry or the Brazilian coffee industry will accept a free market? The point that I make is that we are living in a world which in great measure has been planning its economy and proposes to go on doing that. The highly producing countries do it because they cannot stand alternate times of boom and bust. The underdeveloped countries do it because they have not enough resources in the first place and want to steer more of these resources into industry and capital construction, and away from mere consumption. You and I may not like this planned economy movement. But I am too old and you are too smart not to face facts. Anyhow, none of us can change those facts. We had best learn to live in a world that does exist instead of crying because the 19th century came to an end nearly 60 years ago. This is the main thrust of the point I wanted to make here. I wanted to drive in the fact that we are living as exporters in a world which is increasingly planned, and that Americans, though they deny it, are doing as much planning as anybody else, and that we should, therefore, be more hospitable to the idea of economic planning than has been the case thus far. But I cannot close without going a little farther. What do we do with this situation besides thinking about it?

Well, the first thing we do is to take a good long constructively critical look at the policies of the U.S. Government. You will find, if you examine it, that slowly the U.S. Government is moving toward planning in international economics. It proposed a measure of planned economic development in the Near East after the crisis when our marines were in Libya. This was a major change in policy. It changed the entire atmosphere of the Middle Eastern discussion. Again, under heavy pounding, a measure of economic planning was proposed for Latin America, and a committee of the Pan American bloc has been working on this task during April. We ought to get behind that policy and help it along. When the agreements proposed to the Organization of American States, this is the present name of the Pan American Union, come up for review in the Congress, in my judgment, we ought to support them. When we are called on, as some day we will be, to follow up on our initiative in the Near East we ought to support that. This is one tangible thing we can do.

Next, we are in for a rakeover of our foreign aid program. I personally believe in foreign aid, but I also think it could be done a great deal better. Foreign aid is not a handout here, there, or elsewhere, to buy a friend, you don't buy friends. It is not even a device to fight the Communists—though it should work that way too. Foreign aid is really a method by which we supply capital and facilities for underdeveloped countries to increase their own productivity, in the belief, very nearly a certainty, that as they increase their own production the exchange between their countries and ours will increase. There is a committee under the chairmanship of Ambassador Draper working on that and expecting to report to President Eisenhower sometime this summer. One hopes that committee will do a good job. If not, the job will still have to be done by someone, I think, in the administration or in the Congress. Since this business of exporting goods and getting something done with them is our precise business we ought to have as good informed judgment on what is done as anyone else.

Finally, we can think about our own particular lines of business, the Coca-Cola Co., with which I have a great deal to do has systematically tried to have as much manufacture in foreign countries as possible. Many American businessmen can explore that possibility. While we are doing it we can also explore the possibilities of creating markets here for the goods which these countries must export to pay their debts and to pay for what they buy from us.

I think some commonsense applied to this problem will not be wasted. We are, in theory, in business to make money for our stockholders and ourselves. But, in fact, we can make and have a right to make those profits only if we can arrange to do something solidly useful for our country and for the countries overseas, whose needs we supply. If we put our heads together and combine our thinking and our resources and are not scared to death of the thinking done in the rest of the world I think we shall discover that the growing problems of international trade are not insoluble.

We are, if you like, traders. But the business of trading is the business of seeing that the production of the world meets the needs of the world. If we do that we can face our consciences as well as our balance sheets.

Economy in Government

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. WOLF. Mr. Speaker, like many of my colleagues I have received scores of letters which say no more than the slogan "balance the budget" or "stop spending." A great historian of the 19th century, Jacob Burckhardt, once said that the 20th century would be the age of the simplifier and the slogan. His prediction has certainly come true. It is not only the totalitarians who have used the slogan and the simplification as a tool to deceive the people. It has also become an advertising and political tool to deceive the people in our society. This has certainly been the case in the present budget conflict.

Eminent economists have pointed out that the present inflation is not an ordinary one. It is not caused by excessive supply of money or greater demand for goods than we are capable of producing. This inflation is a much more subtle one. It is what Gardiner Means calls an administrative inflation. This kind of inflation involves a spiraling in prices in certain basic industries where oligopoly is king. The producers in these industries are noncompetitive. They are able to raise prices at will. They are able to raise prices even though the level of demand for their products has dropped.

In the competitive industries according to the price index from June 1958 through March 1959, there has been somewhat of a stabilization in price. Many economists feel that stability has been achieved because food prices have declined—a decline borne by the farmer in a falling share of the consumers' food dollar—while prices of transportation and medical care have increased.

On the other hand, over this same period of time, wholesale prices of very important groups of oligopoly oriented markets—where the market is controlled by a few great producers—iron and steel, nonferrous metals, hardware, agricultural machinery and equipment, construction and general purpose machinery and equipment, and motor vehicles, have continued to increase. These facts support one interpretation only: The possibilities of further price increase are to be found, if at all, only in the prices of manufactured products that are determined administratively and noncompetitively.

This inflation is the direct result of certain efforts on the part of economic royalists to increase profits to hitherto unbelievable heights, without lowering prices, expanding, or competing. The fact that the national budget is balanced for 1 year on the ledger books will in no way change the action of these men nor will the dollar be worth any more, nor will we have solved our present inflationary problems.

Another part of the Eisenhower economic program is the tight money policies of the Federal Reserve. Theoretically this policy is to discourage spending in the community in order to encourage competition among sellers and lower prices on goods. The results are exactly the opposite. We have had greater unemployment and more business failures than ever before. The reason why prices have climbed steadily is not hard to understand. A small businessman is destroyed by tight money policies. He is unable to compete because he cannot get credit or capital to either expand or stay in business. On the other hand, big business oligopolies are not sensitive to the policies of the Federal Reserve. Companies such as General Motors and Du Pont, have fantastic credit lines and fantastic reserves.

Consequently, the upshot of this is that we depress competition and small business while strengthening monopoly and big business. The policies of this administration have made the American Government the prisoner of the big selfish economic interests in this country. Perpetuation of the present policies by the administration will do no more than strangle national growth and increase economic unemployment while raising prices.

Let the record show that I am for economy in government. I believe that our entire defense budget should be examined. I believe that we are going to have some startling discoveries from the Hébert Subcommittee on Weapons Systems Contracts, and the Price Subcommittee on Manpower Utilization. I firmly believe that closer analysis of our defense budget will eliminate billions in waste.

I submit that we overhaul our farm program. I submit that the greatest spender of them all is Secretary Benson. He has spent over $30 billion of our money to prove a theory that was doomed from the start. Mr. Benson has spent more than the combined total spent by all of his predecessors since the beginning of that office in 1862.

When we talk about budget balancing, we should remember that President Truman balanced the budget 6 years out of his 7 years in office while paying $27 billion on the national debt. Furthermore, President Truman did this while saving Europe from famine and chaos through the Marshall plan, a so-called spending program.

And finally let me state that the House has a long record of showing more concern for a balanced budget than is shown by the President. We may take as examples the years 1954 to 1959, the terms of the 83d, 84th, and 85th Congresses. The reductions for 1954 and 1955 below the President's estimates of appropriations totaled $14.6 billion; for 1956 and 1957, the reductions totaled $2.3 billion; for 1958 and 1959 the reductions below the President's estimates totaled $5.7 billion. I am sure that the committees and the leadership of this Congress will continue throughout this session and the 1960 session to find more economic and effective ways of putting this Government's resources to use than the methods outlined in the President's budget.

The issues facing this Nation are much graver than this one—especially when we know that the kind of balancing the President calls for will work against the best interests of this Nation while strengthening the hand of the economic royalists.

Byrd Warns Americans

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, there follows an editorial from the May 10 issue of the Times-News published at Twin Falls, Idaho. It is certainly time, as indicated by the Times-News, that this Congress heed the warning voiced by a prominent Democrat:

BYRD WARNS AMERICANS

The American people may be getting tired of discussing taxes and inflation. But unless they face up to their responsibilities as citizens and crack down on unnecessary Government spending—local, State, and national—they're going to pay a terrific price for their indifference.

It should be significant that the country's leading magazines and industrialists are warning what is in store for us if this rising tide of Government extravagance and deficit spending is not checked.

We commented recently on how the Chicago Tribune is crusading to awaken the American people to the dangers facing this country unless it changes its ways.

Those still courageous enough to challenge the spendthrifts are to be commended for trying to bring the average citizens to his senses—to impress upon him the importance of taking a personal interest in fighting those forces which rapidly are undermining the country.

Perhaps no one man in the United States has fought the forces of waste and extravagance more diligently than has Senator HARRY F. BYRD, of Virginia. He has served in the Senate since 1933. Long an advocate of economy in Government, Senator BYRD has pointed out time and time again how the Federal Government could save billions of dollars without serious impairment of any essential service.

If Senator BYRD were a conservative Republican, motivated by political thinking, his warnings would carry less weight. But he happens to be a Democrat with the welfare of his country at heart. That makes his stand highly significant.

With that in mind, Senator BYRD's most recent appraisal of this country's present predicament comes at an opportune time, while Congress is in session and an effort is being made to arouse nationwide indignation.

In an address before the annual meeting of the National Taxpayers conference in Washington, Senator BYRD summarized the situation somewhat as follows:

1. The Federal Government's fiscal situation has deteriorated faster in the past year than in any comparable peacetime period.

2. We have allowed ourselves to grow weak in the requirement for solvent Government and sound money. "Assurance of fiscal soundness in the future does not now exist."

3. The epidemic of the Federal Government's inflation-breeding spending and taxing policies has spread to State and local governments.

At the outset of his speech, Senator BYRD clarified a popular misconception. Contrary to general understanding, he said, recent great increases in Federal spending have not been for defense or foreign aid. "The tremendous increases have been for domestic-civilian programs."

Since 1954, he explained, expenditures outside of defense, atomic energy, and foreign aid categories increased from $19.1 billion to $34 billion estimated in the current year. This is an increase of $14.9 billion, or 78 percent.

"There is terrific pressure in the current session of Congress for enactment of more nonessential spending programs," said BYRD. "Almost invariably these new spending programs involve multiyear or permanent commitments for heavy spending in the future.

"Much of the domestic-civilian spending is for subsidies—and by subsidies, I mean nearly all kinds of loans, grants and payments out of the Federal Treasury to special beneficiaries. Many of these subsidies are bottomless pits for Federal spending and contribute to sky-high inflation.

"The Federal Government of the United States cannot now pay its bills except by increasing debt and inflation," BYRD emphasized. "Revenue at present tax rates does not meet our commitments. Interest on the Federal debt is taking approximately one-tenth of all taxes collected. Chronic inflation has reduced the purchasing power of our money 52 percent. The American dollar is now worth 48 cents by the 1939 index. Inflation destroys fixed incomes, provident investment, prudent business, sound financing, national security, and democratic government.

"The Federal Government is now subsidizing business, industry, private finance, agriculture, transportation, power, health, education, States, localities, individuals, etc. By the process of cheapening our money and centralizing power in the Federal Government, we have descended to a level of state socialism which is obvious, if not admitted. Social democracy is a subterfuge for sound government and constructive enterprise. Its evils are historically documented wherever nations have stooped to it.

"The situation will continue to grow worse unless there is drastic action in the immediate future. In the process of centralizing power, the Federal Government is usurping State and local revenue sources. At the same time it is encouraging greater spending at all levels. And through expanding paternalism, great segments of business, labor, agriculture, and taxpaying individuals are being brainwashed with Federal subsidy.

"Nearly 40 million people will receive direct payment from the Federal Treasury this year. With their families these 40 million people could reach a number equivalent to half the population of the United States.

"Drastic action should be taken immediately. I believe the best interests of this Nation and our allies would be served if the $77 billion expenditure estimate for the coming fiscal year were reduced by $5 to $6 billions, or between 7 and 8 percent. I know this could be accomplished without the impairment of a single essential function. From long experience I know public demand could force such reductions."

Jean Dalrymple: A Tribute

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HÉBERT. Mr. Speaker, yesterday, when I sat in this Chamber and listened to the King of the Belgians, Baudouin, deliver to America the message from his country, my thought wandered back to the great Brussels World Fair in Belgium. And when I thought of the Brussels' Fair I could not help but think of Jean Dalrymple and the great effort she put into it as coordinator for the U.S. performing arts program.

Listening to King Baudouin and thinking of the Brussels' Fair and Jean Dalrymple, I suddenly realized that even at this late date there has never, to my knowledge, been paid a proper and fitting tribute to Jean Dalrymple for her

great accomplishment when the eyes of the world were focused on America and its exhibitions.

Mr. Speaker, it is never too late to pay tribute to anyone who should have received tribute long before.

A public and just tribute to Jean Dalrymple, coordinator for the U.S. performing arts program for the Brussels' World Fair is long overdue.

I pay it now.

Although the fair has ended and the once heavily populated aisles of the great exhibits have been vacated the amazing job done by Jean Dalrymple continues to be reflected with the passing of each day.

Of course like thousands of other Americans I knew Jean Dalrymple before she went to Europe on this venture. Today Jean Dalrymple is internationally known and American theatrical art and culture is better known and better understood because of Jean Dalrymple's great contribution.

It is most significant that from an original requested, but not provided budget of $2,500,000 Jean Dalrymple staged this gigantic program on an appropriation of $500,000. In addition the Belgian Government has accepted the American Theater Building as a monument to the Americans who performed there and the programs which were presented there. This acceptance saved the American Government an estimated $10,000 which would have been required to demolish the building.

I should like to call to your attention that at the American Theater of the U.S. Pavilion at the Brussels World's Fair this past summer of 1958, over 40 live attractions were offered to the public at prices which everyone could afford: $3 top to $1, and for more than 75 percent of the attractions, $2 to 60 cents.

The following large attractions were given at the higher price of $3 top:

"Carousel," by Richard Rodgers and Oscar Hammerstein II.

"Wonderful Town," by Leonard Bernstein, based on the play "My Sister Eileen."

"Susannah," the American opera by Carlisle Floyd.

"Maria Golovin"—world premier—by Gian-Carlo Menotti.

Philadelphia Orchestra with Ormandy conducting, Isaac Stern, soloist, July 2, 3, 4.

Philadelphia Orchestra with Ormandy conducting, Van Cliburn, soloist, July 5.

Harry Belafonte.

Benny Goodman and his orchestra.

American Ballet Theater Co.

Jerome Robbins Ballet Co.

Juilliard Orchestra.

Newport Jazz Festival.

"Time of Your Life," by William Saroyan, with all-star cast, including Franchot Tone, Susan Strasberg, Dan Dailey, Myron McCormick, Ann Sheridan, Scott McKay, Arnold Moss, Paula Laurence, George Mathews, and Larry Blyden.

Andre Eglevsky's Petit Ballet with stars from the New York City Ballet Co., including Mellissa Hayden, Patricia Wilde, Edward Villella, George Tobias.

Also, a music program of recitals which gained the Gold Medal as the best program of music offered by all 50 countries at the world's fair, which included, at a $2 top: Yehudi Menuhin, violinist; Leontyne Price, soprano; George London, baritone; Blanche Thebom, mezzo-soprano; Byron Janis, pianist; Robert McFerrin, baritone; Rosalyn Tureck, pianist; Jose Iturbi, pianist; Ralph Kirkpatrick, harpsichordist; Leon Fleisher, pianist; William Warfield, baritone; Eleanor Steber, soprano; John Browning, pianist; Sylvia Marlowe, harpsichordist; Berl Senofsky, violinist.

Also "J. B.", the famous Archibald MacLeish drama, now a great hit on Broadway, and recently awarded the Pulitzer Prize, was given by the Yale University Theatre Company under the regional drama division; also "Waiting for Godot," was given with great success by the San Francisco Actors Workshop.

And the following music and choral groups appeared with great success: Massachusetts Institute of Technology Choral Society, Manhasset Pilgram Fellowship Choir, Concordia Seminary Chorus, Yale University Glee Club, Smith College Glee Club, Knox College Choir, Apollo Club of Minneapolis, University of Tulsa Radio Choir.

There was also an extraordinary program of films, including more than 60 documentaries, which covered every phase of American life, all given free in the American Theater, and a "Cavalcade of Great American Films," also shown free, which drew such great crowds, that very often the films had to be shown several times.

The American Theater was open to the public from 11 a.m. each morning until almost midnight, every day from May 1 to October 16. All morning and afternoon performances were free to the public. Only the evening performances were charged for and the theater was crowded from morning to night.

The selection of Jean Dalrymple as the coordinator for the U.S. performing arts program for the Brussels Worlds Fair was a natural one. She has devoted almost an entire lifetime to the performing arts, and in recent years has poured her energies into helping in the operation of the New York City Center of Music and Drama, a semicivic, nonprofit enterprise devoted to the fostering of popular-priced theater, ballet, and opera.

Miss Dalrymple has been with city center since its beginning in 1943, at one time acting as director of public relations, and as a member of the board of directors. As director of the City Center Theatre Company, she has produced revivals of 16 famous plays at city center with all star casts.

In the spring of 1957, as the new director of the Light Opera Company, she produced five popular musicals. "Carousel" was produced in September of 1957, and this spring, in addition to Marcel Marceau, Miss Dalrymple put three more musicals on the stage of city center:

Miss Dalrymple was responsible for bringing Charles Boyer to Broadway in his first stage appearance in America, in Jean-Paul Sartre's "Red Gloves" and she staged the record-breaking revival of "Burlesque," starring Bert Lahr. "Hope for the Best," starring Franchot Tone, was another of her Broadway productions.

Miss Dalrymple produced "Reunion in Vienna," for the coast-to-coast TV program "Producers' Showcase." Indeed, she has been in all branches of "show business" since she was 17 years old, when she was a star in her own comedy sketch on the famous Keith-Orpheum vaudeville circuit. She then went to work with the late John Golden. Eventually, she opened her own publicity and management office, and represented such famous personalities as José Iturbi—she is still his personal manager—Lily Pons, Leopold Stokowski, Nathan Milstein, Bidu Sayao, Tallulah Bankhead, Nanette Fabray, Jan Kiepura, Marta Eggerth, and others.

She also has been associated with numerous Broadway hits, and also the Ballet Russe de Monte Carlo and the New York Philharmonic-Symphony concerts at New York's Lewisohn Stadium. In 1951, when she handled the Berlin Arts Festival for the U.S. State Dapartment she met and later married Col. Philip de Witt Ginder. He is now major general, Deputy Commander, U.S. Army, stationed on Governor's Island.

As the coordinator for the U.S. performing arts program she has assembled a wide variety of attractions in her effort to display the finest available examples of what is indigenous to American culture and achievement in the arts.

Included in the Americans for whose friendship King Baudouin yesterday in this chamber, expressed appreciation is Jean Dalrymple, who was so vital a part of the contribution to the American participation in the Brussels World Fair.

Jean Dalrymple, I salute you.

Navy Secretary Thomas S. Gates: Modern Navy's Architect

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. HOSMER. Mr. Speaker, so quietly, effectively, and efficiently has Thomas S. Gates worked during his 6 years in the Navy Department, first as Under Secretary and then as Secretary of the Navy, that little note has been taken of the magnificent progress his leadership has inspired and directed.

The Nation, men everywhere who love freedom, and all who recognize in seapower a prime guardianship of that freedom, owe Mr. Gates a lasting debt of gratitude. Navy, the magazine of seapower, recently carried a warm profile

of Secretary Gates by James C. Elliott which highlighted some of the Secretary's contributions. It is as follows:

PROFILE: THOMAS S. GATES, JR., SECRETARY OF THE NAVY

(By James C. Elliott)

One of the most startling periods in the Navy's history has unfolded in the past 6 years. Never has there been such a transition in weapons systems. In that amazing period, man has harnessed nuclear power to seapower, not only developing the submarine *Nautilus* and others that followed, but also incorporating them into the fleet as a full-fledged member of the team. With them, new horizons of underwater endurance, Arctic operations and remarkable new submerged speeds have brightened the Navy's future. In that period, the first giant aircraft carrier, the *Forrestal*, joined the fleet, too, and so have her sister ships. Angled decks, mirror landings systems, supersonic jets—all have become as part and parcel of the Navy as John Paul Jones. New concepts for antisubmarine warfare have been developed, and new forms of employing them show promise beyond all expectations of only a year or two ago. The Marine Corps has grown into a more compact, more mobile, more powerful force. Ships' profiles now carry the outline of new missiles. Polaris—a completely new concept of naval warfare—has been started and will emerge as one of America's most elusive, powerful, and frightening deterrents to war.

In those 6 years of fantastic changes, one man has played an important role in every new development, first as Under Secretary and later as Secretary of the Navy. That man, of course, is Thomas S. (Sovereign) Gates, Jr.

And when he steps down from his top civilian echelon in the Navy next month, Gates will be able to look back upon these developments with more than casual pride.

In bowing out of public life after 6 years in the Pentagon, he will have served in a strictly Navy secretariat position longer than any man in modern Navy history.

Gates, a tall and handsome Philadelphian who has gained a tremendous reputation for his fair play and understanding in Washington, quietly declines credit for the tremendous transition in naval weapons, warfare, and doctrine. Out of modesty, he customarily belittles his own efforts in anything. In glancing back over those 6 years, however, Gates candidly admits that his work has been one constant challenge to balance modernization with readiness.

Sitting in his smartly appointed Pentagon office, he recalled the difficult periods of the Suez flareup, the crisis at Lebanon, and the fears at Formosa.

"It has been extremely difficult," he explained with candor, "to keep our forces deployed and to maintain high morale at the same time. It has been difficult to maintain our strength and to keep a program of modernization. This balancing has been the most challenging part of the job."

In reminiscing through the past 6 years, however, the dark-haired Secretary brightened to talk about the Navy's leadership program, a plan to bring along the Navy's younger officers and a move which Gates has taken a personal interest in supporting. He discusses the new reorganization plan recommended by the Franke committee with enthusiasm and thinks it will help the Navy in its long-range planning. And he is tremendously impressed with Rear Adm. John S. Thach's ASW outfit, task group Alfa.

"It's one of the greatest things we've ever done," he chimed up. "The morale there is one of the greatest things I've ever seen."

And he stands a dedicated supporter of Adm. Arleigh A. Burke, Chief of Naval Operations. As a matter of fact, the Gates-Burke team is regarded by many as the strongest civilian-military team in Washington.

"It has been a wonderful partnership," Gates said. "I don't know how it could have been any stronger. We have never disagreed on any fundamental issues. And that goes for the entire Navy civilian-military team, as well."

Evidence of the camaraderie existing between Gates and Burke is no better typified than in the story circulating the Pentagon not long ago. Gates and Burke, it seems, were engaged in a knotty problem one night, working late in Gates' office and struggling diligently for an answer, unmindful of the hour.

Suddenly, with an embarrassed gulp that registered a deep sense of desperation, Gates leaped to his feet and shouted:

"My gosh, Arleigh, it's 8:25. And I was supposed to be at some damned fool black tie dinner at 8."

The fact that Gates made the frantic admission does, indeed, point up the hard-working spirit that drives the two men. Although he probably expected it, Gates found no sympathy, however, from his four-star friend, who appeared fully as desperate as Gates. Nevertheless, he managed a pious smile and blurted out:

"Well, you know I have an idea it's my damn fool black tie dinner you're talking about, and we're both late."

It was a dinner at Burke's home, and both Mrs. Gates and Mrs. Burke had come to expect such tardiness from this hard-driving pair.

In his Pentagon tour, Gates has become known as a man who, in addition to his insatiable appetite for work, has a broad sense of humor, a remarkable talent for making everyone feel he has won the argument and a modest, considerate and warm personality that has won for him, and the Navy, friends in all branches of the service.

He takes a personal interest in his staff. Only recently he won the hearts of his aide's two teenage daughters. While Gates was visiting at the aide's home one day, the girls explained they had organized a Navy club and were fast decorating a clubhouse. Gates visited the clubhouse and soon realized it was without a pennant.

"Design one," he advised the girls, "and I'll have one made for you."

Time passed and he soon received a drawing of the pennant from the girls, complete with stars—silver ones for the members and one big gold one representing the Secretary, who obviously had become an honorary member.

Gates was so impressed he ordered not one, but two of the pennants from a New York flagmaker. One, he presented to the girls. The other? He's keeping it himself and will use it for his personal signal aboard his private yacht, the *Jericho*.

This sincere understanding and consideration of others leaves his staff honestly ready to brag about the boss at any time.

"You start with the adjective 'terrific' and go on from there in describing that guy," one said proudly. "He's tops in all categories."

Gates' charm and compelling fairness go back farther than his Pentagon days, however. His well-rounded personality showed up in his college days at the University of Pennsylvania, an institution of which his father once was president. There, Gates' eagerness and esprit de corps won him the managership of the football team. His intellectual strength brought him a Phi Beta Kappa key.

The youthful appearing broad-shouldered Navy Secretary is an only child, his mother having died when he was born.

He was married in 1928—the same year he was graduated from college—to the former Millicent Anne Brengle. They had four children, three daughters and the late Thomas S. Gates III, whose death in a Canadian ski lodge fire a few years ago is one of the most vivid tragedies in Gates' life.

Gates, 52, dislikes formality, particularly in his office. One reason for that attitude, of course, might be found in his now famous statement about Pentagon offices.

"They gave us such nice offices," he mused, "because they never let us out of them."

His door has always been open to old friends. And to visitors he has never met before, he will always step out from behind his big desk, walk to them with his big warm hand extended and smile "I'm Tom Gates."

Friends who knew him as a youngster still call him "Tommy." In his modesty, he prefers to be called Mr. Gates rather than the proper Mr. Secretary. His most popular description of anything, be it favor or scorn, is "fabulous."

Gates almost missed a Navy career completely. Before World War II, he had risen in 9 years to the obscure rank of private first class in the Pennsylvania National Guard. "The depression was rougher than you think," he laughed. In spite of his slow progress, however, he still had decided to join the Army. He was practically on his way to the recruiting station, as a matter of fact, when he ran into an old friend. One thing led to another. Gates recalls, and before he knew it, the friend had convinced him that the only way he would stay alive would be to join the Navy.

Gates holds several decorations for his work in the war. Once, when he was commanding officer of a Naval Air Intelligence School in Norfolk, he virtually wrote his own ticket to combat. While almost everyone thought he was in Norfolk establishing the school, Gates was getting first-hand war experience aboard the *Ranger*. "All I did," he recalls with a twinkle, "was to write out orders from the commanding officer, to the commanding officer. Naturally, they were approved."

Gates was brought into the Navy hierarchy by former Secretary of the Navy Robert Anderson. As Gates recalls the situation, he was right in the midst of an important business transaction when Anderson phoned him and told him to come to Washington.

"I was flabbergasted," Gates said.

Later, he explained, he was impressed with the careful screening that goes with the selection of a Navy Under Secretary or Assistant Secretary. "It's no mere selection of someone," he explained, adding that in one recent case as many as 74 persons were interviewed before one was selected.

Gates hardly had assumed his post as Under Secretary, however, when he began to wonder whether he should not have stayed in Philadelphia. The ceiling lights in his office had the devastating habit of becoming overcome by gravity and falling smack-dab on anything below them. One time they caused untold damage to his mahogany desk. And another time, his office aides arrived one morning to find they had landed with a crash right in the middle of Gates' empty chair.

Some jokingly referred to the lights as the conspiracy that moved Gates into the Secretary's office, where the lights do not fall. Whether the lights in the Under Secretary's office are still falling or not has not been disclosed. But, some theorize, that certainly could be the case. After all, they reason, William B. Franke, the current Under Secretary, is moving out, too, and into the very same office Gates did.

Poison in Your Water—No. 76

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Portland (Maine) Express on June 4, 1958, entitled "Cape Beach Use Delayed by Pollution":

CAPE BEACH USE DELAYED BY POLLUTION

CAPE ELIZABETH.—It's swimming time again, but not at Maiden Cove Beach.

Pollution has caused Cape Cottage Beach Association directors, sponsors in the past, to postpone opening until steps can be taken to decontaminate it.

Source of the trouble, says William D. Monie, association president, is the Maiden Cove outfall sewer. It serves about 35 families. It empties into the cove.

In a letter to the association's 200 members, a hike in dues is proposed by June 16 to set up a modest chlorination plant to kill bacteria in the sewage.

Bacteria content of the cove's water was found to be 11 times above the State's upper health limit for safe bathing. This was disclosed by the Edward C. Jordan Co., Inc., Portland, during a survey for the town's sewer study committee.

SECOND TEST

In the wake of this disturbing report, the beach association's directors called in the State water improvement commission which found conditions even worse.

The commission reported bacteria 12 to 13 times above the safe limit. Their sampling was done last month. Warmer water probably accounted for more bacteria in May than when the Jordan sampling was done in December, Monie said.

Normally, the beach is opened around June 9–10. The date has been set back to July 1 contingent upon approval of sewage chlorination.

To date, the association has made no attempt to hire a lifeguard, organize swimming classes, or clean up winter beach debris.

"We don't want to sponsor anything that would be unhealthy," Monie explained.

Meanwhile, he said, the association doesn't have the power to post the beach as unsafe; that would have to come from the town health officer.

Dr. George W. Hallett, Jr., the town health officer, is away on vacation until June 16.

That the date the association hopes to have its problem resolved one way or another.

If members can't come across with the dues hikes immediately, they're being asked if they will pay later. If not, directors would like an expression of opinion, so they'll know how the association stands on the matter.

Monie wouldn't disclose the amount of the proposed dues increase. He said it's a matter only between members of the association, which is a private organization.

MAY COST $1,800

However, offhand, he estimated cost of installing and operating a chlorination system at $1,800 for the first year. Thereafter, it would run about $450 annually during the bathing season.

Monie was chairman of the recent Cape Elizabeth sewer study committee. He is chief engineer of the Portland water district. The committee recommendation for setting up a sewer district was turned down at a special town meeting last month.

Among proposals resulting from the Jordan survey was extending the Maiden Cove outfall sewer 1,000 feet out to sea. That would take care of beach pollution. However, the Maiden Cove extension wouldn't have come for some time, even if the town had approved a sewer district.

Monie said that the only other polluted beach area in Cape Elizabeth, from his study of survey reports, is Ship's Cove at Fort Williams. That's on Government property. It's posted as off limits even to Army personnel, he said.

Scenic Maiden Cove beach, sheltered and popular for family relaxation by the sea, offers between 400 and 500 feet of sand beach.

Today, unsafe despite its grandeur, it stands as proof of the axiom that beauty can be only skin deep.

King Baudouin's Visit

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. McDOWELL. Mr. Speaker, I was deeply moved by King Baudouin's speech in this House on Tuesday, May 12.

He spoke of the difficulty of achieving peace, when the new imperialism seeks the mastery of our minds and of our very personalities.

I have seldom heard a more moving phrase—

Youth is the first victim of war, the first fruit of peace. It takes 20 years or more of peace to make a man; it takes only 20 seconds of war to destroy him. * * * Where better can the free peoples of the world look for the averting of war and death than to your Nation so vibrant with the love of life?

Recently I introduced legislation to provide for the utilization of Ellis Island by the Secretary of State as a training center for Americans going abroad, and to keep this great landmark as a living memorial to American freedom and the contributions made to the United States by the immigrants who have come to these shores. More eloquent than the statements of most others was King Baudouin's regarding the promise which is America's:

America has been called a melting pot, but it seems better to call it a mosaic, for in it each nation, people, and race which has come to its shores has been privileged to keep its individuality, contributing, at the same time, its share to the unified pattern of a new nation.

I include here a fine editorial on King Baudouin's visit, from the Journal-Every Evening, Wilmington, Del.:

[From the Journal-Every Evening, May 12, 1959]

KING BAUDOUIN'S VISIT

Royalty as an institution has many things about it that Americans, living under a republican form of government, do not like. But it has its uses, as we are reminded by the presence in this country of a royal visitor who should be particularly welcome.

Baudouin, King of the Belgians, is a tall and reserved young man who looks every inch the monarch but who would agree with the suggestion that the protocol associated with his position can be burdensome. He has shown that he doesn't like to be stared at—and he has indicated that if he could avoid it he would not go through the New York ticker-tape welcome that is planned for him.

Yet he will go through with it, just as he has gone through with the business of being chief of state of his small but populous country since his father abdicated in his favor. He was only 20 then, and he would have preferred to have his father keep the throne. But at that time the royal question was tearing the country apart. He saw it as his duty, to his country and to his line, to accept the responsibility laid upon him.

Belgium has been so tranquil, and so prosperous, since then that there is no question of the rightness of his decision. Since then, too, she has been a strong as well as enthusiastic member of the North Atlantic Alliance. Against that history, King Baudouin's visit here is a happy occasion—and a happy augury of firm friendship between his small kingdom and our great Republic.

183d Anniversary of Our Nation's Independence

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Resolution 352 passed by the Philadelphia City Council, Philadelphia, Pa., on April 22, 1959, inviting a delegation from the Congress of the United States to attend the ceremonies commemorating the 183d anniversary of our Nation's independence on July 4, 1959, at Independence Hall.

The celebration this year will honor our new State of Alaska and the new 49-star flag will be raised for the first time.

Philadelphia and her people are indeed honored and pleased to extend this invitation and it is their hope you will accept.

RESOLUTION 352

Resolution urging members of the State Legislature of Pennsylvania and of the Congress of the United States to form a delegation of distinguished legislators to come to Philadelphia to attend the ceremonies on July 4 at Independence Hall

Whereas this Nation observes the 183d anniversary of its independence on July 4, 1959; and

Whereas the city of Philadelphia, where the Founding Fathers created the historic document of liberty, the Declaration of Independence declaring the 13 Colonies a free and independent Nation, will observe this occasion with appropriate public ceremonies in Independence Hall at 11 a.m.; and

Whereas this celebration will salute the new State of Alaska and will feature as its keynote speaker the Honorable ERNEST GRUENING, U.S. Senator from the State of Alaska; and

Whereas an unduplicated historic moment will be shared at this observance when the 49-star flag will be raised officially for the first time in accordance with the law that the new flag does not fly officially until the Fourth of July following the vote of the people for statehood; therefore be it

Resolved by the Council of the City of Philadelphia, That we hereby urge the mem-

bers of the State Legislature of Pennsylvania and of the Congress of the United States to form a delegation of distinguished legislators to come to Philadelphia to attend these ceremonies on July 4 at Independence Hall, as an inspiration to their constituents all over America to join also in the national pilgrimage to this hallowed shrine; and be it further

Resolved, That the city representative forward invitations and certified copies of this resolution to Hon. David L. Lawrence, Governor of Pennsylvania; Hon. John Morgan Davis, Lieutenant Governor; Hon. Hiram G. Andrews, speaker of the house; and Hon. M. Harvey Taylor, president pro tempore of the State senate; and to Hon. Sam Rayburn, Speaker of the House of the Congress of the United States; Hon. Carl Hayden, President pro tempore of the U.S. Senate; the Representatives in Congress from Philadelphia, and the U.S. Senators from Pennsylvania, with the request that they bring this ceremony to the attention of their illustrious colleagues.

California Defense Contracts Vital to Nation's Security

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HOSMER. Mr. Speaker, the business of defending the Nation is a vital one and intrusted, from the hardware standpoint and a number of others to the military departments of the Government. These departments should be let free to do their job on the principle of getting it done most effectively and most economically. This principle is reiterated in the two following editorials:

[From the Long Beach Independent-Press-Telegram, May 10, 1959]

STATE HAS WHAT IT TAKES TO DELIVER ON DEFENSE CONTRACTS

Though not imbued with the spirit of brotherly love, the congressional delegation from New York State at least has an admirable quality of directness.

New York's Congressmen are launching a movement with the stated purpose of getting more aircraft and missile projects for New York and reducing the number of such projects for California.

We think it commendable that New York wishes to better its position. But the effort to do so at the expense of California and the defense effort is greedy, malicious, and myopic.

However, several factors assure California a substantial portion of defense contracts as long as such contracts are written.

World War II drew a large supply of skilled workers to southern California, and the supply has been continuously replenished since.

The same thing that draws most of them here—the excellent year-round weather—provides a maximum number of productive days for industry.

Also, vast amounts of open country are available in adjacent desert areas for the immediate testing of aircraft, missiles, and other defense products.

These advantages make southern California a natural center for defense production. We trust that the Government does not tend to deprive itself of such a valuable asset merely for the sake of satisfying the desire of New York Congressmen to make points with their constituents.

[From the Los Angeles Examiner]

POLITICS VERSUS SECURITY

Members of Congress from Eastern States are self-righteously pitching for legislation guaranteeing that a larger share of defense contracts will be awarded to the areas they represent.

This is an irresponsible proposal that would unquestionably weaken the Nation's security.

To award these contracts on the basis of geography would lower the quality of the products, whether aircraft, missiles or electronic devices, and at the same time boost their cost.

These short-sighted easterners refuse to recognize that California's defense industry resulted from the most careful and intelligent planning over a period of many years.

They refuse also to take into account the fact that we have the skilled workers, the specially-equipped plants and the brain power that are demanded and that no act of Congress can bestow all of this on some other area.

The unemployment problem in sections of the East that has given rise to this proposed legislation is regrettable but this is not the way to solve it.

As Harold Wright, general manager of the Los Angeles Chamber of Commerce, says, "We must not tolerate making a WPA out of our Nation's defense effort."

We note that Wright will confer today in San Francisco with the managers of the San Francisco, Oakland and State chambers to organize a united program against these threatened raids.

In this effort, they should have the support not only of all the people of California but of the entire country.

Downright politicking of this kind cannot be allowed to enter into the building of the defenses of this Nation against the ever-present danger of annihilation by enemy attack.

Mountain Laurel Proposed as a National Flower

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. MONAGAN. Mr. Speaker, in the battle of the flowers during the current campaign to name a national flower, one important flower has been forgotten and that is the Mountain Laurel, State flower of Connecticut.

I have today introduced in the House a resolution designating this flower as the national flower of the United States of America.

As further explanation of my motive in filing this resolution, I include herewith a letter which I have written to the Honorable JESSICA WEIS, Congresswoman from New York, who is the sponsor of another entrant in this floral race:

Hon. JESSICA WEIS,
House of Representatives,
Washington, D.C.

DEAR JESSICA: I have watched with interest your campaign to have the rose made our national flower and I applaud your efforts, but I disagree wholly with your contentions.

I cannot agree that the rose, which is the national flower of England and the symbol of delicacy and fragility, should ever be designated as the floral symbol of the United States.

I believe that the flower which stands as the embodiment of the American character should have qualities of hardiness, of firmness, and of strength that are not present in the rose.

My candidate for our national flower is Connecticut's own Mountain Laurel (Kalmia Latifolia). This lovely plant strikingly contains the American qualities of those hardy settlers who first recorded its discovery in 1624. Like the early colonies, it flowers in the wilderness and spreads its charm in spite of rocky and inhospitable surroundings.

No one who has ever driven through the Connecticut woods late in June can ever forget the glory of the Mountain Laurel with its white and pink blossoms forming a magnificent contrast with the dark green of surrounding trees and bushes.

Sincerely yours,

JOHN S. MONAGAN,
Member of Congress.

Mr. Speaker, I hope that the Congress will favorably consider my resolution.

Ireland's Frank Aiken Offers a Proposal for Nuclear Disarmament

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. REUSS. Mr. Speaker, nuclear disarmament has become almost a prerequisite of peace. It is important to note, therefore, the outstanding efforts being made by Frank Aiken, Ireland's Minister for External Affairs, to check the spread of nuclear weapons to country after country. For, he reasons that the greater the number of nations that possess nuclear weapons, the less likely nuclear disarmament becomes.

The diplomatic staff of the Manchester Guardian appraised Mr. Aiken's proposals in an article appearing in that paper May 7, 1959. It is well worth reading and thinking about:

IRELAND AND THE BOMB—INITIATIVE AT THE ASSEMBLY

"We shall continue our efforts," Mr. Frank Aiken told the Dail one day last week, when speaking of Ireland's initiative on nuclear disarmament. Mr. Aiken, the Minister for External Affairs, was responsible for that initiative at the last United Nations Assembly. His effort then did not receive the publicity it deserved, because it was overshadowed by East-West disagreement on tests. His proposal is simple. It is that the nuclear powers should undertake to refrain from supply nuclear weapons to states which do not possess them—and that the non-nuclear nations should undertake to refrain fro mmanufacturing or acquiring such weapons. In this way the Irish Government hopes that the dissemination of atomic and hydrogen weapons may be prevented.

The proposal, when put to the Assembly's first committee as a draft resolution, received 37 votes in favor and none against, with 44 abstentions. Mr. Aiken then withdrew it, so as not to prejudice the chances

of further progress this year. But the vote was in itself an achievement. Initially the great powers had been unfavorable to the proposal, but in the end none voted against it. Sweden, although already considering the manufacture of her own weapons, voted for the resolution. Canada, New Zealand, and Australia, while abstaining, spoke with sympathy towards it. Most of the Afro-Asian bloc and six of the Latin American nations supported it. And, in spite of an earlier cold comment by Mr. Sobolev (U.S.S.R.), the Soviet bloc in the end followed a Polish lead in voting for the resolution.

IN REVOLUTIONARY HANDS

Mr. Aiken put his case in public and in private. One novel point concerned the danger that, as atomic weapons were developed in small sizes, they might eventually get into the hands of revolutionary movements. (Who, it may be asked, is better qualified to speak on this than one who was chief of staff of the I.R.A. in its prime?) As he said to the Political Committee:

"Nothing, except international measures to prevent the dissemination of such weapons, can prevent them from coming, ultimately, not merely to small and poor States but also to revolutionary organizations. All through history portable weapons which are the monopoly of the great powers today become the weapons of smaller powers and revolutionary groups tomorrow. And since local wars and revolutions almost always involve some degree of Great Power patronage and rivalry, the use of nuclear weapons by a small State or revolutionary group could lead, only too easily, to the outbreak of general war. One obsolete, Hiroshima-type bomb, used by a small and desperate country to settle a local quarrel, could be the detonator for a worldwide thermo-nuclear war, involving the destruction of our whole civilization."

Another of his points was that the danger will increase greatly when weapons are in the hands of less highly developed countries. The present possessors are countries with great urban populations, who have much to lose and litle to gain in a nuclear war. Their potential adversaries are of similar character (if we omit the possible use of such weapons in another Suez or another Hungary) and have the means to retaliate. But as nuclear weapons become simpler and cheaper they are likely to pass into the hands of States with less to lose. Further in their hands such weapons may give a temporary but enormous advantage—one that they may be sorely tempted to exploit.

A LAST CHANCE

These, however, are subsidiary arguments. The chief reason for trying to prevent the spreading of nuclear weapons is that, unless action is taken, nuclear disarmament may be placed permanently beyond reach. Already it is impossible to detect existing stocks of bombs. As has been said elsewhere, "The only instrument for discovering a bomb in a crate is a screwdriver." Thirteen years ago the opportunity of putting all nuclear weapons under international control, while only the Americans had them, was lost with rejection of the Baruch proposals. The aim of the Irish initiative is to use the limited opportunity that still remains while nuclear weapons are controlled by only a few countries.

Even now these weapons are directly controlled by only three nations—Russia, the United States, and Britain. Soon another two are almost certain to be added—France and China. It is technically feasible for countries such as Sweden and Israel to make their own bombs within, say, the next 5 years. The farther these weapons spread, the less chance there is of ever effectively controlling them. And, of course, the farther they spread the greater the chance that sooner or later they will be used.
